## "accesscache" Event Group

<b>EMS Identifier</b>	accessCache.cfg.updateFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when exports access cache configuration is modified but the new configuration could not be updated in the Nblade. The access cache is therefore operating with the older configuration.
<b>Corrective Action</b>	Retry the exports access cache configuration modification. If it continuously fails, restart management gateway. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Access cache configuration change for Vserver "%s" on node "%s" could not be updated. Failure reason is "%s".
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver on which the problem is occurring. <b>node</b> (STRING): Name of the Node on which the problem is occurring. <b>reason</b> (STRING): The reason for the failure.

<b>EMS Identifier</b>	AccessCache.NearLimits
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the access cache module is near its limits for entries or export rules. Reaching these limits can prevent new clients from being able to mount and perform I/O on the storage system, and can also cause clients to be granted or denied access based on stale cached information.
<b>Corrective Action</b>	Ensure that the number of clients accessing the storage system continues to be below the limits for access cache entries and export rules across those entries. If the set of clients accessing the storage system is constantly changing, consider using the "vserver export-policy access-cache config modify" command to reduce the harvest timeout parameter so that cache entries for clients that are no longer accessing the storage system can be evicted sooner.
<b>Syslog Message</b>	The exports access cache module is near its limits for entries (current count : %u, warning threshold : %u, limit : %u) or export rules across entries (current count : %u, warning threshold : %u, limit : %u).
<b>Parameters</b>	<b>numEntriesCurrent</b> (INT): Current number of entries in the cache. <b>numEntriesWarningThreshold</b> (INT): Warning threshold for number of entries. <b>numEntriesLimit</b> (INT): Limit on the number of entries. <b>numRulesCurrent</b> (INT): Current number of export rules in the cache. <b>numRulesWarningThreshold</b> (INT): Warning threshold for number of export rules. <b>numRulesLimit</b> (INT): Limit on the number of export rules.

<b>EMS Identifier</b>	AccessCache.ReachedLimits
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the access cache module reaches its limit for entries or export rules. This condition can prevent new clients from being able to mount and perform I/O on the storage system. This condition can also cause clients to be granted or denied access based on stale information.
<b>Corrective Action</b>	Ensure that the number of clients accessing the storage system is below the limits for access cache entries and export rules across those entries. If the set of clients accessing the storage system is constantly changing, consider using the "vserver export-policy access-cache config modify" command to reduce the harvest timeout parameter so that cache entries for clients that are no longer accessing the storage system can be evicted sooner.
<b>Syslog Message</b>	The exports access cache module on this node reached its limits while trying to add %d new entries (current count : %u, limit : %u) and/or %d export rules (current count : %u, limit : %u).
<b>Parameters</b>	<b>numEntriesDelta</b> (INT): Number of new entries to be added. <b>numEntriesCurrent</b> (INT): Current number of entries in the cache. <b>numEntriesLimit</b> (INT): Limit on the number of entries. <b>numRulesDelta</b> (INT): Number of new export rules to be added. <b>numRulesCurrent</b> (INT): Current number of export rules in the cache. <b>numRulesLimit</b> (INT): Limit on the number of export rules.

## "acp" Event Group

<b>EMS Identifier</b>	acp.auto.upgrade
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator determines that the ACP Processor has an older firmware image compared to the file revision present in '/etc/acp/acpp_fw'. The ACP Administrator is performing an automatic firmware upgrade.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Performing automatic firmware upgrade (image: %s) on %s (%s).
<b>Parameters</b>	<b>file</b> (STRING): Command issued. <b>inband_id</b> (STRING): Inband ID of the module. <b>ip</b> (STRING): IP address of the module.

<b>EMS Identifier</b>	acp.bind.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system encounters a socket binding error while setting up the Alternate Control Path (ACP) Management Ethernet port. ACP functionality is inactive after encountering this.
<b>Corrective Action</b>	Verify that the Ethernet cable is properly attached to the ACP port and the green LED is on. Reenable the ACP port using the "options acp.enabled" command.
<b>Syslog Message</b>	An error was encountered while configuring the ACP Management Ethernet Port: %s.
<b>Parameters</b>	<b>ErrorString</b> (STRING): Error string.

<b>EMS Identifier</b>	acp.commErr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator determines that the SAS shelf I/O module (IOM) that is configured for in-band ACP is experiencing communication errors.
<b>Corrective Action</b>	Examine the event log for I/O errors that might have a common source such as faulty cabling, and correct them. If the errors persist, the IOM might need to be replaced. Contact NetApp technical support.
<b>Syslog Message</b>	IOM %s is reporting multiple in-band ACP communication errors. Shelf serial number: %s.
<b>Parameters</b>	<b>inband_id</b> (STRING): Inband ID of the module. <b>shelf_sno</b> (STRING): Storage shelf serial number of the shelf where the I/O module is seated.

<b>EMS Identifier</b>	acp.commErrPersist
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator determines that a SAS shelf I/O module (IOM) configured for in-band ACP is experiencing persistent communication errors.
<b>Corrective Action</b>	Examine the event log for I/O errors that might have a common source with this problem, such as faulty cabling. If other devices are not experiencing failures, then contact NetApp technical support to replace the IOM.
<b>Syslog Message</b>	IOM %s has failed after reporting multiple in-band ACP errors. Shelf serial number: %s.
<b>Parameters</b>	<b>inband_id</b> (STRING): Inband ID of the module. <b>shelf_sno</b> (STRING): Storage shelf serial number of the shelf where the IOM is seated.

<b>EMS Identifier</b>	acp.dev.notify
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator encounters an error event in a development-only kernel.
<b>Corrective Action</b>	Notify ACP development. No user action is needed.
<b>Syslog Message</b>	ACP error: %s
<b>Parameters</b>	<b>debug_string</b> (STRING): Error statement that occurred in a development kernel.

<b>EMS Identifier</b>	acp.downrev.acpp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Alternate Control Path Administrator cannot successfully download up-to-date firmware to an Alternate Control Path Processor (ACPP) or when the most up-to-date firmware image is not present in the /etc/acpp_fw/ directory.
<b>Corrective Action</b>	Verify that the latest ACPP firmware is available in the firmware directory. If the firmware update continually fails to download up-to-date firmware, then replace the ACPP I/O module.
<b>Syslog Message</b>	ACPP module %s (%s) has downrev firmware.
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the ACPP module. <b>ip</b> (STRING): IP address of the ACPP module.

<b>EMS Identifier</b>	acp.exp.power.cycle
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Processor receives a command to power-cycle the SAS expander.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	SAS expander power-cycle request sent to %s (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Status code returned by the 'expander power cycle' command.

<b>EMS Identifier</b>	acp.exp.power.cycle.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Controller Path Administrator fails in its attempt to power-cycle the SAS expander.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	SAS expander power-cycle request sent to %s (%s) failed with status (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Reason for the 'expander power-cycle' failure. <b>shelf_sno</b> (STRING): Shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.exp.power.cycle.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an 'expander power cycle' command sent to the Alternate Controller Path (ACP) Processor succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	SAS expander power cycle command sent to %s (%s) was successful, (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.exp.reset
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Processor receives a command to reset a SAS expander.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	SAS expander reset issued to %s (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Status code returned by the 'expander reset' command.

<b>EMS Identifier</b>	acp.exp.reset.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Controller Path Administrator fails in its attempt to reset the SAS expander.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	SAS expander reset request sent to %s (%s) failed with status (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Reason for the 'expander reset' failure. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.exp.reset.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an 'expander reset' command sent to the Alternate Controller Path (ACP) Processor succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	SAS expander reset command sent to %s (%s) was successful, (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.exp.vpd.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an attempt to get SAS expander VPD (Vital Product Data) data from the Alternate Control Path Processor fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	An 'expander vpd' request sent to %s (%s) failed with status (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Reason for the failure to get the SAS expander vpd data. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.fw.download
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Processor receives a command to initiate a firmware download.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Firmware image %s will be downloaded to %s (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>command</b> (STRING): Firmware image name. <b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Status code returned by the 'initiation' command.

<b>EMS Identifier</b>	acp.fw.download.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Controller Path Administrator fails in its attempt to download firmware.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Firmware download on %s (%s) failed with status (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Type of failure that occurred during the firmware download. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.fw.download.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'firmware download' command sent to the Alternate Controller Path Processor succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Firmware download on %s (%s) was successful, (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.init.configIP
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when ONTAP(R) software cannot configure the Ethernet port designated for the Alternate Control Path (ACP) with 30 seconds, and marks the ACP as inactive.
<b>Corrective Action</b>	Verify the connection to the disk shelf ACP port, and make sure that it is not connected to a public network. Try plugging it into another Ethernet port with no devices.
<b>Syslog Message</b>	Could not configure the ACP Ethernet port within 30 seconds.
<b>Parameters</b>	

<b>EMS Identifier</b>	acp.init.netmask
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during initialization state, when the Alternate Control Path (ACP) Administrator netmask was configured incorrectly. The system sets the netmask to a default value.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Setting ACP Administrator netmask value to %s (reason: %s).
<b>Parameters</b>	<b>value</b> (STRING): Default netmask. <b>reason</b> (STRING): Reason to choose the default.

<b>EMS Identifier</b>	acp.init.ssl <b>Deprecated:</b> Deprecated as of ONTAP(R) version 9.2. The ACP process was never really responsible for initializing SSL, and has not tried to do so for a very long time.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) process cannot initialize the underlying Secure Socket Library (SSL). The ACP Administrator will be inactive.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Could not initialize SSL.
<b>Parameters</b>	

<b>EMS Identifier</b>	acp.invalid.vpd.info
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) system detects that an Alternate Control Path Processor (ACPP) has invalid VPD (Vital Product Data) info.
<b>Corrective Action</b>	Replace the Alternate Control Path Processor (ACPP).
<b>Syslog Message</b>	ACPP module %s (%s) has invalid VPD.
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the ACPP module. <b>ip</b> (STRING): IP address of the ACPP module.

<b>EMS Identifier</b>	acp.ioxm.port.down
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the link status of one or more ports from the IOXM switch changes from "up" to "down".
<b>Corrective Action</b>	Verify that all cables in the IOXM switch ports are seated properly.
<b>Syslog Message</b>	IOXM switch port %d is down.
<b>Parameters</b>	<b>port_num</b> (INT): Switch port number of the IOXM switch.

<b>EMS Identifier</b>	acp.ioxm.port.up
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the link status of one or more ports from the IOXM switch changes from "down" to "up".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	IOXM switch port %d is up.
<b>Parameters</b>	<b>port_num</b> (INT): Switch port number of the IOXM switch.

<b>EMS Identifier</b>	acp.locked.wrench.link.down
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the link status of a locked wrench Ethernet port (on the back of the storage controller) changes from "up" to "down".
<b>Corrective Action</b>	Verify that the cable in the port is seated properly.
<b>Syslog Message</b>	The on-board locked wrench port is down.
<b>Parameters</b>	

<b>EMS Identifier</b>	acp.locked.wrench.port.down
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the link status of a locked wrench Ethernet port (on the back of the storage controller) changes from "up" to "down".
<b>Corrective Action</b>	Verify that the cable in the port is seated properly.
<b>Syslog Message</b>	The on-board locked wrench port is down; Alternate Control Path (ACP) management is inactive.
<b>Parameters</b>	

<b>EMS Identifier</b>	acp.locked.wrench.port.up
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the link status of a locked wrench Ethernet port (on the back of the storage controller) changes from "down" to "up".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The on-board locked wrench port is up.
<b>Parameters</b>	

<b>EMS Identifier</b>	acp.need.firmware.update
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator determines that the ACP processor is running an older firmware revision that supports only the Secure Socket Library (SSL) channel. The "/etc/acpp_fw" directory requires the latest firmware file for the update to succeed. This module is marked as inactive.
<b>Corrective Action</b>	Copy the latest firmware file for this module into "/etc/acpp_fw", and then use the "system node run -node -command storage download acp" command to download the firmware.
<b>Syslog Message</b>	ACP module %s (%s) needs a firmware upgrade, (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): Inband ID of the module. <b>ip</b> (STRING): IP address of the module. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.need.module.upgrade
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator determines that the I/O module (IOM) does not support InBand ACP.
<b>Corrective Action</b>	Upgrade the IOM to IOM6 or later.
<b>Syslog Message</b>	IOM %s does not support InBand ACP. Upgrade the IOM to IOM6 or later for supportability (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): Inband ID of the module. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this IOM is seated.

<b>EMS Identifier</b>	acp.no.ip
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the node cannot find a free IP address for the Alternate Control Path (ACP) Management port. ACP functionality is disabled.
<b>Corrective Action</b>	Check the connection to the disk shelf ACP port and verify that it is not connected to a public network. Try plugging it into another Ethernet port with no devices, to see whether it is changed.
<b>Syslog Message</b>	Could not assign a free IP address to the ACP Management Ethernet port, disabling ACP functionality.
<b>Parameters</b>	

<b>EMS Identifier</b>	acp.post.data.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'post data' request that was sent to the Alternate Controller Path Processor fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A 'post data' request sent to %s (%s) failed with status (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Reason for the 'post data' failure. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.shelf.power.cycle.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Processor fails to complete a power cycle of the disk shelf.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf power cycle request issued to %s failed because %s.
<b>Parameters</b>	<b>shelf_id</b> (STRING): In-band ID or Shelf Serial Number of the module. <b>status</b> (STRING): Reason for failure.

<b>EMS Identifier</b>	acp.shelf.power.cycle.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Processor successfully completes a power cycle of the disk shelf.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf power cycle request issued to %s is successful.
<b>Parameters</b>	<b>shelf_id</b> (STRING): In-band ID or Shelf Serial Number of the module.

<b>EMS Identifier</b>	acp.shelf.power.off
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Processor receives a command to power off the disk shelf.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf power off request issued to %s
<b>Parameters</b>	<b>shelf_id</b> (STRING): In-band ID of the module or Shelf Serial Number.

<b>EMS Identifier</b>	acp.shelf.power.off.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Controller Path Administrator fails in its attempt to power-off the SAS disk shelf.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf power off request sent to %s failed with status %s
<b>Parameters</b>	<b>shelf_id</b> (STRING): In-band ID of the module. <b>status</b> (STRING): Reason for the power-off failure.

<b>EMS Identifier</b>	acp.shelf.power.off.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'shelf power off' command sent to the Alternate Controller Path (ACP) Processor succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf power off command sent to %s was successful
<b>Parameters</b>	<b>shelf_id</b> (STRING): In-band ID of the module or Shelf Serial Number.

<b>EMS Identifier</b>	acp.shelf.power.on
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Processor receives a command to power on a disk shelf.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf power up request issued to %s
<b>Parameters</b>	<b>shelf_id</b> (STRING): In-band ID of the module or Shelf Serial Number.

<b>EMS Identifier</b>	acp.shelf.power.on.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Controller Path Administrator fails in its attempt to power on the SAS disk shelf.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf power on request sent to %s failed with status %s
<b>Parameters</b>	<b>shelf_id</b> (STRING): In-band ID or Shelf Serial Number of the module. <b>status</b> (STRING): Reason for the 'power-on' failure.

<b>EMS Identifier</b>	acp.shelf.power.on.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'shelf power on' command sent to the Alternate Controller Path (ACP) Processor succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf power on command sent to %s was successful
<b>Parameters</b>	<b>shelf_id</b> (STRING): In-band ID of the module or Shelf Serial Number.

<b>EMS Identifier</b>	acp.sock.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system encounters a socket error while setting up the Alternate Control Path (ACP) Management Ethernet port. ACP functionality is subsequently inactive.
<b>Corrective Action</b>	Verify that the Ethernet cable is properly attached to the ACP port and that the green LED is on. Reenable the ACP using the "options acp.enabled on" command.
<b>Syslog Message</b>	An error was encountered while configuring the ACP Management Ethernet Port: %s.
<b>Parameters</b>	<b>ErrorString</b> (STRING): Error string.

<b>EMS Identifier</b>	acp.update.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator receives notification from the ACP Processor that it cannot upgrade the firmware because it is in some faulty state or the firmware file is not valid. The ACP processor will continue to run with the older firmware version.
<b>Corrective Action</b>	Try issuing the firmware download again using the "system node run -node -command storage download acp" command.
<b>Syslog Message</b>	ACP module %s (%s) failed to upgrade firmware, (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): Inband ID of the module. <b>ip</b> (STRING): IP address of the module. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.updateConfiguration
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator determines that the SAS shelf I/O module (IOM) supports only the in-band ACP configuration.
<b>Corrective Action</b>	> Use the "storage shelf acp configure -channel in-band -is-enabled true" command to enable in-band ACP.
<b>Syslog Message</b>	IOM %s in shelf S/N: %s does not support out-of-band ACP.
<b>Parameters</b>	<b>inband_id</b> (STRING): Inband ID of the module. <b>shelf_sno</b> (STRING): Storage shelf serial number of the shelf where the IOM is seated.

<b>EMS Identifier</b>	acp.upgrade.successful
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Alternate Control Path (ACP) Administrator determines that the ACP Processor has successfully upgraded the firmware.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ACP module %s (%s) successfully upgraded firmware, (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): Inband ID of the module. <b>ip</b> (STRING): IP address of the module. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

<b>EMS Identifier</b>	acp.voltage.status.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'voltage status' request that was sent to the Alternate Controller Path Processor fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A voltage status request sent to %s (%s) failed with status (%s), (disk shelf serial number: %s).
<b>Parameters</b>	<b>inband_id</b> (STRING): In-band ID of the module. <b>ip</b> (STRING): IP address of the module. <b>status</b> (STRING): Reason for the 'voltage status' failure. <b>shelf_sno</b> (STRING): Disk shelf serial number of the shelf where this I/O module is seated.

## "adminapi" Event Group

<b>EMS Identifier</b>	adminapi.input.badXml
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Data ONTAP server receives a bad XML request that does not contain the API name to be executed.
<b>Corrective Action</b>	Correct the input XML with the API name to be executed.
<b>Syslog Message</b>	Input XML does not contain the API name to be executed.
<b>Parameters</b>	

<b>EMS Identifier</b>	adminapi.xml.encoding
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated in case of a mismatched XML encoding received by ONTAP server.
<b>Corrective Action</b>	Correct the mismatched encoding and retry the API.
<b>Syslog Message</b>	ONTAP server got unexpected encoding (expected %s, got %s
<b>Parameters</b>	<b>expEnco</b> (STRING): The expected xml encoding. <b>recvEnco</b> (STRING): The actual received encoding.

<b>EMS Identifier</b>	adminapi.xml.namespace
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated in case of a mismatched xml namespace received by ONTAP server.
<b>Corrective Action</b>	Correct the XML namespace and retry the API.
<b>Syslog Message</b>	ONTAP server namespace (expected %s, got %s
<b>Parameters</b>	<b>expNamesp</b> (STRING): The expected xml namespace. <b>uri</b> (STRING): The received uri

## "adt" Event Group

<b>EMS Identifier</b>	adt.aggrcb.unlinkfail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the auditing subsystem cannot remove a stale aggregate control block entry from the Audit aggregate hash table. This could happen if the hash table rearrangement fails because of insufficient memory. In this condition, the auditing subsystem might not function or data access might be denied.
<b>Corrective Action</b>	Reboot the node. For high-availability (HA) configurations, perform a takeover and giveback from the partner to reduce the impact on system availability
<b>Syslog Message</b>	Auditing subsystem internal error: Aggregate Control Block: %s unlink failed for SVM with UUID: %s because of insufficient memory.
<b>Parameters</b>	<b>AggregateUuid</b> (STRING): UUID of the aggregate with a stale file handle. <b>VserverUuid</b> (STRING): UUID of the Storage Virtual Machine(SVM, formerly Vserver).

<b>EMS Identifier</b>	adt.aucb.overwrite
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs in the auditing subsystem, when the subsystem overwrite an existing audit control block during audit control block creation. The overwriting of the audit control block is because of a failure in audit control block deletion.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Overwriting of audit control block occurred.
<b>Parameters</b>	

<b>EMS Identifier</b>	adt.cmdq.init.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an internal audit command queue fails to initialize.
<b>Corrective Action</b>	Available system resources are required for this feature to function. The audit subsystem might not function, or might function with reduced performance. The best way to accomplish that is through a system reboot. For HA configurations, operational disruption can be minimized by initiating a partner takeover followed by a reboot of this partner. After the reboot is complete, issue a "giveback" command to return services to this partner.
<b>Syslog Message</b>	Audit subsystem internal error: Audit command queue failed to initialize, system reboot might be required.
<b>Parameters</b>	

<b>EMS Identifier</b>	adt.cmdthrd.create.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when audit initialization fails because the necessary execution threads cannot be created.
<b>Corrective Action</b>	Available system resources are required for this feature to function. The best way to accomplish that is through a system reboot. For HA configurations, operational disruption can be minimized by initiating a partner takeover followed by a reboot of this partner. After the reboot is complete, issue a "giveback" command to return services to this partner.
<b>Syslog Message</b>	Audit subsystem internal error: Could not start required audit command threads, system reboot might be required.
<b>Parameters</b>	

<b>EMS Identifier</b>	adt.dest.access.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the audit consolidation job fails to write audit logs to the destination directory because the destination directory is not available. This event can lead to denial of service on Security Access Control List (SACL) enabled objects.
<b>Corrective Action</b>	Use the "volume show" command to check whether the destination volume exists, is online, and has sufficient free space. Use the "volume modify" command to bring the volume online, or increase volume size. Use the "vserver audit modify" command to modify the destination volume.
<b>Syslog Message</b>	Audit consolidation job failed to access destination directory "%s" of Vserver "%s".
<b>Parameters</b>	<b>destination</b> (STRING): Destination directory of the Vserver into which the consolidation job failed to write audit logs. <b>vserver</b> (STRING): Vserver name whose consolidation job failed to write audit logs to the destination directory.

<b>EMS Identifier</b>	adt.dest.directory.full
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the audit consolidation process fails to write audit logs to the destination directory because the destination directory is full. This event can lead to denial of service on Security Access Control List (SACL) enabled objects.
<b>Corrective Action</b>	Use the "volume show" command to check whether the destination volume exists, is online, and has sufficient free space. Use the "volume modify" command to increase volume size. Use the "vserver audit modify" command to modify the destination volume path.
<b>Syslog Message</b>	Audit destination directory "%s" of Vserver "%s" is full.
<b>Parameters</b>	<b>destination</b> (STRING): Destination directory of the Vserver that is full. <b>vserver</b> (STRING): Vserver name whose audit consolidation process failed to write audit logs to the destination directory.

<b>EMS Identifier</b>	adt.dest.directory.unavail
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the audit consolidation job fails to write audit logs to the destination directory because the destination directory has become unavailable or has run out of space. This event can lead to denial of service for Security Access Control List (SACL) enabled objects.
<b>Corrective Action</b>	Use the "volume show" command to check whether the destination volume exists, is online, and has sufficient free space. Use the "volume modify" command to bring the volume online, or increase volume size. Use the "vserver audit modify" command to modify the destination volume.
<b>Syslog Message</b>	Audit destination directory "%s" of Vserver "%s" is unavailable or out of space.
<b>Parameters</b>	<b>destination</b> (STRING): Destination directory of the Vserver to which the consolidation job failed to write audit logs. <b>vserver</b> (STRING): Name of the Vserver name whose consolidation job failed to write audit logs to the destination directory.

<b>EMS Identifier</b>	adt.nfs.root.access.no.map
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs in the auditing subsystem, when the NFS root user is accessing the file without a valid CIFS credential. Access is being allowed because the "ignore-nt-acl-for-root" NFS option is set, and hence the BUILTIN\Administrator credential is used for auditing.
<b>Corrective Action</b>	If NFS root user access to the file without NT ACL check should be prohibited, disable the "ignore-nt-acl-for-root" option by using the "nfs modify -ignore-nt-acl-for-root" command. If a more appropriate CIFS credential should be used for auditing, configure the SVM name-mapping by using the "vserver name-mapping" command.
<b>Syslog Message</b>	NFS root user is accessing the file without a valid CIFS credential. Access is being allowed because the "ignore-nt-acl-for-root" NFS option is set, and hence the BUILTIN\Administrator credential is used for auditing.
<b>Parameters</b>	<b>VserverUuid</b> (STRING): UUID of the Storage Virtual Machine (SVM, formerly Vserver).

<b>EMS Identifier</b>	adt.service.block
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the volume that hosts the destination path where the final audit logs are stored is not accessible or does not have sufficient space and the audit consolidation service is not able to write to the volume. This prevents the audit service from working properly. File access and file audit logging is blocked.
<b>Corrective Action</b>	Use the "vserver audit show" command to get the name of the volume that hosts the destination path. Use the "volume show" command to check whether the volume exists, is online, and has sufficient free space. Use the "volume modify" command to increase volume size. Use the "vserver audit modify" command to modify the destination path.
<b>Syslog Message</b>	Audit destination directory "%s" of Vserver "%s" is either not accessible or full. File-Operations which need to be audited will be denied. File Audit Logging will also fail.
<b>Parameters</b>	<b>destinationPath</b> (STRING): Destination path. <b>vserverName</b> (STRING): Name of the Storage Virtual Machine (SVM, formerly Vserver).

<b>EMS Identifier</b>	adt.service.ro.filesystem
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the volume that hosts the destination path where the final audit logs are stored is of type Data protection (DP) or Load sharing (LS). These volume types are read-only for the purposes of audit logging and logging will fail.
<b>Corrective Action</b>	Use the "vserver audit modify" command to modify the destination volume.
<b>Syslog Message</b>	Auditing and file-ops failing on SVM %s, the volume containing %s is read only filesystem.
<b>Parameters</b>	<b>vserverName</b> (STRING): Name of the Storage Virtual Machine (SVM, formerly Vserver). <b>destinationPath</b> (STRING): Destination path.

<b>EMS Identifier</b>	adt.service.unblock
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the volume that hosts the destination path where the final audit logs are stored was resized or cleaned up and the audit consolidation service is able to write to the volume thereby unblocking the audit service. File access and file audit logging is unblocked.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Audit destination directory "%s" of Vserver "%s" is now accessible and File-Operations which need to be audited will be unblocked. File Audit Logging will also be unblocked.
<b>Parameters</b>	<b>destinationPath</b> (STRING): Destination path. <b>vserverName</b> (STRING): Name of the Storage Virtual Machine (SVM, formerly Vserver).

<b>EMS Identifier</b>	adt.stgvol.info.notavailable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when retrieving staging volume information fails. This might be due to an internal system problem or the staging volume creation failed.
<b>Corrective Action</b>	Contact Cserver admin to check if staging volume has been created.
<b>Syslog Message</b>	Audit subsystem internal error: Either staging volume %s is not created or unable to retrieve staging volume information.
<b>Parameters</b>	<b>volName</b> (STRING): The Name of the staging volume.

<b>EMS Identifier</b>	adt.stgvol.missing
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when retrieving staging volume information fails. Either the staging volume was not created or information cannot be retrieved due to some internal error. As a result, auditing is not performed for operations on the corresponding volume.
<b>Corrective Action</b>	Use the command "vserver audit repair" in diagnostic mode to correct the problem.
<b>Syslog Message</b>	Audit subsystem internal error: Staging volume "%s" is either not created or not available.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the volume that is missing.

<b>EMS Identifier</b>	adt.stgvol.nospace
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a staging volume does not have enough space and the audit service tries to create a new staging file or directory for writing audit logs.
<b>Corrective Action</b>	Check the volume for older staging files that are no longer required and remove those files. Then retry the operation.
<b>Syslog Message</b>	Audit subsystem internal error: Staging volume %s is full.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the volume that is full.

<b>EMS Identifier</b>	adt.stgvol.offline
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a staging volume is offline and the audit service tries to write an audit log into the staging volume.
<b>Corrective Action</b>	Contact the Cserver administrator to set the staging volume status to online.
<b>Syslog Message</b>	Audit subsystem internal error: Staging volume %s is offline.
<b>Parameters</b>	<b>volName</b> (STRING): The Name of the volume which is offline.

<b>EMS Identifier</b>	adt.wrkrq.init.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an internal audit worker queue fails to initialize.
<b>Corrective Action</b>	Available system resources are required for this feature to function. The Audit subsystem might not function, or might function with reduced performance. The best way to accomplish that is through a system reboot. For HA configurations, operational disruption can be minimized by initiating a partner takeover followed by a reboot of this partner. After the reboot is complete, issue a "giveback" command to return services to this partner.
<b>Syslog Message</b>	Audit subsystem internal error: Audit worker queue failed to initialize; system reboot might be required.
<b>Parameters</b>	

<b>EMS Identifier</b>	adt.wkrthrd.create.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when audit initialization fails because the necessary execution threads cannot be created.
<b>Corrective Action</b>	Available system resources are required for this feature to function. The best way to accomplish that is through a system reboot. For HA configurations, operational disruption can be minimized by initiating a partner takeover followed by a reboot of this partner. After the reboot is complete, issue a "giveback" command to return services to this partner.
<b>Syslog Message</b>	Audit subsystem internal error: Could not start required audit worker threads; system reboot might be required.
<b>Parameters</b>	

## "aggr" Event Group

<b>EMS Identifier</b>	aggr.inconsistent.modify
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the 'aggr inconsistent' command is used to modify a state of an aggregate.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Aggregate %s: 'aggr inconsistent' command used to change inconsistent state to '%s'.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate. <b>state</b> (STRING): State of the action: "set" or "clear".

<b>EMS Identifier</b>	aggr.max.size.increased
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs as a reminder that the maximum aggregate size limit is increased from the default value defined in the Platform Specific Module (PSM) table.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Maximum aggregate size limit is increased from %ld TB to %ld TB.
<b>Parameters</b>	<b>old_limit</b> (LONGINT): Original aggregate size limit as defined in the PSM table. <b>new_limit</b> (LONGINT): New maximum aggregate size limit.

<b>EMS Identifier</b>	aggr.provisioning.unassigned.detected
<b>Severity</b>	NOTICE
<b>Description</b>	This message is issued when the aggregate provisioning recommendation generated for the cluster is found to be incomplete due to the presence of unsigned disks. Any spare disks that are not owned by a node in the cluster cannot contribute to the usable capacity of new aggregates.
<b>Corrective Action</b>	Use the following steps to resolve the issue: - Run 'storage disk show -container-type unassigned' to list all the unassigned disks in the cluster. To assign all unassigned disks, run 'storage disk assign -auto true -node [node-name]'. - If there are still unassigned disks in the cluster, refer to the Storage Management Guide for manual disk assignment best practices. - For further information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	The generated aggr provisioning recommendation might be incomplete because of the following reason: %s
<b>Parameters</b>	<b>details</b> (STRING): Details of the number of unassigned disks visible to a given node <b>source</b> (STRING): The source that generated this warning.

<b>EMS Identifier</b>	aggr.relocation.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when relocation of an aggregate fails.
<b>Corrective Action</b>	Refer to other generated error messages to identify the exact cause of failure and the corrective action.
<b>Syslog Message</b>	Relocation of aggregate %s failed by node %s because %s.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate that was not relocated. <b>node</b> (STRING): Name of the node that failed the relocation. <b>msg</b> (STRING): Error that prevented relocation.

<b>EMS Identifier</b>	aggr.wafliron.attemptStart
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when wafliron is started. A later message indicates the success or failure of wafliron.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>volname</b> (STRING): Volume name. <b>arguments</b> (STRING): Arguments supplied to wafliron on the command line.

## "aggrcopy" Event Group

<b>EMS Identifier</b>	aggrcopy.dst.autoRestrictMsg
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an aggregate copy start is issued on an aggregate which is offline.
<b>Corrective Action</b>	Aggr copy start is issued on a restricted aggregate use "aggr restrict" to restrict the destination aggregate.
<b>Syslog Message</b>	Aggr copy automatically restricting destination aggregate %s (currently offline).
<b>Parameters</b>	<b>dst</b> (STRING): The aggr copy destination aggregate

<b>EMS Identifier</b>	aggrcopy.dst.noMemory
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when there is insufficient memory on the aggr copy destination for the transfer to continue.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	System is low on memory, aborting aggr copy destination transfer.
<b>Parameters</b>	

<b>EMS Identifier</b>	aggrcopy.dst.revert
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an aggr copy start operation has to revert the checksum state of the destination volume aggregate because the source and destination aggregates have differing checksum states.
<b>Corrective Action</b>	No corrective action required.
<b>Syslog Message</b>	An aggr copy transfer to destination aggregate %s has found that the source and destination aggregates have differing checksum states. Data ONTAP is aborting the transfer and reverting the checksum state for the destination aggregate. After Data ONTAP displays a message showing the revert is complete, you will need to retry the operation. You can use the "aggr status -c" command to see the progress of the reversion.
<b>Parameters</b>	<b>dst</b> (STRING): The aggr copy destination volume

<b>EMS Identifier</b>	aggrcopy.dst.revertErr
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a aggr copy start operation is not able to revert the checksum state of the destination aggregate.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Data ONTAP cannot revert the checksum state of destination aggregate %s.
<b>Parameters</b>	<b>dst</b> (STRING): The aggr copy destination

<b>EMS Identifier</b>	aggrcopy.dst.reverting
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an aggr copy start operation is issued on an aggregate which is reverting its checksum state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Aborting aggr copy transfer to aggregate %s because it is reverting its checksum state.
<b>Parameters</b>	<b>dst</b> (STRING): The aggr copy destination aggregate

<b>EMS Identifier</b>	aggrcopy.restart.dst.chkFail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when 'aggr copy' checks for restart capability on the destination storage system fail. The 'aggr copy' transfer operation cannot be restarted. It starts as usual from the beginning (0 %%) without any further user action.
<b>Corrective Action</b>	No action necessary
<b>Syslog Message</b>	Destination side checks fail; 'aggr copy' transfer starts from 0%%.
<b>Parameters</b>	

<b>EMS Identifier</b>	aggrcopy.src.snapshotErr
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when we are not able to obtain all the snapshot information, from the vol copy source volume, required for a vol copy transfer.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Aggr copy not able to obtain snapshot information from source aggregate %s
<b>Parameters</b>	<b>srcaggr</b> (STRING): The aggr copy source volume

## "air" Event Group

<b>EMS Identifier</b>	air.certify.cancel
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a meta-data inconsistency is discovered inside a file system feature that is read-only and therefore cannot be immediately corrected. One or more processes in ONTAP might have been canceled when they encountered the inconsistency.
<b>Corrective Action</b>	No immediate corrective action is necessary, as the ONTAP process that encountered the inconsistency has been automatically canceled. If the condition persists, contact NetApp technical support for assistance.
<b>Syslog Message</b>	AIR certification of %s failed: %s, %s; message %s canceled
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the object with an inconsistency. <b>condition</b> (STRING): The particular metadata validation test that failed. <b>source</b> (STRING): The location of the failing metadata validation test. <b>msg</b> (STRING): The ONTAP process that encountered the inconsistency.

<b>EMS Identifier</b>	air.cleared.qtm.entry
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Automated Incremental Repair (AIR) subsystem clears an entry in the qtree metafile because of inconsistent data within that entry.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Qtree entry certification failed at %s. In the qtree metafile %d, AIR cleared an entry that corresponds to the TID %d in volume %s.
<b>Parameters</b>	<b>source</b> (STRING): Location where qtree entry certification failed. <b>inode</b> (INT): Inode number of qtree metafile. <b>tid</b> (INT): TID. <b>volume</b> (STRING): Name of the volume.

<b>EMS Identifier</b>	air.corrected.qtree.tid
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Automated Incremental Repair (AIR) subsystem repairs an inode having a corrupted qtree ID.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Qtree entry certification failed at %s. AIR repaired qtree inode %d: old TID %d, new TID %d, fgindex %d.
<b>Parameters</b>	<b>source</b> (STRING): Location where qtree entry certification failed. <b>inode</b> (INT): Inode number. <b>old_tid</b> (INT): Old TID. <b>new_tid</b> (INT): New TID. <b>fgindex</b> (INT): Fgindex of the qtree root.

<b>EMS Identifier</b>	air.enabled.fg.qtree
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs in a FlexGroup, when the qtree support is enabled on the volume, but disabled on one or more constituent volumes. ONTAP(R) software automatically enabled the qtree support on the relevant constituent volumes.
<b>Corrective Action</b>	This message indicates that the qtree support is enabled on the volume, but disabled in one or more constituents within the FlexGroup. ONTAP(R) software automatically enabled the qtree support in the relevant constituent FlexGroup volumes.
<b>Syslog Message</b>	Enabled qtree support in FlexGroup constituent volume %s after detecting inconsistency in %s.
<b>Parameters</b>	<b>volume</b> (STRING): Name of the volume. <b>source</b> (STRING): Location of the failing metadata validation.

<b>EMS Identifier</b>	air.qtm.rebuild.scan.state
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the state of a scanner used to rebuild the qtree metafile changes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Scanner to rebuild the qtree metafile is %s.
<b>Parameters</b>	<b>state</b> (STRING): State of the scanner.

<b>EMS Identifier</b>	air.repaired.dir.inode
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered in a directory. The inconsistency is repaired automatically as soon as it is detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Directory %s certification failed: %s, %s.
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the affected directory. <b>condition</b> (STRING): Initial metadata validation test that failed. <b>source</b> (STRING): Location of the failing metadata validation test.

<b>EMS Identifier</b>	air.repaired.hardlink.i2p
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the AIR subsystem repairs an inconsistent inode and previously unreachable hard links are returned to availability.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	AIR repaired inconsistent hardlink for inode %d: %d %d %s
<b>Parameters</b>	<b>inode</b> (INT): Inode number. <b>parent_inode</b> (INT): Parent inode number. <b>link_count</b> (INT): Inode link count. <b>volume</b> (STRING): Name of the volume.

<b>EMS Identifier</b>	air.repaired.qtree.id
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered in the qtree ID of an inode. The inconsistency is repaired automatically as soon as it is discovered.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Repaired inconsistent inode with inum %d due to a corrupted qtree ID: Old qtree ID %d, new qtree ID %d, volume %s.
<b>Parameters</b>	<b>inode</b> (INT): Inode number. <b>old_tid</b> (INT): Old qtree ID. <b>new_tid</b> (INT): New qtree ID. <b>volume</b> (STRING): Name of the volume.

<b>EMS Identifier</b>	air.repaired.qtree.metafile
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered in a qtree metafile. The inconsistency is repaired automatically as soon as it is detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Qtree metafile %s
<b>Parameters</b>	<b>details</b> (STRING): Description of the metadata failure that has been fixed.

<b>EMS Identifier</b>	air.repaired.qtree.root
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system discovers an inconsistency between the qtree file root and a qtree metafile entry. The system repairs this inconsistency automatically, as soon as it detects it.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Qtree root %s certification failed: %s, %s corrections: %s.
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the affected qtree root. <b>condition</b> (STRING): Initial metadata validation test that failed. <b>source</b> (STRING): Location of the failing metadata validation test. <b>state</b> (STRING): Description of the metadata that has been fixed.

<b>EMS Identifier</b>	air.repaired.remote.index
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered within the WAFL RAL index. The inconsistency is automatically repaired immediately upon detection.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Remote index %s certification failed: %s, %s (%s)
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the affected metafile. <b>condition</b> (STRING): The initial metadata validation test that failed. <b>source</b> (STRING): The location of the failing metadata validation test. <b>state</b> (STRING): The RAL index record that was discovered to be incorrect.

<b>EMS Identifier</b>	air.repaired.remote.inode
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered between a file and its RAL state within WAFL. The inconsistency is automatically repaired immediately upon detection.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Remote inode %s certification failed: %s, %s (%s)
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the affected file. <b>condition</b> (STRING): The initial metadata validation test that failed. <b>source</b> (STRING): The location of the failing metadata validation test. <b>state</b> (STRING): A description of the RAL state metadata that was found to be inconsistent.

<b>EMS Identifier</b>	air.repaired.remote.metafile
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered within a WAFL RAL metafile. The inconsistency is automatically repaired immediately upon detection.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Remote metafile %s certification failed: %s, %s (%s)
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the affected metafile. <b>condition</b> (STRING): The initial metadata validation test that failed. <b>source</b> (STRING): The location of the failing metadata validation test. <b>state</b> (STRING): A description of the RAL metafile that was found to be inconsistent.

<b>EMS Identifier</b>	air.repaired.remote.tallies
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered in the tallies in Remote Entry metafile. The inconsistency is automatically repaired immediately upon detection.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Remote metafile %s certification failed: %s, %s (%s)
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the affected metafile. <b>condition</b> (STRING): The initial metadata validation test that failed. <b>source</b> (STRING): The location of the failing metadata validation test. <b>state</b> (STRING): A description of the RAL metafile that was found to be inconsistent.

<b>EMS Identifier</b>	air.repaired.user.ind
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an inconsistency is discovered in the user indirect block. The inconsistency is repaired automatically immediately upon detection.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	User indirect %s certification failed: %s (%s)
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the affected file. <b>condition</b> (STRING): Initial metadata validation test that failed. <b>state</b> (STRING): Description of the user indirect block that was found to be inconsistent. <b>source</b> (STRING): Location of the failing metadata validation test.

<b>EMS Identifier</b>	air.repaired.vplus
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an indexed storage tree is rebuilt after a metadata inconsistency is discovered, in order to repair the inconsistency.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	AIR vplus rebuild of %s completed
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the storage tree.

<b>EMS Identifier</b>	air.vplus.certify.failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered inside an indexed storage tree. The inconsistency is automatically repaired immediately upon detection.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	AIR vplus certification of %s failed: %s, %s
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the storage tree. <b>condition</b> (STRING): The particular metadata validation test that failed. <b>source</b> (STRING): The location of the failing metadata validation test.

## "am" Event Group

<b>EMS Identifier</b>	am.dest.check.failed
<b>Severity</b>	NOTICE
<b>Description</b>	Relocation of aggregates fails at the destination as we no longer accept aggregates from versions 8.2.0 or lower.
<b>Corrective Action</b>	User needs to upgrade to 8.2.1 before attempting ARL to 8.3.0 or higher. `
<b>Syslog Message</b>	Relocation of aggregates failed from node %s to current node as ARL is no longer supported from releases 8.2.0 or lower to 8.3.0 or higher.
<b>Parameters</b>	<b>partner_node</b> (STRING): Source of the aggregate migration

## "api" Event Group

<b>EMS Identifier</b>	api.engine.killed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This event is posted when the ONTAPI(R) engine is unexpectedly terminated. The ONTAPI APIs cannot be executed until the system is rebooted.
<b>Corrective Action</b>	Reboot the controller. If the problem persists, contact Contact NetApp technical support.
<b>Syslog Message</b>	Error in API Engine. Engine name: %s.
<b>Parameters</b>	<b>engineName</b> (STRING): Name of the execution engine (e.g., "m" or "d").

<b>EMS Identifier</b>	api.fileio
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs after a file I/O error that typically causes a Data ONTAP(R) API to fail. While processing Data ONTAP API requests, the system might write intermediate results to files. For example, a long running command returning quantities of data might send a batch of data and save remaining data in a file for subsequent delivery. An I/O error occurred during one of these operations.
<b>Corrective Action</b>	If the problem is related to creating a file, use the system's "df" and "df -i" commands to determine whether the root volume is full or all inodes are in use. If so, it might be possible to remove unneeded files to release space or inodes needed for Data ONTAP API operations. If the problem is that an intermediate file is being deleted because of its age, no action is needed. Probably the client that requested the API did not complete the API processing.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>errorDescription</b> (STRING): Description of the I/O error that occurred. <b>targetDescription</b> (STRING): Description of the file or directory in which the error occurred. <b>errorCode</b> (INT): Numeric error code. <b>errorDetail</b> (STRING): Description of the error code.

<b>EMS Identifier</b>	api.input.invalidSchema
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an ONTAPI(tm) API receives extra input parameters as part of the API request or when a required input parameter is missing in the API request. Most often this is due to a bug in the application that initiates the API request.
<b>Corrective Action</b>	The error is due to strict schema validation. You can turn off the input schema validation by using the following CLI commands: \$priv set advanced \$registry set state.api.schema_input_validate.enable off
<b>Syslog Message</b>	Error in API input schema validation. API name: %s. Detailed error: %s.
<b>Parameters</b>	<b>apiName</b> (STRING): Name of the ONTAPI API in which something invalid was detected. <b>detailInfo</b> (STRING): Description of the error in the API input, such as an extra input value or a missing input value.

<b>EMS Identifier</b>	api.output.invalid
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when An invalid character was detected while checking the output for a Data ONTAP(R) API. All Data ONTAP API output must be valid UTF-8 characters. From time to time invalid output is detected. Most often this is due to hardware errors, for example, a disk-list-info API might query a disk drive for its serial number but receive invalid data from a malfunctioning drive.
<b>Corrective Action</b>	Examine the information in detailInfo to see if it pinpoints defective hardware. If an API name is provided, that API can be executed to determine which field in the API output is being given invalid data.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>detailInfo</b> (STRING): Information regarding the circumstances in which the error was detected, for example, the API name and/or the piece of hardware that provided invalid data. <b>invalidValue</b> (INTHEX): The character in the string that was invalid, printed as a hexadecimal number.

<b>EMS Identifier</b>	api.output.invalidSchema
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an ONTAPI(tm) API generates output that violates the declared schema of the API. Most often this is due to a bug in the API handler.
<b>Corrective Action</b>	The error is due to strict schema validation. You can turn off the output schema validation by using the following CLI commands: \$priv set advanced \$registry set state.api.schema_output_validate.enable off
<b>Syslog Message</b>	Error in API output schema validation. API name: %s. Detailed error: %s.
<b>Parameters</b>	<b>apiName</b> (STRING): Name of the ONTAPI API in which something invalid was detected. <b>detailInfo</b> (STRING): Description of the error in the API output, such as an extra output value or a missing output value.

## "app" Event Group

<b>EMS Identifier</b>	app.log.alert
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when an application is in a condition that should be corrected immediately.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: %s %s: (%u) %s: %s
<b>Parameters</b>	<b>computerName</b> (STRING): Client Computer connected to the Filer. <b>eventSource</b> (STRING): Client application that generated this event. <b>appVersion</b> (STRING): Client application version. <b>eventID</b> (INT): Application eventID. <b>category</b> (STRING): Event category. <b>subject</b> (STRING): Event description.

<b>EMS Identifier</b>	app.log.emerg
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an application encounters a fatal error and requires immediate attention.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	%s: %s %s: (%u) %s: %s
<b>Parameters</b>	<b>computerName</b> (STRING): Client Computer connected to the Filer. <b>eventSource</b> (STRING): Client application that generated this event. <b>appVersion</b> (STRING): Client application version. <b>eventID</b> (INT): Application eventID. <b>category</b> (STRING): Event category. <b>subject</b> (STRING): Event description.

<b>EMS Identifier</b>	app.log.err
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when an application encounters an error condition.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: %s %s: (%u) %s: %s
<b>Parameters</b>	<b>computerName</b> (STRING): Client Computer connected to the Filer. <b>eventSource</b> (STRING): Client application that generated this event. <b>appVersion</b> (STRING): Client application version. <b>eventID</b> (INT): Application eventID. <b>category</b> (STRING): Event category. <b>subject</b> (STRING): Event description.

