

Active IQ[®] Unified Manager 9.9

Quick Start Guide

For Windows Installations

System requirements

- Operating system: Microsoft Windows Server 2016 and 2019 64-bit Standard and Datacenter Editions. The following languages are supported:
 - English
 - Japanese
 - Simplified Chinese
- RAM: 12 GB
- CPU: 9572 MHz total
- Free disk space: 100 GB of disk space for the installation directory, 50 GB of disk space for the MySQL data directory

For detailed system requirements, see the [Unified Manager Installation Guide](#) and [Interoperability Matrix](#).

Installing Active IQ Unified Manager

Download the installer

1. Download the `ActiveIQUnifiedManager-<version>.exe` installation package.
2. Copy the installation file to a directory on the target system.

Install Unified Manager

For installing Unified Manager, ensure that you have Microsoft .NET 4.5.2, or a later version installed. As a part of the installation process, Unified Manager installs other third-party packages as required. For more information about the dependent software packages, refer to the [Unified Manager Installation Guide](#).

1. Log in to Windows using the default local administrator account.
2. In the directory where you downloaded the installation file, right-click and run the Unified Manager executable (.exe) file as an administrator.
3. When prompted, enter the user name and password to create the Unified Manager maintenance user.
4. In the Database Connection wizard, enter the MySQL root password.
5. Follow the remaining prompts to complete the installation.
6. Click **Finish** at the end of the installation and the Unified Manager web UI is displayed.