<b>EMS Identifier</b>	app.log.info
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when an application's message is meant for informational purposes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: %s %s: (%u) %s: %s
<b>Parameters</b>	<b>computerName</b> (STRING): Client Computer connected to the Filer. <b>eventSource</b> (STRING): Client application that generated this event. <b>appVersion</b> (STRING): Client application version. <b>eventID</b> (INT): Application eventID. <b>category</b> (STRING): Event category. <b>subject</b> (STRING): Event description.

<b>EMS Identifier</b>	app.log.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an application is notifying of a certain event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: %s %s: (%u) %s: %s
<b>Parameters</b>	<b>computerName</b> (STRING): Client Computer connected to the Filer. <b>eventSource</b> (STRING): Client application that generated this event. <b>appVersion</b> (STRING): Client application version. <b>eventID</b> (INT): Application eventID. <b>category</b> (STRING): Event category. <b>subject</b> (STRING): Event description.

<b>EMS Identifier</b>	app.temp.destroy.volume.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume cannot be destroyed as a part of an application destroy operation.
<b>Corrective Action</b>	Use the "volume offline" command to take the volume offline, and then use the "volume delete" command to delete the volume manually. Retry the "application destroy" command on the specified application.
<b>Syslog Message</b>	Failed to destroy volume %s of application %s on Vserver %s. Error %s.
<b>Parameters</b>	<b>volume</b> (STRING): Name of the volume. <b>application_name</b> (STRING): Name of the application that contains this volume. <b>vserver</b> (STRING): Name of the Vserver. <b>error</b> (STRING): The error that the application destroy service encountered while destroying the volume.

<b>EMS Identifier</b>	app.temp.rb.app.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot remove or roll back an application that it created.
<b>Corrective Action</b>	Run the "application destroy" command on the specified application.
<b>Syslog Message</b>	Failed to roll back application %s (rollback operation: %s) in Vserver %s. Error %s.
<b>Parameters</b>	<b>application_name</b> (STRING): Name of the application. <b>rollback_operation</b> (STRING): Rollback operation that failed. <b>vserver_name</b> (STRING): Name of the Vserver in which the application was created. <b>error</b> (STRING): The error that the system encountered during attempted application removal.

<b>EMS Identifier</b>	app.temp.rb.igroup.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an igroup created by the provisioning engine was not removed during the rollback operation after an error was encountered.
<b>Corrective Action</b>	Use the "lun igroup delete" command to delete the igroup manually.
<b>Syslog Message</b>	Failed to roll back the creation of igroup %s on Vserver %s: %s
<b>Parameters</b>	<b>igroup</b> (STRING): Name of the igroup. <b>vserver</b> (STRING): Name of the Vserver. <b>error</b> (STRING): The error that the balanced placement service encountered while destroying the igroup.

<b>EMS Identifier</b>	app.temp.rb.initiator.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an initiator added by the provisioning engine was not removed during the rollback operation after an error was encountered.
<b>Corrective Action</b>	Use the "lun igroup remove" command to remove the initiator manually.
<b>Syslog Message</b>	Failed to roll back the addition of initiator %s to igroup %s on Vserver %s: %s
<b>Parameters</b>	<b>initiator</b> (STRING): Name of the initiator. <b>igroup</b> (STRING): Name of the igroup. <b>vserver</b> (STRING): Name of the Vserver. <b>error</b> (STRING): The error that the balanced placement service encountered while removing an initiator from an igroup.

<b>EMS Identifier</b>	app.temp.rb.lun_map.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a LUN map created by the provisioning engine was not removed during the rollback operation after an error was encountered.
<b>Corrective Action</b>	Use the "lun mapping delete" command to delete the LUN map manually.
<b>Syslog Message</b>	Failed to roll back the mapping of LUN %s to igroup %s on Vserver %s: %s
<b>Parameters</b>	<b>path</b> (STRING): Path of the LUN. <b>igroup</b> (STRING): Name of the igroup. <b>vserver</b> (STRING): Name of the Vserver. <b>error</b> (STRING): The error that the balanced placement service encountered while destroying the LUN map.

<b>EMS Identifier</b>	app.temp.rb.mod.ss.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an application component's storage service is modified as part of a failed "application modify" command. The performance provided by the affected application component will not match the performance guaranteed by its storage service until this problem is corrected.
<b>Corrective Action</b>	Use the "cluster show" command to verify that all of the nodes are healthy, and then retry the "application modify" command. Contact NetApp technical support if the issue persists.
<b>Syslog Message</b>	Failed to reset the original storage service %s of application component %s in application %s on Vserver %s: %s.
<b>Parameters</b>	<b>storage_service_name</b> (STRING): Name of the original storage service. <b>application_component_name</b> (STRING): Name of the application component. <b>application_name</b> (STRING): Name of the application. <b>vserver_name</b> (STRING): Name of the Vserver on which the application was modified. <b>error</b> (STRING): The error that the "application modify" command encountered while resetting the application component's original storage service.

<b>EMS Identifier</b>	app.temp.rb.mod.vol.qos.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume's adaptive Quality of Service (QoS) policy is modified as part of a failed "application modify" command. The performance provided by the application component that owns the affected volume will not match the performance guaranteed by its storage service until this problem is corrected.
<b>Corrective Action</b>	Use the "application modify" command to modify the application's storage service, or use the "volume modify" command to reset the original adaptive policy group for the volume.
<b>Syslog Message</b>	Failed to reset the original adaptive policy group %s of volume %s on Vserver %s: %s
<b>Parameters</b>	<b>policy_group</b> (STRING): Name of the adaptive policy group. <b>volume</b> (STRING): Name of the volume. <b>vserver</b> (STRING): Name of the Vserver. <b>error</b> (STRING): The error that the "application modify" command encountered while resetting the original adaptive policy group.

<b>EMS Identifier</b>	app.temp.remove.app.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an application cannot be removed from the persistent database during an "application destroy" operation.
<b>Corrective Action</b>	Retry the "application destroy" command. Contact NetApp technical support if the failure persists.
<b>Syslog Message</b>	Failed to remove application %s on Vserver %s from the persistent database. Error %s.
<b>Parameters</b>	<b>application_name</b> (STRING): Name of the application. <b>vserver_name</b> (STRING): Name of the Vserver. <b>error</b> (STRING): The error that the application destroy service encountered while removing the application from the persistent database.

## "application" Event Group

<b>EMS Identifier</b>	application.volume.removed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an application is destroyed, but a member volume was not deleted after an error was encountered. This volume is no longer associated with the application and must be deleted manually.
<b>Corrective Action</b>	Delete the volume using the "volume delete" command.
<b>Syslog Message</b>	Failed to destroy member volume %s in Vserver %s during an application destroy operation. The volume must be deleted manually. The volume was previously associated with an application with UUID %s.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of the volume. <b>vserver</b> (STRING): Vserver containing the volume. <b>applicationUUID</b> (STRING): UUID of the application.

## "aps" Event Group

<b>EMS Identifier</b>	aps.rollback.qospolicy.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a QoS policy group created by the provisioning engine was not removed during the rollback operation after an error was encountered.
<b>Corrective Action</b>	Use the "qos policy-group delete" command to delete the indicated QoS policy group manually.
<b>Syslog Message</b>	Failed to roll back the creation of QoS policy group %s: %s
<b>Parameters</b>	<b>policy_group</b> (STRING): Name of the QoS policy group. <b>error</b> (STRING): The error that the balanced placement service encountered while destroying the QoS policy group.

<b>EMS Identifier</b>	aps.rollback.volume.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume created by the provisioning engine was not removed during the rollback operation after an error was encountered.
<b>Corrective Action</b>	Use the "volume delete" command to delete the volume manually.
<b>Syslog Message</b>	Failed to roll back the creation of volume %s on Vserver %s: %s
<b>Parameters</b>	<b>volume</b> (STRING): Name of the volume. <b>vserver</b> (STRING): Name of the Vserver. <b>error</b> (STRING): The error that the balanced placement service encountered while destroying the volume.

## "arl" Event Group

<b>EMS Identifier</b>	arl.abort.raid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a relocation of an aggregate is canceled due to activity in RAID.
<b>Corrective Action</b>	Reissue the "storage aggregate relocation start" command to initiate relocation of an aggregate to the specified destination node after the pending or in-progress operation on the aggregate is complete.
<b>Syslog Message</b>	Aggregate %s%s is %s; canceling 'storage aggregate relocation start' operation.
<b>Parameters</b>	<b>owner</b> (STRING): String indicating the owner of the affected aggregate. <b>vol</b> (STRING): Name of the aggregate. <b>reason</b> (STRING): Activity that is preventing the aggregate relocation operation.

<b>EMS Identifier</b>	arl.aggrDestTimeout
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during an aggregate relocation operation, when the source node does not receive notification from the destination node, within the specified time, that the aggregate is online.
<b>Corrective Action</b>	Use the "storage aggregate show" command to verify that the aggregate and its volumes are online on the destination node.
<b>Syslog Message</b>	Node did not receive notification from the destination in %llu milliseconds that aggregate %s is online after relocation.
<b>Parameters</b>	<b>time</b> (LONGINT): Timeout, in milliseconds, for notification from the destination node that an aggregate is online after relocation. <b>aggrName</b> (STRING): Name of the aggregate that was relocated.

<b>EMS Identifier</b>	arl.aggrOnlineFailed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the RAID or WAFL(R) subsystem fails to bring online the aggregate or its containing volumes after relocation.
<b>Corrective Action</b>	Check the EMS logs for messages from the RAID and WAFL subsystems to determine the exact cause of the failure and the corrective action.
<b>Syslog Message</b>	Bringing online of aggregate %s or its volumes failed after relocation with error %d.
<b>Parameters</b>	<b>aggrName</b> (STRING): Name of the aggregate that was relocated. <b>error</b> (INT): Error that occurred while bringing online the aggregate or its volumes after relocation.

<b>EMS Identifier</b>	arl.aggrOnlineTimeout
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node fails to bring online the aggregate and its containing volumes within the specified time after relocation.
<b>Corrective Action</b>	Use the "storage aggregate show" command to verify that the aggregate and its volumes are online.
<b>Syslog Message</b>	Node did not bring online the aggregate %s and its volumes after relocation for %llu milliseconds.
<b>Parameters</b>	<b>aggrUUID</b> (STRING): UUID of the aggregate that was relocated. <b>time</b> (LONGINT): Timeout, in milliseconds, to bring online the aggregate and its volumes after relocation.

<b>EMS Identifier</b>	arl.aggrStart
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when relocation of a storage failover aggregate starts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Starting relocation of aggregate %s at time %llu.
<b>Parameters</b>	<b>aggrName</b> (STRING): Name of the aggregate being relocated. <b>time</b> (LONGINT): Time at which relocation of the aggregate started. <b>aggrUUID</b> (STRING): UUID of the aggregate being relocated.

<b>EMS Identifier</b>	arl.connectToDestFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the local node cannot connect over the cluster network to the d-blade of the destination node while relocating an aggregate.
<b>Corrective Action</b>	1. Verify that the destination node is up. 2. Use the "network interface show" command to verify that the cluster network interfaces on the local node and the destination node are both up. 3. Retry the aggregate relocation command.
<b>Syslog Message</b>	Failed to connect with the destination node %s (d-blade ID: %s) over the cluster network while relocating aggregate %s.
<b>Parameters</b>	<b>destName</b> (STRING): Name of the destination node. <b>destDbladeid</b> (STRING): D-blade ID of the destination node. <b>aggrName</b> (STRING): Name of the aggregate being relocated.

<b>EMS Identifier</b>	arl.netra.ca.check.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during the relocation of an aggregate, when the destination node cannot reach the object stores.
<b>Corrective Action</b>	Verify that your intercluster LIF is online and functional by using the 'network interface show' command. Also, check network connectivity to the object store server by using the 'ping' command over the destination node intercluster LIF. Additionally, verify that the configuration of your object store has not changed and that login and connectivity information is still accurate by using the 'aggregate object-store config show' command. It is possible to override this error by using the 'override-destination-checks' parameter of the relocation command. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	Relocation of aggregate '%s' failed due to %s preventing object store access on the destination node.
<b>Parameters</b>	<b>vol</b> (STRING): Name of the aggregate. <b>reason</b> (STRING): Activity that is preventing the aggregate relocation operation.

<b>EMS Identifier</b>	arl.netra.ha.dskChkFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when relocation of an aggregate fails because the destination node cannot see all disks belonging to the aggregate.
<b>Corrective Action</b>	If the destination is the source node's high-availability (HA) partner, identify the missing disks by using the "storage failover show -fields local-missing-disks, partner-missing-disks" command. If the destination is not the source node's HA partner, use the "storage disk show -aggregate" command to list the disks belonging to the aggregate, and then verify that those disks are visible from the destination by using the "storage disk show" command.
<b>Syslog Message</b>	Relocation of aggregate %s failed from node %s because the destination node cannot see all disks belonging to the aggregate.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate that was not relocated. <b>node</b> (STRING): Name of the node that failed the relocation.

<b>EMS Identifier</b>	arl.netra.lmgr.limit.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during the relocation of an aggregate, when the destination node fails the lock count limit checks.
<b>Corrective Action</b>	Ensure that the destination node supports the identified lock count limits, or select a different destination node and retry the operation.
<b>Syslog Message</b>	Aggregate '%s': Lock limits check failed on destination node. %s
<b>Parameters</b>	<b>vol</b> (STRING): Name of the aggregate. <b>reason</b> (STRING): Activity that is preventing the aggregate relocation operation.

<b>EMS Identifier</b>	arl.netra.lmgr.reserve.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate is being relocated, and the partner node fails to reserve lock resources needed for this aggregate.
<b>Corrective Action</b>	Take the appropriate action based on the reason supplied in the logged message: - 'Partner reconstructing locks': Retry the relocation after reconstruction is complete on the partner node. You can check the reconstruction progress by using the 'debug locks reconstruction show' diagnostic privilege command. - 'Partner does not have sufficient lock resources': Free up lock resources on the partner and retry the relocation. You can free lock resources on the partner as client applications using locks are closed for volumes contained on that node. You can also free lock resources by moving volumes with locks from the partner node to a different node in the cluster. - 'Memory allocation failure': The system is running low on memory. Monitor memory statistics on the node and retry the relocation when more memory is available. - For other reason messages, or for further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Aggregate '%s': Lock reservation failed. Reason: %s.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate being relocated. <b>reason</b> (STRING): Reason the lock reservation failed.

<b>EMS Identifier</b>	arl.netra.raid.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during migration of an aggregate as part of aggregate relocation, when one of the aggregate checks fails on the destination node, which include duplicate aggregate name, duplicate Universally Unique Identifier (UUID), aggregate count, and capacity limits.
<b>Corrective Action</b>	1. If checks fail due to aggregate count or capacity limits, then relocate this aggregate to an alternate destination node that has enough capacity to receive the aggregate. 2. If checks fail due to duplicate aggregate name or UUID, delete the duplicate aggregate created from previous "storage failover giveback" or "storage aggregate relocation" operations. Contact NetApp technical support for assistance with deletion of the unwanted duplicate aggregate.
<b>Syslog Message</b>	Aggregate '%s' (UUID = %s, type = %s, home_owner_id = %llu, dr_home_owner_id = %llu): RAID aggregate migration checks failed on destination node %s.
<b>Parameters</b>	<b>vol</b> (STRING): Name of the aggregate. <b>aggregate_uuid</b> (STRING): UUID of the aggregate. <b>raid_type</b> (STRING): RAID type of the volume. <b>home_owner_id</b> (LONGINT): NVRAM system ID of the aggregate's home owner. <b>dr_home_owner_id</b> (LONGINT): NVRAM system ID of the aggregate's disaster recovery (DR) home owner. <b>reason</b> (STRING): Activity that is preventing the aggregate relocation or giveback operation.

<b>EMS Identifier</b>	arl.netra.wafl.mcc.veto
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during the relocation of an aggregate, when one or more online left-behind disaster recovery(DR) aggregates are found on the destination node and the "node-object-limit" option is set to off.
<b>Corrective Action</b>	Check whether there exists any online left-behind DR aggregates on the destination node from a previous switchover operation. If such an aggregate exists, then perform the corrective actions specified in the earlier EMS messages for the left-behind aggregate to return it to its original owner, and then retry the operation. If you cannot perform the corrective action, then use the "override-destination-checks" option in the "relocation" command to force the relocation.
<b>Syslog Message</b>	Aggregate '%s': One or more online left-behind DR aggregates were found on the destination node and the "node-object-limit" option is set to off.
<b>Parameters</b>	<b>vol</b> (STRING): Name of the aggregate.

<b>EMS Identifier</b>	arl.OpAborted
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate relocation operation is aborted.
<b>Corrective Action</b>	Refer to other generated error messages to identify the exact cause of failure and the corrective action.
<b>Syslog Message</b>	Aggregate relocation operation aborted by node %s because %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node that aborted relocation. <b>msg</b> (STRING): Error that prevented relocation.

<b>EMS Identifier</b>	arl.OpFinished
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the aggregate relocation operation from the source node to the specified destination is finished. Use the "storage aggregate relocation show" command to check whether all aggregates were relocated successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Aggregate relocation operation from the source node %s to the destination node %s finished in %llu milliseconds. 'override-vetoes' set to %s, and 'override-destination-checks' set to %s.
<b>Parameters</b>	<p><b>srcName</b> (STRING): Name of the source node.</p> <p><b>destName</b> (STRING): Name of the destination node.</p> <p><b>time</b> (LONGINT): Time, in milliseconds, taken to complete the relocation operation.</p> <p><b>override_vetoes</b> (STRING): Flag that indicates whether the system should override veto checks for a relocation operation. This flag corresponds to the "-override-vetoes" parameter of the "storage aggregate relocation start" command. When set to true, it might result in the relocation proceeding even if the node detects outstanding issues that would make aggregate relocation dangerous or disruptive.</p> <p><b>override_dest_checks</b> (STRING): Flag that indicates whether the system should override checks done on the destination node. This flag corresponds to the "-override-destination-checks" parameter of the "storage aggregate relocation start" command. When set to true, it can be used to force relocation of aggregates even if the destination has outstanding issues. Note that this could make the relocation dangerous or disruptive.</p>

<b>EMS Identifier</b>	arl.OpStart
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the aggregate relocation operation starts. After this message is displayed, aggregates are relocated to the specified destination serially.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Starting relocation to destination %s at time %llu. 'override-vetoes' set to %s, and 'override-destination-checks' set to %s.
<b>Parameters</b>	<p><b>destName</b> (STRING): Name of the destination node.</p> <p><b>time</b> (LONGINT): Time at which relocation started.</p> <p><b>override_vetoes</b> (STRING): Flag that indicates whether the system should override veto checks for a relocation operation. This flag corresponds to the "-override-vetoes" parameter of the "storage aggregate relocation start" command. When set to true, it might result in the relocation proceeding even if the node detects outstanding issues that would make aggregate relocation dangerous or disruptive.</p> <p><b>override_dest_checks</b> (STRING): Flag that indicates whether the system should override checks done on the destination node. This flag corresponds to the "-override-destination-checks" parameter of the "storage aggregate relocation start" command. When set to true, it can be used to force relocation of aggregates even if the destination has outstanding issues. Note that this could make the relocation dangerous or disruptive.</p>

<b>EMS Identifier</b>	arl.postMigrNotOk
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the specified subsystem encounters an error during the post-migration phase of the aggregate relocation (ARL) operation.
<b>Corrective Action</b>	Check the event log for a subsystem-specific reason as to why the subsystem failed the post-migration phase of the relocation operation. The corrective action is subsystem-specific and is detailed in the corrective action portion of the message. Follow the corrective action specified by that message.
<b>Syslog Message</b>	Relocation of aggregate '%s' encountered an error during post-migration processing. The error was encountered by the subsystem '%s'.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate on which the subsystem attempted the relocation operation. <b>subsystem</b> (STRING): Name of the subsystem that failed the relocation operation.

<b>EMS Identifier</b>	arl.precmt.lmgr.resync.abrt
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during aggregate relocation, when automatic lock resynchronization with the node's high-availability (HA) partner for files on this aggregate was aborted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Automatic lock resynchronization was aborted for aggregate %s on forced relocation.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate for which resynchronization was aborted.

<b>EMS Identifier</b>	arl.precmt.lmgr.resyncing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during aggregate relocation, when automatic lock resynchronization with the node's high-availability (HA) partner is in progress for files on this aggregate.
<b>Corrective Action</b>	Retry the relocation after verifying that lock synchronization is complete by using the 'debug locks auto-resync-status -aggregate ' diagnostic privilege command. If lock state disruption for all CA locks on the aggregate is acceptable, retry the aggregate relocation with the '-override-vetoes true' option.
<b>Syslog Message</b>	Could not relocate aggregate %s because automatic lock resynchronization was in progress.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate with locks not yet in sync.

<b>EMS Identifier</b>	arl.precmt.lmgr.sync.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when relocation of an aggregate has started but mirrored lock state cannot be created locally for the relocating aggregate. The relocate operation is aborted.
<b>Corrective Action</b>	Take the appropriate action based on the reason supplied in the logged message: - 'Timed Out': Retry the aggregate relocation with the '-override-destination-checks' option. Overriding the check might result in a longer administrative outage period during which no administrative operations can be performed for volumes on this aggregate. - 'Fatal Error': Contact NetApp technical support.
<b>Syslog Message</b>	Could not relocate the aggregate %s because creating locally mirrored lock state failed.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate being relocated. <b>reason</b> (STRING): Reason the local mirrored lock state creation failed.

<b>EMS Identifier</b>	arl.precmt.lmgr.sync.forced
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during aggregate relocation, when local mirrored lock state creation is allowed to proceed without any time restrictions. This might result in a longer administrative outage period during which no administrative operations can be performed for volumes on this aggregate.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Local mirrored lock state creation for relocating aggregate %s is proceeding without time restrictions.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate being relocated.

<b>EMS Identifier</b>	arl.precmt.repl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when all replication transfers are aborted because of aggregate relocation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Replication transfers aborted due to aggregate relocation.
<b>Parameters</b>	

<b>EMS Identifier</b>	arl.precmt.vdom.lowMem
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate relocation fails due to the unavailability of Data ONTAP(R) memory on the source node.
<b>Corrective Action</b>	Free some memory and retry the aggregate relocation.
<b>Syslog Message</b>	Relocation of aggregate %s failed due to unavailability of Data ONTAP(R) memory on the source node.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate that was not relocated.

<b>EMS Identifier</b>	arl.subsystemAbort
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the specified subsystem aborts relocation of the aggregate.
<b>Corrective Action</b>	Check the syslog/EMS output for a subsystem-specific reason for aborting the relocation operation. The corrective action is subsystem-specific and is detailed in the corrective action portion of the message. Follow the corrective action specified by the subsystem and then reissue the 'relocation' command. If you cannot perform the corrective action, then use the 'override-vetoes' option in the 'relocation' command to force the relocation.
<b>Syslog Message</b>	The relocation operation of '%s' was aborted by '%s'.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate on which the subsystem attempted the relocation operation. <b>subsystem</b> (STRING): Name of the subsystem that aborted the relocation operation.

<b>EMS Identifier</b>	arl.veto.coredump.saveinprog
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the coredump subsystem vetoes the use of storage failover (SFO) during takeover because a coredump save is in progress; cluster failover (CFO) will be used instead. The coredump save must be complete before the system can perform a takeover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Takeover use of SFO vetoed because a coredump save was in progress.
<b>Parameters</b>	

<b>EMS Identifier</b>	arl.veto.coredump.unsavedcor
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when aggregate relocation (ARL) is vetoed because there is an unsaved kernel core file on one of the aggregate disks.
<b>Corrective Action</b>	Use the "node coredump save" command to save any unsaved cores, or use the "-override-vetoes true" option when relocating aggregates.
<b>Syslog Message</b>	Aggregate relocation vetoed due to an unsaved coredump %s on disk %s ("%s").
<b>Parameters</b>	<b>corefile</b> (STRING): Name of the kernel core file. <b>disk</b> (STRING): Name of the disk containing the kernel core file. <b>panic</b> (STRING): Panic string of the unsaved kernel core file that caused the aggregate relocation (ARL) veto.

<b>EMS Identifier</b>	arl.veto.lmgr.CA.volmove
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate relocation has started but cannot proceed because a volume move to or from this aggregate is in the cutover phase and the volume being moved has continuously available (CA) locks. CA locks are established by opens through CIFS CA shares for regular files on read-write volumes that reside in storage failover (SFO) aggregates. These locks are mirrored to the node's high-availability (HA) partner to support the nondisruptive property of CA shares. The rest of the locks are classified as non-CA locks and are not mirrored to the node's HA partner.
<b>Corrective Action</b>	Retry the relocation after volume move exits the cutover phase. To check for volume move state, run the 'volume move show' command.
<b>Syslog Message</b>	Could not complete aggregate relocation because volume move of '%s%s%s%s' is in the cutover phase and this volume has CA locks.
<b>Parameters</b>	<b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier of the volume in cases where the volume name itself is insufficient.

<b>EMS Identifier</b>	arl.veto.lmgr.nonCA.broken
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an aggregate relocation is forced that causes non-continuously available (non-CA) locks on the volume to be dropped. CA locks are established by opens through CIFS CA shares for regular files on read-write volumes that reside in storage failover (SFO) aggregates. These locks are mirrored to the node's high-availability (HA) partner to support the nondisruptive property of CA shares. The rest of the locks are classified as non-CA locks and are not mirrored to the node's HA partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dropped non-CA locks on volume %s%s%s%s due to forced aggregate relocation of aggregate %s.
<b>Parameters</b>	<b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier of the volume in cases where the volume name alone is insufficient. <b>aggrname</b> (STRING): Aggregate name.

<b>EMS Identifier</b>	arl.veto.lmgr.nonCA.locks
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate relocation has started but cannot proceed because non-continuously available (non-CA) locks are present on the volume. CA locks are established by opens through CIFS CA shares for regular files on read-write volumes that reside in storage failover (SFO) aggregates. These locks are mirrored to the node's high-availability (HA) partner to support the nondisruptive property of CA shares. The rest of the locks are classified as non-CA locks and are not mirrored to the node's HA partner.
<b>Corrective Action</b>	Based on how resilient they are to failures, applications must either gracefully close sessions over which non-CA locks are established or accept lock state disruption. To determine the open files that have these sessions established, run the 'vserver cifs session file show -hosting-aggregate "aggregate name" -continuously-available No' command. "aggregate name" is the aggregate for which relocation is being attempted. If lock state disruption for all existing non-CA locks is acceptable, retry the aggregate relocation by using the '-override-vetoes true' option.
<b>Syslog Message</b>	Could not complete aggregate relocation because of non-CA locks on volume %s%s%s aggregate %s.
<b>Parameters</b>	<b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier of the volume in cases where the volume name alone is insufficient. <b>aggrname</b> (STRING): Aggregate name.

<b>EMS Identifier</b>	arl.veto.lmgr.recons.left
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate relocation has started, but cannot proceed because reconstruction of client file locks from mirrored lock information is not yet complete.
<b>Corrective Action</b>	Retry the relocation a few times after checking the status of reconstruction by using the 'debug locks reconstruction show' diagnostic privilege command. If the locks reconstruction operation is not completed, contact NetApp technical support.
<b>Syslog Message</b>	Could not relocate aggregate '%s' because lock reconstruction on node %s is in progress.
<b>Parameters</b>	<b>aggregate</b> (STRING): Name of the aggregate being relocated. <b>node</b> (STRING): Name of the node reconstructing locks.

<b>EMS Identifier</b>	arl.veto.lmgr.syncing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate relocation has started but cannot proceed because synchronization of client file locks ("locks sync") with the partner is not yet complete.
<b>Corrective Action</b>	Retry the relocation after verifying that lock synchronization is complete, by using the 'debug locks lock-sync show' diagnostic privilege command.
<b>Syslog Message</b>	Could not relocate aggregate '%s' because locks sync from node %s to its partner node %s is in progress.
<b>Parameters</b>	<b>aggregate</b> (STRING): Name of the aggregate being relocated. <b>node</b> (STRING): Name of the node performing locks sync with its partner. <b>partner</b> (STRING): Name of the partner node with which locks sync is being performed.

<b>EMS Identifier</b>	arl.veto.repl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an aggregate relocation is vetoed by a critical replication transfer (for example, volume move in the cutover phase).
<b>Corrective Action</b>	Either abort the replication transfer that is preventing the aggregate relocation from being completed, retry the 'aggregate relocation start' command with the '-override-vetoes true' option, or wait for the transfer to finish.
<b>Syslog Message</b>	Could not complete giveback because a replication transfer with UUID %s involving the aggregate %s is in progress.
<b>Parameters</b>	<b>transferId</b> (STRING): UUID of the SnapMirror(R) replication transfer that vetoed the aggregate relocation. <b>aggr</b> (STRING): Name of the aggregate.

<b>EMS Identifier</b>	arl.veto.snaprestore
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot perform an aggregate relocation because a volume snaprestore operation is active. The relocation is aborted.
<b>Corrective Action</b>	Retry aggregate relocation after the snaprestore operation is finished.
<b>Syslog Message</b>	%s %s %s %s %s is running snaprestore. Canceling aggregate relocation.
<b>Parameters</b>	<b>type</b> (STRING): Type of object (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique volume identity when the volume name itself is insufficient.

<b>EMS Identifier</b>	arl.veto.volmove
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an active volume move operation that cannot be automatically aborted prevents aggregate relocation from starting. When the volume move operation is completed, aggregate relocation can be retried using the 'storage aggregate relocation start' command.
<b>Corrective Action</b>	When the volume move operation is complete, reissue the 'storage aggregate relocation start' command. To abort the volume move immediately, include the '-override-vetoes true' command option.
<b>Syslog Message</b>	Unable to relocate aggregate while volume move for volume (DSID: %llu, NAME: %s) on aggregate %s is in progress.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Source/destination volume Data Set ID (DSID). <b>vol_name</b> (STRING): The name of the volume. <b>aggr_name</b> (STRING): The name of the containing aggregate.

## "asup" Event Group

<b>EMS Identifier</b>	asup.config.minimal.parse
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when we are unable to parse /etc/asup_content.conf
<b>Corrective Action</b>	Either the /etc/asup_content.conf file was corrupt or it may have been accidentally modified, compare the file to the released version of the file and make the appropriate modifications.
<b>Syslog Message</b>	AutoSupport could not parse section %s in /etc/asup_content.conf
<b>Parameters</b>	<b>section</b> (STRING): The section that failed to parse.

<b>EMS Identifier</b>	asup.config.minimal.unavailable
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when we are unable to access /etc/asup_content.conf
<b>Corrective Action</b>	Either the /etc/asup_content.conf file does not exist or the permissions don't allow it to be accessed. Verify that the file is in the correct location and that the system has access to it.
<b>Syslog Message</b>	Minimal AutoSupports unavailable. Could not read /etc/asup_content.conf
<b>Parameters</b>	

<b>EMS Identifier</b>	asup.general.drop
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system cannot generate an AutoSupport message from a callhome EMS event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Could not create AutoSupport message (sequence #: %u, ID: %s). %s.
<b>Parameters</b>	<b>sequence</b> (LONGINT): AutoSupport sequence number assigned to the callhome event. <b>trigger</b> (STRING): AutoSupport callhome EMS event ID. <b>detail</b> (STRING): Additional details about why an AutoSupport message could not be created for the callhome EMS event. <b>parameters</b> (STRING): A comma-delimited list of the parameter name and value pairs passed to the callhome EMS event.

<b>EMS Identifier</b>	asup.general.queue.deleted
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when all entries have been deleted from the AutoSupport queue and the disk file spool. This should only occur when the autosupport.content option is changed from complete to minimal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	All AutoSupport message queue entries have been deleted.
<b>Parameters</b>	

<b>EMS Identifier</b>	asup.general.reminder
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when AutoSupport is not configured to send messages to NetApp.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	AutoSupport is not configured to send messages to NetApp. Enabling AutoSupport can significantly speed problem determination and resolution should a problem occur on your system. More information about AutoSupport is available at <a href="http://support.netapp.com/autosupport/">http://support.netapp.com/autosupport/</a> .
<b>Parameters</b>	

<b>EMS Identifier</b>	asup.post.drop
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the AutoSupport(R) mechanism quits trying to post to the NetApp URL after having retried for the specified number of times.
<b>Corrective Action</b>	Use the "system node autosupport check show-details" command to check for connectivity or certificate errors. If the connectivity check shows no errors and if the problem persists, contact NetApp technical support for further assistance.
<b>Syslog Message</b>	AutoSupport message (%s) was not posted to NetApp. The system will drop the message.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport message title.

<b>EMS Identifier</b>	asup.smtp.drop
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the AutoSupport(R) mechanism drops email messages after having retried for the specified times.
<b>Corrective Action</b>	Use the "system node autosupport check show-details" command to check for connectivity errors with the configured mailhost. If the connectivity check shows no errors and if the problem persists, contact NetApp technical support for further assistance.
<b>Syslog Message</b>	AutoSupport mail (%s) was not sent. The system will drop the message.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport message title.

<b>EMS Identifier</b>	asup.throttle.drop
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an AutoSupport message is dropped because it is believed to be spam.
<b>Corrective Action</b>	To disable AutoSupport throttling, run the (privilege: diagnostic) "system node autosupport modify -throttle false -node " command.
<b>Syslog Message</b>	Too many AutoSupport messages in too short a time, throttling AutoSupport: %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport message title.

## "ata" Event Group

<b>EMS Identifier</b>	ata.excessive.latency
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an I/O request to the ATA driver in ONTAP(R) Select takes longer than five seconds. This might be an indication of an overloaded or misconfigured back-end storage subsystem.
<b>Corrective Action</b>	If possible, reduce the I/O load on the system. Verify that the device is configured correctly and is functioning correctly.
<b>Syslog Message</b>	Excessive latency on ATA device %s
<b>Parameters</b>	<b>ata_latency_message</b> (STRING): ATA high latency message

<b>EMS Identifier</b>	ata.timeout.failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an I/O request to the ATA driver times out. This might be indicative of an overloaded back-end storage subsystem. The retries for this I/O operation have been exhausted; the I/O operation has failed and will not be retried.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ATA device timeout (%s).
<b>Parameters</b>	<b>ata_timeout</b> (STRING): Timeout message from the ATA driver.

<b>EMS Identifier</b>	ata.timeout.retry
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an I/O request to the ATA driver times out. This might be indicative of an overloaded back-end storage subsystem. The I/O operation will be retried; this message does not indicate failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ATA device timeout (%s).
<b>Parameters</b>	<b>ata_timeout</b> (STRING): Timeout message from the ATA driver.

## "audit" Event Group

<b>EMS Identifier</b>	audit.cap.staging.event.failure
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system fails to generate an audit staging event as a part of the Central Access Policy (CAP) evaluation during access checks.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to generate an audit staging event when evaluating CAPs for the Vserver "%s". Reason: "%s".
<b>Parameters</b>	<b>vserverUuidStr</b> (STRING): UUID of the Vserver. <b>errorStr</b> (STRING): Error encountered.

<b>EMS Identifier</b>	audit.log.event
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when there is an issue during message auditing. The system recovers by itself.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Auditing error (%s) occurred at %s.
<b>Parameters</b>	<b>error</b> (STRING): Error encountered during message auditing. <b>time</b> (STRING): Time that this error occurred.

<b>EMS Identifier</b>	audit.log.file.recovered
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system recovers a previously deleted log file as part of audit log policy.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Recovered previously deleted audit log file "%s".
<b>Parameters</b>	<b>log_name</b> (STRING): Log file name. <b>recovered_time</b> (STRING): File recovery timestamp.

<b>EMS Identifier</b>	audit.log.queue.high
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the syslog queue reaches 75% of its maximum size.
<b>Corrective Action</b>	Verify remote server network reachability and processing performance.
<b>Syslog Message</b>	Log queue for destination %s, protocol %s has exceeded 75%% of capacity. Last audit log was sent successfully at %s, number of pending messages: %d.
<b>Parameters</b>	<b>syslog_dest</b> (STRING): Log forwarding destination for which messages are being dropped. <b>protocol</b> (STRING): Protocol used for syslog destination. <b>last_sent</b> (STRING): Time that the audit log was last successfully sent to the syslog destination. <b>pending_msg</b> (INT): Number of pending messages in queue.

<b>EMS Identifier</b>	audit.log.queue.overflow
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an internal queue overflow causes the audit logging mechanism to drop messages destined for a particular log forwarding destination.
<b>Corrective Action</b>	Verify remote server network reachability and processing performance.
<b>Syslog Message</b>	Log queue overflowed for destination %s, protocol %s. Current drop count: %ld.
<b>Parameters</b>	<b>syslog_dest</b> (STRING): Log forwarding destination for which messages are being dropped. <b>protocol</b> (STRING): Protocol used for syslog destination. <b>drop_count</b> (LONGINT): Number of messages dropped since the last drop was reported.

<b>EMS Identifier</b>	audit.log.queue.recovered
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the audit logging queue recovers after earlier message drops, and the current queue is less than 75% full.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Log queue recovered for destination %s, protocol %s. Issue start time: %s, end time: %s, total number of drops during this period: %ld.
<b>Parameters</b>	<b>syslog_dest</b> (STRING): Log forwarding destination for which the queue has recovered. <b>protocol</b> (STRING): Protocol used for the syslog destination. <b>issue_start_time</b> (STRING): Time that the queue overflowed. <b>recovered_time</b> (STRING): Time that the queue recovered. <b>drop_count</b> (LONGINT): Total number of drops since the last time the queue overflowed.

<b>EMS Identifier</b>	audit.log.rotate.size.limit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system rotates a log file that has reached its size limit.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Log file %s has been rotated because size limit %ld was reached.
<b>Parameters</b>	<b>log_name</b> (STRING): Log file name. <b>max_log_size</b> (LONGINT): Maximum log file size.

## "auto" Event Group

<b>EMS Identifier</b>	auto.policy.feature.enable
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during upgrade to Data ONTAP(R) 9.3 or later, when we start enabling the "auto" efficiency policy on the existing compatible volumes on All-Flash Optimized nodes in the background.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Volume efficiency features will be enabled on Volumes of All-Flash Optimized nodes in the Cluster.
<b>Parameters</b>	

<b>EMS Identifier</b>	auto.policy.feature.enable.done
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during upgrade to Data ONTAP(R) 9.3 or later, when we have completed enabling the "auto" efficiency policy on the existing compatible volumes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Volume efficiency features were enabled on Volumes of All-Flash Optimized nodes in the Cluster.
<b>Parameters</b>	

<b>EMS Identifier</b>	auto.policy.feature.enable.fail
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during upgrade to Data ONTAP(R) 9.3 or later, when we fail to enable the "auto" efficiency policy on the existing compatible volume on All-Flash Optimized nodes.
<b>Corrective Action</b>	Manually try enabling the inline Volume Efficiency features on the volume using the "volume efficiency modify" command.
<b>Syslog Message</b>	Could not enable Volume Efficiency features for Volume %s of vserver %s.%s
<b>Parameters</b>	<b>volume</b> (STRING): Volume name. <b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for failure.

<b>EMS Identifier</b>	auto.policy.feature.enabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during upgrade to Data ONTAP(R) 9.3 or later, when we enable the "auto" efficiency policy on the existing compatible volume on All-Flash Optimized nodes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Volume Efficiency features enabled on Volume %s of Vserver %s.
<b>Parameters</b>	<b>volume</b> (STRING): Volume name. <b>vserver</b> (STRING): Vserver name.

## "aws" Event Group

<b>EMS Identifier</b>	aws.dev.diskNotUnique
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) is running as an instance in Amazon Web Services (AWS), and the volume being added has a UUID that is already used by the attached volumes. This usually happens when the user creates a Snapshot(R) copy from a volume, creates the volume from this copy and then tries to attach the volume to the instance.
<b>Corrective Action</b>	Detach the being added duplicate UUID device from the AWS instance.
<b>Syslog Message</b>	The volume #%d(%s) being added has a duplicate UUID which is already used by the attached volume #%d(%s).
<b>Parameters</b>	<b>curr_unit</b> (INT): Unit number of the device which is being attached. <b>curr_devname</b> (STRING): Name of the device which is being attached. <b>orig_unit</b> (INT): Unit number of the original device which is being duplicated. <b>orig_devname</b> (STRING): Name of the original device which is being duplicated.

<b>EMS Identifier</b>	aws.dev.limitExceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) is running as an instance in Amazon Web Services (AWS), and the volume being added is attached to an unsupported device name. Data ONTAP supports attaching a maximum of 51 Elastic Block Storage (EBS) volumes to a single instance. Supported device names are xvdf-xvdz, xvdaa-xvdaz, and xvdba-xvdbd.
<b>Corrective Action</b>	Detach the unsupported device from the AWS instance.
<b>Syslog Message</b>	The volume being added is attached to an unsupported device name #%d(%s). Data ONTAP supports attaching a maximum of 51 device volumes to a single instance. Supported device names are xvdf-xvdz, xvdaa-xvdaz, and xvdba-xvdbd.
<b>Parameters</b>	<b>unit</b> (INT): Device unit number. <b>devname</b> (STRING): Device name.

<b>EMS Identifier</b>	aws.instance.metadata.url
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when instance metadata retrieval fails on a hypervisor hosting an Amazon Web Services (AWS) Data ONTAP(R) instance. The instance metadata URL is not reachable at this time. Failure to reach the instance metadata URL indicates issues with the hypervisor.
<b>Corrective Action</b>	This error indicates an issue with the AWS environment. Contact AWS technical support for further assistance. Stopping and starting the instance can also resolve the issue because the instance will typically be relaunched on a different host.
<b>Syslog Message</b>	Failed to retrieve AWS instance metadata when executing the command: %s
<b>Parameters</b>	<b>command</b> (STRING): Full AWS instance metadata command line that returned an error.

<b>EMS Identifier</b>	aws.nic.noTxIntr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) is running in Amazon Web Services (AWS) and a network interface stops processing packets at the beginning of system boot.
<b>Corrective Action</b>	If the issue persists, reboot the node. If reboot does not help, contact NetApp technical support for troubleshooting assistance.
<b>Syslog Message</b>	No TX interrupt on NIC '%s' for %u seconds.
<b>Parameters</b>	<p><b>nicName</b> (STRING): Network interface or port name.</p> <p><b>secElapsed</b> (INT): Seconds elapsed since the last send interrupt.</p> <p><b>sigCnt</b> (INT): Number of signals sent to the back-end host OS.</p> <p><b>reqPending</b> (INT): Number of outstanding send requests.</p> <p><b>reqTotal</b> (INT): Number of total send requests.</p> <p><b>respPending</b> (INT): Number of outstanding responses.</p> <p><b>respTotal</b> (INT): Number of total responses.</p> <p><b>evtBackend</b> (INT): Number of back-end events.</p> <p><b>evtFrontend</b> (INT): Number of front-end events.</p>

## "backup" Event Group

<b>EMS Identifier</b>	backup.abort.ROOLR
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when backup event like dump has been aborted and currently ROOLR (Read Only On Line Replica) is running on the Filer. This event might have been aborted because of user intervention or device like bad tape has encountered backup failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The abort event, %s, is just notified.
<b>Parameters</b>	<b>errmsg</b> (STRING): Error Description

<b>EMS Identifier</b>	backup.abort.STSP
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when a backup started by VERITAS NBU STSP Protocol has been aborted. This event might have been aborted because of user intervention or device like bad tape has encountered backup failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The abort event, %s, is just notified.
<b>Parameters</b>	<b>errmsg</b> (STRING): Error Description

<b>EMS Identifier</b>	backup.fail.giveback
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during a giveback operation, when there are active dump or restore processes running on cfo aggregates of the partner node.
<b>Corrective Action</b>	Wait for backup operations like dump or restore running on cfo aggregates of the partner node to finish before retrying the giveback operation. To kill the active backup operations and proceed, retry the giveback operation with the -override-vetoes option set to true.
<b>Syslog Message</b>	Backup/restore services: There are active backup/restore sessions on the partner.
<b>Parameters</b>	

<b>EMS Identifier</b>	backup.fail.logopen
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when we tried to open up the log file and it failed while opening the file
<b>Corrective Action</b>	Make sure that the log file exists with proper permission and the file is not corrupted.
<b>Syslog Message</b>	Failed to open backup log file: %s
<b>Parameters</b>	<b>log_file_open_err</b> (STRING): The error encountered during log file open

<b>EMS Identifier</b>	backup.fail.logwrite
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when we tried to write a log event to the log file and it failed while writing it to the file.
<b>Corrective Action</b>	Make sure that the log file exists with proper permission and the file is not corrupted.
<b>Syslog Message</b>	Failed to write to backup log file: %s
<b>Parameters</b>	<b>log_file_write_err</b> (STRING): The error encountered during log file write

<b>EMS Identifier</b>	backup.flip.inodemap
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message is generated while flipping inodemap.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Took %u seconds to flip inodemap.
<b>Parameters</b>	<b>time</b> (INT): Time in seconds taken to flip inodemap.

## "bcomd" Event Group

<b>EMS Identifier</b>	bcomd.fcpLifAdded
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a Fibre Channel logical interface (LIF) is added.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LIF %s (on Vserver %s), WWPN %s, was added to node %s, port %s.
<b>Parameters</b>	<b>lifname</b> (STRING): Name of the LIF that was added. <b>vserver</b> (STRING): Name of the Vserver on which the LIF resides. <b>wwpn</b> (STRING): WWPN that was added. <b>node</b> (STRING): Name of the node on which the LIF is hosted. <b>port</b> (STRING): Name of the port on which the LIF is hosted.

<b>EMS Identifier</b>	bcomd.fcpLifRemoved
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a Fibre Channel logical interface (LIF) is removed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LIF %s (on Vserver %s), WWPN %s, was removed from node %s, port %s.
<b>Parameters</b>	<b>lifname</b> (STRING): Name of the LIF that was removed. <b>vserver</b> (STRING): Name of the Vserver on which the LIF resided. <b>wwpn</b> (STRING): WWPN that was removed. <b>node</b> (STRING): Name of the node on which the LIF had been hosted. <b>port</b> (STRING): Name of the port on which the LIF had been hosted.

<b>EMS Identifier</b>	bcomd.igroup.auto.delete.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an initiator group marked with the delete-on-unmap flag is not automatically deleted when it is no longer part of a LUN mapping relationship.
<b>Corrective Action</b>	Use the "lun igroup delete" command to delete the initiator group manually.
<b>Syslog Message</b>	Failed to delete initiator group %s on Vserver %s: %s
<b>Parameters</b>	<b>igroup</b> (STRING): Name of the initiator group. <b>vserver</b> (STRING): Name of the Vserver. <b>error</b> (STRING): The error encountered when deleting the initiator group.

<b>EMS Identifier</b>	bcomd.lun.update.lost
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SAN Kernel Agent is unable to process a LUN metadata update resulting from a Snapshot(R) copy restore operation or other LUN event.
<b>Corrective Action</b>	Resolve the error and then reload the indicated Vserver with the command "debug san vserver reload".
<b>Syslog Message</b>	A metadata change notification for a LUN in VServer %s on volume %llu has been lost due to error: %s
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver. <b>volume</b> (LONGINT): MSID of the volume. <b>error</b> (STRING): Error preventing the update from being processed.

<b>EMS Identifier</b>	bcomd.volume.update.lost
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SAN Kernel Agent is unable to process a volume LUN inventory update resulting from a Snapshot(R) copy restore operation.
<b>Corrective Action</b>	Resolve the error and then delete stale maps in the volume with the command "lun mapping delete-stale".
<b>Syslog Message</b>	A volume LUN inventory change notification for Vserver %s volume %llu has been lost due to error: %s
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver. <b>volume</b> (LONGINT): MSID of the volume. <b>error</b> (STRING): Error preventing the update from being processed.

## "bdfu" Event Group

<b>EMS Identifier</b>	bdfu.selected
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when background disk firmware update selects a disk for firmware download. The disk contents will be copied to a suitable spare, the disk will be removed from the raid group and then firmware will be downloaded to it. After the firmware download is complete, the contents of the disk will be restored.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s [%s %s %s] S/N [%s] selected for background disk firmware update.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialNo</b> (STRING): Serial number of the disk.

## "boot" Event Group

<b>EMS Identifier</b>	boot.bootmenu.issue
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an error is detected while booting into, or using, the system boot menu.
<b>Corrective Action</b>	Retry the boot. If the problem persists, contact NetApp technical support for assistance in replacing the boot device media.
<b>Syslog Message</b>	Failed to boot the system. Error: %s
<b>Parameters</b>	<b>err_str</b> (STRING): Error string.

<b>EMS Identifier</b>	boot.shutdown.issue
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an error is detected while shutting down the system.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Failed to shutdown the system. Error: %s
<b>Parameters</b>	<b>err_str</b> (STRING): Error string.

<b>EMS Identifier</b>	boot.skproc.limit
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs when the number of threads in the system exceeds a certain level. This might prevent other threads from being initialized and may lead to inconsistent system behavior.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	non-vfiler sk proc limit exceeded %d (%d max)
<b>Parameters</b>	<b>proc_count</b> (INT): The number of active threads in the system. <b>max_procs</b> (INT): The maximum number of non-vfiler threads in the system.

<b>EMS Identifier</b>	boot.varfs.backup.issue
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an error is detected while trying to back up the /var file system to the boot media or node root volume (mroot).
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Backup of the /var file system failed (%s)
<b>Parameters</b>	<b>err_str</b> (STRING): Error string.

<b>EMS Identifier</b>	boot.varfs.backup.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a subsequent backup is successful following a failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Backup of the /var file system is successful after previous failures.
<b>Parameters</b>	

<b>EMS Identifier</b>	boot.varfs.repair.partial
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system is unable to restore all missing files detected by a scan of the /var file system during boot.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Unable to restore all missing files in /var file system.
<b>Parameters</b>	

<b>EMS Identifier</b>	boot.varfs.repair.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when missing files are restored during a scan of the /var file system during boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	All missing files in /var are restored.
<b>Parameters</b>	

<b>EMS Identifier</b>	boot.varfs.restore.issue
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an error is detected while restoring the /var file system from a shutdown.
<b>Corrective Action</b>	The file system is automatically restored from the boot media. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Failed to restore the /var file system. Error: %s
<b>Parameters</b>	<b>err_str</b> (STRING): Error string.

<b>EMS Identifier</b>	boot.varfs.restore.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when, following a failure, a subsequent restore of the /var file system is successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully restored the /var file system.
<b>Parameters</b>	

## "bootfs" Event Group

<b>EMS Identifier</b>	bootfs.env.issue
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an error is detected while trying to access the environment file stored on the boot device. Environment variables on the system cannot be changed or saved.
<b>Corrective Action</b>	Reformat or replace the boot media. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Environmental variables cannot be accessed or saved on the boot device (%s).
<b>Parameters</b>	<b>err_str</b> (STRING): Error string.

## "bridge" Event Group

<b>EMS Identifier</b>	bridge.discovered
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system discovers an FC-to-SAS bridge.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-to-SAS bridge %s [%s %s %s] S/N [%s] was discovered.
<b>Parameters</b>	<b>bridgeName</b> (STRING): Name of the bridge. <b>bridgeVendor</b> (STRING): Vendor name of the bridge. <b>bridgeModel</b> (STRING): Model name of the bridge. <b>bridgeRevision</b> (STRING): Firmware revision of the bridge. <b>bridgeSerialNum</b> (STRING): Serial number of the bridge.

<b>EMS Identifier</b>	bridge.removed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an FC-to-SAS bridge is removed from the system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-to-SAS bridge %s [%s %s %s] S/N [%s] was removed.
<b>Parameters</b>	<b>bridgeName</b> (STRING): Name of the bridge. <b>bridgeVendor</b> (STRING): Vendor name of the bridge. <b>bridgeModel</b> (STRING): Model name of the bridge. <b>bridgeRevision</b> (STRING): Firmware revision of the bridge. <b>bridgeSerialNum</b> (STRING): Serial number of the bridge.

<b>EMS Identifier</b>	bridge.timestamp.noSync
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the max number of retries is exceeded when attempting to apply SCSI SET TIMESTAMP command on one or more attached FC-to-SAS bridges. A timestamp that is not in sync does not affect the functional operation of the bridge. The SET TIMESTAMP operation is only used to synchronize timestamps between ONTAP(R) and the bridge to assist with correlating log events.
<b>Corrective Action</b>	A timestamp operation will always retry in 24 hours. If this notice persists, contact NetApp technical support.
<b>Syslog Message</b>	ONTAP timestamp sync did not complete on FC-to-SAS bridge with S/N: %s WWN: %s.
<b>Parameters</b>	<b>bridgeSerialNum</b> (STRING): Serial number of the bridge. <b>bridgeWWN</b> (STRING): World Wide Name of the bridge.

## "bsdsocket" Event Group

<b>EMS Identifier</b>	bsdsocket.queueLimit.reached
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the number of connection requests for a socket reaches the maximum. These connection requests include partially completed connections and connections that are ready to be accepted.
<b>Corrective Action</b>	Network misconfigurations can cause connectivity issues such as asymmetric routing, which causes loss of ACKs. Check the network for any such misconfigurations. A Denial of Service attack and an overloaded system can also be reasons for such an event. Contact NetApp technical support.
<b>Syslog Message</b>	Number of connection requests for the socket bound to port %d having the IP address %s has reached the limit of %d connections. The socket uses %s protocol. This event has occurred %llu times since the last warning.
<b>Parameters</b>	<b>port</b> (INT): Local port bound to the socket. <b>ipAddress</b> (STRING): IP address of the socket. <b>limit</b> (INT): Maximum number of connection requests per socket. <b>protocol</b> (STRING): Protocol used by the socket. <b>count</b> (LONGINT): Number of occurrences for this event since the last warning.

## "cache" Event Group

<b>EMS Identifier</b>	cache.ttl.settings.change
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs on the last node during the upgrade to ONTAP(R) 9.3, if the default TTL values of any of the SecD or NFS export caches are changed.
<b>Corrective Action</b>	Use the "vserver services name-service cache" commands to configure TTL values after the system is fully upgraded to ONTAP 9.3.
<b>Syslog Message</b>	One or more default cache TTL values for SecD and NFS export caches have been changed.
<b>Parameters</b>	

## "cachemirror" Event Group

<b>EMS Identifier</b>	cacheMirror.offline
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Cache Mirror encounters an error and has to be taken offline. The system functions normally except that takeover and giveback operation times will be negatively affected.
<b>Corrective Action</b>	Reboot the node by performing a planned takeover and giveback. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	Cache Mirror was taken offline because of an unrecoverable error. %s.
<b>Parameters</b>	<b>error_reason</b> (STRING): String providing information about why Cache Mirror was taken offline.

## "callhome" Event Group

<b>EMS Identifier</b>	callhome.aggr.offline
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an aggregate is inconsistent and is taken offline. The inconsistency might stem from one or more sources and might be related to previous operations or to current operations. Disabling access is a protective measure to ensure that further inconsistencies are avoided. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If the operating environment for the system, storage, or associated cabling has changed in terms of temperature, humidity, vibration, unstable electrical power, or other physical factors, gracefully shut down and power off the system until the environment is restored to normal operations. If the operating environment has not changed, identify the source of the inconsistency by checking for previous errors and warnings. Also check for hardware statistics from Fibre Channel, SCSI, disk drives, other communications mechanisms, and previous administrative activities. Another approach is to consult with NetApp technical support (it is recommended that you do so before attempting this step), and then run WAFL(R) Iron (wafliron) on the aggregate to identify and optionally repair the inconsistency. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for AGGREGATE INCONSISTENT AND TAKEN OFFLINE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.aggr.restricted
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a medium error is encountered during a reconstruction. Medium errors during reconstruction automatically invoke wafliron if your system's 'raid.reconstruct.wafliron.enable' option is set to "on". If the option is set to "off", the aggregate is moved offline. In this case, the option was set to "off" and the aggregate was moved offline. The failed disk drive's reconstruction continues and the aggregate stays offline until you repair it. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Run wafliron manually to bring this aggregate online. It is recommended that you contact NetApp technical support before attempting this. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for MEDIUM ERROR DURING RECONSTRUCTION (aggregate restricted)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.aggr.wafliron
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a medium error is encountered during a reconstruction. Medium errors during reconstruction automatically invoke wafliron if your system's 'raid.reconstruct.wafliron.enable' option is set to "on". If the option is set to "off", the aggregate is moved offline. In this case, the option was set to "on" and the aggregate remains online. The failed disk drive's reconstruction continues and wafliron begins repairing the aggregate. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	The corrective process of running wafliron has already begun. Wait until you see a message indicating that the wafliron process is complete and the inconsistency status of the aggregate is cleared. If this doesn't happen, or if you see subsequent error messages, contact NetApp technical support. If you need assistance in bringing the aggregate online, contact NetApp technical support.
<b>Syslog Message</b>	Call home for MEDIUM ERROR DURING RECONSTRUCTION (wafliron started)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.andu.pausederr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the automated update of the cluster has been paused due to an error. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	The automated update of the cluster has been paused due to an error. Determine the cause of the error by using the "cluster image show-update-progress" command. Correct the cause of the error, and then issue the "cluster image resume-update" command to continue the automated update of the cluster.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multinode AutoSupport. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.appdm.c.rb.fail.igr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Application Data Management feature encounters an error while attempting to roll back an incomplete creation of a new application. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "igroup show -vserver " command to determine if the igroup exists. If it does, use the "igroup delete -vserver -igroup -force true" command to delete the igroup. Contact NetApp technical support for assistance with reviewing the event log to determine the cause of the igroup clean up failure.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>vserver_name</b> (STRING): Vserver name related to this event. <b>igroup_name</b> (STRING): Igroup name related to this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.appdm.c.rb.fail.lmp
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Application Data Management feature encounters an error while attempting to roll back an incomplete creation of a new application. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the following command to determine if the LUN is mapped: "lun mapped show -vserver -igroup -path " If it is, use the "lun unmap -vserver -igroup -path " command to unmap the LUN. Contact NetApp technical support for assistance with reviewing the event log to determine the cause of the LUN map clean up failure.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>vserver_name</b> (STRING): Vserver name related to this event. <b>igroup_name</b> (STRING): Igroup name related to this event. <b>lun_path</b> (STRING): LUN path related to this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.appdm.c.rb.fail.qos
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Application Data Management feature encounters an error while attempting to roll back an incomplete creation of a new application. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "qos policy-group show" command to determine if the QoS policy group exists. If it does, use the "qos policy-group delete " command to delete the QoS policy. Contact NetApp technical support for assistance with reviewing the event log to determine the cause of the QoS policy clean up failure.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>qos_policy_group_name</b> (STRING): QOS policy group name related to this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.appdm.c.rb.fail.vol
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Application Data Management feature encounters an error while attempting to roll back an incomplete creation of a new application. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "volume show -vserver " command to determine if the volume exists. If it does, use the "volume delete -vserver -volume -force true" command to delete the volume. Contact NetApp technical support for assistance with reviewing the event log to determine the cause of the volume clean up failure.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>vserver_name</b> (STRING): Vserver name related to this event. <b>volume_name</b> (STRING): Volume name related to this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.appdm.m.rb.fail.qos
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Application Data Management feature encounters an error while attempting to roll back an incomplete modification of an application. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "event log show -message-name app.temp.rb.mod.vol.qos.fail" command to determine which volume's adaptive policy groups were modified. Use the "application modify" command to modify the application to the desired storage service, or use the "volume modify -qos-adaptive-policy-group " command to reset the original adaptive policy group for the volume. Contact NetApp technical support for assistance with reviewing the event log to determine the cause of the QoS policy clean up failure.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.appdm.m.rb.fail.ss
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Application Data Management feature encounters an error while attempting to roll back an incomplete modification of an application. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "event log show -message-name app.temp.rb.mod.ss.fail" command to determine which application components were modified. Use the "application modify" command to modify the application to the desired storage service. Contact NetApp technical support for assistance with reviewing the event log to determine the cause of the application component clean up failure.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.appdm.snaprest.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Application Data Management feature encounters an error while attempting to restore an application from a Snapshot copy. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "application snapshot show -vserver -application -protection-group " command to determine if the snapshot exists. If it does, retry the operation. Contact NetApp technical support for assistance with reviewing the event log to determine the cause of the application snapshot restore failure.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>vserver_name</b> (STRING): Vserver name related to this event. <b>application_name</b> (STRING): Application name related to this event. <b>protection_group_name</b> (STRING): Protection group name related to this event. <b>snapshot_name</b> (STRING): Snapshot name related to this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.bad.ram
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when correctable ECC errors are masked off, possibly due to bad or poorly seated memory or a faulty motherboard. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If anyone recently installed memory, try removing and reseating it. If problems persist, replace the memory module. If problems still persist, replace the motherboard. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for POSSIBLE BAD RAM
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.battery.failure
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the battery is either incapable of maintaining data during a power-outage, or is experiencing a failure that poses a physical threat. To prevent data loss and/or damage, the system will shut down momentarily. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Correct any environmental issues, such as a high ambient temperature. If the condition persists, replace the NVRAM card/battery. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s CRITICAL.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.battery.low
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVRAM battery capacity is critically low. If your system is configured to do so, it generates and transmits an AutoSupport(R) (or 'call home') message to NetApp(R) technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "system node environment sensors show" command to view the battery's current status, capacity, and charging state. If the battery was recently replaced or the system was nonoperational for an extended period of time, monitor the battery to verify that it is charging properly. If the battery run time continues to decrease below critical levels, the storage system will automatically shut down. Contact NetApp technical support for assistance.
<b>Syslog Message</b>	Call home for BATTERY_LOW.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.battery.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the battery is operating near the limit of its supported environment. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Correct any environmental issues, such as a high ambient temperature. If the condition persists, replace the NVRAM card/battery in the next three months. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s NOTICE.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.battery.overchg
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVRAM card lithium battery is overcharged and is at risk of failure. The system is currently serving data but will shut down shortly. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Replace the NVRAM card/battery and start the system back up. The system will not boot with the battery in this state. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for BATTERY OVERCHARGED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.battery.overtemp
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the sensor for the NVRAM card lithium battery over the intended temperature limit. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If the system is excessively warm, allow it to cool gradually. If the battery temperature is still too high, replace the battery pack. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for BATTERY OVERTEMP
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.battery.warning
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the battery is operating outside the limit of its supported environment. Under these conditions, the battery might not be capable of maintaining data during a power-loss event. To prevent data loss, the system will automatically shut down in 24 hours. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Correct any environmental issues, such as a high ambient temperature. If the condition persists, replace the NVRAM card/battery. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s WARNING.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.bootfs.chkdisk
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a consistency check of the boot media (compact flash or other type) has shown a problem and has not been corrected automatically. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	The boot media should be reformatted and/or replaced. After corrective steps have been taken, the "bootfs chkdisk" command should be used to confirm the recovery has been successful. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for BOOTFS CHKDSK
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.bridge.reboot.unexp
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a bridge reboots unexpectedly. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Analyze the bridge event log to determine the cause of the reboot. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>bridgeName</b> (STRING): Name of the bridge. <b>bridgeVendor</b> (STRING): Vendor name of the bridge. <b>bridgeModel</b> (STRING): Model name of the bridge. <b>bridgeRevision</b> (STRING): Firmware revision of the bridge. <b>bridgeSerialNum</b> (STRING): Serial number of the bridge. <b>rebootReason</b> (STRING): Reason for the bridge reboot. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.c.fan
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an unexpected decrease in a chassis fan's spin rate, possibly due to a slight decrease in revolutions or to a failed chassis fan. A failed chassis fan can lead to overheating and can cause damage to your equipment. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the chassis fan to determine whether it is spinning. Replace the chassis fan if it failed or is not operating correctly. You might need to replace the motherboard to replace the chassis fan. If a slight decrease in revolutions seems to have caused this event, and if this has not happened often, you do not need to replace the chassis fan. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.c.fan.fru.degraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a chassis fan might be operating in a degraded state. This condition can lead to overheating and can cause damage to your equipment. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the chassis fan to determine whether it is spinning. Replace the chassis fan if it failed or is not operating correctly. You might need to replace the motherboard to replace the chassis fan. A slight decrease in revolutions might have caused this event. If this seems to be the case and has not happened often, you do not need to replace the chassis fan. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.c.fan.fru.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a chassis fan might have failed. This failure can lead to overheating and can cause damage to your equipment. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the chassis fan to determine whether it is spinning. Replace the chassis fan if it failed or is not operating correctly. You might need to replace the motherboard to replace the chassis fan. A slight decrease in revolutions might have caused this event. If this seems to be the case and has not happened often, you do not need to replace the chassis fan. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.c.fan.fru.rm
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a chassis fan is removed. You have two minutes to install a replacement chassis fan or the system shuts down automatically to avoid overheating. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Install a replacement chassis fan within two minutes of removing the original to complete the hot-swap. Otherwise, install the replacement chassis fan when you are ready. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.c.fan.fru.shut
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when multiple chassis fans have failed. This failure can lead to overheating and can cause damage to your equipment. It is sent just before the system shutdown. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the chassis fans to determine whether they are spinning. Replace the chassis fans if any have failed or they are not operating correctly. You might need to replace the motherboard to replace the chassis fans. A slight decrease in revolutions might have caused this event. If this seems to be the case and has not happened often, you do not need to replace the chassis fan. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.carrier.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when all the disks in the carrier, that contains more than one disk in it, have failed. The carrier should be replaced. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the carrier with the failed disks by looking for the carrier whose amber LED is on and the green LED does not indicate any disk activity. Replace the carrier with the failed disks. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.ch.ps.degraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a degraded chassis power supply unit (PSU) state exists. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	You might need to replace a chassis PSU. If you need assistance, contact NetApp technical support.

<b>EMS Identifier</b>	callhome.ch.ps.wrong.in
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a power supply is not connected to the correct type of power source (voltage, amperage, type, etc. difference). If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Connect the power supply to the proper power source or replace the power supply with the appropriate one for the available power source. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.chassis.hitemp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the chassis temperature is too warm and might cause an environmental problem, or when there is faulty hardware in the system, such as a fan failure or a malfunctioning temperature sensor. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Evaluate the environment in which your system is operating and identify whether the problem is environmental or hardware-related. Your system should be in a room with an operating temperature of 18C to 24C (65F to 75F). If faulty hardware caused the error, such as a bad temperature sensor or a broken fan, replace the faulty part as soon as possible. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CHASSIS OVER TEMPERATURE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.chassis.overtemp
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the chassis temperature is too hot. It is sent just before system shutdown and indicates a potential environmental problem or faulty hardware in the system, such as a fan failure or a malfunctioning temperature sensor. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Evaluate the environment in which your system is operating and identify whether the problem is environmental or hardware-related. Your system should be in a room with an operating temperature of 18C to 24C (65F to 75F). If the environment is too hot, shut down and power off your system until the environmental conditions are restored to the normal operating temperature range. If faulty hardware caused the error, such as a bad temperature sensor or a broken fan, replace the faulty part as soon as possible. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CHASSIS OVER TEMPERATURE SHUTDOWN
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.chassis.power
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when power is in a degraded state because of bad power supply units (PSUs), bad wall power, or bad components on the motherboard. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If spare PSUs are available, try exchanging them to see whether that alleviates the problem. If not, you might need to replace motherboard components or the motherboard. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.chassis.power.down
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when voltage and other power sensors for the system power show critical values. A power supply unit (PSU) might have failed or the sensors might be malfunctioning. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Replace the faulty hardware. Most likely, you need to replace a PSU. If you need assistance, contact NetApp technical support.

<b>EMS Identifier</b>	callhome.client.app.info
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a remote client accesses the node using Manage ONTAP(R) and triggers an event using the ems-autosupport-log API call with "auto-support" field set to "true". If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Identify and resolve the issue on the remote client that is using the Manage ONTAP API to trigger this event. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.client.app.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a remote client accesses the node using Manage ONTAP(R) and triggers an event using the ems-autosupport-log API call with "auto-support" field set to "true". If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Identify and resolve the issue on the remote client that is using the Manage ONTAP API to trigger this event. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.clus.net.degraded
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the cluster network has experienced an issue that could potentially affect connectivity, reliability, redundancy, or performance, as observed from the local node. A degraded cluster network might cause a cluster-wide outage. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	See the EMS event log for additional information related to the issue. If the event_type is "Frequent Link Flapping", check the network cables that are connected to the specified port for any loose connections. If the event_type is "Large MTU Packet Loss", verify cluster switch MTU settings and ensure that all cluster network ports are configured with the same MTU. If the event_type is "Total Packet Loss", verify all cluster network connectivity and configuration and ensure that all cluster network ports are reachable from one another. If the event_type is "Cluster LIF Not Assigned to Any Port" and the cluster ports are link "down", check the network cables that are connected to the specified port for any loose connections. Ensure that the cluster ports are administratively configured link "up". If the cluster ports are link "up", attempt to manually migrate the cluster LIF to another cluster port. If the event_type is "Cluster LIF Administratively Down", use the "network interface modify" command to change the status-admin state of the cluster LIF to "up". If the event_type is "Insufficient L2 Reachability", verify that the network topology is correct and the ports are correctly assigned to the right broadcast domain. If the problem persists after correcting any issues, call NetApp technical support.
<b>Syslog Message</b>	Call home for %s: %s - %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>event_type</b> (STRING): The type of the event that signaled that the cluster network might be operating in a degraded state from the perspective of the local node.</p> <p><b>event_details</b> (STRING): Details of the event that signaled that the cluster network might be operating in a degraded state from the perspective of the local node.</p> <p><b>AutoSupport To</b> (default): enabled</p>

<b>EMS Identifier</b>	callhome.clus.vol.cre.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the active volume required to store the system data needed for cluster-wide storage cannot be created. This is typically due to not finding an aggregate with the specified size or mirrored attribute to create the volume. The specified feature cannot function without this volume. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Study the error message and take steps to rectify the problem. For example, if the error message indicates that the volume create failed because the aggregate is offline, use the 'aggr online -aggregate' command to bring it back online. If the error message does not indicate an obvious problem, run the 'aggregate show' command to find the state of the aggregate and 'metrocluster check config-replication show-aggregate-eligibility' command to find the eligibility of aggregates for configuration replication. If the aggregate is full, try to create space on it. Otherwise, if possible, create an aggregate with the specified mirror attribute and size by using the 'aggregate create -aggregate name -diskcount diskcount -diskspace size -mirror mirrorattribute' command. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s. Could not create volume after %d attempts for feature %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AttemptsMade</b> (INT): Count of failed attempts to create the volume. <b>Feature</b> (STRING): Feature using the cluster-wide storage. <b>ErrorMessage</b> (STRING): Error message on create failure at time of event generation <b>Size</b> (STRING): Size of the volume to be created. <b>Mirror</b> (STRING): Mirrored attribute of the aggregate. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.clus.vol.del.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volumes that were used for cluster-wide storage cannot be deleted. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Study the error message and take steps to rectify the problem. For example, if the error message indicates that the volume delete failed because the aggregate is offline, use the 'aggr online -aggregate aggregate_name' command to bring it back online. If the error message does not indicate an obvious problem, contact NetApp technical support
<b>Syslog Message</b>	Call home for %s. Could not delete volumes "%s" and "%s" for feature %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>ActiveVolume</b> (STRING): Active volume name. <b>StandbyVolume</b> (STRING): Standby volume name. <b>Feature</b> (STRING): Feature using the cluster-wide storage. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.config
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects a disk shelf configuration error for one or more disk shelves. The system continues to report this error until you resolve the problem. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the command "storage errors show" to display outstanding storage errors in the system. Use the "event log show" command to identify earlier EMS messages related to shelf configuration errors. Correct the cause of the configuration error. Common causes of configuration errors are as follows: - A previously attached disk shelf was removed - A loss of disk shelf enclosure services occurred - A disk shelf fan module failed - An invalid disk shelf drive configuration was created - An operating environment temperature was 50C (122F) degrees or higher - A disk shelf environment module failure occurred If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CONFIGURATION_ERROR
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.coredump.save.done
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when all the core segments belonging to a coredump have been saved. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "system node coredump show" command to obtain coredump file details.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>file</b> (STRING): Primary core segment file that was created. <b>node</b> (STRING): Name of the node whose core was saved. <b>size</b> (LONGINT): Size of primary core segment in bytes. <b>chksum</b> (STRING): Checksum of primary core segment file's data. <b>ancillary_segment_directory</b> (STRING): Directory which holds ancillary core segments. <b>ancillary_segments</b> (STRING): List of ancillary segments. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.corefile.upload
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you invoke an AutoSupport for corefile upload. This Autosupport collects and sends only the corefile specified as part of the payload. This autosupport is sent only when the transport is set to http or https. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	corefile upload callhome for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport message subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this AutoSupport message. If this is set, this AutoSupport message is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport message should be generated and delivered even if the AutoSupport configuration is disabled. If "0" then obey the normal "state" and "support" flags. If this is "1", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>case_number</b> (STRING): Case number to be associated with this coredump AutoSupport message.</p> <p><b>core_filename</b> (STRING): Coredump filename to be included in the coredump AutoSupport message.</p> <p><b>aod_initiated</b> (INT): This flag indicates that NetApp technical support has remotely requested for this AutoSupport message via AutoSupport OnDemand.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.cpu.fan
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a CPU fan failed or the fan is spinning too slowly or too fast. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Analyze whether you need to replace the CPU fan. CPU fan replacement might require that you replace the motherboard as well. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>AutoSupport To</b> (default): enabled</p>

<b>EMS Identifier</b>	callhome.cpu.fan.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a CPU fan failed or the fan is spinning too slowly or too fast. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Analyze whether you need to replace the CPU fan. CPU fan replacement might require that you replace the motherboard as well. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.ctran.gcror.timeout
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) / Cluster Transaction Manager (CTRAN) detects that one or more newly selected Group Coordinators (GCs) are taking too long to successfully complete the GC Ready on Reselect procedure. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Call NetApp technical support immediately for further assistance.
<b>Syslog Message</b>	Call home for GROUP COORDINATOR ROR TIMEOUT.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.ctran.jpc.splitbrain
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) / Cluster Transaction Manager (CTRAN) detects that there is a disagreement in the cluster - a split brain - about which node has the Join Proposal Coordinator (JPC). If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Call NetApp technical support immediately for further assistance.
<b>Syslog Message</b>	Call home for CTRAN JPC SPLIT BRAIN DETECTED.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dafs.nic.stop
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the DAFS (Direct Access File System) NIC (Network Interface Controller) has stopped while DAFS was running. This is caused by a failure of the NIC processor firmware during heavy and complex workloads. DAFS can usually recover and continue. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Reboot the system to recover the NIC. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DAFS VI NIC HALTED - DAFS SERVICE MAY BE INACCESSIBLE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.device.qual
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detected a disk drive device that did not receive qualification from NetApp. Unqualified disk drives can cause serious damage to the system, and the system shuts down within 72 hours to prevent this potential damage. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	To correct this situation, complete one of the following steps: 1. Download and install the latest Drive Qualification Package (DPQ) from NetApp technical support. This automatically qualifies any disk drives that were provided by NetApp. Search the support site knowledge base for the "DQP" keyword for further information. 2. Remove the unqualified disk drives from the system. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DEVICE_QUALIFICATION_FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.disk.carrier.evacuation.notpossible
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a system does not contain enough spares to correct existing disk failures. This message is seen only on systems containing disk carriers capable of holding more than one disk. When this message occurs, manual intervention is required because ONTAP(R) cannot automatically correct the existing issues with the system's disk configuration. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	To correct this issue on systems that contain carriers with multiple disks, try the following (in the specified order): (1) Assign any unassigned disks that are contained within a multidisk carrier. (2) Add multidisk carriers. (3) If a replacement carrier is available, do the following: a) Fail ALL disks within the carrier. Do not remove a multidisk carrier that contains non-failed disks; doing so results in system degradation and might result in system failure. b) Wait until the disk's amber Attention LEDs stop flashing and are lit continuously. Do not remove a carrier while the shelf OPS panel is alternating between the shelf ID and the Attention Code H1, or while the disks within the carrier are flashing their amber Attention LEDs. c) Replace the carrier. (4) Reassign partner spare disks in the HA configuration. (5) If the problem persists, call NetApp technical support.
<b>Syslog Message</b>	Call home for DISK_CARRIER_EVACUATION_NOTPOSSIBLE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.disk.low.io
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the storage health monitor detected low disk drive throughput. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for DISK_LOW_THRUPUT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.diskown.AssignExceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when too many disks have been installed. An attempt is made to assign more disks than the maximum that can be supported on this node. This problem must be resolved before the system is rebooted. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Review the system capacity limits and the assigned disks on this system. If possible, unassign the unused array LUNs. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for ATTEMPTED TO ASSIGN MORE DISKS THAN MAXIMUM SUPPORTED.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.disks.missing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detected simultaneously that multiple disk drives were missing from the system. It generated a single "MULTIPLE DISKS MISSING" message rather than multiple "DISK MISSING" messages. The problem might be due to a Fibre Channel loop (connection) or a disk shelf or disk drive operating incorrectly. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for MULTIPLE DISKS MISSING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dr.apply.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when all attempts to replicate the configuration fails. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	To troubleshoot further, search the event management system (EMS) logs on the destination cluster for events starting with "vsdr". Perform any provided corrective actions. For further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DR CONFIG REPLICATION FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>DestinationVserver</b> (STRING): Destination Vserver of the DR relationship. <b>FailedReason</b> (STRING): Failed reason. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.bypass
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive failure occurred and the Embedded Switched Hub (ESH) removed the disk drive from the loop electronically--bypassing the disk drive on one or possibly both ports. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Depending on your system configuration, you might need to place the disk drive software into a failed state to match what the ESH module did. Then locate and replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK_FAIL - Bypassed by ESH
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.dsk.config
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects a configuration problem with a disk drive, Fibre Channel switch, or host bus adapter (HBA). A cabling issue might be causing the problem. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Review and repair the cabling and SAN configuration. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK CONFIGURATION ERROR
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.dsk.disable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive failure occurred and the I/O Module (IOM) removed the disk drive from the system by disabling the PHY on one or possibly both ports. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Depending on your system configuration, you might need to place the disk drive software into a failed state to match what the IOM did. Then locate and replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK_FAIL - Disabled by IOM
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.dsk.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive fails. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the “storage disk show -broken” command to locate the failed drive. Confirm the location by looking for a drive whose red and amber LED fault lights are lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.fw.needed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects one or more disk drives with out of date or "downrev" disk firmware. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check and update all the disk drive firmware levels to the current the disk drive firmware level. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK_FIRMWARE_NEEDED_UPDATE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.init
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive failed to initialize. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the “storage disk show -broken” command to locate the failed drive. Confirm the location by looking for a drive whose red and amber LED fault lights are lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK INIT FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.io.degraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the storage health monitor detects degraded disk I/O (taking too long) that indicates a problem with a disk drive. A disk drive might not be using the most recent disk drive firmware. If the disk drive is using the most recent firmware, it might be at a higher risk of failing. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Identify the disk drive that caused this event and verify that it is running the most recent firmware. If the firmware is not up to date, update it to ensure that problems do not continue. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK_IO_DEGRADED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.dsk.label
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk drive failed due to unexpected RAID metadata. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the “storage disk show -broken” command to locate the failed drive. Confirm the location by looking for a drive whose red and amber LED fault lights are lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK BAD LABEL
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.label.broken
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive fails. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the “storage disk show -broken” command to locate the failed drive. Confirm the location by looking for a drive whose red and amber LED fault lights are lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK LABELED BROKEN
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.label.v
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive failed due to a version number in its RAID metadata that is inconsistent with the operating system version installed. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the “storage disk show -broken” command to locate the failed drive. Confirm the location by looking for a drive whose red and amber LED fault lights are lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK BAD LABEL VERSION
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.missing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot detect a disk drive in the Fibre Channel network (or loop) that it previously discovered. The error might be caused by a failed disk drive in the chassis still awaiting replacement or a broken connection to the disk drive. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate and replace the defective disk drive. If you already replaced it, check the Fibre Channel network for network connectivity from the appliance to the disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK MISSING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.no.spin
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive fails to start. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Logged message 'disk.init.failure.spinup' identifies the failed disk drive. Locate and replace the disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK NOT SPINNING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.noio
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when disk drive device commands to a disk drive are failing with link errors, adapter errors, or timeouts. With this type of problem, the disk drives's red or amber LED fault light may not be lit. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the “storage disk show -broken” command to locate the failed drive. Confirm the location by looking for a drive whose red and amber LED fault lights are lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK NOT RESPONDING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.predict <b>Deprecated:</b> Deprecated as of ONTAP 9.2. Last used in DOT 7.1.1.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the storage health monitor PFA (predictive failure analysis) determines that disk drive failure is forthcoming. A disk drive might not be using the most recent disk drive firmware. If the disk drive is using the most recent firmware, it might be at higher risk of failing. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Identify the disk drive that caused this event and check whether the firmware is up-to-date. If the firmware is not up-to-date, update it to ensure that problems do not continue. If the firmware is up-to-date, manually fail the faulty disk drive and remove it from the system to ensure the integrity of data. At the earliest opportunity, install a replacement disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK_FAILURE_PREDICTED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.redun.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when redundant access to disk storage is lost. This message and associated Autosupport are issued at most once per day. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate disks which have lost redundancy by using the following command: "storage disk show -fields disk,primary-port,secondary-name,secondary-port,shelf,bay" Note all channels with single path connectivity. Check for failures using these commands: "system health node-connectivity shelf show" and "system health system-connectivity shelf show". If a module or cable failure is identified, replace the failed module or cable. Confirm redundancy has been restored with the following command: "storage disk show -fields disk,primary-port,secondary-name,secondary-port,shelf,bay" If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK REDUNDANCY FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.scrub
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the weekly scheduled disk scrub detects checksum errors. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Review the results of the disk scrub. Your next steps depend on the result of your review, and might include replacing the disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK SCRUB CHECKSUM ERROR
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.dsk.scrub.done
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk scrub finishes bypassing media errors and places the aggregate in a normal state. This type of disk scrub is started automatically after wafiron when disk reconstruction is bypassing media errors. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Review the results of the disk reconstruction, wafiron, and disk scrub. Your next steps depend on the result of your review, and might include replacing the disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK SCRUB COMPLETED (bypassing media errors)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.dsk.scrub.parity
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the scheduled disk scrub detects parity inconsistencies. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Review the results of the disk scrub. Your next steps depend on the result of your review, and might include replacing the disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK SCRUB PARITY INCONSISTENCY
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.dsk.sense
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when storage health monitor detects a SCSI sense error that indicates a problem with a disk drive. A disk drive might not be using the most recent disk drive firmware. If the disk drive is using the most recent firmware, it might be at a higher risk of failing. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Identify the disk drive that caused this event and verify that it is running the most recent firmware. If the firmware is not up-to-date, update it to ensure that problems do not continue. If the firmware is up-to-date, manually fail the faulty disk drive and remove it from the system to ensure the integrity of data. At the earliest opportunity, install a replacement disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK_RECOVERED_ERRORS
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.dsk.shrank
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when either an aggregate or hot spare disk drive fails because its raw capacity was downsized due to a firmware change. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "storage disk show -broken" command to locate the failed drive. Confirm the location by looking for a drive whose red and amber LED fault lights are lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for DISK RAWSIZE SHRANK
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.encl.access
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when contact to one or more disk shelf enclosure services (environmental monitoring) is lost, possibly due to storage cabling, adapter, or configuration problems. The system uses the enclosure services to monitor the environment continuously to ensure that conditions remain at safe operating levels. If the system cannot contact the enclosure services, it cannot detect when operating conditions move into unsafe ranges and cannot minimize any damage that might result. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "storage errors show" command to display the current outstanding shelf error conditions. Use the "event log show" command to identify earlier EMS messages related to shelf connectivity errors. Restore connectivity to the disk shelf enclosure services. Check cabling for loose connections. Swap out adapters, if possible. Double-check the configuration. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for ENCLOSURE SERVICES ACCESS ERROR
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.ext.cache.bad
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a check of the external memory cache used for increasing system performance has failed and this cache has been disabled. System operations will continue with possibly reduced performance. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	The external memory cache should be checked and possibly repaired to restore its service to the system. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for EXTERNAL CACHE FAILURE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fans.failed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when multiple fans inside the appliance case fail. This failure can lead to overheating and cause damage to your equipment. The system shuts down within 10 minutes unless you resolve the fan problems. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Replace the fans within 10 minutes. If that is not possible, perform a graceful shutdown of the system and power it off. Then replace the fans when you can, power on the system, and restore it to normal operation. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for MULTIPLE FAN FAILURE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fc.al.link
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a Fibre Channel arbitrated loop (FC-AL) has link failures. You need to resolve this issue promptly. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the FC-AL itself and the connections to the FC-AL for poor or broken connections and misconfigurations. Examine the event log for messages related to FC or disk I/O errors and take the corrective actions found there. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fc.al.poor <b>Deprecated:</b> Deprecated as of ONTAP 9.2. Last used in DOT 7.1.0.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects that a Fibre Channel arbitrated loop (FC-AL) is unreliable or is too poor in quality for data exchange. You need to resolve this issue promptly. The link errors are recoverable in the sense that the system is up and running. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the FC-AL itself and the connections to the FC-AL for poor or broken connections and misconfigurations. Examine the event log for messages related to FC or disk I/O errors and take the corrective actions found there. Restore normal, error-free communication for the FC-AL as quickly as possible. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FC-AL RECOVERABLE ERRORS
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fcp.adapter.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Fibre Channel Protocol (FCP) HBA Host Bus Adapter (HBA) in this node has failed to read a critical setting from the adapter's internal configuration. The adapter should be replaced. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the FCP adapter in the slot specified in this message. Replace the adapter. If the adapter name starts with 0, the motherboard may need to be replaced. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fcp.sram.dump
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Fibre Channel Protocol (FCP) HBA Host Bus Adapter (HBA) in this node has recorded to disk a memory image from its Static Random Access Memory (SRAM). The SRAM dump has been performed as the result of several possible reasons, including a command directive and HBA firmware restart. Note that performing a dump of a HBA can disrupt data access operations. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If this event happens as a result of a command directive such as "fcp dump", the dump operation is expected. If this event happens as a result of HBA reset, the collected dump files can be used by technical support for subsequent analysis. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FCP SRAM DUMP.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>portInstance</b> (INT): Instance number of the target port where the dump occurs. <b>dumpDirName</b> (STRING): Directory location where the FC dumps are stored. <b>portName</b> (STRING): FC HBA's name. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.fdisk.admin
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you fail a file system disk drive. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for FILESYSTEM DISK ADMIN FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fdisk.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive fails. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fdisk.label
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive fails due to unexpected RAID metadata. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FILESYSTEM DISK BAD LABEL
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fdisk.label.v
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive fails due to a version number in its RAID metadata that is inconsistent with the operating system version installed. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FILESYSTEM DISK BAD LABEL VERSION
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fdisk.missing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects that a disk drive is not in a loop or is missing. This might also occur when a failed disk drive is still in the chassis awaiting replacement. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate and replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FILESYSTEM DISK MISSING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fdisk.noio
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when disk drive device commands to a file system disk drive are failing with link errors, adapter errors, or timeouts. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FILESYSTEM DISK NOT RESPONDING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fdisk.shrank
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate disk drive fails because its raw capacity was downsized due to a firmware change. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. After the automated e-mail is sent to you with the case# and instructions, the case is closed. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FILESYSTEM DISK RAWSIZE SHRANK
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.flash.cache.degraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Flash Management Module (FMM) detects that a percentage of a Flash Cache is offline that is above a warning threshold. FMM monitors all flash devices in the system that attach with it. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	A Flash Cache has degraded. This is an indication or the cause of a performance degradation. Exact impact cannot be estimated. This Flash Cache needs to be repaired or replaced. Contact customer support for more details.
<b>Syslog Message</b>	Call home for Flash Cache DEGRADED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.flash.cache.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Flash Management Module (FMM) detects that a Flash Cache has suffered a failure. Typically, this is the result of a hardware failure on the Flash Cache itself. FMM monitors all flash devices in the system that attach with it. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	The Flash Cache can fail due to many reasons. If you see "iomem.dma.internal" in EMS log, reboot the system. If the state of the Flash Cache in system configuration shows 'Failed firmware', update the device (follow the corrective action of the "iomem.card.fail.fpga.rev" EMS message). For all other reasons, replace the Flash Cache. For further assistance, contact technical support.
<b>Syslog Message</b>	Call home for Flash Cache FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.flash.cache.offlined
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Flash Management Module (FMM) detects that a critical percentage of a Flash Cache is offline, beyond which the device cannot operate. FMM turned off this device. FMM monitors all flash devices in the system that attach with it. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	A Flash Cache was offlined. This is an indication or the cause of a performance degradation. Exact impact cannot be estimated. This Flash Cache needs to be repaired or replaced. Contact customer support for more details.
<b>Syslog Message</b>	Call home for Flash Cache OFFLINED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.fs.lun.resized
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system has detected that a filesystem logical disk array or LUN (Logical Unit Number) stored raw size no longer matches the reported physical size of the LUN. Resizing of a filesystem gateway LUN is not supported. Only gateway LUNs that are spare (not used in a filesystem) may be resized. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Restore the logical disk array or LUN raw size to the expected file system size that system expects. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FILESYSTEM LUN RESIZED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.hainterconnect.down
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the high-availability (HA) interconnect is down. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Corrective action depends on the number and type of HA interconnect links supported by the platform, as well as the reason for which the interconnect is down. EMS event "ic.HAInterconnectDown" provides the reason information. a. If links are down: Verify that both controllers in the HA pair are operational. For externally connected links, make sure that the interconnect cables are connected properly and that the small form-factor pluggables (SFPs), if applicable, are seated properly on both controllers. For internally connected links, disable and reenables the links one at a time by using the "ic link off" and "ic link on" commands. b. If links are disabled: Enable the links by using the "ic link on" command. c. If a peer is not connected: Disable and reenables the links one at a time by using the "ic link off" and "ic link on" commands. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	Call home for %s due to %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>reason</b> (STRING): Reason for interconnect down. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.hba.failed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a HBA port is taken offline due to read-after-write verification errors. This AutoSupport message and associated EMS messages are issued once for a given port. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Hardware components might need to be replaced. Contact NetApp technical support for assistance.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>adapterName</b> (STRING): Name of the adapter. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.hm.alert.critical
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an error is detected during the periodic health health monitoring of system health monitors. System health monitors create alerts for potential problems detected while monitoring the subsystem. The alerts contain information about probable cause along with recommended actions to rectify the problem. This message is generated after every polling interval if new alerts are detected during this interval. Polling interval is configurable. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Run the "system health alert show" command to view details about new alerts in the system. Details of the alerts can be found in the AutoSupport. To correct the alert conditions, refer to the corrective actions described in the alert. Contact NetApp technical support for additional information.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.hm.alert.major
<b>Severity</b>	ALERT

<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.hostport.bypass
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an Embedded Switched Hub (ESH) bypasses a host port due to excessive errors on the port. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Depending on your system configuration, you might need to replace the ESH Module or replace the Fibre Channel cable to the host port. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for HOST_PORT_FAIL - Bypassed by ESH
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.hostport.disable
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an I/O Module (IOM) disables a host port due to excessive errors on the port. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Depending on your system configuration, you might need to replace the IOM or ensure that a good cable is attached to the host port. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for HOST_PORT_FAIL - Disabled by IOM
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.ibretimerprog.fail
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when InfiniBand (IB) retimer programming of the high- availability (HA) interconnect link failed after multiple retry attempts. The affected InfiniBand HA interconnect link is down. The failure can be due to any of the following reasons: InfiniBand device not found, GPIO read failure, QSFP register dump failure, QSFP parse failure, or retimer failure. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	This failure can be due to defective hardware or cabling. Contact NetApp technical support for further assistance.
<b>Syslog Message</b>	Call home for INFINIBAND RETIMER PROGRAMMING FAILURE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.invoke
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you invoke an AutoSupport(R) message, and the "type" of that message is set to "test". This message contains very little content and is intended for testing AutoSupport(R) end-to-end. When this message arrives at NetApp technical support, a confirmation email is sent to email destinations specified by the -to parameter. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this ASUP. If this is set, this ASUP is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport should be generated and delivered even if the AutoSupport configuration is disabled. If zero then obey the normal "state" and "support" flags. If this is "one", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p> <p><b>AutoSupport To</b> (default): enabled</p>

<b>EMS Identifier</b>	callhome.invoke.all
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you invoke an AutoSupport(R) message, and the "type" of that message is set to "all". For the benefit of technical support, the message also contains troubleshooting content, which might lengthen the collection time required. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	User triggered complete call home for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this ASUP. If this is set, this ASUP is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport should be generated and delivered even if the AutoSupport configuration is disabled. If zero then obey the normal "state" and "support" flags. If this is "one", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p> <p><b>AutoSupport To</b> (default): enabled</p>

<b>EMS Identifier</b>	callhome.invoke.remotesplog
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an administrator invokes an AutoSupport message on a node to collect the logs from the service processor of another node in the cluster. If the system is configured to do so, it generates and transmits an AutoSupport message (or 'call home' message) to NetApp technical support and to the configured destinations.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home (Remote SP LOG) for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this ASUP. If this is set, this ASUP is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport should be generated and delivered even if the AutoSupport configuration is disabled. If zero then obey the normal "state" and "support" flags. If this is "one", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p> <p><b>AutoSupport To</b> (default): enabled</p>

<b>EMS Identifier</b>	callhome.iscsi.hba.crash
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the iSCSI host bus adapter (HBA) crashes. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If the HBA is in use, reboot your system to reset the HBA and retrieve the crash-dump file. Contact NetApp technical support and provide the crash-dump file for support purposes.
<b>Syslog Message</b>	Call home for ISCSI HBA CRASH
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.isp.adapter.bad <b>Deprecated:</b> Deprecated as of ONTAP 9.2. Last used in R8.2.x.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects multiple Static Random Access Memory (SRAM) parity errors within a 30 day period. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Replace the Fibre Channel adapter that is exhibiting subsequent parity errors to insure continued operations. Look for the "fci.adapter.parity:info" EMS message in the event log to identify the adapter that is encountering the SRAM parity error and needs to be replaced. You can also check the output of the "FC-STATS" section in AutoSupport and look for the value of link state counter "adap_sram_parity_error_cnt" which will be more than one for the concerned adapter. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SRAM PARITY ERRORS ON FIBRE CHANNEL ADAPTER - replace adapter
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.jpc.selection.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) / Cluster Transaction Manager (CTAN) detects that the algorithm to reselect the Join Proposal Coordinator (JPC) is failing repeatedly. The JPC is reselected when the node that hosted the JPC goes out of quorum. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Call NetApp technical support immediately for further assistance.
<b>Syslog Message</b>	Call home for JOIN PROPOSAL COORDINATOR SELECTION FAILING.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.kernel.core <b>Deprecated:</b> Deprecated as of ONTAP 9.3. This event is replaced by the callhome.kernel.coreinfo event.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you invoke an AutoSupport for kernel coredump files. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Kernel coredump callhome for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this AutoSupport message. If this is set, this AutoSupport message is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport should be generated and delivered even if the AutoSupport configuration is disabled. If "0" then obey the normal "state" and "support" flags. If this is "1", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>case_number</b> (STRING): Case number to be associated with this coredump AutoSupport message.</p> <p><b>core_filename</b> (STRING): Coredump filename to be included in the coredump AutoSupport message.</p> <p><b>aod_initiated</b> (INT): This flag indicates that NetApp technical support has remotely requested for this AutoSupport via AutoSupport OnDemand.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p>

<b>EMS Identifier</b>	callhome.kernel.coreinfo
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you invoke an AutoSupport for kernel coredump files. It contains content relevant to userspace cores. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Kernel coredump callhome for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this AutoSupport message. If this is set, this AutoSupport message is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport should be generated and delivered even if the AutoSupport configuration is disabled. If "0" then obey the normal "state" and "support" flags. If this is "1", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>case_number</b> (STRING): Case number to be associated with this coredump AutoSupport message.</p> <p><b>core_filename</b> (STRING): Coredump filename to be included in the coredump AutoSupport message.</p> <p><b>aod_initiated</b> (INT): This flag indicates that NetApp technical support has remotely requested for this AutoSupport via AutoSupport OnDemand.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.link.change.stuck
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a network port link state change cannot be confirmed for more than 5 minutes because another configuration task is still in progress. Network port states can change when the node reboots or is administratively changed by a system administrator. The affected port might still be operating in the state before the attempted change. While this condition exists, additional configuration changes or status queries will not be possible. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	The link state change request will keep retrying until it succeeds. If the request does not succeed, it indicates that there is a configuration task that has not correctly completed and the node should be rebooted. For further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>AutoSupport To</b> (default): enabled</p>

<b>EMS Identifier</b>	callhome.management.log
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the MANAGEMENT_LOG AutoSupport or 'call home' event is sent. This message occurs on a daily basis and is sent from clustered nodes only. Information is sent to NetApp technical support to ensure that subsequent communications work and to enable operations analysis. Some results of these analysis might include recommendations on upgrades, firmware changes, and configuration changes to improve the reliability and performance of the node. If your node is configured to do so it generates and transmits an AutoSupport (or 'call home') to NetApp technical support and to the configured destinations on a daily basis. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for MANAGEMENT_LOG
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.mcc.auso.complete
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a MetroCluster(tm) automatic unplanned switchover operation has completed. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check why switchover was triggered by using the "event log show" command and search for event "mcc.auso.triggered". Use the "metrocluster operation show" command to view the details of the switchover operation. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multinode ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.auso.trig.fail
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a MetroCluster(tm) automatic unplanned switchover trigger failed to initiate a switchover operation. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Verify the health of each node and that automatic unplanned switchover is enabled on both by using the "metrocluster node show" command. Use the "metrocluster switchover -forced-on-disaster true" command to switch over the DR-site storage manually. For further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.clst.dm.wd.gvup
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Cluster DM Watchdog thread has given up after retrying for over an hour. Cluster configuration replication services are affected and configuration updates might be lost. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Examine the event management system (EMS) logs for any related issues. Perform any provided corrective actions. For further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for METROCLUSTER CLUSTER DM WATCHDOG GAVE UP
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.mcc.cluster_dm.stream_in_error
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when cluster-domain sender/receiver stream has an error. The stream type is indicated through the flag. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for METROCLUSTER CLUSTER_DM SENDER/RECEIVER STREAM_IN_ERROR
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>stream</b> (STRING): Stream is sender or receiver. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.config.complete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the "metrocluster configure" operation is successful. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for METROCLUSTER CONFIGURE COMPLETE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.mcc.fcvi.reset
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when fcvi adapter has been reset. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for METROCLUSTER FCVI RESET
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.heal_aggr.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when metrocluster heal aggregates operation has failed. The failure could be partial or complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Run 'metrocluster operation show' to determine the failure reason and take appropriate corrective measure. Retry the operation following the corrective measure. If the failures persists or need assistance, contact NetApp technical support
<b>Syslog Message</b>	Call home for METROCLUSTER HEAL_AGGR FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.heal_root.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when metrocluster heal root-aggregates operation has failed. The failure could be partial or complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Run 'metrocluster operation show' to determine the failure reason and take appropriate corrective measure. Retry the operation following the corrective measure. If the failures persists or need assistance, contact NetApp technical support
<b>Syslog Message</b>	Call home for METROCLUSTER HEAL_ROOT FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.personality
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the All-Flash Optimized node in a MetroCluster configuration detects that it has a different personality setting. This error can occur when a node loses its All-Flash Optimized setting. When this happens, the node may not function properly. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	A node configured with All-Flash Optimized personality recognizes only SSD disks and ignores hard disk drives(HDD). The personality is determined at boot time by checking the bootarg value "bootarg.init.flash_optimized". If the intended configuration of the node is All-Flash Optimized, any HDDs need to be removed and the bootarg needs to be set to true using the "setenv bootarg.init.flash_optimized true" command in maintenance mode. Otherwise, use the "unsetenv bootarg.init.flash_optimized" command to support HDDs on the system.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.sb.vetoed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system detects that a MetroCluster (tm) switchback operation has been vetoed, and creates an AutoSupport message for delivery to NetApp technical support for further analysis.
<b>Corrective Action</b>	Enter "metrocluster operation show" to determine the failure reason and take appropriate corrective measures as indicated by the output of this command. Retry the operation following the corrective measure. If the failures persist, or you need further assistance, contact NetApp technical support
<b>Syslog Message</b>	Call home for METROCLUSTER SWITCHBACK VETOED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Correlating tag value used in the AutoSupport message. Other cluster nodes that have detected related events may also have sent AutoSupport messages with this value to NetApp technical support. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.sbca
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when metrocluster switchback continuation agent (SBCA) is run on the disaster site. This happens as part of the metrocluster switchback operation run on the surviving site. This ASUP provides troubleshooting information from the site which is being recovered (disaster hit). If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for METROCLUSTER SWITCHBACK CONTINUATION AGENT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.mcc.so.vetoed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system detects that a MetroCluster (tm) switchover operation has been vetoed, and creates an AutoSupport message for delivery to NetApp technical support for further analysis.
<b>Corrective Action</b>	Enter "metrocluster operation show" to determine the failure reason and take appropriate corrective measures as indicated by the output of this command. Retry the operation following the corrective measure. If the failures persist, or you need further assistance, contact NetApp technical support
<b>Syslog Message</b>	Call home for METROCLUSTER SWITCHOVER VETOED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Correlating tag value used in the AutoSupport message. Other cluster nodes that have detected related events may also have sent AutoSupport messages with this value to NetApp technical support. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.switchback.complete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when metrocluster switchback operation is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for METROCLUSTER SWITCHBACK COMPLETE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mcc.switchback.failed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when metrocluster switchback operation has failed. The failure could be partial or complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Run 'metrocluster operation show' to determine the failure reason and take appropriate corrective measure. Retry the operation following the corrective measure. If the failures persists or need assistance, contact NetApp technical support

<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mdb.recovery.unsuccessful
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs after an unsuccessful recovery of an inconsistent management database. The message is from the management processes identified by name in the auto-support subject line. The unsuccessful recovery results in the loss of all records contained in the 'job history' and 'rdb statistics' databases. Also, no additional records will be collected until the problem is resolved by NetApp technical support. The affected management process will function normally without these databases.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s WARNING.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.mhost.core <b>Deprecated:</b> Deprecated as of ONTAP 9.3. This event is replaced by the callhome.mhost.coreinfo event.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you invoke an AutoSupport for userspace coredump files. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	User space coredump callhome for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport message subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this AutoSupport message. If this is set, this AutoSupport message is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport message should be generated and delivered even if the AutoSupport configuration is disabled. If "0" then obey the normal "state" and "support" flags. If this is "1", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>case_number</b> (STRING): Case number to be associated with this coredump AutoSupport message.</p> <p><b>core_filename</b> (STRING): Coredump filename to be included in the coredump AutoSupport message.</p> <p><b>aod_initiated</b> (INT): This flag indicates that NetApp technical support has remotely requested for this AutoSupport message via AutoSupport OnDemand.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p>

<b>EMS Identifier</b>	callhome.mhost.coreinfo
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you invoke an AutoSupport for userspace coredump files. It contains content relevant to userspace cores. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	User space coredump callhome for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport message subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this AutoSupport message. If this is set, this AutoSupport message is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport message should be generated and delivered even if the AutoSupport configuration is disabled. If "0" then obey the normal "state" and "support" flags. If this is "1", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>case_number</b> (STRING): Case number to be associated with this coredump AutoSupport message.</p> <p><b>core_filename</b> (STRING): Coredump filename to be included in the coredump AutoSupport message.</p> <p><b>aod_initiated</b> (INT): This flag indicates that NetApp technical support has remotely requested for this AutoSupport message via AutoSupport OnDemand.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.micro.core
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a "micro-core" file is available. A "micro-core" file is a very small and simple binary image representing some state of ONTAP(R) and can be collected and reported to support. Transmission of a normal core file which can be several gigabytes or larger can take a significant time so isn't done. The subject line provides the filename of the micro- core file which is included as part of a special AutoSupport normally only sent to support. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Call home for MICRO-CORE: %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.mlm.array.portOneController
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when all paths for an array LUN are connected to the same controller on the array. This configuration results in a single point of failure at the array. If an active-passive array is connected at the back end, then all the partner controller's paths go to the alternate controller, which results in a tug of war on mailbox I/O or other events that talk to the partner's array LUNs. If the system is running in Cluster-Mode, use the 'storage errors show' command to detect this error. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Reconfigure your back-end SAN so that array LUNs are presented from controllers in different fault domains on the target array. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for ALL PATHS FOR THE ARRAY LUN ARE CONNECTED TO THE SAME CONTROLLER.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.mlm.lun.OnePath
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the logical devices (LDEVs) on an array LUN or group of array LUNs are connected using only one path. A proper configuration requires the LDEVs to be connected to at least two paths; otherwise, there is the potential for data loss caused by a single path failure. If an array LUN is assigned, an EMS message is logged to the console at least once a day indicating that it is a single-path assigned array LUN. If the system is running in Cluster-Mode, use the 'storage errors show' command to identify the error. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Verify the configuration and identify the LDEVs that are connected to only one path. After you identify the LDEVs, change the system configuration to ensure that there are at least two paths to all these LDEVs. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for ARRAY LUN CONNECTED USING ONLY ONE PATH.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.netif.fatal.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Network Interface Card encountered a fatal error. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check for the following EMS message in the EMS log that has the EMS event name "netif.fatal.err". For example: "...netif.fatal.err:crit]: The network device in slot 1 Encountered Fatal Error" The netif.fatal.err EMS message provides the slot number of the NIC device which encountered fatal error. If you need assistance, contact NetApp technical support
<b>Syslog Message</b>	Call home for NETWORK INTERFACE CARD FATAL ERROR.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.netif.init.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when initialization of a network interface failed due to an unexpected software error. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Review the cabling and network configuration. Collect faulty NIC statistics. If you need assistance, contact NetApp technical support
<b>Syslog Message</b>	Call home for NETWORK INTERFACE INITIALIZATION FAILURE, port %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.netif.uncorEccError
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a network interface controller encountered an unrecoverable ECC error. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Review the cabling and network configuration. Replace the faulty NIC device. If you need assistance, contact NetApp technical support
<b>Syslog Message</b>	Call home for NETWORK INTERFACE UNRECOVERABLE ECC ERROR, port %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.netinet.dup.clustIP
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a new node that is trying to join the cluster is using the same IP address that is configured on this node's cluster interface. This can prevent data from being served to clients and potentially bring down the entire cluster. This event generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the Ethernet (MAC) address with the "network port show -mac " command to find network port. Use "network interface show -curr-port " command to identify the cluster interface that is configured with the duplicate IP address. Remove the LIF on the cluster interface of the new node in the cluster network by using the "net int delete -vserver -lif " command. After removing the LIF, assign a new, unique IP address to the cluster interface.
<b>Syslog Message</b>	Call home for DUPLICATE CLUSTER IP.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>ipaddr</b> (STRING): Duplicate IP address that was detected on the cluster network. <b>ethaddr</b> (STRING): Ethernet (MAC) address that uniquely identifies the node configured with the duplicate IP address. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.nht.data
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the weekly AutoSupport or 'call home' event is sent for any drive NHT data. Information is sent to NetApp technical support to ensure that subsequent communications work and to enable operations analysis. Some results of these analysis might include recommendations on upgrades, firmware changes, and configuration changes to improve the reliability and performance of the system. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for DRIVE NHT DATA
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.no.inodes
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume is out of inodes, which refer to individual files, other types of files, and directories. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Modify the volume's maxfiles (maximum number of files) to increase the inodes on the affected volume. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for OUT OF INODES
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.nvme.exhausted
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a directly attached NVMe module has worn out and is at the end of its write life. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact technical support for assistance with possible replacement of the module.
<b>Syslog Message</b>	Callhome for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>serial</b> (STRING): Serial number of the NVMe device. <b>model</b> (STRING): Model number of the NVMe device. <b>slot_subslot</b> (STRING): PCI slot/subslot of the NVMe device. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.nvme.offline
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a directly attached NVMe module goes offline. When a module goes offline, it has either had a critical failure or is no longer reliable. In either case, the card is no longer functioning properly and was taken offline. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact technical support for assistance with possible replacement of the module.
<b>Syslog Message</b>	Callhome for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>serial</b> (STRING): Serial number of the NVMe device. <b>model</b> (STRING): Model number of the NVMe device. <b>slot_subslot</b> (STRING): PCI slot/subslot of the NVMe device. <b>code</b> (LONGINTEX): Bit-encoded error that caused the event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.nvmem.volt.hi
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the sensor for the Non-Volatile memory (NVMEM) card lithium battery has an excessively high voltage. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	First, correct any environmental or battery problems. If the problem continues, replace the controller module. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for NVMEM VOLTAGE HIGH
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.nvmem.volt.lo
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the sensor for the Non-Volatile memory (NVMEM) card lithium battery has an excessively low voltage. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	First, correct any environmental or battery problems. If the problem continues, replace the controller module. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for NVMEM VOLTAGE LOW
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.nvram.cecc
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when excessive correctable error-correcting code (ECC) memory errors are reported by the NVRAM complex. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Use the "system environment sensors show -hidden true" cluster shell command to view the current "NV Correctable ECC count" and "NV Correctable ECC rate" values. Contact NetApp technical support for further assistance.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.nvram.failure
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM card has experienced a critical hardware failure. The system will shut down to avoid potential data loss. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support to replace the NVRAM card.
<b>Syslog Message</b>	Call home for NVRAM FAILURE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.ondemand.invoke
<b>Severity</b>	NOTICE
<b>Description</b>	This message normally occurs when NetApp technical support has remotely requested an AutoSupport or 'call home' message of type TEST. This request is accomplished by use of the AutoSupport OnDemand Server (AODS) service. The intent of this AutoSupport is to collect only the information necessary to understand the configuration of the system and quickly deliver it. For this reason, the data collection is bounded by time taken to collect data and quantity of data collected. With less data collected, delivery over the internet is expected to be faster. The overall process from remote activation to delivery should be measurable in minutes. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>URI</b> (STRING): Alternate destination for this AutoSupport. If set, this AutoSupport is delivered to this alternate destination. <b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.ondemand.invoke.all
<b>Severity</b>	NOTICE
<b>Description</b>	This message normally occurs when NetApp technical support has remotely requested an AutoSupport or 'call home' message of type ALL. This request is accomplished by use of the AutoSupport OnDemand Server (AODS) service. The intent of this AutoSupport is to collect more data to aid in problem resolution. The collection is bounded by time and size limits but these are much larger as compared to most other AutoSupport messages. Collecting a larger amount of AutoSupport data can help support personnel diagnose difficult problems. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>URI</b> (STRING): Alternate destination for this AutoSupport. If set, this AutoSupport is delivered to this alternate destination. <b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.ondemand.perf.snap
<b>Severity</b>	NOTICE
<b>Description</b>	This message normally occurs when NetApp technical support has remotely requested an AutoSupport or 'call home' message of type PERFORMANCE. This request is accomplished by use of the AutoSupport OnDemand Server (AODS) service. The intent of this AutoSupport is to collect statistics and other information to aid in understanding operations and other usage analysis related to networking, storage, memory and processor. This analysis might result in recommendations on upgrades, firmware changes, and configuration changes to improve the reliability and performance of the system. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>URI</b> (STRING): Alternate destination for this AutoSupport. If set, this AutoSupport is delivered to this alternate destination. <b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.partner.down
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the storage failover partner is down and takeover cannot begin. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Call home for PARTNER DOWN, TAKEOVER IMPOSSIBLE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.performance.archive
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you invoke an AutoSupport for performance archives. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Performance archive callhome for %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this AutoSupport message. If this is set, this AutoSupport message is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport should be generated and delivered even if the AutoSupport configuration is disabled. If 0 then obey the normal "state" and "support" flags. If this is "1", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>case_number</b> (STRING): Case number to be associated with this performance archive AutoSupport message.</p> <p><b>temp_tar_path</b> (STRING): Tarred performance archives to be included in this performance archive AutoSupport message.</p> <p><b>aod_initiated</b> (INT): This flag indicates that NetApp technical support has remotely requested for this AutoSupport via AutoSupport OnDemand.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.performance.data
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the weekly AutoSupport or 'call home' event is sent for performance data. Information is sent to NetApp technical support to ensure that subsequent communications work and to enable operations analysis. Some results of these analysis might include recommendations on upgrades, firmware changes, and configuration changes to improve the reliability and performance of the system. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for PERFORMANCE DATA
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.performance.snap
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs some minutes after a reboot or storage takeover operation occurs so that performance information can be sent. Information is sent to NetApp technical support to ensure that subsequent communications work and to enable operations analysis. Some results of these analysis might include recommendations on upgrades, firmware changes, and configuration changes to improve the reliability and performance of the system. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for PERFORMANCE SNAPSHOT
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>URI</b> (STRING): Alternate destination for this ASUP. If this is set, this ASUP is delivered to this alternate destination.</p> <p><b>force</b> (INT): This flag indicates this AutoSupport should be generated and delivered even if the AutoSupport configuration is disabled. If zero then obey the normal "state" and "support" flags. If this is "one", then ignore the "state" and "support" configuration and deliver as if both "state" and "support" are enabled.</p> <p><b>sequence</b> (LONGINT): Sequence number to use to generate this Autosupport. Use value zero to auto-generate or a value higher than last used ASUP sequence number.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.raid.no.recover
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when too many errors have been detected by the RAID (Redundant Array of Inexpensive Disks) software protection and recovery is not possible. The detected errors could be related to checksum calculations, lost write detection and on disk medium errors in combinations with disk and NVRAM failures. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Immediately contact NetApp technical support for assistance to help diagnose the failures. If the diagnosis points to malfunctioning hardware components, these should be replaced.
<b>Syslog Message</b>	Call home for RAID DETECTED UNRECOVERABLE ERRORS
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>AutoSupport To</b> (default): enabled</p>

<b>EMS Identifier</b>	callhome.raid.over.max
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the maximum raw capacity of the file system (aggregate or RAID file system) is reached for this software release. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Call home for Exceeded maximum raw capacity
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.raidtree.assim
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an aggregate experiences a configuration corruption error during assimilation of aggregate structures. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Call home for RAIDTREE ASSIMILATION FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.reboot
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs after an appliance reboot--the appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If reboots continue to occur, contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.agentwatchdog
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system experiences an internal hardware watchdog timer reset. The system reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport(tm) (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you continue to experience watchdog timer resets, contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT (agent watchdog reset).
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.reboot.fw
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the appliance reboots after loading firmware--the appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for REBOOT (after entering firmware)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.giveback
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the node boots to normal operations because of a successful storage giveback from the partner. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for REBOOT (after giveback)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.glitch
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the appliance halts and reboots due to problems with inconsistent power. The appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you continue to experience 'power glitch' reboots, contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT (power glitch)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.halt
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the appliance reboots after you use the 'halt' command to shut it down. The appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for REBOOT (halt command)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.ioxm.removal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the appliance halts and reboots due to the removal of the IOXM without powering down the appliance first. The appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Do not remove the IOXM without powering down the appliance first.
<b>Syslog Message</b>	Call home for REBOOT (IOXM removal)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.panic
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the appliance reboots after a panic (also known as a 'system crash'). The appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT (panic)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.reboot.poweron
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the appliance reboots when it is powered on. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you continue to experience 'power on' reboots, contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT (power on)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.reboot
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you reboot the appliance with the 'reboot' command. The appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for REBOOT (reboot command)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.sk.halt
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system is halted automatically to prevent damage or possible loss of data. The system reports this event after the reboot is complete. An internal halt might be caused by one of the following reasons: 1. If a disk drive fails and there are no available spares, the system enters degraded mode. The appliance halts automatically to prevent a double disk drive failure, and possible loss of data, if it runs in degraded mode for the time interval given by the following command: "storage raid-options show -name raid.timeout -node local" The default timeout is usually 24 hours. If a spare disk drive becomes available while the system is running in degraded mode, the system immediately begins rebuilding the failed disk drive. 2. The system also halts automatically if the environmental conditions, such as temperature or power, are not within the safe operating limits or are inadequate to prevent possible damage. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you continue to experience 'internal halt' reboots, contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT (internal halt)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.sk.reboot
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you halt, reset, or turn off power to the appliance without completing an orderly halt or shutdown sequence before rebooting. The appliance reports this event after the reboot is complete. To keep your data safe, always use the 'halt' command to halt the appliance, and then wait for an orderly halt or shutdown to be complete before you power down the appliance or perform any hardware maintenance. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you continue to experience 'internal reboot' reboots, contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT (internal reboot)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.sp.rst
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the appliance reboots when it has been reset through the Service Processor (SP) 'system reset' command. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for REBOOT (sp system reset)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.takeover
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the partner appliance storage is taken over successfully by this appliance. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for PARTNER REBOOT (CONTROLLER TAKEOVER)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.takeover.p
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the partner appliance storage is taken over successfully by this appliance. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for PARTNER REBOOT (CONTROLLER TAKEOVER ON PANIC)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.unknown
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs after an appliance reboot--the appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If reboots continue to occur, contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.reboot.watchdog
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the appliance experiences an internal hardware watchdog timer reset. The appliance reports this event after the reboot is complete. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If you continue to experience watchdog timer resets, contact NetApp technical support.
<b>Syslog Message</b>	Call home for REBOOT (watchdog reset)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.rnode.splog
<b>Severity</b>	NOTICE
<b>Description</b>	This messages occurs when a new set of log files has been collected from a Service Processor (SP) of one or more non-operational nodes in the cluster. When an abnormal node reboot is detected by its SP, log files are created. When this node is operational again, the SP log files are collected and included in subsequent AutoSupport messages sent by the node. In cases where nodes cannot return to operation immediately, the SP's log files are collected by another node in the cluster and sent via this AutoSupport message. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for REMOTE NODE SP LOG %s %s %s %s %s %s %s %s %s %s
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>node1_down_fn</b> (STRING): Node-specific filename for the downfiler splog from the first node. If NULL is specified, this downfiler splog is not available.</p> <p><b>node1_latest_fn</b> (STRING): Node-specific filename for the latest splog from the first node.</p> <p><b>node2_down_fn</b> (STRING): Node-specific filename for the downfiler splog from the second node. If NULL is specified, this downfiler splog is not available.</p> <p><b>node2_latest_fn</b> (STRING): Node-specific filename for the latest splog from the second node.</p> <p><b>node3_down_fn</b> (STRING): Node-specific filename for the downfiler splog from the third node. If NULL is specified, this downfiler splog is not available.</p> <p><b>node3_latest_fn</b> (STRING): Node-specific filename for the latest splog from the third node.</p> <p><b>node4_down_fn</b> (STRING): Node-specific filename for the downfiler splog from the fourth node. If NULL is specified, this downfiler splog is not available.</p> <p><b>node4_latest_fn</b> (STRING): Node-specific filename for the latest splog from the fourth node.</p> <p><b>node5_down_fn</b> (STRING): Node-specific filename for the downfiler splog from the fifth node. If NULL is specified, this downfiler splog is not available.</p> <p><b>node5_latest_fn</b> (STRING): Node-specific filename for the latest splog from the fifth node.</p> <p><b>AutoSupport To</b> (default): disabled</p>

<b>EMS Identifier</b>	callhome.root.vol.recovery.reqd
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the root volume is not working properly and its recovery is required. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support to obtain the root volume recovery procedures and further assistance.
<b>Syslog Message</b>	Call home for ROOT VOLUME NOT WORKING PROPERLY: RECOVERY REQUIRED.
<b>Parameters</b>	<p><b>subject</b> (STRING): AutoSupport subject or title for this event.</p> <p><b>AutoSupport To</b> (default): enabled</p>

<b>EMS Identifier</b>	callhome.rtc.battery.low
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the voltage for the Real-Time Clock (RTC) battery is low. The message is repeated once every hour until you replace the battery. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Replace the RTC battery as soon as possible. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for RTC BATTERY LOW
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sas.init.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SAS adapter fails to initialize the link. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp Global Services and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If the adapter is in use, check cabling and connected equipment. If the adapter is connected to storage shelves, check connected I/O modules (IOM).
<b>Syslog Message</b>	Callhome for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>adapterName</b> (STRING): Name of the associated SAS host bus adapter. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sblade.import.susp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when LUN import cannot resume after takeover/giveback. All LUN import sessions have been suspended. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Call home for LUN IMPORT SESSIONS SUSPENDED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multinode AutoSupport. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sblade.lif.init
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during Vserver initialization when partially initialized volumes do not complete initialization within the specified maximum timeout value. On timer expiration the Vserver data LIFs are brought online regardless of the volume initialization status. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for SCSIBLADE LIF INIT TIMEOUT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sblade.lu.resync.to
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the SCSI target internal resynchronization of a LUN times out. This LUN is unavailable until one or more nodes that could not complete the internal resynchronization are taken over and given back or rebooted. If your system is configured to do so, it generates and transmits an AutoSupport(R) (or "call home") message. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Call NetApp technical support for further assistance.
<b>Syslog Message</b>	Call home for SCSIBLADE LU RESYNC TIMEOUT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sblade.lu.rst.hung
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the SCSI target cannot complete an internal reset of a LUN. This LUN is unavailable until one or more nodes that could not complete the internal reset are taken over and given back or rebooted. If your system is configured to do so, it generates and transmits an AutoSupport(R) (or "call home") message. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Call NetApp technical support for further assistance.
<b>Syslog Message</b>	Call home for SCSIBLADE LU INTERNAL RESET HUNG
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sblade.prop.fail
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an internal SAN management command fails. SAN management commands is not able to be completed for the Vserver which fails until the node is rebooted. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Refer to Knowledgebase article: 2017459 for recovery instructions.
<b>Syslog Message</b>	Call home for SCSIBLADE PROPOSAL FAIL
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sblade.unavailable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the node has lost connectivity with the majority of the cluster and is unable to recover automatically. When this occurs both FCP and iSCSI traffic have been disabled on this node. Manual recovery is required to come back into service. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Reboot the node, and if the node is waiting for giveback then perform a giveback.
<b>Syslog Message</b>	Call home for SCSIBLADE SERVICE UNAVAILABLE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sblade.vol.ev.lost
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when LUNs (Logical Unit Numbers) in a volume are not accessible on all paths. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Call NetApp technical support for further assistance.
<b>Syslog Message</b>	Call home for SCSIBLADE VOLUME EVENT LOST
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sblade.vs.op.tt
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a management command or other internal operation takes too long for a LUN (Logical Unit Number). When this situation occurs, the corresponding Vserver cannot handle any other management changes for the LUN until this condition no longer persists. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Call NetApp technical support immediately for further assistance.
<b>Syslog Message</b>	Call home for SCSIBLADE VSERVER OPERATION TIMEOUT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>epoch</b> (STRING): Identifying tag for multi node ASUP. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.scsi.tgt.misconfig
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a LUN (Logical Unit Number) mapping or igroup type misconfiguration has been detected when the cluster interconnect has transitioned from down to up. The detected misconfiguration problems will typically include cases of having a LUN on each storage controller mapped to the same LUN for the same initiator. When the cluster interconnect is down, LUN mapping changes are prevented unless overridden. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Run the "lun config_check" command which will list out the problems that caused this event and resolve this problem list. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for FILER SCSI TARGET MISCONFIGURED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sdisk.admin
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you fail a hot spare disk drive.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for SPARE DISK ADMIN REMOVED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sdisk.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a spare disk drive fails. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sdisk.label
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive fails due to unexpected RAID metadata. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SPARE DISK BAD LABEL
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sdisk.label.v
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk drive fails due to a version number in its RAID metadata that is inconsistent with the operating system version installed. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SPARE DISK BAD LABEL VERSION
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sdisk.missing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects that a spare disk drive is not in a loop or is missing. This might also be due to a failed disk drive that is still in the chassis awaiting replacement. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate and replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SPARE DISK MISSING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sdisk.noio
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when disk drive device commands to a hot spare disk drive are failing with link errors, adapter errors, or timeouts. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SPARE DISK NOT RESPONDING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sdisk.shrank
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a hot spare disk drive fails because its raw capacity was downsized due to a firmware change. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose red and amber LED fault lights are NOT lit. Replace the failed disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SPARE DISK RAWSIZE SHRANK
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.ses.drive.missing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the storage adapter detects a disk on the Fibre Channel loop or the SCSI bus, but enclosure services in the disk shelf does not report a disk with that address. This error indicates that the disk took an address other than what the disk shelf should have provided, or that enclosure services in the disk shelf cannot be contacted for address information. (Note: If the message "ses.drive.possShelfAddr" subsequently appears, follow the corrective actions in that message.) In this condition, the SCSI Enclosure Services (SES) process in the system might be unable to perform certain operations on the disk, such as setting failure LEDs or detecting disk swaps. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If the disk is not part of an active aggregate or volume, pull out the disk and push it back into the slot to ensure that the disk is in place. If the problem persists, insert a spare disk into the slot. If the problem is then gone, replace the original disk with the spare one. If the problem occurs to multiple disks on the same loop, check the I/O modules at the back of the disk shelves on that loop for errors.
<b>Syslog Message</b>	Call home for SES: DRIVE MISSING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>ChannelName</b> (STRING): Channel the disk shelf is on. <b>LoopIds</b> (STRING): Loop or SCSI IDs of the missing disks. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sfo.downrev
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the appliance software boots and detects out-of-date motherboard firmware, which can cause serious issues. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Upgrade the motherboard open firmware (OFW) version to the recommended version for this software and appliance as soon as possible. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for HA GROUP DOWNREV BOOT FIRMWARE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sfo.giveback
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when this appliance successfully completed a giveback of the storage to its partner appliance. The partner appliance is expected to be performing normal operations. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for CONTROLLER GIVEBACK COMPLETE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sfo.miscount
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when each partner in the High Availability (HA) storage configuration detects a different number of disk drives than its partner. This error is typically transient, and can occur for the following reasons: 1) A disk drive failed. 2) A disk drive was replaced. 3) One or more disk drives were added. The problem is usually corrected automatically within 60 seconds, requiring no action from you. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If the problem persists, check the cabling on or reseal any replaced or added disk drives, and check for failed disk drives. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for HA GROUP ERROR: DISK/SHELF COUNT MISMATCH
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sfo.personality
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the All-Flash Optimized node in a high availability configuration detects its partner having a different personality setting. This error can occur when a node loses its All-Flash Optimized setting. When this happens, storage failover may not function properly. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	A node configured with All-Flash Optimized personality recognizes only SSD disks and ignores hard disk drives (HDD). The personality is determined at boot time by checking the bootarg value "bootarg.init.flash_optimized". If an HA pair of nodes does not have a matching personality, HDDs taken over during HA events might not be available to serve data. If the intended configuration of the HA pair is All-Flash Optimized, any HDDs need to be removed from the HA system and the bootarg needs to be set to true on both nodes by using the "setenv bootarg.init.flash_optimized true" command in maintenance mode. Otherwise, use the "unsetenv bootarg.init.flash_optimized" command to support HDDs in the HA system.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sfo.takeover
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when automatic takeover of the cluster partner is successful. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Address the issue that caused the takeover, then restore the cluster partner to normal operations. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CONTROLLER TAKEOVER COMPLETE AUTOMATIC
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sfo.takeover.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when automatic takeover of the cluster partner is not successful. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Determine why the takeover did not succeed. Restore the cluster partner to normal operations. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CONTROLLER TAKEOVER FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sfo.takeover.halt
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when takeover of the HA partner is successful. The takeover occurred because of an administrative halt on the HA partner. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Address the issue that caused you to halt the HA partner and then restore it to normal operations. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CONTROLLER TAKEOVER COMPLETE HALT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sfo.takeover.m
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when manual takeover of the cluster partner is successful.
<b>Corrective Action</b>	Address the issue that caused you to take over the cluster partner manually, then restore the cluster partner to normal operations. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CONTROLLER TAKEOVER COMPLETE MANUAL
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sfo.takeover.m.dr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when manual takeover of the High Availability (HA) partner for disaster recovery (DR) is successful. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Address the issue that required you to perform a DR takeover of the HA partner. After the issue is resolved, restore the HA partner to normal operations. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CONTROLLER TAKEOVER COMPLETE MANUAL(DR)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sfo.takeover.panic
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when automatic takeover of the HA partner is successful. The controller takeover occurred because of a HA partner software failure or panic.
<b>Corrective Action</b>	Address the cause of the cluster partner software failure or panic, then restore the cluster partner to normal operations. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CONTROLLER TAKEOVER COMPLETE PANIC
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sfo.takeover.reboot
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when takeover of the HA partner is successful. The takeover occurred because of an administrative reboot on the HA partner. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Address the issue that caused you to reboot the HA partner and then restore it to normal operations. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for CONTROLLER TAKEOVER COMPLETE REBOOT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.shlf.fan
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system detects faulty hardware on the disk shelf, such as a fan, power supply unit (PSU), or failing temperature sensor. The problem might be environmental (temperature or faulty power) or hardware-related. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Evaluate the environment in which your system is operating and identify whether the problem is environmental or hardware-related. Your system should be in a room with an operating temperature of 18C to 24C (65F to 75F). If faulty hardware caused the error, such as a bad temperature sensor or a broken fan, replace the faulty part as soon as possible. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SHELF COOLING UNIT FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.shlf.fan.warn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects faulty hardware on the disk shelf, such as a fan, power supply unit (PSU), or failing temperature sensor. The problem might be environmental (temperature or faulty power) or hardware-related. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Evaluate the environment in which your system is operating and identify whether the problem is environmental or hardware-related. Your system should be in a room with an operating temperature of 18C to 24C (65F to 75F). <b>Syslog Message</b>	Call home for SHELF_FAULT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.shlf.overtemp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects a disk shelf problem. The problem might be due to environmental issues, such as temperature or faulty power, or by faulty hardware, such as a fan, power supply, or failing temperature sensor. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Evaluate the environment in which your system is operating and identify whether the problem is environmental or hardware-related. Your system should be in a room with an operating temperature of 18C to 24C (65F to 75F). If faulty hardware caused the error, such as a bad temperature sensor or a broken fan, replace the faulty part as soon as possible. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for %s
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.shlf.power.intr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when your system detects that a disk shelf power supply reported either a sustained loss of DC voltage output for about 20 seconds or a failure condition. This issue can occur for a number of reasons: 1. The power supply was turned off or unplugged. 2. The power to the server room failed or fluctuated. 3. The disk shelf power supply malfunctioned and should be replaced. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If necessary, replace the disk shelf power supply. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SHELF POWER INTERRUPTED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.shlf.ps.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when your system detects that a disk shelf power supply reported a loss of DC voltage. This might be a transient issue. This issue can occur for a number of reasons: 1. The power supply was turned off or unplugged. 2. The power to the server room failed or fluctuated. 3. The shelf power supply malfunctioned and should be replaced. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If necessary, replace the shelf power supply. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SHELF POWER SUPPLY WARNING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.shutdown.pending
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk drive fails but there are no suitable spares available for reconstruction. To protect your data, the system enters degraded mode. The system halts automatically to prevent a double disk drive failure, and possible loss of data, if it runs in degraded mode for the time interval given by the following command: "storage raid-options show -name raid.timeout -node local" The default timeout is usually 24 hours. If a spare drive becomes available while the system is running in degraded mode, the system immediately begins rebuilding the failed drive. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	To prevent the system from shutting down in 24 hours, perform either of the following actions: 1. Add a spare disk drive suitable for reconstructing the failed disk drive. 2. Change the timeout period with the following command: "storage raid-options modify -name raid.timeout -node local -value X" where X equals the number of hours for the new timeout value. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SHUTDOWN PENDING (degraded mode)
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sm.vsdr.break.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a break operation on a SnapMirror(R) relationship that is a part of VserverDR fails. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support for additional information.
<b>Syslog Message</b>	Call home for SNAPMIRROR BREAK FAILURE.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>SourceVserver</b> (STRING): Source Vserver of the SnapMirror relationship. <b>DestVserver</b> (STRING): Destination Vserver of the SnapMirror relationship. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.snapmirror.oos
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a sync-granular consistency group (CG) transitions from in-sync status to out-of-sync status. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Look for the sm.syncmirror.out.of.sync event concerning this relationship in the EMS log file. The event provides the reason why the relationship has been transitioned to out-of-sync and an appropriate corrective action, if applicable.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.snapmirror.oos.pers
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a sync-granular consistency group (CG) relationship transitions from in-sync status to out-of-sync status and remains out-of-sync for longer than expected. If your system is configured to do so, it generates and transmits an AutoSupport (or "call home") message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Look for the sm.syncmirror.out.of.sync event concerning this relationship in the EMS log file on source node of SnapMirror relationship. The event provides the reason why the relationship has been transitioned to out-of-sync. Verify network connections between the primary cluster and the secondary cluster. Check for error information in the "snapmirror show" command output for the relationship. Quiesce the relationship if the condition cannot be addressed immediately.
<b>Syslog Message</b>	Call home for %s.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sp.hbt.missed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when ONTAP(R) does not receive an expected "heartbeat" signal from the Service Processor (SP). Along with this message, log files from SP will be sent out for debugging. ONTAP will reset the SP to attempt to restore communication. The SP will be unavailable for up to two minutes while it reboots.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Call home for SP HBT MISSED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sp.hbt.stopped
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when ONTAP(R) is no longer receiving heartbeats from the Service Processor (SP). Depending on the hardware design, the system may continue to serve data or may determine to shut down to prevent data loss or hardware damage. The system continues to serve data, but because the SP might not be working, the system cannot send notifications of down appliances, boot errors, or Open Firmware (OFW) Power-On Self-Test (POST) errors. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If the system has shut down, attempt a hard power cycle: Pull the controller out from the chassis, push it back in then power on the system. Contact NetApp technical support if the problem persists after the power cycle, or for any other condition that may warrant attention.
<b>Syslog Message</b>	Call home for SP HBT STOPPED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.spares.low
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when one or more RAID groups do not have an eligible spare disk drive available in case of a disk drive failure. An eligible spare disk drive must be the correct size and capacity, and must be in the appropriate pool. If a disk drive fails without a spare to reconstruct on, the system enters degraded mode. The system halts automatically to prevent a double disk drive failure, and possible loss of data, if it runs in degraded mode for the time interval given by the following command: "storage raid-options show -name raid.timeout -node local" The default timeout is usually 24 hours. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Add suitable spare disk drives for all RAID groups to ensure that you have at least one spare disk drive. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SPARES_LOW
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.spm.process.maxexit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a subsystem is not fully operational after one or more restarts and a restart threshold has been reached by the Service Process Manager (SPM). The inconsistency might be caused by external events such network data, previous configuration changes, software changes, firmware changes, or hardware changes. The message should not occur more than once per day. The underlying subsystem might be related to one or more operational systems such as management, authentication, network access, and so on. Performance issues and operational difficulties might have been exhibited before this event. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If necessary, undo recent changes to the system and to external services that the system uses to stabilize operations, and then contact NetApp technical support. They will help to identify the underlying issue and whether a software upgrade has been made available to resolve the issue. You might need to isolate the system from any suspect network traffic.
<b>Syslog Message</b>	Call home for MAXIMUM EXITS THRESHOLD OF A PROCESS MANAGED BY SPM IS REACHED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.svo.prevented
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a write to a SnapValidator enabled volume failed to be validated and was rejected by the server. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the configuration of the server to insure correct 'svf_offset' setting on the lun (if applicable) and correct use of svo_options. This includes making sure that RMAN data is not being stored on a volume that does not have the svo_allow_rman option set. If the server appears to be correctly configured, the problem may exist at any point between Oracle client and the server. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SNAPVALIDATOR ERROR PREVENTED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sync.mirror.nospc
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when ONTAP(R) cannot create a new base Snapshot copy in a SyncMirror aggregate after multiple attempts. Systems using RAID SyncMirror require aggregate Snapshot copies for normal operation. Periodically, ONTAP creates a new base Snapshot copy with a name similar to "mirror_resync.1201023128(filer_name)." Once created, ONTAP deletes the old base Snapshot copy. The base Snapshot copy is used to optimize resynchronization when one plex goes offline. Short-lived circumstances when a new aggregate Snapshot copy cannot be created are not unusual. ONTAP initiates background processes to reclaim space and allow creation of new aggregate Snapshot copies. This message is issued when ONTAP cannot create a new base Snapshot copy after waiting a reasonable time. If the aggregate lacks an existing SyncMirror base Snapshot copy, then if one plex goes offline, subsequent resynchronization must copy all data in the aggregate - this can be a very long process. ONTAP issues this message when there is no SyncMirror base Snapshot copy and a new one cannot be created in repeated attempts in the last ten minutes (by default). If an old base Snapshot copy is present, this condition is less urgent. However, since space reclamation is likely to be slower, ONTAP waits up to two hours (by default) before issuing this message. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	ONTAP continually retries to create a new SyncMirror Snapshot copy. This condition might autocorrect, even after issuing this message. If it does not, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SYNCMIRROR SNAPSHOTS NOT ROTATING PROPERLY
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.syncm.isolation
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when both plexes of a SyncMirror(R) configuration have disk drives in the same hardware-based disk pool; that is, the plexes are not hardware-fault isolated. Therefore, a single hardware failure can cause both plexes to fail. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	To resolve this issue, complete the following steps: 1. Identify the problem aggregate from the system logs. 2. Determine which mirror plexes have disk drives in mixed pools. 3. Determine how this occurred: possible causes include a wiring problem, a reconstruction forced mixed pools, or the mirror was created explicitly so that the plexes have disk drives in mixed pools. 4. Based on the information you gather, determine how to correct the issue. For example, recable the disk drives to restore hardware-fault isolation. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SYNCMIRROR FAULT ISOLATION
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.syncm.plex
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a SyncMirror(R) plex fails. Therefore, the SyncMirror plex is in a degraded mode. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	To resolve this problem, complete the following steps: 1. Identify the problem aggregate and failed plex from the system logs. 2. Determine the reason for the plex failure, such as disk drive, disk shelf, or loop failure. 3. Replace any faulty components that you discover. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SYNCMIRROR PLEX FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.syncm.verify
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system finds one or more block inconsistencies between plexes of a SyncMirror(R) configuration. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	To resolve this issue, complete the following steps: 1. Determine the problem aggregate and failed plex from the system logs. 2. Take the aggregate offline. 3. Split the plexes into two aggregates. 4. Contact NetApp technical support for assistance, and then run WAFL(R) Iron (wafliron) on both aggregates. 5. Determine which is the 'good' aggregate by inspection. 6. Take offline and then destroy the 'bad' aggregate. 7. Re-mirror the 'good' aggregate. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SYNCMIRROR VERIFY FAILED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.sys.config
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the appliance has an unsupported PCI slot configuration. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Examine the command-line interface and System Configuration Guide for more information about slot assignments and hardware configuration, and then correct the unsupported configuration. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SYSTEM CONFIGURATION WARNING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.sys.config.crit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the appliance has an unsupported PCI slot configuration. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Examine the command-line interface and System Configuration Guide for more information about slot assignments and hardware configuration, and then correct the unsupported configuration. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for SYSTEM CONFIGURATION ERROR
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.tgt.lun.nospc
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SCSI Target subsystem begins failing SCSI Write commands due to an out of space (ENOSPC) condition on the appliance. This event is seen only when thin provisioning is used together with FCP or iSCSI. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	When this event occurs the customer should verify that all volumes containing luns on the appliance are properly configured for thin provisioning. Under some conditions additional disks may need to be added to the volume/aggragate. Contact NetApp support for more information. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for LUN OUT OF SPACE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.unsupported.snaplock
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system generates an AutoSupport event to notify you that a SnapLock(R) disk is attached to a system running a release of ONTAP(R) that does not support SnapLock.
<b>Corrective Action</b>	Remove the SnapLock disks from this system and attach them to a system that supports SnapLock. You can also revert or upgrade this system to a release that supports SnapLock.
<b>Syslog Message</b>	Call home for SNAPLOCK DISKS IN UNSUPPORTED RELEASE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.ups.line
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when line power for an Uninterruptible Power Supply (UPS) system is restored and the battery power is normal.
<b>Corrective Action</b>	Maintain the environment and ensure that the line power to the UPS continues to be normal. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for UPS LINE POWER RESTORED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.ups.low.battery
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when battery power for an Uninterruptible Power Supply (UPS) system has under 5 minutes of charge left. The system is currently serving data but will eventually shut down if the UPS continues to run without line power. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the environment and restore the line power to the UPS as soon as possible to avoid system shutdown. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for UPS LOW BATTERY
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.ups.ok.low.battery
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when line power for an Uninterruptible Power Supply (UPS) system is restored but the battery power is low. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Maintain the environment and ensure that the line power to the UPS continues to be normal. As line power continues to be normal, the battery is recharged. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for UPS PWR GOOD LOW BATTERY
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.ups.ok.no.battery
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when line power for an Uninterruptible Power Supply (UPS) system is restored but the battery power is very low. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Maintain the environment and ensure that the line power to the UPS continues to be normal. As line power continues to be normal, the battery is recharged. If line power is disrupted or leaves the normal range, the system might shut down immediately to protect your data. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for UPS PWR GOOD CRITICAL BATTERY
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.ups.on.battery
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when line power for an Uninterruptible Power Supply (UPS) system fails and the system is running on battery power. The server is currently serving data but will eventually shut down if the UPS continues to run without line power. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the environment and restore line power to the UPS as soon as possible to avoid system shutdown. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for UPS ON BATTERY
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.ups.shutting.down
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when battery power for an Uninterruptible Power Supply (UPS) system is almost depleted and the system is shutting down to protect your data. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Restore the line power to the UPS immediately to prevent system shutdown. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for UPS SHUTTING DOWN
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.user.snmp.trap
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a SNMP (Simple Network Management Protocol) has been configured to cause an SNMP trap. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for SNMP USER DEFINED TRAP
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.vdom.reconcile
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the virtual disk infrastructure (vdom) unsuccessfully reconciles the Out Of Volume Container (OOVC) and the Vdisk Table Of Contents (VTOC). The Out Of Volume Container or OOVC is an area of storage that resides in a per-vvol aggregate metadir and provides storage for LUN configuration (override) and metadata (PR, mode page, log page). OOVC will have a LUN inventory that is identical to the LUN inventory in the AFS. Therefore the VTOC and OOVC must contain the same set of LUNs. As a result of data management operations like volume snapstore, the LUN inventory can differ between VTOC and OOVC. For these operations that affect LUN inventory, VDOM will need to reconcile the OOVC with the VTOC as part of the operation. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for %s Could not reconcile vtoc and oovc for volume associated with DSID: %llu, due to VDOM error: %u.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume. <b>vdom_error</b> (INT): The vdom error code associated with the reconcile. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.vfiler.move.to.dst
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs on the destination controller during the final phase of migrating a vfiler when the 120 second time limit has been reached . During the final phase of migrating a vfiler from a source controller to a destination controller, input/output data access is stalled until the destination is ready. The amount of time spent with I/O data access stalled within 120 seconds, since many pre-checks have be done to ensure this can be achieved. With the time limit reached, operations will resume to using the vfiler on the source controller. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check that service has been restored to the vfiler on the source controller. If not, contact NetApp technical support. Many pre-checks have been done to ensure timely migration of the vfiler from one controller to another. It is unclear whether network or other conditions have changed, such as changes in controller loads have prevented successful vfiler migration. Check the network connectivity, network bandwidth, load on the source controller and load on the destination controller. If they are not within normal expecations, resolve the issue. If they are within normal expectations, consult with NetApp technical support. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for VFILER MIGRATION EXCEEDED 120 SECONDS ON DESTINATION
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.vfiler.move.to.src
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs on the source controller at the request of the destination controller. The destination controller has exceeded a 120 second time limit during the final phase of migrating a vfiler. During the final phase of migrating a vfiler from a source controller to a destination controller, input/output data access is stalled until the destination is ready. The amount of time spent with I/O data access stalled within 120 seconds, since many pre-checks have been done to ensure this can be achieved. With the time limit reached, operations will resume to using the vfiler on the source controller. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check that service has been restored to the vfiler on this controller. If not, contact NetApp technical support. Many pre-checks have been done to ensure timely migration of the vfiler from one controller to another. It is unclear whether network or other conditions have changed, such as changes in controller loads have prevented successful vfiler migration. Check the network connectivity, network bandwidth, load on the source controller and load on the destination controller. If they are not within normal expectations, please resolve. If they are within normal expectations, consult with NetApp technical support. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for VFILER MIGRATION TIME OUT EXCEEDED BY DESTINATION
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.vol.offline
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects an inconsistent volume and takes it offline. The file system inconsistency could be from one or more sources. The inconsistency might be related to previous operations or to current operations. Disabling access is a protective measure to ensure that further inconsistencies are avoided. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	If the operating environment for the system, storage, or associated cabling has changed in terms of temperature, humidity, vibration, unstable electrical power, or other physical factors, gracefully shut down and power off the system until the environment is restored to normal operations. If the operating environment has not changed, identify the source of the inconsistency by checking for previous errors and warnings. Also check for hardware statistics from Fibre Channel, SCSI, disk drives, other communications mechanisms, and previous administrative activities. Another approach is to consult with NetApp technical support (it is recommended that you do so before attempting this step), and then run WAFL(R) Iron (wafliron) on the volume to identify and optionally repair the inconsistency. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for VOLUME INCONSISTENT AND TAKEN OFFLINE
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.vol.space.crit
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a volume has overallocated space. It will be taken offline soon and the node will reboot. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Create space by increasing volume/aggregate size or deleting data. While changing the provisioning from thick to thin will prevent further utilization of space, it is no longer sufficient to prevent the volume/aggregate from being offlined. In a volume, size can be increased with the "volume size" command. To change provisioning in a volume, reserved files can be unreserved using the "volume file reservation" command. In an aggregate, size can be increased by adding disks. To change provisioning in an aggregate, volume guarantees can be changed from "volume" to "none" using the space-guarantee parameter in the "volume modify" command. The nodeshell "vol status -S" and "aggr status -S" commands display "Total Used" and "Total Physical Used" values greater than 100% when the reserve is being used. The "vol.log.overalloc" and "volume.phys.overalloc" EMS events and their associated SNMP traps of "volumeLogicalOverallocated" and "volumePhysicalOverallocated" are issued when the volume or aggregate is consuming more than the recommended amount of reserve.
<b>Syslog Message</b>	Call home for VOLUME CRITICALLY OUT OF SPACE ERROR.
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.wafl.check
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs after a WAFL(R) check (wack) operation runs. WAFL check is a detection and repair process. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the appliance's log for valuable information that WAFL check might have reported. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for WAFL_check
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.wafl.inconsistent
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects that a volume is inconsistent. The file system inconsistency can be from one or more sources. The inconsistency can be related to previous operations or to current operations. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Consult with NetApp technical support (it is recommended that you do so before attempting this step), and then run WAFL(R) Iron (wafliron) on the volume to identify and optionally repair the inconsistency. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for WAFL INCONSISTENT
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.wafl.inconsistent.block
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects a volume that contains an inconsistent block. The file system inconsistency can be from one or more sources. The inconsistency can be related to previous data operations or to current data operations. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support for further assistance.
<b>Syslog Message</b>	Call home for WAFL INCONSISTENT BLOCK
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.wafl.inconsistent.user.block
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects inconsistent user data within a volume. The file system inconsistency can be from one or more sources. The inconsistency can be related to previous data operations or to current data operations. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Contact NetApp technical support for further assistance.
<b>Syslog Message</b>	Call home for WAFL INCONSISTENT USER BLOCK
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.wafl.iron.done
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs after a WAFL(R) Iron (wafliron) operation runs. WAFL(R) Iron is a detection and repair process. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Check the appliance's log for valuable information that WAFL Iron might have reported. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Call home for WAFL IRON COMPLETED
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

<b>EMS Identifier</b>	callhome.wafliron.chg.pending
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when WAFL(R) Iron (wafliron) Optional Commit changes are pending. WAFL(R) Iron is a detection and repair process. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	Work with NetApp technical support on this issue. If you decide against this, it is recommended that the pending changes be committed.
<b>Syslog Message</b>	Call home for WAFLIRON CHANGES PENDING
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): enabled

<b>EMS Identifier</b>	callhome.weekly
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the weekly AutoSupport or 'call home' event is sent. Information is sent to NetApp technical support to ensure that subsequent communications work and to enable operations analysis. Some results of these analysis might include recommendations on upgrades, firmware changes, and configuration changes to improve the reliability and performance of the system. If your system is configured to do so, it generates and transmits an AutoSupport (or 'call home') message to NetApp technical support and to the configured destinations. Successful delivery of an AutoSupport message significantly improves problem determination and resolution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Call home for WEEKLY_LOG
<b>Parameters</b>	<b>subject</b> (STRING): AutoSupport subject or title for this event. <b>AutoSupport To</b> (default): disabled

## "cap" Event Group

<b>EMS Identifier</b>	cap.cache.corrupt
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a corrupt Central Access Policy (CAP) is encountered during access checks.
<b>Corrective Action</b>	Fix the CAP definitions on the Active Directory, and use the 'vserver cifs group-policy update' command to refresh the cache on the cluster.
<b>Syslog Message</b>	Encountered a corrupt CAP for Vserver %s.
<b>Parameters</b>	<b>vserverUuidStr</b> (STRING): UUID of the Vserver.

<b>EMS Identifier</b>	cap.cache.not.ready
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system attempts to access a Central Access Policy (CAP) for evaluation during access checks and finds the CAP cache database (DB) is not ready for access.
<b>Corrective Action</b>	Make sure that group-policy is enabled for the given Vserver and the Central Access Policies (CAPs) from the Active Directory (AD) can be applied to file system objects.
<b>Syslog Message</b>	CAP Cache DB not ready for Vserver %s.
<b>Parameters</b>	<b>vserverUuidStr</b> (STRING): UUID of the Vserver.

<b>EMS Identifier</b>	cap.cache.update.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when refresh of the Central Access Policy (CAP) Cache database (DB) fails.
<b>Corrective Action</b>	Use the "vserver cifs group-policy update" command with the "force" flag to retry the operation manually.
<b>Syslog Message</b>	Failed to update the CAP cache DB for Vserver %s. (Reason: %s.)
<b>Parameters</b>	<b>vserverUuidStr</b> (STRING): UUID of the Vserver. <b>errString</b> (STRING): Error string.

## "ccma" Event Group

<b>EMS Identifier</b>	ccma.disabled
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Performance Archive has been disabled for more than an hour. This is caused by setting the -is-enabled flag to false. This message will be repeated every hour that the archiver is turned off. The messages will only displayed once a day.
<b>Corrective Action</b>	Run the 'statistics archive config modify -is-enable true' command. This will enable the Performance Archive.
<b>Syslog Message</b>	The Performance Archive has been disabled for more than an hour. It is Important for the analysis and diagnoses of performance related issues. Consider enabling it.
<b>Parameters</b>	

<b>EMS Identifier</b>	ccma.perfstatd.disabled
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Perfstat daemon (perfstatd) has been disabled for more than an hour. This is caused by setting the -perfstat-sampling-period value to 0. This message will be repeated every hour perfstatd is turned off. The messages will only displayed once a day.
<b>Corrective Action</b>	Run the 'statistics archive config modify -perfstat-sampling-period 5' command. This will enable the perfstatd and it will set the Perfstat sampling period to the default value of 5 minutes.
<b>Syslog Message</b>	The Perfstat daemon (perfstatd) has been disabled for more than an hour. It is important for the analysis and diagnoses of performance related issues. Consider enabling it.
<b>Parameters</b>	

<b>EMS Identifier</b>	ccma.quota.datastore.leak
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a datastore has been orphaned due to the system not having sufficient memory to keep track of it in the quota system. Orphaned datastores will take up disk space and may build up over time if this problem recurs.
<b>Corrective Action</b>	Delete the orphaned datastore and/or restart the CM daemon once the out of memory condition has been resolved.
<b>Syslog Message</b>	A datastore may have been orphaned due to the system being out of memory. Please delete this datastore: %s
<b>Parameters</b>	<b>datastore</b> (STRING): Name of the datastore that has been orphaned and needs to be deleted.

<b>EMS Identifier</b>	ccma.quota.file.leak
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an archiver file has been orphaned due to the system not having sufficient memory to keep track of the file in the quota system. Orphaned files will take up disk space and may build up over time if this problem recurs.
<b>Corrective Action</b>	Delete the orphaned file and/or restart the CM daemon once the out of memory condition has been resolved.
<b>Syslog Message</b>	An archiver file may have been orphaned due to the system being out of memory. Please delete this file: %s
<b>Parameters</b>	<b>filename</b> (STRING): Name of the archiver file that has been orphaned and needs to be deleted.

<b>EMS Identifier</b>	ccma.quota.throughput
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the performance archive data collection rate is too high for the amount of reserved disk space, possibly resulting in a shortened history of the system's performance (less than the configured datastore-max-retention value). A shortened history might limit the ability of support staff to triage performance problems.
<b>Corrective Action</b>	Using the (diagnostic privilege) "statistics archive config" commands, increase the performance archive's datastore-max-percent configuration parameter so that the reported datastore-max-size value on this node is increased by the stated "size" amount.
<b>Syslog Message</b>	The performance archive data collection rate is too high for the amount of space available. The system can only keep %ld days of performance archive data at this rate, and needs %ld MB of additional space to maintain a system performance history equal to the datastore-max-retention configuration value.
<b>Parameters</b>	<b>days</b> (LONGINT): Number of days of performance archive data that can be stored at the current rate. <b>size</b> (LONGINT): Size increase (in MB) needed to maintain a system performance history equal to the datastore-max-retention configuration value.

## "cdpd" Event Group

<b>EMS Identifier</b>	cdpd.recv.cacheOverflow
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the CDP (Cisco Discovery Protocol) daemon running on the storage controller receives more unique neighbor advertisements than it can cache. The storage controller stops saving incoming CDP advertisements after the CDP neighbor cache has the maximum allowed neighbor entries. The CDP daemon will start processing new advertisements again after entries in the CDP neighbor cache start timing out.
<b>Corrective Action</b>	Use the 'cdpd show-stats' CLI command under the "Cache overflow" receive statistic to view the number of unique advertisements in excess of the maximum. Check the traffic statistics on the neighboring switches and bridges. If the storage controller has more than 64 CDP neighbors, you can ignore this message. Otherwise, take a packet trace on the network or on each network port of the storage controller to check the source of the CDP advertisements.
<b>Syslog Message</b>	The CDP neighbors table is full.
<b>Parameters</b>	

## "cecc\_log" Event Group

<b>EMS Identifier</b>	cecc_log.dropped
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the ECC error logger dropped some correctable ECC errors without logging them. Typically, correctable ECC errors are logged in the system even though they are automatically corrected. They are dropped due to lack of buffer space in the ECC error logger. This might be a sign of high frequency of ECC errors. If the number of ECC errors dropped crosses a certain predefined threshold, the ECC error logger issues a cecc_log.masked message.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dropped %ld additional correctable ECC error details.
<b>Parameters</b>	<b>num_cecc_batch_dropped</b> (LONGINT): Number of correctable ECC errors dropped without being logged.

<b>EMS Identifier</b>	cecc_log.entry
<b>Severity</b>	NOTICE
<b>Description</b>	Correctable ECC errors occurred in the system memory. The system automatically corrects these errors. All the corrected errors are reported by the ECC error logger to track the history of occurrence of these errors.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%ld: %s
<b>Parameters</b>	<b>cecc_entry_num</b> (LONGINT): Number of correctable ECC errors since boot. <b>cecc_msg</b> (STRING): Information about the ECC error.

<b>EMS Identifier</b>	cecc_log.entry_no_syslog
<b>Severity</b>	NOTICE
<b>Description</b>	Correctable ECC errors occurred in the system memory. The system automatically corrects these errors. All the corrected errors are reported by the ECC error logger to track the history of occurrence of these errors.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>cecc_entry_num</b> (LONGINT): Number of correctable ECC errors since boot. <b>cecc_msg</b> (STRING): Information about the ECC error.

<b>EMS Identifier</b>	cecc_log.masked
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the ECC error logger stops reporting the occurrence of correctable ECC errors because the frequency of their occurrence is too high. The ECC logger crossed the predefined threshold of ECC errors that can be dropped. Reporting is suppressed to control the log traffic, but the system sends out a periodic message as a reminder.
<b>Corrective Action</b>	Use the "system controller memory dimm show" command to check system memory.
<b>Syslog Message</b>	Error logging temporarily suspended due to excessive CECC errors.
<b>Parameters</b>	

<b>EMS Identifier</b>	cecc_log.summary
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the ECC error logger reports its periodic summary of new correctable ECC errors that occurred after the last report and the total number of ECC errors that occurred since boot. These errors were corrected by the system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Total of %lld new correctable ECC errors just reported. You might want to check system memory. %lld correctable ECC errors reported since booting.
<b>Parameters</b>	<b>num_ceccs</b> (LONGINT): Number of new correctable ECC errors after the last summary. <b>total_num_ceccs</b> (LONGINT): Number of correctable ECC errors since boot.

## "cf" Event Group

<b>EMS Identifier</b>	cf.autoGBCanceled.headswap
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an automatic giveback is canceled because of a headswap.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.badShelfCountMsg
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if we are sent an invalid negotiated failover shelf count message. The message size is incorrect. This is likely due to an InterConnect problem.
<b>Corrective Action</b>	Check for and resolve any interconnect errors. If the nodes are on different releases, upgrade the down-rev node.
<b>Syslog Message</b>	Invalid disk shelf count message was received from partner.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.badShelfCountVersion
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if we are sent a negotiated failover shelf count message with a version which we don't support. As a result, disk shelf count negotiated failover will not work. This is likely due to a kernel version mismatch.
<b>Corrective Action</b>	Upgrade the down-rev node so both nodes are on the same version.
<b>Syslog Message</b>	Disk shelf count message with unsupported version received from partner.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.boot.continuing
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the failover monitor continues booting after waiting for giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.cdo.badMsg
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when the filer receives a disk operation message over the High Availability (HA) interconnect that it does not recognize. This is likely due to a change in the message protocol that the down-revision partner does not recognize. Fix this problem by upgrading the partner to a compatible version of Data ONTAP(R). This message is not emitted for every message received to avoid spamming the console.
<b>Corrective Action</b>	Upgrade both nodes to the same release.
<b>Syslog Message</b>	unknown message %d received from partner (%d unknown messages since boot).
<b>Parameters</b>	<b>msg</b> (INT): Message which was not known. <b>count</b> (INT): Number of unknown messages.

<b>EMS Identifier</b>	cf.cdo.reportOp
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the filer bypasses or unbypasses a disk after being requested to do so by its partner. The bypassing of a drive on a particular port may only be done by the host which is attached to that port; the High Availability (HA) software ensures that both ports of the drive are bypassed by communicating bypass requests to the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s disk %s on behalf of the partner.
<b>Parameters</b>	<b>op</b> (STRING): Operation description <b>driveName</b> (STRING): Drive name

<b>EMS Identifier</b>	cf.disk.invent.mismatchalt
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when one of the nodes in a high-availability (HA) pair reports that multiple disks in the disk inventory do not match what the partner node reported. This only occurs when sufficient mismatches have occurred to throttle the specific disk inventory mismatch message. The issue might be due to one of following reasons: (1) One node can see disks that the other node cannot. (2) Ownership of multiple disks has changed. (3) Multiple disks have been failed or unfailed. (4) Multiple disks have been inserted or removed.
<b>Corrective Action</b>	Rescan the disks on both nodes in the HA pair to determine the latest ownership by using the "storage disk refresh-ownership" command. If the inventory mismatch is not resolved, remove and replace any failed disks. If there are no failed disks, check the cabling for loose connections or a bad cable on the node where the disks are not included in the inventory.
<b>Syslog Message</b>	Status of some of the disks has changed or the node (%s) is missing %u disks (detailed logs have been throttled).
<b>Parameters</b>	<b>host</b> (STRING): Name of the node not reporting the disks in its disk inventory. <b>nummissing</b> (INT): Number of disks not reported in the disk inventory.

<b>EMS Identifier</b>	cf.disk.invent.mismatchOKalt
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when previously detected disk inventory mismatches have been resolved and the detailed match events have been throttled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%u disks now included in the inventory of node (%s) (detailed logs have been throttled).
<b>Parameters</b>	<b>nummatches</b> (INT): Number of disks found to match the partner disk inventory so far. <b>host</b> (STRING): Name of the host where the disk is included in the inventory.

<b>EMS Identifier</b>	cf.disk.inventory.mismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when one of the nodes in a high-availability (HA) pair has reported this disk in its disk inventory, but the HA partner node has not. This might be due to one of following reasons: (1) One node can see the disk, but the other node cannot. (2) Ownership of the disk has changed. (3) The disk has either been failed or unfailed. (4) The disk has been inserted or removed.
<b>Corrective Action</b>	Use the "storage disk refresh-ownership" command on both nodes in the HA pair to rescan the disks and to determine the latest ownership. If the inventory mismatch is not resolved, remove and replace any failed disks. If there are no failed disks, check the cabling for loose connections or a bad cable on the node where the disk is not included in the inventory.
<b>Syslog Message</b>	Status of the disk %s (%s) has recently changed or the node (%s) is missing the disk.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk not reported in the inventory. <b>uid</b> (STRING): Unique identifier of the disk that was not included in the inventory. <b>host</b> (STRING): Name of the node not reporting the disk in its disk inventory.

<b>EMS Identifier</b>	cf.disk.inventory.mismatchOK
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a previously detected disk inventory mismatch is resolved.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The node (%s) included the disk %s (%s) in its inventory.
<b>Parameters</b>	<b>host</b> (STRING): Name of the host where the disk is included in the inventory. <b>diskname</b> (STRING): Name of the disk included in the inventory. <b>uid</b> (STRING): Unique identifier of the disk.

<b>EMS Identifier</b>	cf.disk.inventory.ver.notok
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the local node does not support the partner's disk inventory message version.
<b>Corrective Action</b>	Upgrade the partner to the same Data ONTAP(R) version.
<b>Syslog Message</b>	cfdisk: The local node did not support the partner's disk inventory message version. The disk inventory check will not be performed during giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.disk.inventoryChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when High Availability (HA) disk inventory is enabled/disabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: disk inventory %s
<b>Parameters</b>	<b>state</b> (STRING): Parameter which describes if enabled or disabled.

<b>EMS Identifier</b>	cf.disk.releaseFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the release of reservation request on a disk fails. The error indicates that a disk is not ready, that it failed, or that it does not exist.
<b>Corrective Action</b>	Use the "disk show -broken" CLI command to check whether the disk is reporting a "FAILED" state, or use the "disk show -disk diskname" command to check the status of the disk. Also check the syslog for other errors pertaining to the same disk. The disk might need to be resealed or replaced.
<b>Syslog Message</b>	Disk reservation failed to release on disk %s because the error %d was encountered.
<b>Parameters</b>	<b>diskname</b> (STRING): Disk that reported the failure when a release of reservation request was attempted on it. <b>force</b> (INT): Type of reservation release request. If non-zero, then the system was instructed to release reservations owned by the other systems. Otherwise, it only releases the reservation on the disks reserved by the local system. <b>error</b> (INT): Error encountered while attempting to release the reservation on disk. <b>errortext</b> (STRING): Error description as text.

<b>EMS Identifier</b>	cf.disk.reserveFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk reserve fails. The error indicates that a disk is not ready, that it failed, or that it does not exist.
<b>Corrective Action</b>	Check the specified disk for failure. You might need to replace it or reseal it. Then check the syslog for other errors pertaining to the same disk.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<p><b>diskname</b> (STRING): Disk that reported the failure when a reserve was attempted on it.</p> <p><b>preempt</b> (INT): Type of reservation request. If non-zero, then the system was instructed to preempt reservations from the other systems. Otherwise, it only reserves disks without existing reservations.</p> <p><b>error</b> (INT): Error encountered while attempting to reserve the disk.</p> <p><b>errortext</b> (STRING): Error description as text.</p>

<b>EMS Identifier</b>	cf.disk.ResvFail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node attempts to access a disk that has been reserved by the HA partner node. A node performing a takeover reserves the HA partner node's disks as part of a takeover operation. It is possible that the node being taken over can attempt to access a reserved disk before it has shut down as part of being taken over. The takeover node will automatically release the reservation prior to a giveback operation.
<b>Corrective Action</b>	The takeover node will automatically release the disk reservation before a giveback operation.
<b>Syslog Message</b>	Disk %s has been reserved by the High Availability (HA) partner as part of a takeover operation.
<b>Parameters</b>	<b>DiskName</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	cf.disk.ResvTakeOver
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we find disks with reservation conflicts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	This node will wait for giveback and the disk reservations to be released.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.disk.skipped
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the failover monitor skips an unresponsive disk.
<b>Corrective Action</b>	Use the "storage disk show" command to check whether the disk failed. Replace the disk if needed.
<b>Syslog Message</b>	The disk %s was skipped because it reported the status %s.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk that was skipped. <b>status</b> (STRING): Status reported by the disk.

<b>EMS Identifier</b>	cf.diskinventory.cksum.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the computed checksum of the disk inventory message is different from the checksum sent as part of the disk inventory message.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk inventory checksum mismatch: old %d new %d.
<b>Parameters</b>	<b>oldCkSum</b> (INT): Old checksum, sent as part of the message. <b>newCkSum</b> (INT): Checksum of the disk inventory message computed locally.

<b>EMS Identifier</b>	cf.diskinventory.many.disks
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a node receives more than maximum supported disks in the disk inventory message.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	disk inventory: ndisks %d max_disks %d
<b>Parameters</b>	<b>ndisks</b> (INT): Number of disk descriptions sent in the inventory message. <b>maxdisks</b> (INT): Maximum number of disks supported.

<b>EMS Identifier</b>	cf.fm.cpuUtilDuringTOAndGB <b>Deprecated:</b> Deprecated as of version 9.0.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs at the start of a takeover, end of a successful takeover, start of a CFO giveback, and completion of an SFO giveback. It records the maximum, minimum, and average CPU and disk utilization on the node executing the takeover or giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CPU and disk utilization during the %d seconds %s: cpu_util_high: %lld; cpu_util_low: %lld; cpu_util_avg: %lld; disk_util_high: %lld; disk_util_low: %lld; disk_util_avg: %lld
<b>Parameters</b>	<b>window_sz</b> (INT): Duration, in seconds, over which CPU and disk utilization are tracked. <b>when</b> (STRING): Event during which CPU and disk utilization are tracked. <b>cpu_util_high</b> (LONGINT): Maximum CPU utilization. <b>cpu_util_low</b> (LONGINT): Minimum CPU utilization. <b>cpu_util_avg</b> (LONGINT): Average CPU utilization. <b>disk_util_high</b> (LONGINT): Maximum disk utilization. <b>disk_util_low</b> (LONGINT): Minimum disk utilization. <b>disk_util_avg</b> (LONGINT): Average disk utilization.

<b>EMS Identifier</b>	cf.fm.discardNvram
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we discover that the partner has previously taken us over, forcing us to invalidate our own nvram contents. This is a normal condition, subsequent to a takeover/giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: node was previously taken over, nvram may be discarded
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.diskInventoryOff
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system discovers that disk inventory gathering has been disabled. During normal operation, the high-availability (HA) nodes transmit their disk inventory data at regular intervals. This is intended to prevent a situation in which loop connectivity problems are unnoticed until a takeover event occurs. If this event occurs, contact NetApp technical support.
<b>Corrective Action</b>	Use the "sysconfig" and "storage" nodeshell commands to determine whether there are problems with the loop, adapter, or shelf. Resolve those problems.
<b>Syslog Message</b>	Failover monitor: HA disk inventory disabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.diskRelease
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when we're using a debug build and failover monitor reservations are released.
<b>Corrective Action</b>	n/a
<b>Syslog Message</b>	Failover monitor: released disk reservations.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.diskReleaseFail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the release of a reservation on a disk fails in preparation for a giveback event. The error indicates that a disk is not ready, that it failed, or that it does not exist. If the reservation is detected by the partner node, it will reboot.
<b>Corrective Action</b>	Look for the cf.disk.releaseFailed event in the EMS log to find the name of the disk where the reservation could not be released. Follow the corrective action described in the cf.disk.releaseFailed event to address any problems with the disk.
<b>Syslog Message</b>	Could not release disk reservations of at least one disk.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.duplicateId
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the local node system identifier is the same as the partner's. This could happen if the HA-Interconnect is configured for loopback in maintenance mode systems or if the system was not properly configured. The local node will halt in this case and the partner node will do a takeover of the local node resources, provided takeover is enabled.
<b>Corrective Action</b>	If this message occurs only while the system is configured in maintenance mode, it can be ignored as HA-interconnect loopback tests send a message with a node's own system identifier to itself. If this message occurs while a system is not in maintenance mode, check if the HA-interconnect cables are properly connected. If cabling is correct, contact NetApp technical support for assistance.
<b>Syslog Message</b>	Partner ID %u is the same as that of this node. This node will halt and the partner will perform a takeover, if takeover is enabled.
<b>Parameters</b>	id (INT): System ID.

<b>EMS Identifier</b>	cf.fm.earlyGivebackDone
<b>Severity</b>	NOTICE
<b>Description</b>	This event occurs when we are aborting a takeover that was initiated during a previous boot sequence. This event should only occur under unusual circumstances, indicating successful recovery from a software failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: giveback of previous takeover complete
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.earlyTakeoverFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an error during early takeover prevents the node from booting into takeover mode. The node instead boots up without taking over its partner and also releases its partner resources, allowing the partner node to boot up. Note: Early takeover occurs when a node boots up after rebooting while in takeover mode.
<b>Corrective Action</b>	Check the EMS log for the cf.rsrc.takeoverFail error or other errors indicating why the node could not boot into takeover mode.
<b>Syslog Message</b>	Early takeover failed; node will boot without taking over partner node. Partner resources released, allowing partner node to boot.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.fastTimeoutBlocked
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued if the monitor fast timeout thread has been blocked for an unacceptable amount of time. The event indicates a heavy load on the system and may result in an unexpected (false) takeover.
<b>Corrective Action</b>	Check CPU load and make sure system is not over subscribed.
<b>Syslog Message</b>	WARNING failover monitor fast timeout was blocked for %lld secs
<b>Parameters</b>	<b>secs</b> (LONGINT): Number of seconds that the High Availability (HA) node has been blocked

<b>EMS Identifier</b>	cf.fm.gbCancelledDueToDR
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when a giveback has been cancelled due to an ongoing metrocluster disaster recovery operation.
<b>Corrective Action</b>	Check the status of metrocluster disaster recovery operation by executing command 'metrocluster operation show'. If the command reports metrocluster disaster recovery operation is in progress wait for it to complete and then issue a manual giveback.
<b>Syslog Message</b>	Failover monitor: giveback cancelled
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.givebackCancelled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a giveback is canceled due to a preexisting state, such as an active CIFS session, a reconstruction, and so on.
<b>Corrective Action</b>	To override, use the "storage failover giveback -override-vetoes true" command.
<b>Syslog Message</b>	Failover monitor: giveback canceled.
<b>Parameters</b>	<b>partner_node_uuid</b> (STRING): UUID of the partner node.

<b>EMS Identifier</b>	cf.fm.givebackComplete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when giveback succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: giveback completed
<b>Parameters</b>	<b>token</b> (STRING): Unique token that identifies a failover instance. <b>partner_node_uuid</b> (STRING): UUID of the partner node.

<b>EMS Identifier</b>	cf.fm.givebackDuration
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a giveback is completed successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: giveback duration time is %llu seconds.
<b>Parameters</b>	<b>giveback_duration</b> (LONGINT): Giveback duration time.

<b>EMS Identifier</b>	cf.fm.givebackFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the failover monitor determines that a giveback has failed. The reason code is a string that describes the reason for the failure.
<b>Corrective Action</b>	Resolve the issue based on the reason logged in the message.
<b>Syslog Message</b>	Failover monitor: giveback failed '%s'
<b>Parameters</b>	<b>reason</b> (STRING): Internal reason code for the failure. <b>token</b> (STRING): Unique token that identifies a failover instance. <b>partner_node_uuid</b> (STRING): UUID of the partner node.

<b>EMS Identifier</b>	cf.fm.givebackForced
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the takeover node detects that the takeover process has not been completed within the expected time, and/or normal attempts to give back partner resources also fail. Subsequent to this event, the takeover node will panic and reboot.
<b>Corrective Action</b>	Attempt to find the panic string in the event logs by using the "event log show" command from the CLI, and then look up the string by using the Panic Message Analyzer tool on the NetApp support site: <a href="http://mysupport.netapp.com/NOW/cgi-bin/pmsg/">http://mysupport.netapp.com/NOW/cgi-bin/pmsg/</a> . Contact NetApp technical support to confirm the analysis.
<b>Syslog Message</b>	Failover monitor: forcing reboot to clear state.
<b>Parameters</b>	<b>partner_node_uuid</b> (STRING): UUID of the partner node.

<b>EMS Identifier</b>	cf.fm.givebackStarted
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the failover monitor initiates a giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: giveback started with token %s. "override-vetoes" set to %s, and "require-partner-waiting" set to %s.
<b>Parameters</b>	<p><b>token</b> (STRING): Unique token that identifies a failover instance.</p> <p><b>override_vetoes</b> (STRING): Flag that indicates whether the system overrides veto checks during a giveback operation. This flag corresponds to the "-override-vetoes" parameter of the "storage failover giveback" command. When the parameter is set to true, some veto checks made by subsystems on the source node might be overridden.</p> <p><b>require_partner_waiting</b> (STRING): Flag that indicates whether, during a giveback, the storage is given back regardless of whether the partner node is available to take back the storage. This flag corresponds to the "-require-partner-waiting" parameter of the "storage failover giveback" command. When set to true, the parameter might cause the giveback to proceed, even if the destination node is not ready to receive the aggregate being migrated.</p> <p><b>partner_node_uuid</b> (STRING): UUID of the partner node.</p>

<b>EMS Identifier</b>	cf.fm.givebackUpdateFail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when GIVEBACK_DONE is not written to the backup mailbox after all other giveback processing is done. The issuing node is no longer in takeover mode, but the partner node cannot boot (without operator intervention) because the partner mailbox claims it has been taken over.
<b>Corrective Action</b>	Boot the previously taken over node. During the boot operation, the node requests confirmation to proceed.
<b>Syslog Message</b>	Failover Monitor: Unexpected error %d while trying to update backup mailbox during giveback
<b>Parameters</b>	<p><b>errcode</b> (INT): Error code.</p> <p><b>partner_node_uuid</b> (STRING): UUID of the partner node.</p>

<b>EMS Identifier</b>	cf.fm.haltUpdateFail
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued if we are unable to update the partner state as part of halt processing. This occurrence of this event should not affect the operation of the High Availability (HA) pair.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	halt: Unable to update failover monitor with NoTakeover state
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.hogger
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the fast timeout thread is blocked for a very long time and the system can identify threads that might have been responsible for the fast timeout thread not being scheduled.
<b>Corrective Action</b>	Determine why the process is consuming the CPU, and either correct the problem, or end the offending process.
<b>Syslog Message</b>	Failover monitor: Process %s ran continuously for %llu ms.
<b>Parameters</b>	<b>procName</b> (STRING): Name of the process that is consuming the CPU. <b>schedTime</b> (LONGINT): Time for which the process ran without releasing the CPU.

<b>EMS Identifier</b>	cf.fm.initError
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when failover monitor initialization fails. If this event occurs, the failover monitor cannot be started. The node will reboot after this event.
<b>Corrective Action</b>	Check the logs for other messages from the failing component listed in the message by using the "event log show" command from the CLI. Also check for errors from other components or errors indicating hardware failures. If the problem occurs again after the node reboots, contact NetApp technical support.
<b>Syslog Message</b>	Failover monitor: initialize(%s) fails.
<b>Parameters</b>	<b>component</b> (STRING): Software component that has failed to initialize.

<b>EMS Identifier</b>	cf.fm.kernelMismatch
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when we detect a possible mismatch of kernel versions in the High Availability (HA) pair. This situation is allowed, although takeover may be disabled if the mismatch imposes version differences in the metadata formats (nvram, filesystem, etc.) of the system.
<b>Corrective Action</b>	Upgrade both nodes to the same release.
<b>Syslog Message</b>	Failover monitor: possible kernel mismatch detected local '%s', partner '%s'
<b>Parameters</b>	<b>myVersion</b> (STRING): My version <b>partnerVersion</b> (STRING): The partner's version

<b>EMS Identifier</b>	cf.fm.kernelMismatchOk
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when we detect a possible mismatch of kernel versions in the High Availability (HA) pair has been resolved.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: possible kernel mismatch resolved
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.launch
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when the failover monitor is launched. It occurs very early in the system startup sequence.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Launching failover monitor
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.lmgrVetoOverride
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during an SFO aggregate giveback, when system settings indicate that giveback should be vetoed but the veto was overridden by the automated nondisruptive update procedure. The automated nondisruptive update procedure verifies the expected state of aggregate.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	"%s" subsystem veto was overridden during giveback operation of "%s" aggregate.
<b>Parameters</b>	<b>subsystem</b> (STRING): Name of the vetoed subsystem. <b>aggregate</b> (STRING): Name of the aggregate.

<b>EMS Identifier</b>	cf.fm.localmbReadStatus
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message reports the status of a local mailbox disk read.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>returncode</b> (INT): Status returned by the read of the local mailbox disk.

<b>EMS Identifier</b>	cf.fm.lowMemory
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the local node does not have sufficient memory to run failover monitor services.
<b>Corrective Action</b>	Verify that the recommended amount of memory is installed on the system. If there is sufficient memory, the error might be related to hardware issues. In this case, capture the console logs, and then call NetApp technical support.
<b>Syslog Message</b>	Takeover is disabled due to insufficient memory.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.MBstatusOnBoot
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs on system boot when the failover monitor detects that no takeover is in progress.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>status</b> (INT): Failover monitor status as reported by the mailbox disk.

<b>EMS Identifier</b>	cf.fm.mirrorConsistencyOff
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system discovers that the NVRAM mirror consistency option has been disabled. This option should ONLY be disabled under operator control. If mirror consistency is disabled, a takeover can result in a loss of recently logged data.
<b>Corrective Action</b>	Run the "cf enable mirrorconsistency" advanced privilege nodeshell command to reenable mirror consistency.
<b>Syslog Message</b>	Failover monitor: NVRAM mirror consistency is disabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.missingAdapter
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the HA mode is set to "ha" but no interconnect adapter is found. This is an error indicating a misconfiguration of the system.
<b>Corrective Action</b>	Install the high-availability (HA) interconnect adapter or set the HA mode to "non_ha" by using the "storage failover modify -mode non_ha" command.
<b>Syslog Message</b>	Warning: HA mode is set to "ha" but the interconnect adapter was not found.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.monitorBlocked
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued if the failover monitor has been blocked for an unacceptable amount of time. The event indicates a heavy load on the system and may result in an unexpected (false) takeover.
<b>Corrective Action</b>	Check CPU load and make sure system is not over subscribed.
<b>Syslog Message</b>	WARNING failover monitor was blocked for %lld secs
<b>Parameters</b>	<b>secs</b> (LONGINT): Number of seconds that the failover monitor has been blocked

<b>EMS Identifier</b>	cf.fm.noearlyrelease
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an early release of reservations is not done.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>state</b> (INT): Partner firmware state. <b>version</b> (INT): Partner firmware version.

<b>EMS Identifier</b>	cf.fm.nofwUpdateinTO
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is no progress in the firmware status received from the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.noICbutFoundMb
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when no firmware state is obtained over the High Availability (HA) interconnect but the mailbox disks are found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>status</b> (INT): Status of the active/active configuration based on the mailbox disks.

<b>EMS Identifier</b>	cf.fm.nombdisks
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This messages indicates the status of the local mailbox disks.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>returncode</b> (INT): Return value from the call to read the local mailbox disks. <b>mbstatus</b> (INT): Current status of the active/active configuration.

<b>EMS Identifier</b>	cf.fm.noMBdisksOnSFUP
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when no local mailbox disks are detected, even though the partner performed a giveback.
<b>Corrective Action</b>	Check connectivity to all disks by running the "run local storage show" command on each partner, and then comparing the results.
<b>Syslog Message</b>	Could not find the local mailbox disks after a giveback. Check connectivity to all disks.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.noMBDisksOrlc
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) cannot access the local mailbox disks and cannot determine partner status through the high-availability (HA) interconnect.
<b>Corrective Action</b>	Check connectivity to all disks by running the "run local storage show" command on each partner, and then comparing the results. Verify that the interconnect cables are properly cabled.
<b>Syslog Message</b>	Could not find the local mailbox disks. Could not determine the firmware state of the partner through the HA interconnect.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.noPartnerVariable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot identify the serial number of the partner because the firmware variable is not set.
<b>Corrective Action</b>	1) Use the "storage failover show" command to verify that that high-availability (HA) is enabled. 2) If HA is enabled, there might be too many environment variables defined. Halt the system, and then enter the "printenv" command at the LOADER prompt. Use the "unsetenv" command to remove unneeded environment variables.
<b>Syslog Message</b>	Unknown partner serial number: firmware %s variable is not set.
<b>Parameters</b>	<b>variable</b> (STRING): Name of the firmware variable.

<b>EMS Identifier</b>	cf.fm.noTakeoverNoRc
<b>Severity</b>	ERROR
<b>Description</b>	This message indicates that we cannot do takeover during a no-rc boot.
<b>Corrective Action</b>	Reboot the node normally
<b>Syslog Message</b>	Failover monitor: reboot normally to enable takeover
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.notkoverBadMbox
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we discover that a mailbox is uninitialized.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: uninitialized %s mailbox data detected
<b>Parameters</b>	<b>whose</b> (STRING): Indicates which mailbox is uninitialized

<b>EMS Identifier</b>	cf.fm.notkoverClusterDisable
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when we discover that failover between the High Availability (HA) pair has been disabled. Failover may be disabled under operator control or when a condition has been discovered (e.g., kernel mismatch) that necessitates disabling of the HA pair.
<b>Corrective Action</b>	Resolve the reason provided in the message.
<b>Syslog Message</b>	Failover monitor: takeover disabled (%s)
<b>Parameters</b>	<b>reason</b> (STRING): The reason code for disabling the HA pair

<b>EMS Identifier</b>	cf.fm.notkoverOperatorDeny
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when we discover that the operator has disabled takeover-by-partner.
<b>Corrective Action</b>	If takeover by the partner is desired, re-enable takeover.
<b>Syslog Message</b>	Failover monitor: takeover by partner disabled
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.notkoverOperatorDisableNvram
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when we discover that the operator has disabled the nvram mirror.
<b>Corrective Action</b>	Re-enable NVRAM mirroring
<b>Syslog Message</b>	Failover monitor: nvram mirror disabled
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.overwriteState
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the operator has manually intervened and has forced an overwrite of failover monitor state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	System continuing after overwriting failover monitor state!
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.panicAfterToDone
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node panics too soon after the completion of a takeover. The node reboots in normal mode to avoid recursive panics.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Failover monitor: Panic occurred too soon after takeover was completed (currentTime %llu ms, Takeover completed %llu ms).
<b>Parameters</b>	<b>currentTime</b> (LONGINT): Time when the panic occurred. <b>ToDoneTime</b> (LONGINT): Time when the takeover was completed.

<b>EMS Identifier</b>	cf.fm.panicInToMode
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the node panics after taking over the partner node. When the node comes back up, it will do so in takeover mode.
<b>Corrective Action</b>	Attempt to find the panic string in the event logs by using the "event log show" command from the CLI, and then look up the string by using the Panic Message Analyzer tool on the NetApp support site: <a href="http://mysupport.netapp.com/NOW/cgi-bin/pmsg/">http://mysupport.netapp.com/NOW/cgi-bin/pmsg/</a> . Contact NetApp technical support to confirm the analysis.
<b>Syslog Message</b>	Failover monitor: Panic in takeover mode; takeover will occur on reboot.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.panicOnGBforced
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node panics while a forced giveback is in progress. The node performs giveback and releases partner resources on reboot.
<b>Corrective Action</b>	Capture the console log and contact NetApp technical support.
<b>Syslog Message</b>	Failover monitor: Panic during forced giveback; node will release partner resources on reboot.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.panicToInProgress
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node panics while the takeover is in progress. The node reboots in normal mode with takeover disabled.
<b>Corrective Action</b>	Capture the console log and contact NetApp technical support.
<b>Syslog Message</b>	Failover monitor: Panic during takeover; takeover will be disabled on reboot.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.partner
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued to announce the name of the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: partner '%s'
<b>Parameters</b>	<b>partner</b> (STRING): The name of the High Availability (HA) partner

<b>EMS Identifier</b>	cf.fm.partnerChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued to announce a change in the name of the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: partner hostname has changed: '%s'
<b>Parameters</b>	<b>partner</b> (STRING): The name of the High Availability (HA) partner

<b>EMS Identifier</b>	cf.fm.partnerFwState
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message reports the firmware status of the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>state</b> (INT): Partner firmware status.

<b>EMS Identifier</b>	cf.fm.partnerFwTransition
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is a change in the partner firmware state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>prevstate</b> (STRING): Previously reported partner firmware state. <b>newstate</b> (STRING): New firmware state, as reported by the partner. <b>progresscounter</b> (LONGINT): New progress counter, as reported by the partner.

<b>EMS Identifier</b>	cf.fm.partnerICFwVersion
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the partner is using a different version of the interconnect firmware.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>version</b> (INT): Partner firmware version.

<b>EMS Identifier</b>	cf.fm.partnerSysid
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued to announce the system id of the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: partner system id: %u
<b>Parameters</b>	<b>sysid</b> (LONGINT): The sysid of the High Availability (HA) partner

<b>EMS Identifier</b>	cf.fm.partnerSysidChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued to announce a change in the system id of the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: partner system id has changed: %u
<b>Parameters</b>	<b>sysid</b> (LONGINT): The sysid of the High Availability (HA) partner

<b>EMS Identifier</b>	cf.fm.partnerVolumesOnline
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued to indicate that the partner's volumes have been brought on-line as part of early takeover processing.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: partner volumes on-line
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.replayOnlyTakeover
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when the failover monitor initiates a replay-only takeover, which essentially means performing takeover till the partner logs have been replayed, and then initiating a giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Starting replay-only takeover. A giveback will be initiated after the partner logs have been replayed.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.replayOnReboot
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs if a node panics in takeover mode and replay of the partner logs will be attempted on reboot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: replay of partner logs will be attempted on reboot.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.reserveDisksOff
<b>Severity</b>	EMERGENCY
<b>Description</b>	This event is issued if we discover that disk reservations have been disabled. If this event occurs, contact NetApp technical support.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	Failover monitor: disk reservations disabled
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.reserveMBproblem
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) cannot reserve a partner mailbox disk during a takeover.
<b>Corrective Action</b>	Check connectivity to all disks by running the "run local storage show" command on each partner, and then comparing the results.
<b>Syslog Message</b>	Takeover processing could not reserve the partner mailbox disk.
<b>Parameters</b>	<b>diskname</b> (STRING): Partner mailbox disk that Data ONTAP could not reserve.

<b>EMS Identifier</b>	cf.fm.slowTimeoutBlocked
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the High Availability slow timeout thread has been blocked for an unacceptable amount of time. The event indicates a heavy load on the system and may result in an unexpected takeover.
<b>Corrective Action</b>	Check CPU load and make sure system is not over subscribed. Contact NetApp technical support for further assistance.
<b>Syslog Message</b>	High Availability slow timeout was blocked for %lld secs.
<b>Parameters</b>	<b>secs</b> (LONGINT): Number of seconds that the High Availability (HA) slow timeout thread has been blocked.

<b>EMS Identifier</b>	cf.fm.softError
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when a "soft error" has occurred in the failover monitor.
<b>Corrective Action</b>	Resolve the failure listed in the message.
<b>Syslog Message</b>	Failover monitor: %s
<b>Parameters</b>	<b>reason</b> (STRING): Description of the failure.

<b>EMS Identifier</b>	cf.fm.takeoverComplete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a takeover succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover completed
<b>Parameters</b>	<b>token</b> (STRING): Unique token that identifies a failover instance. <b>partner_node_uuid</b> (STRING): UUID of the partner node.

<b>EMS Identifier</b>	cf.fm.takeoverDetectionSeconds.Default
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the takeover detection time is set to a value less than the DEFAULT_FIRMWARE_TIMEOUTS setting. This can result in false takeovers and takeovers without diagnostic core dumps.
<b>Corrective Action</b>	Modify the takeover detection time to the recommended value by using the "storage failover modify -detection-time" command.
<b>Syslog Message</b>	Takeover detection time is set to %d seconds, which is below the recommended value of %d seconds. False takeovers and takeovers without diagnostic core dumps might occur.
<b>Parameters</b>	<b>SECONDS</b> (INT): Value that the takeover detection time is set to. <b>FIRMWARE_TIMEOUT_DEF</b> (INT): Recommended value.

<b>EMS Identifier</b>	cf.fm.takeoverDetectionSeconds.Kernel
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the takeover detection time is set to a value less than the <code>KERNEL_TIMEOUT</code> setting (as specified by the "sk.process.timeout.override" option). This can result in takeovers without accompanying diagnostic core dumps of the taken over node.
<b>Corrective Action</b>	Set the takeover detection time to the recommended value by using the "storage failover modify -detection-time" command.
<b>Syslog Message</b>	Takeover detection time is set to %d seconds, which is below %d (= sk.process.timeout.override + 5) seconds. Takeovers without diagnostic core dumps might occur.
<b>Parameters</b>	<b>SECONDS</b> (INT): Value that the takeover detection time is set to. <b>KERNEL_TIMEOUT</b> (INT): Minimum value that should be used.

<b>EMS Identifier</b>	cf.fm.takeoverDuration
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a takeover is completed successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover duration time is %llu seconds.
<b>Parameters</b>	<b>takeover_duration</b> (LONGINT): Takeover duration time.

<b>EMS Identifier</b>	cf.fm.takeoverFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the failover monitor determines that a takeover has failed. The reason code is a string that describes the reason for the failure. Any data LIFs that were migrated as part of the takeover operation are not automatically reverted.
<b>Corrective Action</b>	Resolve the issue based on the reason logged in the message.
<b>Syslog Message</b>	Failover monitor: takeover failed '%s'
<b>Parameters</b>	<b>reason</b> (STRING): Internal reason code for the failure. <b>token</b> (STRING): Unique token that identifies a failover instance. <b>partner_node_uuid</b> (STRING): UUID of the partner node.

<b>EMS Identifier</b>	cf.fm.takeoverStarted
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the failover monitor initiates a takeover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover started
<b>Parameters</b>	<b>token</b> (STRING): Unique token that identifies a failover instance. <b>partner_node_uuid</b> (STRING): UUID of the partner node.

<b>EMS Identifier</b>	cf.fm.timeMasterStatus
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is when we determine our status as time master or slave.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Acting as time %s
<b>Parameters</b>	<b>masterOrSlave</b> (STRING): Master or Slave

<b>EMS Identifier</b>	cf.fm.TODetectionSecs.reset
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the current setting of takeover detection time is shorter than the minimum takeover detection time allowed by this version of Data ONTAP(R). This can result in false takeovers or takeovers without diagnostic core dumps. Data ONTAP resets the takeover detection time to the new minimum.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Takeover detection time was set to %d seconds, shorter than the minimum allowed. Reset the detection time to a new minimum of %d seconds.
<b>Parameters</b>	<b>SECONDS</b> (INT): Current takeover detection seconds. <b>FIRMWARE_TIMEOUT_DEF</b> (INT): New default takeover detection seconds.

<b>EMS Identifier</b>	cf.fm.transitTimeChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when you set the takeover or giveback transit timeout to a value other than the default value. During takeover or giveback, if the timeout is exceeded by a subsystem during the takeover/giveback processing, a panic occurs. If the timeout is set too high, longer client outages might occur instead of aborting the takeover/giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>SECONDS</b> (INT): Transit timeout value (in seconds). <b>DEFAULT_VAL</b> (INT): Default transit timeout value (in seconds).

<b>EMS Identifier</b>	cf.fm.undoFailedTakeover
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we initiate an undo of a failed takeover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: initiate giveback due to failed takeover
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.unexpectedPartner
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the HA mode is set to "non_ha" but the HA mode was set to "ha" previously. This is not an error, but indicates a possible misconfiguration of the system.
<b>Corrective Action</b>	Determine whether the HA mode should be set to "ha", and if so, set it.
<b>Syslog Message</b>	Warning: HA mode is set to "non_ha" but the node once had a storage failover partner.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fm.versionMismatch
<b>Severity</b>	ALERT
<b>Description</b>	This event occurs when a version mismatch is detected during internode initialization. Each node transmits its version information to its partner. If a mismatch is detected, the High Availability (HA) takeover capability is disabled.
<b>Corrective Action</b>	Boot both nodes on the same release.
<b>Syslog Message</b>	Failover monitor: %s version mismatch detected: %d/%d
<b>Parameters</b>	<b>subsystem</b> (STRING): The name of the versioned subsystem <b>myVersion</b> (INT): My version <b>partnerVersion</b> (INT): The partner's version

<b>EMS Identifier</b>	cf.fm.waitBeforeWFG
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a system waits, during boot, for a module to come up before declaring itself ready for giveback. Examples include waiting for the NVRAM battery to be charged.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: waited %llu seconds for module %s.
<b>Parameters</b>	<b>secs</b> (LONGINT): Amount of time spent waiting, in seconds. <b>module_name</b> (STRING): Name of the module the system is waiting for.

<b>EMS Identifier</b>	cf.fmns.skipped.disk
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node is in "Waiting For Giveback" state and the Failover Monitor Node State (fmns) module skips a local disk while releasing the reservations in that state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	While releasing the reservations in "Waiting For Giveback" state Failover Monitor Node State(fmns) module skipped the disk %s that is owned by %u and reserved by %u.
<b>Parameters</b>	<b>uid_string</b> (STRING): Name of the disk which was skipped by fmns. <b>down_owner</b> (INT): The system ID of the node that owns this disk. <b>resvn_owner</b> (INT): The system ID of the node that has a reservation on this disk.

<b>EMS Identifier</b>	cf.fsm.autoGBTkoverOnPanic
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a node initiates an automatic giveback to its partner following a takeover that was due to a panic on the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Automatic giveback was initiated following a takeover that was caused by a panic on the partner.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.autoGBTkoverOnReboot
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a node initiates an automatic giveback to its partner following a takeover that was due to a reboot of the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Automatic giveback was initiated following a takeover that was caused by the partner reboot.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.autoGivebackAttemptsExceeded
<b>Severity</b>	EMERGENCY
<b>Description</b>	This event is issued when auto giveback is disabled due to a ping-pong situation (autoGB followed by t/o followed by autoGB...)
<b>Corrective Action</b>	Examine the logs and/or console output from the partner node. Resolve the issue which prevents the node from staying up.
<b>Syslog Message</b>	Failover monitor: Automatic giveback is being disabled due to exceeding %d attempts in %d minutes.
<b>Parameters</b>	<b>attempts</b> (INT): Number of automatic givebacks attempted <b>minutes</b> (INT): Time period where the automatic givebacks were attempted

<b>EMS Identifier</b>	cf.fsm.autoGivebackDelayed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an automatic giveback is delayed because 'Delay Before Auto Giveback' is set to a non-zero number. If you want to eliminate the delay before automatic giveback occurs, you can use the command "storage failover modify -delay-seconds" to set it to zero.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Automatic giveback was delayed by %d seconds due to a non-zero value of 'Delay Before Auto Giveback'.
<b>Parameters</b>	<b>seconds</b> (INT): Number of seconds by which automatic giveback was delayed.

<b>EMS Identifier</b>	cf.fsm.autoGivebackReleasingReservations
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when we release the disk reservations in preparation for an automatic giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Releasing disk reservations in preparation for an automatic giveback
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.autoGivebackStarted
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when an automatic giveback is initiated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Automatic giveback started
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.autoGivebackVetoed
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when one or more subsystems have vetoed the automatic giveback.
<b>Corrective Action</b>	Terminate the long-running jobs and auto giveback will be successful next time it is attempted.
<b>Syslog Message</b>	Failover monitor: Automatic giveback has been deferred due to long running operations
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.autoTakeoverCancelled
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the failover monitor cancels a pending takeover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: pending takeover cancelled
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.backupMailboxError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the failover monitor determines that an error was observed in the partner's mailbox.
<b>Corrective Action</b>	Correct the issues preventing the node from accessing the partner's mailbox disks. Check for cabling, host bus adapter (HBA), storage controller or drive/LUN issues. You can also use Multipathing to provide a redundant connection to the mailbox disk.
<b>Syslog Message</b>	Failover monitor: partner mailbox error detected.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.backupMailboxOk
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the failover monitor has determined that an error in the backup's mailbox has been fixed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: backup mailbox OK
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.checkingForBigJobs
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is generated when we want to initiate an automatic giveback and we're checking for long running operations which might veto our plans.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Checking for long running operations in preparation for an automatic giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.cliTakeoverCancelled
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the failover monitor cancels a pending takeover issued through a CLI.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover cannot be performed because of reason (%s)
<b>Parameters</b>	<b>reason</b> (STRING): Reason why takeover cannot occur

<b>EMS Identifier</b>	cf.fsm.firmwareStatus
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when we detect an altered firmware status update from the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: partner %s
<b>Parameters</b>	<b>reason</b> (STRING): Partner status

<b>EMS Identifier</b>	cf.fsm.givebackHung
<b>Severity</b>	ALERT
<b>Description</b>	This event occurs when the failover monitor detects that the giveback process is hung.
<b>Corrective Action</b>	Collect the resulting core file and provide it to Customer Support.
<b>Syslog Message</b>	Failover monitor: giveback process is hung ('%s')
<b>Parameters</b>	<b>moduleName</b> (STRING): The name of the module that the hang occurred in.

<b>EMS Identifier</b>	cf.fsm.givebackMaxRetries
<b>Severity</b>	ALERT
<b>Description</b>	This event is called when the giveback retry count has been exceeded. This situation exists when the system is unable either to takeover or giveback. It may be due to either a hardware bug (e.g., the disk subsystem is hung) or a software bug.
<b>Corrective Action</b>	Examine the logs and determine why the giveback is failing. Correct that problem and retry the giveback.
<b>Syslog Message</b>	Failover monitor: giveback has exceeded max retry count
<b>Parameters</b>	<b>retries</b> (INT): Number of retries attempted.

<b>EMS Identifier</b>	cf.fsm.nfo.acceptTakeoverReq
<b>Severity</b>	NOTICE
<b>Description</b>	This event is called when the system accepts a request by its partner to take it over.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Negotiated failover: accepting takeover request by partner, reason: %s. Asking partner to shutdown gracefully; will takeover in at most %d seconds.
<b>Parameters</b>	<b>partnerReason</b> (STRING): Description on why takeover is being requested. <b>maxTakeoverTime</b> (INT): Maximum amount of time for shutdown

<b>EMS Identifier</b>	cf.fsm.nfo.clearReqTakeover
<b>Severity</b>	NOTICE
<b>Description</b>	This event is called when the system clears a request for takeover by its partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Negotiated failover: clearing partner takeover request
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.nfo.delayingGracefulShutdown
<b>Severity</b>	ERROR
<b>Description</b>	This event is called when the system has been asked to shutdown by its partner as the result of the negotiated failover mechanism, but the system can not shut down due to a specific reason.
<b>Corrective Action</b>	Using the information provided in the message, determine why shutdown cannot be invoked. Resolve that problem and retry the takeover request.
<b>Syslog Message</b>	Negotiated failover: delaying shutdown due to %s
<b>Parameters</b>	<b>why</b> (STRING): Indicates the cause of the delay.

<b>EMS Identifier</b>	cf.fsm.nfo.disable
<b>Severity</b>	ERROR
<b>Description</b>	This event is called when negotiated failover is disabled for a particular module.
<b>Corrective Action</b>	Examine previous messages for failures related to the type of NFO.
<b>Syslog Message</b>	Negotiated failover: disabling negotiated failover for module %s
<b>Parameters</b>	<b>mod</b> (STRING): Negotiated failover module or type.

<b>EMS Identifier</b>	cf.fsm.nfo.disable.shelfversion
<b>Severity</b>	ERROR
<b>Description</b>	This event is called when negotiated failover is disabled due to Shelf Count message version mismatch.
<b>Corrective Action</b>	Upgrade both nodes to the same release.
<b>Syslog Message</b>	Negotiated failover: disabling negotiated failover due to version mis-match.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.nfo.enable
<b>Severity</b>	NOTICE
<b>Description</b>	This event is called when negotiated failover is enabled for a particular module.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Negotiated failover: enabling negotiated failover for module %s
<b>Parameters</b>	<b>mod</b> (STRING): NFO module (or type)

<b>EMS Identifier</b>	cf.fsm.nfo.gracefulShutdownTimerExpired
<b>Severity</b>	NOTICE
<b>Description</b>	This event is called when the maximum time the system will wait for the partner to shutdown gracefully has passed. At this point the system takes over by force.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Negotiated failover: partner graceful shutdown appears hung, taking over
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.nfo.moduleImpairmentChange
<b>Severity</b>	ERROR
<b>Description</b>	This event is called when a module which is participating in negotiated failover changes from "unimpaired" to "impaired" or vice versa.
<b>Corrective Action</b>	Check the state of the module listed in the message.
<b>Syslog Message</b>	Negotiated failover: module %s is now %s
<b>Parameters</b>	<b>mod</b> (STRING): Type of negotiated failover <b>impairment</b> (STRING): Either unimpaired or impaired

<b>EMS Identifier</b>	cf.fsm.nfo.partnerShutdown
<b>Severity</b>	NOTICE
<b>Description</b>	This event is called when the system sees that the partner has finished shutting down gracefully during negotiated failover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Negotiated failover: partner has shutdown
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.nfo.rejectTakeoverReqDueToImpairment
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system rejects a request by its partner to take it over because the system is itself impaired.
<b>Corrective Action</b>	Use the "storage failover show" command to determine why takeover is not possible. Resolve that problem and retry the takeover request.
<b>Syslog Message</b>	Negotiated failover: rejecting takeover request by partner due to own impairment.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.nfo.rejectTakeoverReqDueToOwnReq
<b>Severity</b>	ERROR
<b>Description</b>	This event is called when the system rejects a request by its partner to take it over because the system has itself recently requested takeover by its partner. Rejecting this request prevents each system trying to takeover its partner simultaneously. If the partner persists and the system doesn't become impaired the request will soon be granted.
<b>Corrective Action</b>	Resolve any impairment issues reported in previous messages that would cause takeover. If takeover is requested by the operator, it should only be requested on one node.
<b>Syslog Message</b>	Negotiated failover: rejecting takeover request by partner due to own recent takeover request.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.nfo.startingGracefulShutdown
<b>Severity</b>	NOTICE
<b>Description</b>	This event is called when the system has been asked to shutdown by its partner as the result of the negotiated failover mechanism. The system responds by shutting down gracefully, shutting down services in an orderly manner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Negotiated failover: starting graceful shutdown.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.nfo.takeoverPendingCancel
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system is waiting for the partner to shutdown gracefully and failover is disabled, canceling the pending takeover.
<b>Corrective Action</b>	Use the "storage failover modify -enabled true" command to reenable failover.
<b>Syslog Message</b>	Negotiated failover: pending takeover canceled.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.partnerNotResponding
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we detect that the partner node is not responsive.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: partner not responding
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.partnerOk
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we detect that the partner node, which was previously not responsive, is now OK.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: partner ok
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.releasingReservations
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is generated when we release the disk reservations in preparation for a manual giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Releasing disk reservations in preparation for giveback
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.shelfCount.fewerShelves
<b>Severity</b>	ALERT
<b>Description</b>	This event is emitted when we detect that the partner sees more of our disk shelves than we do. In other words, it sees more shelves on its FCAL B loop than we see on our A loop. This is probably due to a cabling problem or a broken FCAL host adaptor. If "disk_shelf" negotiated failover is enabled, this condition should lead to a takeover by the partner if the partner is otherwise able to take us over.
<b>Corrective Action</b>	Resolve cabling issues which are preventing both nodes from seeing the same disks.
<b>Syslog Message</b>	Disk shelf count mismatch: partner sees more of our A shelves on its B loop (%d) than we do (%d).
<b>Parameters</b>	<b>bShelves</b> (INT): Number of our shelves which the partner can see <b>aShelves</b> (INT): Number of shelves which we can see

<b>EMS Identifier</b>	cf.fsm.stateTransit
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when a state transition is detected. Typically, this indication means that the failover monitor is about to either takeover its partner or giveback to its partner. This can happen as the result of timers going of, operator command, or an indication from the partner that a fault has been detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: %s --> %s
<b>Parameters</b>	<b>oldState</b> (STRING): The old failover monitor state. <b>newState</b> (STRING): The new failover monitor state. <b>elem</b> (STRING): The name of the FSM element that has caused the state transition to occur. This value is dependent upon the FSM implementation.

<b>EMS Identifier</b>	cf.fsm.takeover.bootingExp
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when an automatic takeover is initiated after detecting that the partner boot process is hung trying to load the kernel.
<b>Corrective Action</b>	Please capture console log of partner filer and contact Customer Support
<b>Syslog Message</b>	Failover monitor: automatic takeover attempted after detecting that partner is hung loading kernel while booting
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.disaster
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an operator-requested disaster recovery (DR) takeover is initiated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover attempted after "cf forcetakeover -d" command.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.early
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when a filer takes over its partner while booting up in takeover mode.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover resumption attempted after reboot
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.forced
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an operator-requested forced takeover is initiated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover attempted after "cf forcetakeover" or "storage failover takeover -option force" in advanced privilege.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.mdp
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when an automatic takeover is initiated after detecting that the partner has panicked due to a multi-disk failure
<b>Corrective Action</b>	Please check the connectivity of the partner to it's disks and shelves and contact customer support.
<b>Syslog Message</b>	Failover monitor: takeover attempted after multi-disk failure on partner
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.ndu
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an operator-requested takeover is initiated with the "cf takeover -n" or "storage failover takeover -option allow-version-mismatch" command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover attempted after "cf takeover -n" or "storage failover takeover -option allow-version-mismatch" command.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.nfo
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an operator-requested takeover is initiated with the "storage failover takeover" command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover attempted after "storage failover takeover" command.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.noHeartbeat
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node detects no heartbeat from the partner, indicating that the partner is not functioning. The node will attempt an automatic takeover.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Failover monitor: Takeover initiated after no heartbeat was detected from the partner node.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an operator-requested takeover is initiated with the "storage failover takeover -option immediate" command, or when Kernel Cluster Services Connectivity, Liveness and Availability Monitor (CLAM) triggers a takeover after determining that the partner node is out of "CLAM quorum".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: %s attempted
<b>Parameters</b>	<b>reason</b> (STRING): Reason a takeover of the partner was triggered. Possible values are "Operator initiated immediate takeover" and "CLAM initiated takeover".

<b>EMS Identifier</b>	cf.fsm.takeover.on.halt
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when one node in a high-availability (HA) pair initiates an automatic takeover after detecting that its partner node has halted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Node initiated automatic takeover after detecting that its partner node has halted.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.on.reboot
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when one node in a High Availability (HA) pair initiates an automatic takeover after detecting that its partner node is rebooting.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: One node initiated automatic takeover after detecting that its partner node is rebooting.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.operatorExp
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an automatic takeover is initiated after detecting that the operator timer has expired. This may happen when the operator has failed to respond to a question or not entered a required command during boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover attempted after operator timeout expired on partner
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.panic
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an automatic takeover is initiated after detecting that the partner has panicked.
<b>Corrective Action</b>	Attempt to find the panic string in the event logs by using the "event log show" command from the CLI, and then look up the string by using the Panic Message Analyzer tool on the NetApp support site: <a href="http://mysupport.netapp.com/NOW/cgi-bin/pmsg/">http://mysupport.netapp.com/NOW/cgi-bin/pmsg/</a> . Contact NetApp technical support to confirm the analysis.
<b>Syslog Message</b>	Failover monitor: takeover attempted after partner panic.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.postFailed
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when an automatic takeover is initiated after detecting that the partner's power-on self-test has failed.
<b>Corrective Action</b>	Please run hardware diagnostics on partner filer and contact Customer Support
<b>Syslog Message</b>	Failover monitor: takeover attempted after partner POST failed
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.rebootExp
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an automatic takeover is initiated after detecting that the partner boot process is hung.
<b>Corrective Action</b>	Capture console log of partner node and contact NetApp technical support.
<b>Syslog Message</b>	Failover monitor: automatic takeover attempted after detecting that partner is hung in boot.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.shortUptime
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an automatic takeover is initiated after detecting that the partner died very shortly after booting up.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Failover monitor: takeover attempted after partner went down shortly after booting up
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeover.sparecoreExp
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an automatic takeover is initiated by the local node after it detects that the partner node has panicked, and that the partner has not initiated a main memory core dump to disk in a reasonable amount of time.
<b>Corrective Action</b>	Capture the console log of the partner node, and then contact NetApp technical support.
<b>Syslog Message</b>	A takeover was attempted by the local node after sparecore timeout expired on the partner node.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.fsm.takeoverByPartnerDisabled
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the failover monitor determines that takeover by the partner is disabled.
<b>Corrective Action</b>	<p>Find the reason for the error message (it is surrounded by parentheses). Based on that reason, the corrective action is one of the following:</p> <ul style="list-style-type: none"> <li>-allowed: Takeover is allowed; you do not need to take any action.</li> <li>-Controller failover (CFO) is not initialized: Make sure that the high-availability (HA) pair is set up correctly. Contact NetApp technical support if you need assistance.</li> <li>-Controller is in non-HA mode: Set the HA mode to "ha" by using the "storage failover modify -mode ha" command to activate HA functionality.</li> <li>-Takeover disabled: Use the "storage failover modify -enabled true" command to reenable HA functionality.</li> <li>-partner mailbox disks not accessible or invalid: Check connectivity to all disks by running the "run local storage show" command on each node, and then comparing the results. Resolve the differences in disks visible to both systems. Verify that the interconnect cables are properly cabled. <b>Syslog Message</b>	Failover monitor: takeover of %s by %s disabled (%s).
<b>Parameters</b>	<p><b>local</b> (STRING): Name of the local node.</p> <p><b>partner</b> (STRING): Name of the partner node.</p> <p><b>reason</b> (STRING): Reason takeover is disabled.</p>

<b>EMS Identifier</b>	cf.fsm.takeoverByPartnerEnabled
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the failover monitor determines that takeover by the partner has been enabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover of %s by %s enabled
<b>Parameters</b>	<b>local</b> (STRING): Name of local node <b>partner</b> (STRING): Name of partner node

<b>EMS Identifier</b>	cf.fsm.takeoverCountdown
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued as part of the takeover countdown processing in the FSM.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover scheduled in %d seconds
<b>Parameters</b>	<b>secsTillTakeover</b> (INT): Number of seconds until takeover occurs

<b>EMS Identifier</b>	cf.fsm.takeoverDelayed
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we are delaying takeover due to status indications received from the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover delayed, partner %s
<b>Parameters</b>	<b>reason</b> (STRING): Description of why takeover is being delayed <b>secsTillTakeover</b> (INT): Number of seconds until takeover will be started

<b>EMS Identifier</b>	cf.fsm.takeoverHung
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the failover monitor detects that the takeover process is hung. Subsequent to this event, the takeover node will panic.
<b>Corrective Action</b>	Attempt to find the panic string in the event logs by using the "event log show" command from the CLI, and then look up the string by using the Panic Message Analyzer tool on the NetApp support site: <a href="http://mysupport.netapp.com/NOW/cgi-bin/pmsg/">http://mysupport.netapp.com/NOW/cgi-bin/pmsg/</a> . Contact NetApp technical support to confirm the analysis.
<b>Syslog Message</b>	Failover monitor: takeover process is hung ('%s').
<b>Parameters</b>	<b>moduleName</b> (STRING): Name of the module that the hang occurred in.

<b>EMS Identifier</b>	cf.fsm.takeoverOfPartnerDisabled
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the failover monitor determines that takeover of the partner is disabled.
<b>Corrective Action</b>	<p>Find the reason for the error message (it is surrounded by parentheses). Based on that reason, the corrective action is one of the following:</p> <ul style="list-style-type: none"> <li>-allowed: Takeover is allowed; you do not need to take any action.</li> <li>-Controller failover (CFO) is not initialized: Make sure that the high-availability (HA) pair is set up correctly. Contact NetApp technical support for assistance.</li> <li>-Controller is in non-HA mode: Set HA mode to "ha" by using the "storage failover modify -mode ha" command to activate HA functionality.</li> <li>-HA takeover disabled: Use the "storage failover modify -enabled true" command to reenable HA functionality.</li> <li>-partner mailbox disks not accessible or invalid: Check connectivity to all disks by running the "storage show" nodeshell command on each node and comparing the results. Resolve the differences in disks visible to both systems. Verify that the interconnect cables are properly cabled.</li> <li>-failover monitor version mismatch: Make sure that both the local and partner node are running the same version of Data ONTAP(R).</li> <li>-Takeover disabled by partner: Use the "storage failover modify -enabled true" command to reenable HA functionality.</li> <li>-Takeover disabled by operator: Use the "storage failover modify -enabled true" command to reenable HA functionality.</li> <li>-NVRAM size mismatch: Make sure that the local NVRAM (nonvolatile random-access memory) size matches the partner node.</li> <li>-version mismatch: Make sure that both the local and partner nodes are running the same version of Data ONTAP.</li> <li>-interconnect error: Make sure that the interconnect link is connected and functioning.</li> <li>-partner booting: Wait for the partner node to complete its booting process, and then try takeover.</li> <li>-shelf too hot: Make sure that the disk shelf temperature is properly regulated.</li> <li>-partner is performing revert: Wait for the partner node to complete the revert process, and then try takeover.</li> <li>-revert is in progress: Wait for the local node to complete the revert process, and then try takeover.</li> <li>-partner is attempting takeover: Cannot perform a takeover operation while the partner node is attempting a takeover.</li> <li>-takeover is in progress: The local node is already taken over or is trying to take over the partner node.</li> <li>-partner halted in notakeover mode: The partner node was most likely halted using the "halt -f" or "system node halt -inhibit-takeover" command; reboot the partner node, and then try again.</li> <li>-unsynchronized log: Make sure that the interconnect link is connected and functioning.</li> <li>-unknown notakeover reasons: Contact NetApp technical support.</li> <li>-waiting for partner to recover: The partner has not booted completely after giveback; wait for the partner to come back up completely.</li> <li>-low memory: Contact NetApp technical support to upgrade.</li> <li>-local halt in progress: The local node is about to halt; try again after the reboot.</li> <li>-status of backup mailbox is uncertain: Check connectivity to all disks by running the "run local storage show" command on each node, and then comparing the results. Resolve the differences in disks visible to both systems. Verify that the interconnect cables are properly cabled.</li> <li>-automatic takeover disabled: Use the "storage failover takeover" command manually.</li> <li>-metrocluster disaster recovery operation is in progress: The local node is performing a MetroCluster(tm) disaster recovery operation; wait for it to finish, and then try again.</li> <li>-This node or the partner node is in switchover state and the MetroCluster configuration option "node-object-limit" is off in the disaster recovery(DR) group of this node: Retry takeover after doing a switchback.</li> </ul>
<b>Syslog Message</b>	Failover monitor: takeover of %s disabled (%s).
<b>Parameters</b>	<p><b>partner</b> (STRING): Name of the partner node.</p> <p><b>reason</b> (STRING): Description of why takeover cannot occur.</p>

<b>EMS Identifier</b>	cf.fsm.takeoverOfPartnerEnabled
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the failover monitor determines that takeover of the partner has been enabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover of %s enabled
<b>Parameters</b>	<b>partner</b> (STRING): Name of partner node

<b>EMS Identifier</b>	cf.giveback.delayed.cleanup
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when giveback of a partner node is delayed due to the cleanup of a previous giveback event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: giveback process was delayed because of a previous giveback event.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.giveback.disk.check.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the giveback failed due to a disk inventory check failure.
<b>Corrective Action</b>	If the giveback failed or is disabled because the node did not receive the disk inventory information from the partner, then retry giveback after a few minutes. If the giveback failed or is disabled because the partner is missing its disks, make sure that the partner has connectivity to all of its disks. To check the list of disks that the partner can see, boot the partner in Maintenance mode and use the "disk show" command or "storage show disk" command to list its disks. To check for missing disks, use the "storage failover show -instance" command. If you want to override the disk inventory check, use the "cf disable diskInventory" command from the advanced privilege level of the nodeshell on the takeover node. However, disabling the disk inventory check can lead to client outage if the partner cannot see all of its disks.
<b>Syslog Message</b>	cf giveback failed: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the disk inventory failure.

<b>EMS Identifier</b>	cf.giveback.keepingPartnerAggr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during the giveback process following a failed takeover attempt, when an aggregate belonging to the partner node is not given back to the partner node. The reason is that the aggregate was already under the control of the node performing the takeover before the takeover attempt. Only aggregates that are acquired during the failed takeover attempt are given back.
<b>Corrective Action</b>	Give back the aggregate to the partner node by using the "storage failover giveback" command.
<b>Syslog Message</b>	Not giving back aggregate '%s' because it was under the control of this node prior to the failed takeover attempt.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate that was not given back.

<b>EMS Identifier</b>	cf.headswap.abort
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the headswap on the partner node is aborted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>partner_sysid</b> (LONGINT): Value of the partner system ID after aborting the headswap.

<b>EMS Identifier</b>	cf.headswap.clear.partner
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the disks are manually reassigned to a new partner. The head swap information has been cleared.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.headswap.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the headswap of a node is completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>old_sysid</b> (LONGINT): Value of the partner system ID before completion of the headswap. <b>new_sysid</b> (LONGINT): Value of the partner system ID after completion of the headswap.

<b>EMS Identifier</b>	cf.headswap.detected.local
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a headswap on the local node is detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>old_local_sysid</b> (LONGINT): System ID of the node that is being replaced. <b>new_local_sysid</b> (LONGINT): System ID of the new node that is replacing the old node.

<b>EMS Identifier</b>	cf.headswap.detected.partner
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a headswap on the partner node is detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>old_partner_sysid</b> (LONGINT): System ID of the partner that is being replaced. <b>new_partner_sysid</b> (LONGINT): System ID of the new partner that is replacing the old partner.

<b>EMS Identifier</b>	cf.headswap.state.change
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the headswap state changes. The headswap state is written to the primary mailbox. The possible values are HEADSWAP_NONE, HEADSWAP_START, HEADSWAP_CFO_START, HEADSWAP_CFO_END, and HEADSWAP_SFO_START.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>old_state_string</b> (STRING): Old value of the headswap state. <b>new_state_string</b> (STRING): New value of the headswap state.

<b>EMS Identifier</b>	cf.hwassist.Default.NodemgmtAddr
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the hardware-assist module automatically picked a local IP address for the hardware-assisted takeover feature.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The system automatically chose %s as the local hardware-assist IP address.
<b>Parameters</b>	<b>defaultip</b> (STRING): Default hardware-wassist IP address chosen to receive hardware assist alerts.

<b>EMS Identifier</b>	cf.hwassist.DefaultEnabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system automatically enables the hardware-assist takeover feature. With hardware-assisted takeover, certain failures, such as watchdog reset, POST error, and so on, trigger hardware-assisted takeover through hardware components such as Remote LAN Module (RLM) or Service Processor (SP).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Hardware-assisted takeover feature is enabled on this system. The partner can take over this node faster during certain failures.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.hwassist.DefaultPrtnrAddr
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the hardware-assist partner address is not configured and the system automatically picked a partner IP address for the hardware-assisted takeover feature. If a partner node has multiple node management IP addresses, a different partner node management IP address can optionally be set by using the "storage failover modify -hwassist-partner-ip" command. Note: the automatically configured IP address cannot be modified on some platforms.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The system automatically chose %s as the hardware-assisted takeover partner address.
<b>Parameters</b>	<b>defaultip</b> (STRING): Default hardware-assist partner IP address chosen to send hardware-assisted takeover alerts.

<b>EMS Identifier</b>	cf.hwassist.DefaultPrtnrPort
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the partner's port for the hardware-assisted takeover feature is not configured and the system sets the hardware-assist partner port to a default port number. A different partner port number can optionally be set by using the "storage failover modify -hwassist-partner-port" command. Note: the default port number cannot be modified on some platforms.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The system set the default hardware-assist partner port number to %d.
<b>Parameters</b>	<b>defaultport</b> (INT): Default hardware-assist partner port number.

<b>EMS Identifier</b>	cf.hwassist.empty.MgmtAddr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the local hardware-assist module cannot find at least one node management IP address that has the same capabilities as the partner's hardware components, such as Remote LAN Module (RLM) or Service Processor (SP).
<b>Corrective Action</b>	Complete or correct the setup of the Remote LAN Module (RLM) or Service Process (SP) for each node in your cluster.
<b>Syslog Message</b>	Cannot find hardware-assist node management IP address for partner node.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.hwassist.empty.NodemgmtAddr <b>Deprecated:</b> Deprecated as of version 9.1.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the local hardware-assist module cannot find at least one node management IP address that has the same capabilities as the partner's hardware components, such as Remote LAN Module (RLM) or Service Processor (SP).
<b>Corrective Action</b>	Complete or correct the setup of the Remote LAN Module (RLM) or Service Process (SP) for each node in your cluster.
<b>Syslog Message</b>	Cannot find hardware-assist node management IP address for partner node.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.hwassist.FwUpgrade
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when hwassist thread detects that partner's hw_assist hardware firmware does not support hw_assist feature.
<b>Corrective Action</b>	Upgrade the partner hw_assist hardware firmware to the latest version.
<b>Syslog Message</b>	HA hw_assist: Partner(%s) %s firmware does not support the hw_assist feature.
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner's name. <b>hwassist_hrdwr</b> (STRING): Type of hw_assist hardware, for example, Remote LAN module(RLM) or Service Processor(SP).

<b>EMS Identifier</b>	cf.hwassist.hwasstActive
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when hw_assist successfully binds to a port to listen for alerts.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	hw_assist: hw_assist functionality is active on IP address: %s port: %d
<b>Parameters</b>	<b>ipaddress</b> (STRING): IP address to which bind was attempted. <b>port</b> (INT): Port on which bind was attempted.

<b>EMS Identifier</b>	cf.hwassist.invalidConfig
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system encounters invalid hardware-assist configurations.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Invalid hardware-assist configurations. IPv4: %s IPv6: %s port: %d keep_alive_interval: %d
<b>Parameters</b>	<b>ipv4</b> (STRING): Partner node IPv4 address. <b>ipv6</b> (STRING): Partner node IPv6 address. <b>port</b> (INT): Partner node hardware-assist port number. <b>keep_alive_interval</b> (INT): Hardware-assist keep-alive interval.

<b>EMS Identifier</b>	cf.hwassist.IpNotConfigured
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the hwassist thread detects that the partner's hw_assist hardware is not configured with an IPv4 or IPv6 address.
<b>Corrective Action</b>	Configure a valid IPv4 or IPv6 address for the partner's hw_assist hardware by using the "storage failover modify -hwassist-partner-ip" command.
<b>Syslog Message</b>	cf hw_assist: Partner(%s)'s %s is not configured with the right IP address family. Use the "storage failover hwassist show" command for details.
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner's name. <b>hwassist_hrdwr</b> (STRING): Type of hw_assist hardware, for example, RLM.

<b>EMS Identifier</b>	cf.hwassist.keyMismatch
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when hwassist receives a alert with wrong key. EMS displays both the expected and the received keys.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>expectedKey</b> (STRING): Expected key, generated by Failover Monitor(FM). <b>receivedKey</b> (STRING): Received key from hwassist hardware. <b>systemid</b> (STRING): Received systemid.

<b>EMS Identifier</b>	cf.hwassist.localMonitor
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when hwassist thread is inactive because of problems on local node.
<b>Corrective Action</b>	check console log for cf.hwassist_socBindFailed message. If message exist, take corrective action for that message.
<b>Syslog Message</b>	hw_assist: hw_assist functionality is inactive.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.hwassist.missedKeepAlive
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when hwassist thread misses keep alive alert from partner.
<b>Corrective Action</b>	Make sure partner hw_assist hardware is functional and online
<b>Syslog Message</b>	hw_assist: missed keep alive alert from partner(%s).
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner name

<b>EMS Identifier</b>	cf.hwassist.noConfigRecv
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when hwassist thread has not received any config info from partner.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	hw_assist: hw_assist functionality inactive. No config received from partner(%s).
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner's name.

<b>EMS Identifier</b>	cf.hwassist.notCapable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the currently installed firmware version of the hardware module doesn't support the hardware-assisted takeover feature.
<b>Corrective Action</b>	Upgrade the hardware module firmware to the latest version.
<b>Syslog Message</b>	Currently installed version of %s's firmware doesn't support the hardware-assist takeover feature. Install a latest firmware for the hardware-assist takeover feature to work.
<b>Parameters</b>	<b>hwtype</b> (STRING): Hardware module type.

<b>EMS Identifier</b>	cf.hwassist.notifyCfgFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a controller module fails to update the hardware-assist configuration with its partner node. This is most likely because the SP component is not ready. The controller module will retry the hardware-assist configuration update automatically.
<b>Corrective Action</b>	Use the ""system node service-processor show"" command to check whether the SP is online. The SP must be online to update the hardware-assist configuration. If the SP is operational and online, use the ""system node service-processor reboot-sp"" command to reboot the SP. If the message persists, contact NetApp technical support.
<b>Syslog Message</b>	Failed to update the hardware-assist configuration with hardware component (%s): %s(%d).
<b>Parameters</b>	<b>hwtype</b> (STRING): Hardware component type. <b>errorstr</b> (STRING): Error string returned by the hardware component. <b>error</b> (INT): Error number returned by the hardware component.

<b>EMS Identifier</b>	cf.hwassist.notifyEnableOff
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the hwassist thread detects that 'notify enable' is turned off on the partner node.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	HA hw_assist: hw_assist functionality on the partner node has been disabled by the user.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.hwassist.notifyEnableOn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the user enables hw_assist functionality on the partner node. hw_assist will try to bind to the specified IP address and port.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	HA hw_assist: hw_assist functionality on the partner node has been enabled by the user.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.hwassist.ptnStartThrottle
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when partner has started throttling hw_assist alerts. UDP socket will be closed and no alerts will be received.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover Monitor hw_assist: Partner(%s) node has started throttling hw_assist alerts.
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner's name

<b>EMS Identifier</b>	cf.hwassist.ptnStopThrottle
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when partner has stopped throttling hw_assist alerts. hw_assist will bind to UDP socket and wait for alerts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	hw_assist: Partner(%s) has stopped throttling hw_assist alerts.
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner's name

<b>EMS Identifier</b>	cf.hwassist.recvKeepAlive
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when hwassist thread receives hw_assist KeepAlive alert after missing at least two consecutive KeepAlive alerts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	hw_assist: Received hw_assist KeepAlive alert from partner(%s).
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner's name

<b>EMS Identifier</b>	cf.hwassist.socBindFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when hwassist thread fails to bind to a socket on a particular ipaddress. The error indicates why bind failed.
<b>Corrective Action</b>	Check if specified port and IP address is valid. You may want to try with a different recommended port number.
<b>Syslog Message</b>	hw_assist: bind failed to port %d on IP address %s. Error %d
<b>Parameters</b>	<b>port</b> (INT): Port on which bind was attempted. <b>ipaddress</b> (STRING): IP address to which bind was attempted. <b>error</b> (INT): error returned by bind call

<b>EMS Identifier</b>	cf.hwassist.socInitFailed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when hwassist thread fails to create socket.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	hw_assist: Fail to create socket.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.hwassist.startThrottle
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the hardware assist subsystem thread detects that it is receiving hardware assist alerts at a rate higher than the maximum configurable rate and has temporarily stopped listening for hardware assist alerts. This can be an indication that another client is configured to send SNMP traps to the hardware assist trap IP address and port. If the partner node fails while listening for hardware assist alerts is disabled, detection of the partner failure can take slightly longer as loss of heartbeat from the partner or other non-hardware-assisted mechanism is instead needed to detect the failure. Subsequent receipt of the cf.hwassist.stopThrottle message indicates the hardware assist thread is again listening for hardware assist alerts.
<b>Corrective Action</b>	Check whether some other client is configured to send SNMP alerts to the IP address and port on which hardware assist is configured. You can obtain the IP address using the ""storage failover hwassist show"" command. If this is the case, direct those SNMP alerts to the correct IP address and port. If not, contact NetApp technical support to further diagnose the issue.
<b>Syslog Message</b>	hw_assist: Received %llu hw_assist alerts in %llu secs. Throttling alerts for %llu secs.
<b>Parameters</b>	<b>num_of_traps</b> (LONGINT): Number of traps received. <b>time_interval</b> (LONGINT): Time window in which the traps were received. <b>throttle_time</b> (LONGINT): Time for which throttle will happen.

<b>EMS Identifier</b>	cf.hwassist.stopThrottle
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node has stopped throttling hardware assist alerts from the partner. This indicates the hardware assist thread has restarted listening for hardware assist alerts subsequent to the receipt of the cf.hwassist.startThrottle event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor hw_assist: Shutting off throttle for hw_assist alerts from partner(%s).
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner's name.

<b>EMS Identifier</b>	cf.hwassist.takeoverTrapRecv
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when hwassist thread receives a hw_assist alert which will result in partner takeover. EMS displays trap type as well as reason for the trap.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	hw_assist: Received takeover hw_assist alert from partner(%s), %s because %s.
<b>Parameters</b>	<b>partnerName</b> (STRING): Partner's name <b>trap_type</b> (STRING): Type of trap received <b>trap_event</b> (STRING): Type of trap event

<b>EMS Identifier</b>	cf.hwassist.unknownSig
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when hwassist thread receives an unknown signal.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	hw_assist: Received unknown signal 0x%x.
<b>Parameters</b>	<b>sigmask</b> (INT): Signal received by hwassist thread.

<b>EMS Identifier</b>	cf.ic.cc.config.changed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the controller configuration is changed from a single enclosure HA configuration to a dual enclosure HA configuration.
<b>Corrective Action</b>	If the controller is part of a dual enclosure HA configuration, make sure that the psm-cc-config? environment variable is unset and reboot.
<b>Syslog Message</b>	HA interconnect: Controller configuration was changed from single enclosure HA configuration to dual enclosure HA configuration.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.ic.clientinitFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the interconnect client fails to initialize due to remote VI setup failure.
<b>Corrective Action</b>	Reboot the controller. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	HA interconnect: Initialization failure for %s client.
<b>Parameters</b>	<b>client</b> (STRING): Name of the client that failed to initialize.

<b>EMS Identifier</b>	cf.ic.disabled
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the HA interconnect is disabled by the ic-type environment variable.
<b>Corrective Action</b>	Either remove the HA interconnect from the controller or change the ic-type environment variable.
<b>Syslog Message</b>	HA interconnect: Card in slot %d has been disabled because of the ic-type environment variable.
<b>Parameters</b>	<b>slot</b> (INT): Slot that the interconnect is in.

<b>EMS Identifier</b>	cf.ic.driver.flush.idWarn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the HA interconnect cannot process a flush request for a particular driver I/O request.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: Flush %s failed for channel %d and ID %d.
<b>Parameters</b>	<b>s</b> (STRING): Name of the error. <b>nvidx</b> (INT): Interconnect channel. <b>wrid</b> (INT): Work request ID.

<b>EMS Identifier</b>	cf.ic.failed.memReg
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when memory registration fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: Memory registration operation failed at %d.
<b>Parameters</b>	<b>source</b> (INT): Source for the memory operation.

<b>EMS Identifier</b>	cf.ic.flush.ACKWarn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the HA interconnect cannot send acknowledgments through its completion channel.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: Flush completion %s error.
<b>Parameters</b>	<b>s</b> (STRING): Name of the error.

<b>EMS Identifier</b>	cf.ic.flush.MemError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during boot time initialization, when the HA interconnect encounters an error with memory registration or allocation.
<b>Corrective Action</b>	Reboot the controller to restart the HA interconnect. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	HA interconnect: Flush memory %s error.
<b>Parameters</b>	<b>s</b> (STRING): Name of the error.

<b>EMS Identifier</b>	cf.ic.flush.oodlinitFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure in the initialization of a NIC to enable out-of-order delivery on the HA interconnect.
<b>Corrective Action</b>	Reboot the controller to enable HA interconnect flushing. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	HA interconnect: Flush out-of-order delivery initialization failed.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.ic.heartBeatFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when heartbeats cannot be sent or received over the HA interconnect.
<b>Corrective Action</b>	Verify that both controllers in the HA pair are operational. If this message persists, disable and reenale the links one at a time by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands.
<b>Syslog Message</b>	HA interconnect: Heartbeat failed.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.ic.initFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the driver fails to find an HA interconnect adapter or the interconnect is nonfunctional.
<b>Corrective Action</b>	Verify that the High Availability interconnect card is present and operational on the system. Reboot the controller. Contact NetApp technical support if this problem persists.
<b>Syslog Message</b>	HA interconnect: Unable to initialize process.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.ic.non.cc.config.changed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the controller configuration is changed from a dual enclosure HA configuration to a single enclosure HA configuration.
<b>Corrective Action</b>	If the controller is part of single enclosure HA configuration, make sure that that the other controller is physically present in the chassis and that the psm-cc-config? environment variable is set to true, and then reboot.
<b>Syslog Message</b>	HA interconnect: Controller configuration was changed from dual enclosure HA configuration to single enclosure HA configuration.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.ic.notifyTimeout
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when data transfer over the HA interconnect times out.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: %s transfer timed out.
<b>Parameters</b>	<b>qp_name</b> (STRING): Queue-pair name.

<b>EMS Identifier</b>	cf.ic.portsCrossConnected
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the HA interconnect driver determines that the ports between this controller and its partner are cross-connected.
<b>Corrective Action</b>	Connect port 1 on this controller to port 1 on the partner, and connect port 2 on this controller to port 2 on the partner. If the interconnect cables have serial number tags on both ends, use the serial numbers to verify that the ports are properly connected. If the interconnect cables do not have serial number tags, disconnect one of the HA interconnect ports from one of the controllers. The LEDs of this port and one of the ports on the partner turn off. If the two ports have different port numbers, the cables are cross-connected. Reversing the connection on one of the controllers rectifies the problem.
<b>Syslog Message</b>	HA interconnect: Port %d of this controller seems to be connected to port %d on the partner.
<b>Parameters</b>	<b>localPort</b> (INT): Local port number. <b>remotePort</b> (INT): Remote port number.

<b>EMS Identifier</b>	cf.ic.probe.error
<b>Severity</b>	ALERT
<b>Description</b>	This event is generated when we fail to detect an High Availability (HA) interconnect communication device during system initialization. If this error occurs, internode communication within the HA pair is down.
<b>Corrective Action</b>	Examine the logs for messages regarding the HA interconnect. Resolve the HA interconnect problems.
<b>Syslog Message</b>	Failover monitor: no interconnect found WARNING: Failover monitor operating in degraded mode
<b>Parameters</b>	<b>errorCode</b> (INT): The internal error code

<b>EMS Identifier</b>	cf.ic.sbb
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a system SBB (Storage Bridge Bay) Compatibility event occurs. SBB Compatibility events determine the presence or absence of the HA partner controller on some platforms.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: SBB Compatibility Event. %s
<b>Parameters</b>	<b>event_description</b> (STRING): Presence or absence of the partner controller and what action has been taken on the interconnect device.

<b>EMS Identifier</b>	cf.ic.xferTimedOut
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when data transfer over the HA interconnect times out. This is usually seen when the interconnect link goes down. It can also be encountered when the interconnect hardware, firmware, or driver experiences a hang.
<b>Corrective Action</b>	Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	HA interconnect: %s transfer timed out.
<b>Parameters</b>	<b>qp_name</b> (STRING): Name of the connection queue-pair that timed out.

<b>EMS Identifier</b>	cf.misc.givebackPartnerNotReady
<b>Severity</b>	NOTICE
<b>Description</b>	The message occurs when a giveback is initiated before the partner has reached waiting-for-giveback state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Giveback is being initiated before the partner is in the waiting-for-giveback state. The partner is in the %s state.
<b>Parameters</b>	<b>state</b> (STRING): Current state of the partner.

<b>EMS Identifier</b>	cf.misc.operatorDisable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the operator disables the high-availability (HA) pair.
<b>Corrective Action</b>	Use the "storage failover modify -enabled true" command to reenble failover.
<b>Syslog Message</b>	Failover monitor: operator initiated disabling of takeover.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.operatorDisableOption
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when the operator disables a High Availability (HA) option.
<b>Corrective Action</b>	Re-enable the option
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>option</b> (STRING): Name of the option

<b>EMS Identifier</b>	cf.misc.operatorEnable
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the operator enables failover between the 2 nodes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: operator initiated enabling of failover.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.operatorEnableOption
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the operator enables a controller failover option.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>option</b> (STRING): Name of the option

<b>EMS Identifier</b>	cf.misc.operatorForcedTakeover
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a forced takeover is initiated by the operator.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: forced takeover initiated by operator
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.operatorGiveback
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when a giveback is initiated by the operator.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: %s initiated by operator
<b>Parameters</b>	<b>strengthString</b> (STRING): External string <b>strengthCode</b> (INT): Internal code for strength

<b>EMS Identifier</b>	cf.misc.operatorTakeover
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a takeover is initiated by the operator.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover initiated by operator
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.ProgTakeover
<b>Severity</b>	NOTICE
<b>Description</b>	This message is issued when a takeover is initiated programmatically by Data ONTAP(R).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: takeover initiated.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.ProgTakeoverFail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a takeover is initiated programmatically by Data ONTAP(R) and the takeover request fails.
<b>Corrective Action</b>	Check the reason string and repair the problem reported.
<b>Syslog Message</b>	Failover monitor: Programmatic takeover failed (%s)
<b>Parameters</b>	<b>errorstr</b> (STRING): Error string returned by the failover monitor.

<b>EMS Identifier</b>	cf.misc.ProgTakeoverFailInit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a takeover is initiated programmatically by Data ONTAP(R) and the takeover request fails because the controller is set to "non_ha" mode or is not initialized.
<b>Corrective Action</b>	Set the HA mode to "ha" by using the "storage failover modify -mode ha" command, and then reboot the node.
<b>Syslog Message</b>	Failover monitor: Programmatic takeover failed due to initialization issues.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.ProgTakeoverFailInTO
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a takeover is initiated programmatically by Data ONTAP(R) and the node is already in takeover mode.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Programmatic takeover failed due to previous takeover.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.ProgTakeoverFailNotUp
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a negotiated takeover is initiated programmatically by Data ONTAP(R) and the partner node is not up.
<b>Corrective Action</b>	Bring up the partner node.
<b>Syslog Message</b>	Failover monitor: Programmatic takeover failed because the partner node is not up.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.ProgTakeoverFailPartnerDeny
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a takeover is initiated programmatically by Data ONTAP(R) and the partner node denies the takeover request.
<b>Corrective Action</b>	Check previous EMS messages to determine why takeover was denied.
<b>Syslog Message</b>	Failover monitor: Programmatic takeover failed because the partner node denied the takeover request.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.misc.ProgTakeoverFailShutdown
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a takeover is initiated programmatically by Data ONTAP(R) and a shutdown is in progress.
<b>Corrective Action</b>	Verify that both nodes are booted.
<b>Syslog Message</b>	Failover monitor: Programmatic takeover failed because shutdown was in progress.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.mode.auto.HA
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the controller is automatically set to High Availability(HA) mode because of the configuration values in the Field Replaceable Unit(FRU) or the slot of the interconnect/NVRAM card (depending on the hardware type of the controller).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.mode.auto.non.HA
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the controller is automatically set to non-High Availability (non-HA) mode because of the configuration values in the Field Replaceable Unit (FRU) or the slot of the interconnect/NVRAM card (depending on the hardware type of the controller).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.mode.HA
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the user sets the controller to High Availability(HA) mode through the command-line interface.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.mode.HA.onboot
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the controller is set to High Availability (HA) mode according to options detected at boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.mode.non.HA
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the user sets the controller to non-High Availability (non-HA) mode through the command-line interface.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.mode.non.HA.onboot
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the controller is set to non-High Availability (non-HA) mode according to options detected at boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.multidisk.fatalProblem
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the node is waiting for the partner to take over, after the node encounters a multidisk error or some other fatal error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Node encountered a multidisk error or other fatal error while waiting to be taken over. %s.
<b>Parameters</b>	<b>mdp_msg</b> (STRING): Multi Disk Panic (MDP) string.

<b>EMS Identifier</b>	cf.nduComplete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a nondisruptive upgrade is completed successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>token</b> (STRING): Unique token that identifies an instance of a nondisruptive upgrade. <b>host</b> (STRING): Name of system that completed the nondisruptive upgrade.

<b>EMS Identifier</b>	cf.nduIncomplete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a nondisruptive upgrade fails.
<b>Corrective Action</b>	Resolve the reason for the failure and retry the nondisruptive upgrade from the failed step.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>token</b> (STRING): Unique token that identifies an instance of a nondisruptive upgrade. <b>host</b> (STRING): Name of the node that failed the nondisruptive upgrade. <b>reason</b> (STRING): Reason for the upgrade failure.

<b>EMS Identifier</b>	cf.nduStart
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a nondisruptive upgrade starts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>token</b> (STRING): Unique token that identifies an instance of a nondisruptive upgrade. <b>host</b> (STRING): Name of system that started the nondisruptive upgrade.

<b>EMS Identifier</b>	cf.nm.nicReset
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the controller performs a soft reset of the HA interconnect card as part of automatic recovery from a timeout or link error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: Initiating soft reset on card %d due to %s.
<b>Parameters</b>	<b>nic_num</b> (INT): Interconnect NIC number. <b>reason</b> (STRING): Describes why the soft reset was initiated. Possible reasons: rendezvous jammed rendezvous fm timeout rendezvous peer-connect timeout

<b>EMS Identifier</b>	cf.nm.nicViError
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when any error is detected in any virtual interface while handling a link transition.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: NIC %d has an error on %s (virtual interface #%d): %s.
<b>Parameters</b>	<b>nic_num</b> (INT): Interconnect NIC number. <b>vi_name</b> (STRING): Name of the virtual interface. <b>vinum</b> (INT): Virtual interface number. <b>origin</b> (STRING): Origin of the error.

<b>EMS Identifier</b>	cf.noAutoGB.ptnrLowerVersion
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an automatic giveback operation is cancelled because the high-availability (HA) partner is using an earlier and incompatible Data ONTAP(R) version than the local node. Subsequent failover events might not be successful when HA partners are not using compatible Data ONTAP versions.
<b>Corrective Action</b>	Run the "system node image show" command to determine which image on the partner should be booted to be compatible with the local node. After rebooting the node, automatic giveback is performed.
<b>Syslog Message</b>	Auto-giveback cancelled because the HA partner is using a lower Data ONTAP version than the local node.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.noPartner_takeover
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the partner node fails but requested not to be taken over to prevent multiple, simultaneous RAID reconstructs from starting.
<b>Corrective Action</b>	Check the partner node for multiple disk or disk shelf failures, and then correct that situation. If you want takeover to occur, use the "storage failover takeover" command. If you want takeover to occur when disk or shelf failures occur, change the setting of the "raid.panic.missing.disks" option to '0' from the nodeshell.
<b>Syslog Message</b>	Failover monitor: Partner node is down, but requested not to be taken over.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.nullShelfCountMsg
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if we are sent a NULL negotiated failover shelf count message. * This is likely due to an InterConnect problem.
<b>Corrective Action</b>	Check for and resolve any interconnect errors.
<b>Syslog Message</b>	Invalid disk shelf count message was received from partner.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.partner.login
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when a login to the console of the partner occurs as a result of the 'partner' command being issued with no arguments.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Login to partner shell: %s
<b>Parameters</b>	<b>hostname</b> (STRING): The name of this node

<b>EMS Identifier</b>	cf.partner.logoff
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when a logoff from the console of the partner occurs as a result of the 'partner' command being issued with no arguments.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Logoff from partner shell: %s
<b>Parameters</b>	<b>hostname</b> (STRING): The name of this node

<b>EMS Identifier</b>	cf.partner.nvram.notSync
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during takeover, when the system finds the partner nonvolatile memory (NVRAM) unsynchronized. There might be data loss.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Partner NVRAM was not synchronized. Some data might be lost.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.partner.nvram.state
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during takeover, when the system determines that the partner mailbox is stale. This might mean that partner nonvolatile memory (NVRAM) is unsynchronized and might have some data loss.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Partner mailbox was stale. Partner NVRAM might not be synchronized and some data might be lost.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.partner.ready.giveback
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the partner is booted and ready for giveback.
<b>Corrective Action</b>	Verify that network connectivity is restored, and then use the "storage failover giveback" command to initiate giveback to the partner.
<b>Syslog Message</b>	Partner is booted and ready for giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.partner.shortUptime
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a node in a controller failover pair determines that the partner node has stayed up for a very short time period. This might result in a takeover
<b>Corrective Action</b>	Check the disk connectivity to the partner node. If the problem persists and the partner node restarts multiple times, perform hardware diagnostics in maintenance mode, and then consult the EMS logs to determine why this is happening.
<b>Syslog Message</b>	Partner up for %llu seconds only.
<b>Parameters</b>	<b>seconds</b> (LONGINT): Time duration for which the partner was up.

<b>EMS Identifier</b>	cf.reservation.disk.notFound
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system does not halt on a disk reservation conflict and the reservation is not found on the disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Reservation found on disk %s; not halting due to sanown_pr_test_mode.
<b>Parameters</b>	<b>diskName</b> (STRING): Disk name.

<b>EMS Identifier</b>	cf.rsrc.givebackFail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a failure is detected during giveback. The giveback operation will be cancelled.
<b>Corrective Action</b>	Check the logs for other messages regarding the listed subsystem using the "event log show" CLI command. Resolve those problems and perform a planned giveback operation using "storage failover giveback" command.
<b>Syslog Message</b>	Failover monitor: giveback during %s failed; giveback cancelled.
<b>Parameters</b>	<b>op</b> (STRING): Name of the giveback subsystem that has suffered a fatal error.

<b>EMS Identifier</b>	cf.rsrc.givebackForceFail
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if a failure is forced during giveback. This event should only occur in debugging kernels.
<b>Corrective Action</b>	Retry the takeover.
<b>Syslog Message</b>	Failover monitor: giveback during %s forced fail
<b>Parameters</b>	<b>op</b> (STRING): Name of the takeover operation

<b>EMS Identifier</b>	cf.rsrc.givebackForceVeto
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if a veto is forced during giveback. This event should only occur in debugging kernels.
<b>Corrective Action</b>	Check the state of the subsystem listed in this message. Retry the giveback.
<b>Syslog Message</b>	Giveback during %s forced veto
<b>Parameters</b>	<b>op</b> (STRING): Name of the takeover operation

<b>EMS Identifier</b>	cf.rsrc.givebackOpFail
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if a failure is detected during giveback. This error is not fatal to the giveback process but indicates that the related service could not be shutdown cleanly.
<b>Corrective Action</b>	Check the state of the subsystem listed in the message and validate it is working correctly. Validate that there are no configuration errors for the listed subsystem.
<b>Syslog Message</b>	Failover monitor: giveback during %s failed; giveback continuing...
<b>Parameters</b>	<b>op</b> (STRING): Name of the giveback operation that has suffered a non-fatal error.

<b>EMS Identifier</b>	cf.rsrc.givebackUnexpected
<b>Severity</b>	ALERT
<b>Description</b>	This event occurs if we detect an unexpected failover monitor state during a giveback operation. This indicates a software bug.
<b>Corrective Action</b>	Retry the giveback.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>op</b> (STRING): Name of the giveback operation <b>state</b> (INT): Value of the failover monitor state

<b>EMS Identifier</b>	cf.rsrc.givebackVeto
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a veto is indicated during giveback. A veto occurs when the active partner state is detected during the giveback process. A veto can be overridden by using the "cf giveback -f" or "storage failover takeover -override-vetoes true" command.
<b>Corrective Action</b>	Check the preceding messages for reasons why the giveback was vetoed. Check the state of the subsystem listed in this message. Retry the giveback.
<b>Syslog Message</b>	Failover monitor: %s: giveback canceled due to active state.
<b>Parameters</b>	<b>op</b> (STRING): Name of the takeover operation.

<b>EMS Identifier</b>	cf.rsrc.raidReplayOnlyTODone
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event occurs when a node is booting after having panicked too soon after takeover or during takeover. In that event we want to replay the partner RAID logs, before we perform a giveback. This message indicates the point at which we have committed partner RAID logs to the disk and are now going to initiate a giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Raid replay-only takeover completed. Initiating giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.rsrc.replayOnlyTakeoverDone
<b>Severity</b>	NOTICE
<b>Description</b>	This event occurs when a node is booting after having panicked too soon after takeover or during takeover. In that event we want to replay the partner logs, before we perform a giveback. This message indicates the point at which we have committed partner logs to the disk and are now going to initiate a giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: replay-only takeover completed. Initiating giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.rsrc.takeoverFail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a failure is detected during takeover. The takeover operation will be cancelled.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Failover monitor: takeover during %s failed; takeover cancelled.
<b>Parameters</b>	<b>op</b> (STRING): Name of the takeover operation that has suffered a fatal error.

<b>EMS Identifier</b>	cf.rsrc.takeoverForceFail
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if a failure is forced during takeover. This event should only occur in debugging kernels.
<b>Corrective Action</b>	Retry the takeover request.
<b>Syslog Message</b>	Failover monitor: takeover during %s forced fail
<b>Parameters</b>	<b>op</b> (STRING): Name of the takeover operation

<b>EMS Identifier</b>	cf.rsrc.takeoverOpFail
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if a failure is detected during takeover. This error is not fatal to the takeover process but indicates that the related service may be inaccessible during takeover of the partner.
<b>Corrective Action</b>	After takeover completes, check the state of the subsystem listed in the message. Check that the configuration of the subsystem listed in the message is correct.
<b>Syslog Message</b>	Failover monitor: takeover during %s failed; takeover continuing...
<b>Parameters</b>	<b>op</b> (STRING): Name of the takeover operation that has suffered a non-fatal error.

<b>EMS Identifier</b>	cf.rsrc.takeoverUnexpected
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs if we detect an unexpected failover monitor state during a takeover operation. This indicates a software bug.
<b>Corrective Action</b>	Check the state of the subsystem listed in 'op' parameter. Retry the giveback.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>op</b> (STRING): Name of the giveback operation <b>state</b> (INT): Value of the failover monitor state

<b>EMS Identifier</b>	cf.rv.connected
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an HA connection agent connects on an HA interconnect device.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: Connection for '%s' succeeded.
<b>Parameters</b>	<b>rv_name</b> (STRING): Logical name of the successful HA connection.

<b>EMS Identifier</b>	cf.rv.flush.handleExchange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when HA interconnect exchanges flushing information with the partner.
<b>Corrective Action</b>	If the flush handle exchange reports "inactive", the remote controller might be running a version of Data ONTAP(R) that does not support flushing. Make sure that the controller and its partner are running compatible versions of the software.
<b>Syslog Message</b>	HA interconnect: Flushing is %s.
<b>Parameters</b>	<b>s</b> (STRING): Flushing status.

<b>EMS Identifier</b>	cf.rv.localNoConn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the local controller votes not to connect to the HA partner. This can be caused by incompatibility between the software versions running on the two controllers.
<b>Corrective Action</b>	Install compatible versions of software on both controllers.
<b>Syslog Message</b>	HA interconnect: Local controller voted not to connect.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.rv.nicReset
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when HA interconnects are reset due to NVRAM log being unsynchronized for longer time than 15seconds.
<b>Corrective Action</b>	Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	HA interconnect: Reset due to unsynchronized log.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.rv.notConnected
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an HA connection agent fails to connect on an HA interconnect device.
<b>Corrective Action</b>	Verify that both controllers in the HA pair are operational. If this message persists, disable and reenale the link by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands.
<b>Syslog Message</b>	HA interconnect: Connection for '%s' failed.
<b>Parameters</b>	<b>rv_name</b> (STRING): Logical name of the failing HA connection.

<b>EMS Identifier</b>	cf.rv.partnerNoConn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the HA partner votes not to connect to this controller. This can happen if the HA partner detects an incompatibility between the software versions running on the two controllers.
<b>Corrective Action</b>	Install compatible versions of software on both controllers.
<b>Syslog Message</b>	HA interconnect: Partner voted not to connect.
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.shutdown.info
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the controller receives a message from its partner over the HA interconnect that indicates a condition related to the partner's attempted graceful shutdown.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>eventType</b> (STRING): Event type, such as "Long shutdown". <b>eventSummary</b> (STRING): Last task executed and its duration. <b>shutdownSummary</b> (STRING): Shutdown phase summary for the event.

<b>EMS Identifier</b>	cf.sysid.sent
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a node sends its system ID and its HA partner's system ID successfully across the HA interconnect.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>sysid</b> (LONGINT): Value of the local system ID that was sent successfully . <b>host</b> (STRING): This parameter is obsolete from Data ONTAP(R)8.3 and later because the partner's systemID is also sent in the message. <b>partner_sysid</b> (LONGINT): Value of the partner system ID that was sent successfully.

<b>EMS Identifier</b>	cf.takeover.aborted.bdfu
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when negotiated takeover is aborted because the background disk firmware update took more than 120 seconds to finish.
<b>Corrective Action</b>	Rerun the takeover command.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.takeover.delayed.bdfu
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when negotiated takeover is initiated on a node while the background disk firmware update (BDFU) is in progress. If update is not completed within 120 seconds, takeover is aborted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.takeover.delayed.cleanup
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when takeover of a node by the node's high-availability (HA) partner was delayed due to the cleanup being performed after the previous giveback event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>delay</b> (LONGINT): Amount of time (in milliseconds) the takeover was delayed.

<b>EMS Identifier</b>	cf.takeover.disabled
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when takeover of a node by the node's high-availability (HA) partner is disabled.
<b>Corrective Action</b>	Resolve the issue, as identified by the message, for takeover being disabled. Use the "storage failover show -instance" command to determine whether the disks are accessible by both nodes in the HA pair, also check the HA interconnect between both nodes is installed and functioning correctly. If not, fix the cabling, disk, or adapter issues to resolve the connectivity issues.
<b>Syslog Message</b>	%s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for takeover being disabled.

<b>EMS Identifier</b>	cf.takeover.missing.ptnrDiskInventory
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a takeover request is denied because the node did not receive the partner disk inventory information.
<b>Corrective Action</b>	Wait five minutes and then try takeover again. If you want to disable the disk inventory check instead, you can use the "cf disable diskInventory" command from the advanced privilege level of the nodeshell. However, disabling the disk inventory check might lead to a client outage when the local node cannot see the partner disks during takeover.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.takeover.missing.ptnrDisks
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a takeover request is denied because the node cannot see some of the partner's disks.
<b>Corrective Action</b>	Make sure that the local node has connectivity to all file system disks owned by the partner. To see which disks are missing, use the "storage failover show -instance" command. If you want to disable the disk inventory check instead, use the "cf disable diskInventory" command from the advanced privilege level of the nodeshell. However, disabling the disk inventory check might lead to a client outage when the local node cannot see the partner file system disks during takeover.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	cf.transition.info
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a failover event is completed successfully. It displays the protocol transition information for the event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s.
<b>Parameters</b>	<b>eventType</b> (STRING): Takeover, aggregate relocation, SFO phase of takeover, or SFO giveback event type. <b>eventSummary</b> (STRING): Transition duration for protocols during the event.

## "cft" Event Group

<b>EMS Identifier</b>	cft.trans.aggr.end
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Copy-Free Transition of a 7-Mode aggregate to clustered Data ONTAP(R) is successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Copy-Free Transition session:%s on node "%s" for aggregate UUID:%s using Snapshot:%s completed successfully.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>node</b> (STRING): Name of the target controller. <b>aggrUuid</b> (STRING): UUID of the aggregate. <b>snapshot</b> (STRING): Aggregate Snapshot(R) copy name.

<b>EMS Identifier</b>	cft.trans.aggr.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Copy-Free Transition of a 7-Mode aggregate to clustered Data ONTAP(R) fails.
<b>Corrective Action</b>	Contact technical support for assistance.
<b>Syslog Message</b>	Copy-Free Transition session:%s on node "%s" for aggregate UUID:%s using Snapshot:%s failed.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>node</b> (STRING): Name of the target controller. <b>aggrUuid</b> (STRING): UUID of the aggregate. <b>snapshot</b> (STRING): Aggregate Snapshot(R) copy name.

<b>EMS Identifier</b>	cft.trans.aggr.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Copy-Free Transition of a 7-Mode aggregate to clustered Data ONTAP(R) starts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Copy-Free Transition session:%s on node "%s" for aggregate UUID:%s using Snapshot:%s started.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>node</b> (STRING): Name of the target controller. <b>aggrUuid</b> (STRING): UUID of the aggregate. <b>snapshot</b> (STRING): Aggregate Snapshot(R) copy name.

<b>EMS Identifier</b>	cft.trans.commit.end
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Copy-Free Transition commit on a transitioned aggregate in clustered Data ONTAP(R) is successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Copy-Free Transition session:%s commit phase for aggregate UUID:%s" completed successfully.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>aggrUuid</b> (STRING): UUID of the aggregate.

<b>EMS Identifier</b>	cft.trans.commit.failed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when Copy-Free Transition commit of a transitioned aggregate in clustered Data ONTAP(R) fails.
<b>Corrective Action</b>	Contact technical support for assistance.
<b>Syslog Message</b>	Copy-Free Transition session:%s commit phase for aggregate UUID:%s " failed.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>aggrUuid</b> (STRING): UUID of the aggregate.

<b>EMS Identifier</b>	cft.trans.commit.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Copy-Free Transition commit of a transitioned aggregate in clustered Data ONTAP(R) starts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Copy-Free Transition session:%s commit phase for aggregate UUID:%s" started.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>aggrUuid</b> (STRING): UUID of the aggregate.

<b>EMS Identifier</b>	cft.trans.revert.end
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a Copy-Free Transition revert operation for an aggregate is successfully completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Copy-Free Transition session:%s revert to Data ONTAP 7-Mode version:%s for aggregate UUID:%s on node "%s" completed successfully.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>kernelVersion</b> (STRING): Kernel Version of 7-Mode needed for the revert operation. <b>aggrUuid</b> (STRING): UUID of the aggregate. <b>node</b> (STRING): Name of the target controller.

<b>EMS Identifier</b>	cft.trans.revert.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a Copy-Free Transition revert operation of a transitioned aggregate in clustered Data ONTAP(R) fails.
<b>Corrective Action</b>	Contact technical support for assistance.
<b>Syslog Message</b>	Copy-Free Transition session:%s revert to Data ONTAP 7-Mode version:%s for aggregate UUID:%s on node "%s" failed.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>kernelVersion</b> (STRING): Kernel version of 7-Mode needed for the revert operation. <b>aggrUuid</b> (STRING): UUID of the aggregate. <b>node</b> (STRING): Name of the target controller.

<b>EMS Identifier</b>	cft.trans.revert.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a Copy-Free Transition revert for an aggregate starts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Copy-Free Transition session:%s revert to Data ONTAP 7-Mode version:%s for aggregate UUID:%s on node "%s" started.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>kernelVersion</b> (STRING): Kernel version of 7-Mode needed for the revert operation. <b>aggrUuid</b> (STRING): UUID of the aggregate. <b>node</b> (STRING): Name of the target controller.

<b>EMS Identifier</b>	cft.trans.vol.end
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occur when Copy-Free Transition's volume transition job, responsible for transitioning 7-Mode volumes to clustered Data ONTAP(R), is complete. It provides the details of the number of successful transitions and the number of failures, with references for rectification and corrective measures.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Copy-Free Transition session:%s volume transition job for %d volumes is complete. %d volumes transitioned successfully and %d volumes failed.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>numVolumes</b> (INT): Number of volumes transitioning. <b>successTransVols</b> (INT): Number of volumes successfully transitioned. <b>failedTransVols</b> (INT): Number of volumes that failed to transition.

<b>EMS Identifier</b>	cft.trans.vol.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Copy-Free Transition of a 7-Mode volume to clustered Data ONTAP(R) fails.
<b>Corrective Action</b>	Contact technical support for assistance.
<b>Syslog Message</b>	Copy-Free Transition session:%s for volume UUID:%s contained in aggregate UUID:%s and associated with Vserver "%s" failed.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>volUuid</b> (STRING): Volume unique identifier. <b>aggrUuid</b> (STRING): UUID of the containing aggregate. <b>vserver</b> (STRING): Vserver associated with the volume.

<b>EMS Identifier</b>	cft.trans.vol.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Copy-Free Transition's volume transition job, responsible for transitioning 7-Mode volumes to clustered Data ONTAP(R), starts.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Copy-Free Transition session:%s volume transition job for %d volumes started.
<b>Parameters</b>	<b>sessionId</b> (STRING): Unique session identification number. <b>numVolumes</b> (INT): Number of volumes transitioning.

## "cifs" Event Group

<b>EMS Identifier</b>	cifs.does.not.exist
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Vserver or Cluster administrator tries to initialize Snapmirror on Async VserverDR ID Discard setup without creating a CIFS server at destination. Snapmirror initialize will not complete successfully and will remain uninitialized.
<b>Corrective Action</b>	Create CIFS server at destination(DP-destination) vserver. Reissue snapmirror initialize.
<b>Syslog Message</b>	CIFS server does not exist on Vserver '%s'.
<b>Parameters</b>	<b>vserverName</b> (STRING): Name of the DP-destination Vserver on which CIFS server does not exist.

<b>EMS Identifier</b>	cifs.domainpwd.job.deletion
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when disabling of CIFS domain password change schedule fails to delete the job for a Vserver.
<b>Corrective Action</b>	Delete the job on the owning node using 'job delete -id ' command.
<b>Syslog Message</b>	An attempt to delete the CIFS domain password change job with ID %d for Vserver %s failed. Reason %s.
<b>Parameters</b>	<b>jobid</b> (LONGINT): CIFS password change job ID that failed to delete. <b>vserver</b> (STRING): Name of the Vserver for which the password change job failed to delete. <b>reason</b> (STRING): Reason for the failure to delete the job.

<b>EMS Identifier</b>	cifs.domainpwd.job.not.sched
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the scheduled job for a CIFS domain password change fails for a Vserver.
<b>Corrective Action</b>	Disable and enable the feature for the Vserver by using the 'vserver cifs domain password schedule modify -is-schedule-enabled false' and 'vserver cifs domain password schedule modify -is-schedule-enabled true' commands. If the error persists, do the following: 1. Disable the scheduling feature for the password change on the Vserver by using the command specified above. 2. Change password manually by using the 'vserver cifs domain password change' command. 3. Contact NetApp technical support.
<b>Syslog Message</b>	An attempt to schedule a job to update the domain account password for Vserver %s failed.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver for which the password change job failed.

<b>EMS Identifier</b>	cifs.domainpwd.not.updated
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the CIFS domain password update for a Vserver fails.
<b>Corrective Action</b>	Try updating the password manually by using the 'vserver cifs domain password change' command. Review recent event logs for additional information. If the error persists, contact NetApp technical support.
<b>Syslog Message</b>	An attempt to update the domain account password for Vserver %s failed during %s with the following error: %s
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver for which the password update failed. <b>method</b> (STRING): Method used to update the password. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	cifs.replay.failure
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when configuration is not synchronized. This might cause the node experiencing the problem to become unresponsive to data access.
<b>Corrective Action</b>	Contact NetApp technical support. Be prepared to provide log files to technical support, particularly the "mgwd.log" and "sktrace.log" files.
<b>Syslog Message</b>	Failed to replay configuration for %s module.
<b>Parameters</b>	<b>module</b> (STRING): Name of the module for which configuration is not synchronized.

<b>EMS Identifier</b>	cifs.server.auth.StyleMismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Vserver DR subsystem detects that the authentication style (domain or workgroup) of the source Vserver's CIFS server does not match the authentication style of the destination Vserver's CIFS server
<b>Corrective Action</b>	Use the 'vserver cifs modify' command to configure the source or destination Vserver's CIFS server into a domain or workgroup as necessary for the authentication styles to match.
<b>Syslog Message</b>	Vserver DR check found that the CIFS server authentication style of the source Vserver, %s, did not match the authentication style of the destination Vserver, %s.
<b>Parameters</b>	<b>source_vserver</b> (STRING): Name of the source Vserver of the Vserver DR relationship. <b>destination_vserver</b> (STRING): Name of the destination Vserver of the Vserver DR relationship.

<b>EMS Identifier</b>	cifs.shadowcopy.abort
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a shadow copy set is automatically aborted when no activity has been detected for a certain period of time. This condition could be caused by improper operation of the backup application and/or the Volume Shadow Copy Service (VSS) client, or the loss of network connection to the host.
<b>Corrective Action</b>	Check the backup application and VSS client. Verify the network connection between the file server and the client.
<b>Syslog Message</b>	The shadow copy set ( Client Shadow Copy Set ID : %s , Filer Shadow Copy Set ID : %s ) has been automatically aborted. No activity has been seen for at least %d minutes.
<b>Parameters</b>	<b>clientShadowCopySetId</b> (STRING): Client Shadow Copy Set ID. <b>filerShadowCopySetId</b> (STRING): File Server Shadow Copy Set ID. <b>timeout</b> (INT): No activity timeout in minutes.

<b>EMS Identifier</b>	cifs.shadowcopy.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a shadow copy operation has failed.
<b>Corrective Action</b>	Using the information provided in the event message, here are some things to check on your system: Shadow copy configuration; Is the feature enabled? Are the appropriate licenses installed? Share(s) on which the shadow copy operation is performed; Is the share name correct? Does the share path exist? State of the shadow copy set and its shadow copies.
<b>Syslog Message</b>	A shadow copy operation has failed: %s. ( Operation : %s , Client Shadow Copy Set ID : %s , Filer Shadow Copy Set ID : %s , Client Shadow Copy ID : %s , Filer Shadow Copy ID : %s , Share Name : %s )
<b>Parameters</b>	<b>errMsg</b> (STRING): Reason the Shadow Copy operation failed. <b>operation</b> (STRING): Shadow Copy operation that failed. <b>clientShadowCopySetId</b> (STRING): Client Shadow Copy Set ID. <b>filerShadowCopySetId</b> (STRING): File Server Shadow Copy Set ID. <b>clientShadowCopyId</b> (STRING): Client Shadow Copy ID. <b>filerShadowCopyId</b> (STRING): File Server Shadow Copy ID. <b>shareName</b> (STRING): Share Name.

<b>EMS Identifier</b>	cifs.static.homedir.create
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a user creates a static home directory without a substitution value (%u or %w) to uniquely identify a home directory share. If multiple users from the same client access their home directories at the same time, unprotected access to each other's files can occur. This might cause unexpected \"access denied\" errors on those files, and data corruption within those files. Note: multiple users from a single client is most likely in a Citrix or Windows Terminal Services environment.
<b>Corrective Action</b>	Ensure that a substitution value (%u or %w) is provided to the name of the home directory share.
<b>Syslog Message</b>	A static home directory share \"%s\" without a substitution value (%%u or %%w) is created on Vserver: %s.
<b>Parameters</b>	<b>shareName</b> (STRING): Name of the share that the user has created. <b>vserverName</b> (STRING): Name of the Vserver associated with this operation.

## "clam" Event Group

<b>EMS Identifier</b>	clam.disable
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) is disabled by either turning off the KCS capability or by setting the 'clam sysctl/bootarg' variable.
<b>Corrective Action</b>	If you want CLAM functionality disabled, no action is needed. Otherwise, reenable CLAM and reboot the node to make CLAM operational again.
<b>Syslog Message</b>	CLAM functionality is disabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	clam.disable.takeover
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) is disabled from initiating storage failover requests. This capability is automatically disabled in a NAS-only configuration. To control the setting of CLAM takeover, additional interfaces, such as sysctl bootarg, are provided.
<b>Corrective Action</b>	No action is needed.
<b>Syslog Message</b>	CLAM is disabled from performing storage failover.
<b>Parameters</b>	

<b>EMS Identifier</b>	clam.enable
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) is enabled to operate on this node. When all nodes in the cluster are upgraded to a KCS-available image, KCS capability gets turned on. This event is an indication that CLAM will be now begin to function.
<b>Corrective Action</b>	No action is needed.
<b>Syslog Message</b>	CLAM functionality is enabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	clam.enable.takeover
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) is enabled to initiate storage failover requests when the CLAM OOO (Out Of Quorum) condition is detected on the partner node. This capability is automatically enabled in a scalable SAN configuration. To control the setting of CLAM takeover, additional interfaces, such as sysctl bootarg, are provided.
<b>Corrective Action</b>	No action is needed.
<b>Syslog Message</b>	CLAM is enabled to perform storage failover when partner node is OOO.
<b>Parameters</b>	

<b>EMS Identifier</b>	clam.failover.event
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) receives a failover event from high-availability(HA) subsystem.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on node (id=%llu) received an HA failover event for partner (ID=%llu) indicating that %s.
<b>Parameters</b>	<b>localnodeid</b> (LONGINT): Node ID of the local node. <b>partnernodeid</b> (LONGINT): Node ID of the partner node. <b>event_description</b> (STRING): Description of the event that CLAM received from the HA subsystem.

<b>EMS Identifier</b>	clam.heartbeat.state.change
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services Connectivity, Liveliness, Availability Monitor (CLAM) detects that the state of the heartbeats to a node changed(that is, either the heartbeats started succeeding or they started failing).
<b>Corrective Action</b>	Take one or more of the following actions: - A repeated toggling of the heartbeat state indicates intermittent network issues. Check the connectivity of the node to the cluster interconnect and fix any problems. - In all the other cases, the heartbeat failure will eventually result in the node going out of quorum. If that happens, take the actions prescribed for "EMS_clam_node_ooo event".
<b>Syslog Message</b>	Heartbeats to node (name=%s, ID=%llu) are %s.
<b>Parameters</b>	<b>hostname</b> (STRING): Host name of the node. <b>nodeid</b> (LONGINT): Node ID of the node. <b>state</b> (STRING): New state of the heartbeats to this node.

<b>EMS Identifier</b>	clam.invalid.config
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) determines that the local node is in an invalid configuration for providing CLAM functionality.
<b>Corrective Action</b>	Take one or more of the following actions, as appropriate: - Enable failover on the node by running the 'storage failover modify -node node_name -enabled true' command. - If there is a version incompatibility between the local node and the other nodes in the cluster, upgrade the nodes as needed.
<b>Syslog Message</b>	Local node (name=%s, id=%llu) is in an invalid configuration for providing CLAM functionality. CLAM cannot determine the identity of the HA partner.
<b>Parameters</b>	<b>localhostname</b> (STRING): Host name of the local node. <b>localnodeid</b> (LONGINT): Node ID of the local node.

<b>EMS Identifier</b>	clam.mailbox.initialized
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) has written to the high availability (HA) mailboxes that it has initialized and is ready to participate in CLAM quorum.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on local node has initialized its mailboxes and is ready to participate in quorum.
<b>Parameters</b>	

<b>EMS Identifier</b>	clam.node.disabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the local Connectivity, Liveliness and Availability Monitor (CLAM) concludes that the local node is now disabled.
<b>Corrective Action</b>	This EMS is logged when the local node has lost connectivity with the rest of the nodes in the cluster and the connectivity has not been restored in time for the local node to participate in cluster quorum. Take the actions prescribed for "EMS_clam_node_ooq" event.
<b>Syslog Message</b>	CLAM published an event indicating the local node is now disabled(reason: %s).
<b>Parameters</b>	<b>disabled_reason</b> (STRING): Reason for the node getting disabled.

<b>EMS Identifier</b>	clam.node.inq
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) determines that a node in the cluster has transitioned to "cluster quorum".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cluster node (name=%s, ID=%llu) is in "CLAM quorum".
<b>Parameters</b>	<b>hostname</b> (STRING): Host name of the cluster node that transitioned to quorum. <b>nodeid</b> (LONGINT): Node ID of the cluster node that transitioned to quorum.

<b>EMS Identifier</b>	clam.node.ooq
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) determines that a node in the cluster is out of "cluster quorum".
<b>Corrective Action</b>	Take one or more of the following actions: - Follow the KB article 2022109 to troubleshoot the resolve the issue. - Check the connectivity of the node to the cluster interconnect and fix any problems. - If the local node is administratively disabled, enable it by running the following command from the clustershell 'cluster modify -node node_name -eligibility true'. - If the node is supposed to be in an HA pair but is not, enable the HA pair. You can check whether a node is in an HA pair by running 'storage failover show' command from the clustershell. You can enable storage failover by running the 'storage failover modify -enabled true' command from the clustershell. - If there is a version incompatibility between the local node and the other nodes in the cluster, upgrade the nodes as needed. You can see the software version of all the nodes from the clustershell using the 'version -node *' command.
<b>Syslog Message</b>	Node (name=%s, ID=%llu) is out of "CLAM quorum" (reason=%s).
<b>Parameters</b>	<b>hostname</b> (STRING): Host name of the node that is out of quorum. <b>nodeid</b> (LONGINT): Node ID of the node that is out of quorum. <b>reason</b> (STRING): Reason for the out of quorum transition.

<b>EMS Identifier</b>	clam.node.paused
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the local Connectivity, Liveliness and Availability Monitor (CLAM) entered a paused state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM published an event indicating the local node has paused.
<b>Parameters</b>	

<b>EMS Identifier</b>	clam.node.resumed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the local Connectivity, Liveliness and Availability Monitor (CLAM) was previously in a paused state and has now resumed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM published an event indicating the local node has resumed.
<b>Parameters</b>	

<b>EMS Identifier</b>	clam.node.start.voting
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) on a local node has started to vote for its high-availability (HA) partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on local node (ID:%llu) has started to vote for its HA partner node (ID:%llu).
<b>Parameters</b>	<b>local_id</b> (LONGINT): Node ID of the local node. <b>partner_id</b> (LONGINT): Node ID of the partner node.

<b>EMS Identifier</b>	clam.node.stop.voting
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) on a local node has stopped voting for its high-availability (HA) partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on local node (ID:%llu) has stopped to vote for its HA partner node (ID:%llu).
<b>Parameters</b>	<b>local_id</b> (LONGINT): Node ID of the local node. <b>partner_id</b> (LONGINT): Node ID of the partner node.

<b>EMS Identifier</b>	clam.partner.halting
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveness, Availability Monitor (CLAM) is notified that its high-availability (HA) partner node is undergoing a planned shutdown.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM is notified that its HA partner node is undergoing a planned shutdown (reason: %s).
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the partner beginning the halt process.

<b>EMS Identifier</b>	clam.peer.halting
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveness, and Availability Monitor (CLAM) is notified that its high-availability (HA) partner node is undergoing a planned shutdown.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM is notified that node %s (ID=%llu) is undergoing a planned shutdown.
<b>Parameters</b>	<b>hostnode</b> (STRING): Name of node beginning the halt process. <b>nodeid</b> (LONGINT): ID of node beginning the halt process.

<b>EMS Identifier</b>	clam.reenable
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveness, Availability Monitor (CLAM) is reenabled to operate on this node after being intentionally disabled. The intentional disabling could have been through turning off KCS capability or setting the 'clam bootarg/sysctl' variable. Reenabling CLAM functionality warrants a reboot, upon which CLAM will be functional.
<b>Corrective Action</b>	Reboot the node to make CLAM operational.
<b>Syslog Message</b>	CLAM functionality is reenabled. Reboot the node to make CLAM operational.
<b>Parameters</b>	

<b>EMS Identifier</b>	clam.start.mailbox.polling
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveness, Availability Monitor (CLAM) has started a poll to read CLAM mailboxes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on local node (ID=%llu) has started a poll to read HA partner (ID=%llu) mailbox.
<b>Parameters</b>	<b>local_id</b> (LONGINT): Node ID of the local node. <b>partner_id</b> (LONGINT): Node ID of the partner node.

<b>EMS Identifier</b>	clam.stop.mailbox.polling
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveness, Availability Monitor (CLAM) has stopped polling the CLAM mailboxes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on local node (ID=%llu) has stopped the poll to read HA partner (ID=%llu) mailbox.
<b>Parameters</b>	<b>local_id</b> (LONGINT): Node ID of the local node. <b>partner_id</b> (LONGINT): Node ID of the partner node.

<b>EMS Identifier</b>	clam.takeover
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services Connectivity, Liveliness, Availability Monitor (CLAM) triggers takeover of a partner node after determining that the local node is in "CLAM quorum" and the partner node is out of "CLAM quorum".
<b>Corrective Action</b>	Take one or more of the following actions: - If the node panicked or is hung, troubleshoot and resolve the problem. - Check the connectivity of the node to the cluster interconnect and fix any problems. - If the local node is administratively disabled, enable it by running the following command from the clustershell 'cluster modify -node node_name -eligibility true'. - If the node is supposed to be in an HA pair but is not, enable the HA pair. You can check whether a node is in an HA pair by running the 'storage failover show' command from the clustershell. You can enable storage failover by running the 'storage failover modify -enabled true' command from the clustershell. - If there is a version incompatibility between the local node and the other nodes in the cluster, upgrade the nodes as needed. You can see the software version of all the nodes from the clustershell using the 'version -node *' command.
<b>Syslog Message</b>	Local node (name=%s, ID=%llu) initiated takeover of partner node (name=%s, ID=%llu, state=%llu) result=%s, type=%s.
<b>Parameters</b>	<b>localhostname</b> (STRING): Host name of the local node. <b>localnodeid</b> (LONGINT): Node ID of the local node. <b>partnerhostname</b> (STRING): Host name of the partner node. <b>partnernodeid</b> (LONGINT): Node ID of the partner node. <b>partnerstate</b> (LONGINTEX): The high-availability state of the partner node <b>result</b> (STRING): Result of the takeover initiation operation. <b>type</b> (STRING): Takeover Type.

<b>EMS Identifier</b>	clam.takeover.disallowed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) cannot initiate takeover operations. Takeover is disallowed by High Availability (HA) subsystem on the partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on node %s (ID=%llu) cannot proceed with a takeover operation of partner node %s (ID=%llu) because HA disallowed takeover. Reason :%s
<b>Parameters</b>	<b>local_host_name</b> (STRING): Host name of the local node. <b>localnodeid</b> (LONGINT): Node ID of the local node. <b>partner_host_name</b> (STRING): Host name of the partner node. <b>partnernodeid</b> (LONGINT): Node ID of the partner node. <b>reason</b> (STRING): Reason takeover was disabled.

<b>EMS Identifier</b>	clam.update.partner.state
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) updates the failover state of the partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on node (ID=%llu) updated failover state of partner (ID=%llu) to %s.
<b>Parameters</b>	<b>localnodeid</b> (LONGINT): Node ID of the local node. <b>partnernodeid</b> (LONGINT): Node ID of the partner node. <b>partner_state</b> (STRING): Description of the partner state.

<b>EMS Identifier</b>	clam.valid.config
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services (KCS) Connectivity, Liveliness, Availability Monitor (CLAM) determines that the local node is in a valid configuration for providing CLAM functionality.
<b>Corrective Action</b>	No action is needed.
<b>Syslog Message</b>	Local node (name=%s, id=%llu) is operating in a suitable configuration for providing CLAM functionality.
<b>Parameters</b>	<b>localhostname</b> (STRING): Host name of the local node. <b>localnodeid</b> (LONGINT): Node ID of the local node. <b>partnerhostname</b> (STRING): Host name of the partner node. <b>partnernodeid</b> (LONGINT): Node ID of the partner node.

<b>EMS Identifier</b>	clam.voting.state.change
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Kernel Cluster Services Connectivity, Liveliness, Availability Monitor (CLAM) detects that the voting state of the node changed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CLAM on node (name=%s, ID=%llu) has %s voting for its HA partner node(name=%s, ID=%llu).
<b>Parameters</b>	<b>local_hostname</b> (STRING): Host name of the local node. <b>localId</b> (LONGINT): Node ID of the local node. <b>state</b> (STRING): New voting state of the node. <b>partner_hostname</b> (STRING): Host name of the HA partner node. <b>partnerId</b> (LONGINT): Node ID of the HA partner node.

## "cloud" Event Group

<b>EMS Identifier</b>	cloud.aws.iamCredsExpired
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the IAM Role thread acquires Amazon Web Services (AWS) IAM (Identity and Access Management) role-based credentials that have already expired. The credentials are acquired from the AWS metadata server using the IAM role, and are used in signing API requests to AWS S3.
<b>Corrective Action</b>	Log in to the AWS EC2 Management Console, click on the 'Instances' page, and then find and check the health of the instance pertaining to this ONTAP Cloud deployment. Also verify that the AWS IAM role associated with the instance exists and grants proper privileges to the instance.
<b>Syslog Message</b>	ONTAP acquired AWS credentials associated with the AWS IAM role named '%s' on the AWS metadata server that have already expired.
<b>Parameters</b>	<b>iamRole</b> (STRING): Name of the IAM role associated with this ONTAP Cloud(R) instance.

<b>EMS Identifier</b>	cloud.aws.iamCredsInvalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system acquires Amazon Web Services (AWS) Identity and Access Management (IAM) role-based credentials that are not valid.
<b>Corrective Action</b>	In the AWS EC2 Management Console, find and check the health of the instance pertaining to this ONTAP Cloud deployment. Also, verify that the AWS IAM role associated with the instance exists and grants proper privileges to the instance.
<b>Syslog Message</b>	AWS credentials that were acquired by ONTAP are not valid. AWS IAM role: %s
<b>Parameters</b>	<b>iamRole</b> (STRING): Name of the IAM role associated with this ONTAP Cloud instance.

<b>EMS Identifier</b>	cloud.aws.iamCredsNotFound
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the IAM Role thread cannot acquire Amazon Web Services (AWS) IAM (Identity and Access Management) role-based credentials from the AWS metadata server. The credentials are used in signing API requests to AWS S3.
<b>Corrective Action</b>	Log in to the AWS EC2 Management Console, click on the 'Instances' page, and then find and check the health of the instance pertaining to this ONTAP Cloud(R) deployment. Also verify that the AWS IAM role associated with the instance exists and grants proper privileges to the instance.
<b>Syslog Message</b>	ONTAP cannot acquire AWS credentials associated with the AWS IAM role named '%s' on the AWS metadata server.
<b>Parameters</b>	<b>iamRole</b> (STRING): Name of the AWS IAM role associated with this ONTAP Cloud(R) instance.

<b>EMS Identifier</b>	cloud.aws.iamNotInitialized
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a module attempts to access Amazon Web Services (AWS) IAM (Identity and Access Management) role-based credentials from the IAM Role thread before the IAM Role thread is finished initializing.
<b>Corrective Action</b>	Wait for the IAM Role thread, and by extension the system, to complete initialization.
<b>Syslog Message</b>	A module attempted to access IAM role information before the IAM Role thread initialized.
<b>Parameters</b>	

<b>EMS Identifier</b>	cloud.aws.iamRoleInvalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system acquires an Amazon Web Services (AWS) Identity and Access Management (IAM) role on the AWS metadata server that is not valid.
<b>Corrective Action</b>	In the AWS EC2 Management Console, find and check the health of the instance pertaining to this ONTAP Cloud deployment. Also, verify that the AWS IAM role associated with the instance exists and grants proper privileges to the instance.
<b>Syslog Message</b>	IAM role "%s" on the AWS metadata server is not valid for this ONTAP instance.
<b>Parameters</b>	<b>iamRole</b> (STRING): Name of the IAM role associated with this ONTAP Cloud instance.

<b>EMS Identifier</b>	cloud.aws.iamRoleNotFound
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the IAM Role thread cannot find an Amazon Web Services (AWS) IAM (Identity and Access Management) role on the AWS metadata server. The IAM role is needed to obtain role-based credentials used in signing API requests to AWS S3.
<b>Corrective Action</b>	Log in to the AWS EC2 Management Console, click on the 'Instances' page, and then find and check the health of the instance pertaining to this ONTAP Cloud(R) deployment. Also verify that the AWS IAM role associated with the instance exists.
<b>Syslog Message</b>	ONTAP cannot find an IAM role on the AWS metadata server.
<b>Parameters</b>	

<b>EMS Identifier</b>	cloud.aws.metadataConnFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the IAM Role thread cannot establish a communication link with the Amazon Web Services (AWS) metadata server. Communication must be established to acquire the necessary AWS IAM (Identity and Access Management) role-based credentials used in signing API requests to AWS S3.
<b>Corrective Action</b>	Log in to the AWS EC2 Management Console, click on the 'Instances' page, and then find and check the health of the instance pertaining to this ONTAP Cloud(R) deployment.
<b>Syslog Message</b>	ONTAP cannot communicate with the AWS metadata server needed to acquire IAM role-based credentials for access to AWS S3. Error returned: %s
<b>Parameters</b>	<b>error</b> (STRING): Error code and string, if applicable.

## "clus" Event Group

<b>EMS Identifier</b>	clus.net.switchlessInv
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the "switchless-cluster" option is disabled, but yet one or more cluster ports are directly wired to a cluster port on another node. It can also occur if no devices have been discovered on the cluster network. This could result in packet loss across the cluster network, causing file operations to fail as well as loss of quorum.
<b>Corrective Action</b>	If the cluster network is switched, ensure that CDP is enabled on all cluster switches. If the cluster is a two-node switchless cluster, use the "network options switchless-cluster modify" command to enable support for switchless clusters.
<b>Syslog Message</b>	Either no devices were discovered on the cluster network, or some cluster ports are directly wired to cluster ports on another node while the "switchless-cluster" option is not enabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	clus.net.switchlessMismatch
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the "switchless-cluster" option is enabled, but all of the cluster ports are wired to a switch. This configuration will negatively impact the performance of the cluster network.
<b>Corrective Action</b>	Use the "network options switchless-cluster modify" command to disable support for switchless clusters.
<b>Syslog Message</b>	All of the cluster ports are wired to a switch, but the "switchless-cluster" option is enabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	clus.reboot.internalError
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the cluster reboot detection feature detects an internal software error due to insufficient system resources.
<b>Corrective Action</b>	Reboot the node by using the "system node reboot -node " command. Contact NetApp technical support if further assistance is needed.
<b>Syslog Message</b>	Cluster reboot detection feature detected an internal software error. Error: '%s'.
<b>Parameters</b>	<b>error</b> (STRING): Internal software error.

<b>EMS Identifier</b>	clus.reboot.noBootSequence
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the cluster reboot detection feature fails to obtain the node boot sequence from the /var/BOOT_SEQ file.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Cluster reboot detection feature failed to obtain the node boot sequence from /var/BOOT_SEQ file.
<b>Parameters</b>	

<b>EMS Identifier</b>	clus.reboot.persistencyError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the cluster reboot detection feature fails to save the node reboot information persistently.
<b>Corrective Action</b>	Reboot the node by using the "system node reboot -node nodename" command. Contact NetApp technical support if further assistance is needed.
<b>Syslog Message</b>	Cluster reboot detection feature failed to save the node reboot information persistently. Error: '%s'.
<b>Parameters</b>	<b>error</b> (STRING): Error returned by the save operation.

<b>EMS Identifier</b>	clus.reboot.rebootDetected
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a cluster reboot is detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cluster reboot was detected at %s. Sequence number for the cluster reboot was %d. Estimated beginning time of the cluster reboot was %s.
<b>Parameters</b>	<b>endtime</b> (STRING): End time of the cluster reboot. <b>sequence</b> (LONGINT): Sequence number of the detected cluster reboot. <b>begintime</b> (STRING): Estimated beginning time of the cluster reboot based on the last known time the cluster was operational.

## "cluster" Event Group

<b>EMS Identifier</b>	cluster.epsilon.assign.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when automatic assignment of epsilon to a node fails, alerting the customer that there is no epsilon on their system. Attempts to assign epsilon continue until automatic assignment succeeds or epsilon is assigned manually.
<b>Corrective Action</b>	Try to manually assign epsilon to a healthy node using the command 'cluster modify -node node-name -epsilon true'. Contact NetApp technical support if epsilon cannot be assigned.
<b>Syslog Message</b>	Epsilon could not be automatically assigned to node %s with error %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node that epsilon was being assigned to. <b>error</b> (STRING): Error string detailing why epsilon assignment failed.

<b>EMS Identifier</b>	cluster.epsilon.assigned
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when epsilon is assigned to a node either manually by a user-initiated command or automatically by the system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Epsilon was assigned to node %s by %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node epsilon was assigned to. <b>actor</b> (STRING): Whether the change was made manually by a user command or automatically by the system.

<b>EMS Identifier</b>	cluster.epsilon.removed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when epsilon is removed from a node either manually by a user-initiated command or automatically by the system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Epsilon was removed from node %s by %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node that epsilon was removed from. <b>actor</b> (STRING): Whether the change was made manually by a user command or automatically by the system.

<b>EMS Identifier</b>	cluster.ha.not.configured
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when cluster HA has not been configured on a 2-node cluster with HA mode enabled.
<b>Corrective Action</b>	Use the 'cluster ha modify -configured true' command to configure cluster HA.
<b>Syslog Message</b>	Cluster HA has not been configured. Cluster HA must be configured on a 2-node cluster to ensure data access availability in the event of storage failover.
<b>Parameters</b>	

<b>EMS Identifier</b>	cluster.image.update.aborted
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a non-disruptive data ONTAP upgrade of the cluster was aborted by the user.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A non-disruptive data ONTAP upgrade of the cluster was aborted by the user
<b>Parameters</b>	

<b>EMS Identifier</b>	cluster.network.config
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a two node cluster transitions between a switched and switchless configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The cluster network configuration transitioned to %s.
<b>Parameters</b>	<b>current_configuration</b> (STRING): Displays if the current configuration is switched or switchless.

<b>EMS Identifier</b>	cluster.op.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a "cluster create" or a "cluster join" or a "cluster unjoin" operation is attempted but does not succeed.
<b>Corrective Action</b>	Run the command specified to complete the cluster operation. Resolve the issue, and then try the command again.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>operation_type</b> (STRING): Type of cluster operation. <b>node</b> (STRING): Name of the node that attempted the cluster operation. <b>serial</b> (STRING): System serial number of the node that attempted the cluster operation.

<b>EMS Identifier</b>	cluster.op.not.complete
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a cluster create or cluster join operation fails to complete. The node is not fully operational and many commands will not work properly until this is resolved.
<b>Corrective Action</b>	Run the command specified to complete the cluster operation. Resolve the issue, and then try the command again.
<b>Syslog Message</b>	Cluster operation (%s) failed to complete for node %s. The node is not fully operational.
<b>Parameters</b>	<b>command</b> (STRING): Command for the cluster operation. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	cluster.op.rerun.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a previously failed cluster create or cluster join operation that is automatically rerun in background fails. The operation is automatically retried a maximum of 'max_retry_count' times at an interval of 'retry_interval' seconds.
<b>Corrective Action</b>	To view the reason for failure, run the operation manually. Alternatively, allow the automatic reruns to execute in case the issue is temporary or fixed. To view the progress of these background attempts, use the command 'event log show -event cluster.op.rerun*'. You may rerun the operation manually at any time, without waiting for these background runs to complete.
<b>Syslog Message</b>	Attempt to %s cluster named '%s' in the background failed. This was retry attempt %d of %d.
<b>Parameters</b>	<b>operation_type</b> (STRING): Type of cluster operation. <b>cluster_name</b> (STRING): Name of the cluster that is being created or joined. <b>retry_count</b> (INT): Number of attempts made to rerun the cluster create or join operations in the background. <b>max_retry_count</b> (INT): Maximum number of retry attempts allowed to rerun the cluster create or join operation in the background. <b>retry_interval</b> (INT): Interval of time, in seconds, between each rerun attempt.

<b>EMS Identifier</b>	cluster.op.rerun.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a previously failed cluster create or cluster join operation is rerun in the background in an attempt to successfully complete the operation. The operation is automatically retried a maximum of 'max_retry_count' times at an interval of 'retry_interval' seconds.
<b>Corrective Action</b>	To view the reason for failure, run the operation manually. Alternatively, allow the automatic reruns to execute in case the issue is temporary or fixed. To view the progress of these background attempts, use the command 'event log show -event cluster.op.rerun*' You may rerun the operation manually at any time, without waiting for these background runs to complete.
<b>Syslog Message</b>	Attempt to %s cluster named '%s' in the background. This is retry attempt %d of %d.
<b>Parameters</b>	<b>operation_type</b> (STRING): Type of cluster operation. <b>cluster_name</b> (STRING): Name of the cluster that is being created or joined. <b>retry_count</b> (INT): Number of attempts to retry the cluster create or join operation in the background. <b>max_retry_count</b> (INT): Maximum number of rerun attempts allowed. <b>retry_interval</b> (INT): Interval of time, in seconds, between each rerun attempt.

<b>EMS Identifier</b>	cluster.op.rerun.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a previously failed cluster create or cluster join operation automatically rerun in the background is successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cluster %s operation run in the background completed successfully for cluster name '%s'.
<b>Parameters</b>	<b>operation_type</b> (STRING): Type of cluster operation. <b>cluster_name</b> (STRING): Name of the cluster that is being created or joined.

<b>EMS Identifier</b>	cluster.op.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a "cluster create" or a "cluster join" or a "cluster unjoin" operation is run.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>operation_type</b> (STRING): Type of cluster operation. <b>node</b> (STRING): Name of the node being operated on or empty if the name is not yet set. <b>serial</b> (STRING): System serial number of the node being operated on or empty if the serial number is not set.

<b>EMS Identifier</b>	cluster.op.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a cluster has been successfully created or a node has successfully joined or unjoined the cluster.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>operation_type</b> (STRING): Type of cluster operation. <b>node</b> (STRING): Name of the node that successfully performed the cluster operation. <b>serial</b> (STRING): System serial number of the node that successfully performed the cluster operation.

<b>EMS Identifier</b>	cluster.port.unsupport.speed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the cluster ports are operating at an unsupported speed.
<b>Corrective Action</b>	Ensure that the cluster port has a supported network interface card installed, and that it is operating at the supported speed.
<b>Syslog Message</b>	%s node %s cluster ports are not operating at a supported speed. Ensure that ports %s have supported network interface card installed, and are operating at a supported speed: %s.
<b>Parameters</b>	<b>model_name</b> (STRING): Model on which the misconfigured ports reside. <b>node</b> (STRING): Node on which the misconfigured ports reside. <b>portlist</b> (STRING): List of misconfigured ports. <b>supported_speed</b> (STRING): Speed at which the port is supported.

<b>EMS Identifier</b>	cluster.repl.localNW.unreachable
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the cluster replication heartbeat to a peer cluster cannot reach the local management gateway process for a minimum of 300 seconds. This potentially affects MetroCluster(tm) and Vserver disaster recovery (DR) applications.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The cluster replication heartbeat could not reach the local management gateway process for at least %d seconds.
<b>Parameters</b>	<b>durationSinceLastSuccess</b> (INT): Number of seconds since the problem first occurred.

<b>EMS Identifier</b>	cluster.repl.peer.reachable
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the cluster replication heartbeat can now reach the peer cluster, after previous failures resulted in raising one of the following events: cluster.repl.localNW.unreachable, cluster.repl.peerNW.unreachable, or cluster.repl.remoteApp.unreachable.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The cluster replication heartbeat can now reach peer cluster %s.
<b>Parameters</b>	<b>peerIPAddress</b> (STRING): Peer cluster IP address that can now be reached.

<b>EMS Identifier</b>	cluster.repl.peerNW.unreachable
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the cluster replication heartbeat to the peer cluster fails for a minimum of 300 seconds. This potentially affects MetroCluster(tm) and Vserver disaster recovery (DR) applications.
<b>Corrective Action</b>	Verify network connectivity between the local cluster and the peer cluster. Check the cluster peer EMS messages for more information.
<b>Syslog Message</b>	The cluster replication heartbeat to peer cluster %s failed for at least %d seconds.
<b>Parameters</b>	<b>peerIPAddress</b> (STRING): Cluster peer IP address that could not be reached. <b>durationSinceLastSuccess</b> (INT): Number of seconds since the problem first occurred.

<b>EMS Identifier</b>	cluster.repl.remoteApp.unreachable
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the cluster replication heartbeat to the remote cluster replication application fails for a minimum of 300 seconds. This potentially affects MetroCluster(tm) and Vserver disaster recovery (DR) applications.
<b>Corrective Action</b>	Check the state of the replication application process running on the peer cluster by issuing the 'cluster ring show -unitname crs' command.
<b>Syslog Message</b>	The cluster replication heartbeat to the remote application running on peer cluster %s failed for at least %d seconds.
<b>Parameters</b>	<b>peerIPAddress</b> (STRING): Remote application cluster IP address that could not be reached. <b>durationSinceLastSuccess</b> (INT): Number of seconds since the problem first occurred.

<b>EMS Identifier</b>	cluster.vol.create.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the volume required to store the system data needed for cluster-wide storage is created successfully after one or more attempts to create it failed. An event was previously raised for the failures.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully created the volume for feature %s, after earlier attempts to create it failed.
<b>Parameters</b>	<b>Feature</b> (STRING): Feature using the cluster-wide storage.

<b>EMS Identifier</b>	cluster.vol.delete.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the volume that was used for cluster-wide storage cannot be deleted.
<b>Corrective Action</b>	Study the error message and take steps to rectify the problem. For example, if the error message indicates that the volume delete operation failed because the aggregate is offline, use the "aggr online -aggregate aggregate_name" command to bring it back online. If the error message does not indicate an obvious problem, contact NetApp technical support.
<b>Syslog Message</b>	Could not delete volume %s %d times on aggregate %s for feature %s. Most recent delete before this EMS failed with error message: "%s".
<b>Parameters</b>	<b>Volume</b> (STRING): Volume name. <b>AttemptsMade</b> (INT): Count of failed attempts to delete the volume. <b>Aggregate</b> (STRING): Aggregate name. <b>Feature</b> (STRING): Feature using the cluster-wide storage. <b>ErrorMessage</b> (STRING): Error message resulting from the delete failure at the time of EMS generation.

<b>EMS Identifier</b>	cluster.vol.delete.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the volume that was used for cluster-wide storage is deleted successfully after one or more attempts to delete it failed. An event was previously raised for the failures.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully deleted volume %s on aggregate %s for feature %s, after earlier attempts to delete it failed.
<b>Parameters</b>	<b>Volume</b> (STRING): Volume name. <b>Aggregate</b> (STRING): Aggregate name. <b>Feature</b> (STRING): Feature using the cluster-wide storage.

<b>EMS Identifier</b>	cluster.vol.feature.inoper
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when it is detected that a feature relying on cluster-wide storage has been unable to create its storage. This condition leaves the feature inoperative.
<b>Corrective Action</b>	Look for any instances of the callhome.clus.vol.cre.fail event and follow any corrective action suggested there. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	Feature %s is inoperative due to failures creating the cluster-wide storage that it requires.
<b>Parameters</b>	<b>Feature</b> (STRING): Feature using the cluster-wide storage.

<b>EMS Identifier</b>	cluster.vol.feature.ok
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when it is detected that a feature relying on cluster-wide storage has been able to create its storage after previously not being able to.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Feature %s degraded state has been cleared.
<b>Parameters</b>	<b>Feature</b> (STRING): Feature using the cluster-wide storage.

<b>EMS Identifier</b>	cluster.vol.on.same.aggr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when both active and standby volumes used for cluster-wide storage are hosted on the same aggregate. This is typically due to there not being a suitable second aggregate to host the standby volume. In this configuration, the loss of the single aggregate would remove all cluster-wide storage for the feature, which would severely affect its functionality.
<b>Corrective Action</b>	Use the "volume show" command to identify the size of the specified volumes and on which aggregate they are hosted. Use the "storage aggregate show -fields mirror" command to identify if the aggregate that currently hosts the volumes is mirrored. Use the "storage aggregate show -fields mirror,size,usedsize,state" command to find an online aggregate with the same mirror attribute and with enough free space to host the standby volume. If a suitable aggregate cannot be found, then bring an offline aggregate back online using the "storage aggregate online" command or create a new aggregate using the "storage aggregate create" command. If creating a new aggregate, ensure that it is large enough to host the volume and that it has the same mirror attribute as the current aggregate. After a suitable aggregate has been identified or created, move the standby volume to this aggregate using the "volume move start" command. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	Both active and standby cluster-wide storage volumes (%s, %s) for %s feature are on the same aggregate.
<b>Parameters</b>	<b>ActiveVolume</b> (STRING): Active volume name. <b>StandbyVolume</b> (STRING): Standby volume name. <b>Feature</b> (STRING): Feature using the cluster-wide storage.

## "cmd" Event Group

<b>EMS Identifier</b>	cmd.result.reboot
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system reboots as a consequence of executing the specified command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	System rebooted for ('%s').
<b>Parameters</b>	<b>cmd</b> (STRING): Command for which the system rebooted.

<b>EMS Identifier</b>	cmd.sasadmin.fw_update.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an adapter firmware update failure occurs.
<b>Corrective Action</b>	Verify that the firmware file is valid and try updating the firmware again. If the firmware update still fails, contact NetApp technical support.
<b>Syslog Message</b>	Adapter firmware update failed for adapter: %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated SAS host bus adapter.

<b>EMS Identifier</b>	cmd.shelfchk.config.OK
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is generated while verifying disk shelf cabling and configuration. The operator indicates that the correct disk LEDs have illuminated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk Configuration - No Errors Identified.
<b>Parameters</b>	

<b>EMS Identifier</b>	cmd.shelfchk.config.warning
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated while verifying disk shelf cabling and configuration on a channel. The operator has indicated that the intended set of disk LEDs is not illuminated.
<b>Corrective Action</b>	Verify that the adapters and storage shelves are cabled correctly.
<b>Syslog Message</b>	Disk Configuration - Failure Identified by Operator.
<b>Parameters</b>	

<b>EMS Identifier</b>	cmd.start.unsuccessful
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Counter Manager daemon (cmd) fails to start. The failure impacts the continuous archiving of performance data, which is used by technical support to troubleshoot system issues.
<b>Corrective Action</b>	The startup failure might be due to improper permissions for the '/mroot/etc/log' directory, or a full disk. Verify that the permissions of the '/mroot/etc/log' directory are 'rwxr-xr-x' by executing the 'fsecurity show /vol/vol0/etc/log' command from the nodeshell. Verify that the '/mroot' file system is not full. After fixing the cause of the failure, restart the cmd by running the 'spmctl -e -h cmd' command from the freebsd shell.
<b>Syslog Message</b>	The cmd startup failed.
<b>Parameters</b>	

## "cmds" Event Group

<b>EMS Identifier</b>	cmds.config.file.delete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when there is an error in deleting the specified file.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: Error in deleting %s: (%s).
<b>Parameters</b>	<b>funcname</b> (STRING): Function name. <b>fname</b> (STRING): File name. <b>errMessage</b> (STRING): Error message.

<b>EMS Identifier</b>	cmds.ifconfig.all1s.netmask <b>Deprecated:</b> Deprecated as of version 9.2 because this functionality is not supported.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an IP address is configured with netmask of 255.255.255.255
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Configuring IP address %s on interface %s with netmask 255.255.255.255. Only this IP address will exist in its subnet.
<b>Parameters</b>	<b>ipaddr</b> (STRING): IP address. <b>ifName</b> (STRING): Network interface name.

<b>EMS Identifier</b>	cmds.ifconfig.del.autocf <b>Deprecated:</b> Deprecated as of version 9.2 because this functionality is not supported.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the administrator deletes an IPv6 autoconf address that uses a router-advertised prefix. The address will be restored automatically if the router advertises the same prefix again.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s is using a router-advertised prefix and might get reconfigured when the next router advertisement arrives.
<b>Parameters</b>	<b>ip6address</b> (STRING): IPv6 address of interface.

<b>EMS Identifier</b>	cmds.ifconfig.ip.rm <b>Deprecated:</b> Deprecated as of version 9.2 because this functionality is not supported.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an IP address is removed or not removed from the interface.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	IP address %s is %s removed from interface "%s".
<b>Parameters</b>	<b>ipAddress</b> (STRING): IP address. <b>value</b> (STRING): Value is either a string "not" or an empty string "". <b>infName</b> (STRING): Network interface name.

<b>EMS Identifier</b>	cmds.ifconfig.ip.rm.memAlloc <b>Deprecated:</b> Deprecated as of version 9.2 because this functionality is not supported.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an IP address cannot be removed from the interface due to a memory allocation failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Could not remove IP address %s: memory allocation failure.
<b>Parameters</b>	<b>ipAddress</b> (STRING): IP address.

<b>EMS Identifier</b>	cmds.net.TOE.offload <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the IPv6 option is enabled and the TCP Offload Engine (TOE) card is present. This notifies the user that TCP offload is not supported in IPv6.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	IPv6 connections are not offloaded over TOE. TCP offload is not supported in IPv6.
<b>Parameters</b>	

<b>EMS Identifier</b>	cmds.pktt.trace.suspend <b>Deprecated:</b> Deprecated as of version 9.2 because the command pktt is not supported.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system pauses tracing on all interfaces. This is intended to be called from outside of packet tracing.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Tracing suspended on interface %s: %s.
<b>Parameters</b>	<b>interfaceFullName</b> (STRING): Full new-style interface name, for example "e0a". <b>reason</b> (STRING): Description of the reason why Tracing was paused.

<b>EMS Identifier</b>	cmds.pktt.write.info <b>Deprecated:</b> Deprecated as of version 9.2 because the command pktt is not supported.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message informs you about the packet tracing statistics.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	pktt: %u packets seen, %u dropped, %lld bytes written to %s.
<b>Parameters</b>	<b>pktSeen</b> (INT): Total number of packets seen since tracing started. <b>pktDrop</b> (INT): Total number of packets dropped since tracing started. <b>totalWritten</b> (LONGINT): Total bytes written since tracing started. <b>pkttLogFile</b> (STRING): Path to the log file.

<b>EMS Identifier</b>	cmds.pktt.write.issue <b>Deprecated:</b> Deprecated as of version 9.2 because the command pktt is not supported.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system encounters a write error while dumping unwritten bytes in the packet buffer.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Write error. Disabling packet tracing to %s.
<b>Parameters</b>	<b>pkttLogFile</b> (STRING): Path to the log file.

<b>EMS Identifier</b>	cmds.pktt.write.stuck <b>Deprecated:</b> Deprecated as of version 9.2 because the command pktt is not supported.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when WAFL(R) hangs, possibly due to a memory leak. To avoid a system crash, the log file write is not freed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	pktt: Stuck write of log file.
<b>Parameters</b>	

<b>EMS Identifier</b>	cmds.route.addDefault <b>Deprecated:</b> Deprecated as of version 9.2 because nodeshell command "route" is deprecated
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a default route is added with a metric of 0. If the default route is added with a metric of 0, the controller could become unreachable from hosts outside of the controller's local network.
<b>Corrective Action</b>	Delete and re-add this route with a metric larger than 0.
<b>Syslog Message</b>	route add: Metric should be larger than 0 for default route.
<b>Parameters</b>	

<b>EMS Identifier</b>	cmds.route.addGateway <b>Deprecated:</b> Deprecated as of version 9.2 because nodeshell command "route" is deprecated.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a gateway route is added with a metric of 0. If a gateway route is added with a metric of 0, the destination being configured in the 'route' command becomes unreachable.
<b>Corrective Action</b>	Delete and re-add this route with a metric larger than 0.
<b>Syslog Message</b>	route add: Metric should be larger than 0 for a gateway (%s) route.
<b>Parameters</b>	<b>ipaddr</b> (STRING): IP address of the gateway.

<b>EMS Identifier</b>	cmds.route.invalidHost <b>Deprecated:</b> Deprecated as of version 9.2 because nodeshell command "route" is deprecated.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the 'route' command is invoked with a host IP that is not in the four octet format. In the 'route' command, host IP addresses must be specified in the four octet format to be considered valid.
<b>Corrective Action</b>	Enter the host IP address as xxx.xxx.xxx.xxx.
<b>Syslog Message</b>	route: Invalid host IP address format: %s.
<b>Parameters</b>	<b>ipaddr</b> (STRING): IP address of the host.

<b>EMS Identifier</b>	cmds.software.dirErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs because the system cannot create the directory at the designated path.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Could not create directory %s: %s
<b>Parameters</b>	<b>path</b> (STRING): Path where directory was supposed to be created. <b>errorMsg</b> (STRING): Error message.

<b>EMS Identifier</b>	cmds.software.installDone
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during software update and installation to inform you that the installation is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Software: Installation of %s was completed.
<b>Parameters</b>	<b>fileName</b> (STRING): Name of the file to be updated/installed.

<b>EMS Identifier</b>	cmds.software.installNotDone
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during software update and installation to inform you that installation failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Software: Installation of %s failed.
<b>Parameters</b>	<b>fileName</b> (STRING): Name of the file to be updated/installed.

<b>EMS Identifier</b>	cmds.sysconf.haltERR1
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs to log the reason for system halt, before actually system is halted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Halting system due to %d configuration problems.
<b>Parameters</b>	<b>errCount</b> (INT): Number of error which caused the system halt.

<b>EMS Identifier</b>	cmds.sysconf.haltERR2
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs to log the reason for system halt, before actually system is halted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Halting system due to a configuration problem.
<b>Parameters</b>	

<b>EMS Identifier</b>	cmds.sysconf.inconstRule
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because the rule for the card is applicable to both non_cluster_only and cluster_only systems, which is inconsistent.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Rule for model %s card %s is inconsistent: it applies both to cluster-only and non-cluster-only.
<b>Parameters</b>	<b>model</b> (STRING): Model ID. <b>card</b> (STRING): Card ID.

<b>EMS Identifier</b>	cmds.sysconf.logErr
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs to log the error through syslog as an Error or Informational message depending upon the error count which is in this case greater than 0.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s.
<b>Parameters</b>	<b>errMsg</b> (STRING): Error message to be logged.

<b>EMS Identifier</b>	cmds.sysconf.logInfo
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs to log the error through syslog as an Error or informational message depending upon the error count which is in this case less than or equal to 0.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s.
<b>Parameters</b>	<b>errMsg</b> (STRING): Error message to be logged.

<b>EMS Identifier</b>	cmds.sysconf.perIntSmall
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because the value for a periodic interval for internal testing is set too small, less than the minimum allowed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	options.sysconfig.periodic_interval of %d minutes is too small; using %d.
<b>Parameters</b>	<b>valueUsed</b> (INT): Value used for testing purpose. <b>defaultMinValue</b> (INT): Minimum value allowed for a periodic interval.

<b>EMS Identifier</b>	cmds.sysconf.syslogger
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs to send the output to syslog rather than command prompt because the option '-l' with sysconfig command is not documented and is included in DEBUG builds only.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s.
<b>Parameters</b>	<b>message</b> (STRING): 'sysconfig -l' Command output message.

## "command" Event Group

<b>EMS Identifier</b>	command.complex.query
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a custom role associated with a Storage Virtual Machine has a command directory with complex query.
<b>Corrective Action</b>	Remove the complex query. See BUG 915877 for more information.
<b>Syslog Message</b>	The %s command directory in %s role under Storage Virtual Machine %s, will not be available in merged role.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Storage Virtual Machine. <b>rolename</b> (STRING): Name of the role associated with the Virtual Storage Machine, with a command directory with a complex query. <b>cmddirname</b> (STRING): Name of the command directory with complex query.

## "config" Event Group

<b>EMS Identifier</b>	config.ATANotSupported
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an ATA disk is found, but the appliance does not support it.
<b>Corrective Action</b>	Remove the ATA disks or upgrade your appliance to a model that supports ATA disks. Check your support provider's web site or knowledgebase for more information about appliance models that support ATA disks.
<b>Syslog Message</b>	ATA disks are not supported on this appliance. Disk %s is an ATA disk and should be removed.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.BadLocalSwitch
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk is found to be attached to a switch, but there are also disks attached via local connections. Mixed switch-attached and direct-attached disks are an illegal configuration.
<b>Corrective Action</b>	Correct the cabling so that all disks are attached either directly or through switches. Consult the hardware cabling guides at the NetApp technical support site.
<b>Syslog Message</b>	Disk %s is attached to a switch. However, there are also local attached disks. This is an illegal configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.BadPoolAssign
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when SyncMirror(R) is in use and disks are assigned to different pools on the same interface or loop. This affects the fault isolation of the plexes in mirrored aggregates such that if a single interface fails, both plexes in an aggregate might fail or become degraded. If both plexes of an aggregate fail, the system enters multidisk panic.
<b>Corrective Action</b>	If the disk is a spare disk, use the "storage disk assign -pool [0 1]" command to change the pool assignment of the disks on the interface so that they are assigned to only one pool. If the disk is a file system disk, use the "storage disk replace" command to replace the disk from the incorrect pool with a spare disk from the correct pool.
<b>Syslog Message</b>	Disk %s is in %s and other disks on this loop/domain are in %s. Disks/interfaces need to be in separate pools for SyncMirror.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk that fails. <b>disk_pool</b> (STRING): Name of the pool that the disk is in. <b>other_pool</b> (STRING): Name of the other pool.

<b>EMS Identifier</b>	config.BadSlot
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk is found to be attached to an invalid Host Adapter (HA) controller slot.
<b>Corrective Action</b>	Consult the NetApp technical support guides for the supported slots for adapters in the hardware platform. If the adapter is in a supported slot, contact NetApp technical support for further assistance.
<b>Syslog Message</b>	Disk %s is attached to an invalid HA slot. This is an illegal configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.BadSwitchLocal
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk is found to be attached locally, but there are also disks attached via switches. Mixed switch-attached and direct-attached disks are an illegal configuration.
<b>Corrective Action</b>	Correct the cabling so that all disks are attached either directly or through switches. Consult the hardware cabling guides at the NetApp technical support site.
<b>Syslog Message</b>	Disk %s is attached locally. However, there are also switch attached disks. This is an illegal configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.bridge.adapter.invalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an FC-to-SAS bridge is attached to an unsupported FC adapter port. Only QLogic(R) 4-Gb/s or 8-Gb/s adapters are supported.
<b>Corrective Action</b>	Attach the FC-to-SAS bridge to a supported FC adapter port on the controller.
<b>Syslog Message</b>	FC-to-SAS bridge %s S/N [%s] is attached to unsupported FC adapter port %s.
<b>Parameters</b>	<b>bridgeName</b> (STRING): Name of the FC-to-SAS bridge. <b>bridgeSerialNum</b> (STRING): Serial number of the FC-to-SAS bridge. <b>adapterName</b> (STRING): Name of the associated FC host bus adapter.

<b>EMS Identifier</b>	config.bridge.extra.port
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when both FC ports of an FC-to-SAS bridge are attached to the same controller.
<b>Corrective Action</b>	Follow the defined Fabric or Stretch MetroCluster wiring guide.
<b>Syslog Message</b>	Both FC ports of FC-to-SAS bridge %s S/N [%s] are attached to this controller.
<b>Parameters</b>	<b>bridgeName</b> (STRING): Name of the FC-to-SAS bridge. <b>bridgeSerialNum</b> (STRING): Serial number of the FC-to-SAS bridge.

<b>EMS Identifier</b>	config.bridge.fw.mismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when two or more attached FC-to-SAS bridges are running different firmware revisions.
<b>Corrective Action</b>	For more information about downloading and installing updated firmware, check your support provider's web site or knowledgebase.
<b>Syslog Message</b>	Two or more %s FC-to-SAS bridges are running different firmware revisions.
<b>Parameters</b>	<b>bridgeModel</b> (STRING): Name of the FC-to-SAS bridge model.

<b>EMS Identifier</b>	config.bridge.SAS.miswired
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SAS disk shelves behind an FC-to-SAS bridge are not wired in the correct order.
<b>Corrective Action</b>	Follow the defined Fabric or Stretch MetroCluster wiring guide.
<b>Syslog Message</b>	The SAS disk shelves behind FC-to-SAS bridge %s S/N [%s] are not correctly wired.
<b>Parameters</b>	<b>bridgeName</b> (STRING): Name of the FC-to-SAS bridge. <b>bridgeSerialNum</b> (STRING): Serial number of the FC-to-SAS bridge.

<b>EMS Identifier</b>	config.bridge.SAS2Domain
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is multipathed to one SAS domain; that is, both ports of the disk are visible from the same bridge FC port.
<b>Corrective Action</b>	Recable the disk shelf containing the specified disk, so that the two disk ports are in different SAS domains.
<b>Syslog Message</b>	Disk %s is multipathed to the same SAS domain. The two disk ports must be in different SAS domains.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.bridge.unsupp.shelf
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an FC-to-SAS bridge discovers a disk shelf that it does not support.
<b>Corrective Action</b>	Verify the bridge firmware is up-to-date with minimum FW rev required for support of this shelf type. If the bridge firmware supports the disk shelf but the error condition persists, remove the disk shelf.
<b>Syslog Message</b>	FC-to-SAS %s bridge with S/N: %s WWN: %s has unsupported %s shelf type attached.
<b>Parameters</b>	<b>bridgeType</b> (STRING): Type of FC-to-SAS bridge. <b>bridgeSerialNum</b> (STRING): Serial number of the bridge. <b>bridgeWWN</b> (STRING): World Wide Name of the bridge. <b>shelfType</b> (STRING): Type of shelf.

<b>EMS Identifier</b>	config.CFObothABmodule
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk shelf in a node is cabled for multipathing and the configuration does not support it. Multipathing means that the disk shelf is connected to one node through both disk shelf module A and module B. In HA configurations, multipathing is only supported if software disk ownership is being used and the storage shelf supports it.
<b>Corrective Action</b>	For a standard HA configuration, identify the miscabled disk shelf and attach either module A or module B to the partner node. For a shared storage or multipathed HA, assign disk ownership to the partner node by using the "disk assign" command in Maintenance mode.
<b>Syslog Message</b>	The disk shelf where disk %s resides is connected to this node through both disk shelf module A and module B; one of the modules must be connected to the partner node instead.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk that is cabled for multipathing.

<b>EMS Identifier</b>	config.CFOmixedABmodule
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk shelf attached to a node is miscabled so that one disk shelf's module A is connected to the next disk shelf's module B, or vice versa.
<b>Corrective Action</b>	Identify the miscabled disk shelf, and then recable it. For FC shelves, ensure that each disk shelf's module A is connected Output to Input to the next disk shelf's module A, and that the disk shelf's module B is connected Output to Input to the next disk shelf's module B. For SAS shelves, connect the port identified with a circle on disk shelf module A to the port identified with a square on the next disk shelf's module A, and the "circle" port on module B to the next disk shelf's "square" port.
<b>Syslog Message</b>	Host adapter %s has miscabled disk shelves; one disk shelf's module A is connected to the next disk shelf's module B, or vice versa.
<b>Parameters</b>	<b>adapter</b> (STRING): Adapter that the miscabled disk shelf is on.

<b>EMS Identifier</b>	config.DifferentSwitchPort
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the two ports of the disk are connected to different switch ports.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disks on port %s:%d are also connected to port %s:%d. They need to be connected via the same port on different switches. This is an illegal configuration.
<b>Parameters</b>	<b>switch1</b> (STRING): (None). <b>port1</b> (INT): (None). <b>switch2</b> (STRING): (None). <b>port2</b> (INT): (None).

<b>EMS Identifier</b>	config.DiffPool
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk is found to be multipathed to two different mirroring pools. This configuration is illegal.
<b>Corrective Action</b>	See the NetApp technical support site for guidelines about assigning disks or array LUNs to SyncMirror(R) pools.
<b>Syslog Message</b>	Disk %s is dual-attached to two separate mirrored pools. This is an illegal configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.DiskNoSwitch
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk is found to be attached to a switch, but it's not supported for a switch configuration.
<b>Corrective Action</b>	Ensure that the Disk Qualification Package (DQP) is up-to-date. Visit the NetApp technical support site for information on DQP files and installation. If the error persists for more than 10 minutes after installing an updated DQP file, remove the drive.
<b>Syslog Message</b>	Disk %s is not supported in a switch configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.DualSp2100
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an isp2100 adapter is used in a dual-path setup.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Adapter %s is a 2100 card and does not support disk dual-attached mode.
<b>Parameters</b>	<b>adapter</b> (STRING): Name of the adapter that's being dually connected.

<b>EMS Identifier</b>	config.ExceededHA
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the number of local attached FC adapters exceeds the maximum allowed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%d Fibre Channel disk adapters were detected and the maximum allowed is only %d.
<b>Parameters</b>	<b>numHA</b> (INT): (None). <b>maxHA</b> (INT): (None).

<b>EMS Identifier</b>	config.FCSameLoop
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is multipathed to the same Fibre Channel loop.
<b>Corrective Action</b>	Recable the disk shelf containing the specified disk so that it is multipathed to different Fibre Channel loops.
<b>Syslog Message</b>	Disk %s is attached to the same Fibre Channel loop. The disk should be multipathed to different loops.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.HABadBank1
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a local host adapter is connected to a different switch bank (on ports 8-15) than other adapters on this controller, which are connected to ports 0-7. This is an illegal configuration.
<b>Corrective Action</b>	Connect all of the adapters of this controller to the same bank of switch ports.
<b>Syslog Message</b>	Other local host adapters are connected to Switch bank 1 (ports 0-7). Host adapter %s is connected to Switch bank 2 (ports 8-15). This is an illegal configuration.
<b>Parameters</b>	<b>ha</b> (STRING): Name of the host adapter.

<b>EMS Identifier</b>	config.HABadBank2
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a local host adapter is connected to a different switch bank (on ports 0-7) than other adapters on this controller, which are connected to ports 8-15. This is an illegal configuration.
<b>Corrective Action</b>	Connect all of the adapters of this controller to the same bank of switch ports.
<b>Syslog Message</b>	Other local host adapters are connected to Switch bank 2 (ports 8-15). Host adapter %s is connected to Switch bank 1 (ports 0-7). This is an illegal configuration.
<b>Parameters</b>	<b>ha</b> (STRING): Name of the host adapter.

<b>EMS Identifier</b>	config.HABadRemote
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a remote host adapter is connected to the wrong switch bank.
<b>Corrective Action</b>	Examine the cabling to determine which switch bank the local controller host adapters are attached to (the lower-numbered ports or the higher-numbered ports.) Recable the HA of the remote controller to be in the other bank of switch ports.
<b>Syslog Message</b>	A remote host adapter is connected to the same switch bank as the local host adapters. This is an illegal configuration.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.invalid.PortToPort
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SAS (Serial Attached SCSI) port is attached to another SAS port. This is not a valid connection.
<b>Corrective Action</b>	Check and correct the cabling; connecting two SAS ports together in this configuration is not permitted.
<b>Syslog Message</b>	SAS adapter \"%s\" is attached to another SAS adapter.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated SAS host bus adapter.

<b>EMS Identifier</b>	config.localswitch
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a disk is found attached via both local connection and a switch. This is permitted in debug. The system will be halted in non-debug.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s is attached via a local connection and a switch. This is an illegal configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.mirroring.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the name-service configuration is not replicated in the node. The out-of-sync configuration file can impact access during data access attempts.
<b>Corrective Action</b>	Use the "vserver services name-service unix-user load-from-uri" or "vserver services name-service unix-group load-from-uri" command to reload the configuration file. Use the (privilege: advanced) "vserver services name-service unix-user file status" or "vserver services name-service unix-group file status" command to verify that the configuration file was successfully loaded and corresponding database was successfully generated.
<b>Syslog Message</b>	Failed getting the latest %s file for Vserver %s on node %s with error %s.
<b>Parameters</b>	<b>configuration</b> (STRING): Name of the configuration. <b>vserver_name</b> (STRING): Name of the vserver, for which the configuration was not successfully replicated. <b>node_name</b> (STRING): Name of the node on which configuration failed to replicate. <b>error_string</b> (STRING): Error encountered while extracting package.

<b>EMS Identifier</b>	config.MirrorNotMultiPath
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is not multipathed but synchronous mirroring is enabled.
<b>Corrective Action</b>	Multipath the disk shelf stack by also attaching it to a different host adapter via the other shelf module in each disk shelf in the stack.
<b>Syslog Message</b>	Disk %s and other disks on this loop/domain are not multipathed and should be for synchronous mirroring configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.MirrorSCSI disk
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a SCSI disk is found in a SyncMirror(R) configuration.
<b>Corrective Action</b>	Unconfigure SyncMirror on the aggregate that contains the SCSI disk. Configure SyncMirror using aggregates that do not contain SCSI disks.
<b>Syslog Message</b>	Disk %s is a SCSI disk, and is illegal in a SyncMirror configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the SCSI disk that was found.

<b>EMS Identifier</b>	config.mixedABmodule
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disk shelf stack is miscabled so that one disk shelf's module A is connected to the next disk shelf's module B, or vice versa.
<b>Corrective Action</b>	Identify the miscabled disk shelf, and then recable it. For fibre channel shelves, ensure that each disk shelf's module A is connected Output to Input to the next disk shelf's module A, and that the disk shelf's module B is connected Output to Input to the next disk shelf's module B. For SAS shelves, connect the port identified with a circle on disk shelf module A to the port identified with a square on the next disk shelf's module A, and the "circle" port on module B to the next disk shelf's "square" port on disk shelf module B.
<b>Syslog Message</b>	Host adapter %s has miscabled disk shelves; one disk shelf's module A is connected to the next disk shelf's module B, or vice versa. This is not a recommended configuration.
<b>Parameters</b>	<b>adapter</b> (STRING): Name of the adapter on the miscabled disk shelf stack.

<b>EMS Identifier</b>	config.More2Path
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is found to have more than two connections to the storage controller.
<b>Corrective Action</b>	Remove connections to the disk so there are only two.
<b>Syslog Message</b>	Disk %s and other disks on this loop/domain are attached with more than two connections. Only two connections are supported.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.MultiPath
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the filer configuration is configured for High Availability (HA) multipathing.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	config.noAdisk
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the local node in an HA configuration is connected to its disk shelves through the shelf B module instead of the shelf A module. In an HA configuration, the local node must be connected to its disk shelves through the shelf A module, and the partner node must be connected to those disk shelves through the shelf B module.
<b>Corrective Action</b>	For a standard HA configuration, identify and connect the local node's disk shelves to the local node using the shelf's module A. Then connect those disk shelves to the partner node using the shelf module B. For a shared storage or multipathed HA, assign disk ownership to the local and partner nodes by using the "disk assign" command in Maintenance mode.
<b>Syslog Message</b>	All disk shelves are attached to the local node through shelf module B. Some of these shelves should be attached via shelf module A.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.noBconnect
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the local node in an HA configuration has no access to its partner node's disk shelves because the partner node's shelves are not connected to the local node through the shelf's module B.
<b>Corrective Action</b>	For an HA configuration that uses software disk ownership, verify that both the local and partner nodes can access the disks.
<b>Syslog Message</b>	The local node cannot access the partner node's disk shelves because the partner node's shelves are not connected to the local node through their shelf module B.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.NoCheck
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system should be halting, but it cannot because the "no-config-check? " environment variable is set to true.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	This is an illegal configuration. However the Filer is not halting due to no-config-check? being set to true.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.NoMultiPath
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk is found with multiple paths and it does not support them.
<b>Corrective Action</b>	Remove the second path from the disk shelf.
<b>Syslog Message</b>	Disk %s cannot be multipathed.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk that was found.

<b>EMS Identifier</b>	config.noPartnerDisks
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs in a High-Availability (HA) configuration when there are no partner disks.
<b>Corrective Action</b>	Ensure that both nodes of the HA pair are cabled so they have access to all the disks. Check that the adapter interface to the disk shelves is up using the "storage adapter show" command. Ensure that any switches are correctly zoned for disk visibility by the nodes.
<b>Syslog Message</b>	No disks were detected for the partner; this node cannot perform takeover correctly.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.noPartnerLUNs
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs in a High-Availability (HA) configuration with array LUNS when there is no attachment to both local and partner LUNs.
<b>Corrective Action</b>	Ensure that both nodes of the HA pair are cabled so they have access to all of the LUNs. Check that the adapter interface to the array is up by using the "storage adapter show" command. Ensure that any switches are correctly zoned for LUN visibility by the nodes. Verify that the array or bridge is correctly exporting its LUNs on the proper interface.
<b>Syslog Message</b>	No LUNs were detected for the partner; this node cannot perform takeover correctly.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.NoSwitchCount
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to obtain the switch port count fails because it does not exist.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Unable to obtain switch port count information for attached switches.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.NoSwitchCountForDisk
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to obtain the switch port count fails because it does not exist.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Unable to obtain switch port count information for disk %s.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.NotMultiPath
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is not multipathed.
<b>Corrective Action</b>	Multipath the disk shelf stack by also attaching it to a different host adapter via the other shelf module in each disk shelf in the stack.
<b>Syslog Message</b>	Disk %s and other disks on this loop/domain are not multipathed and should be for improved availability.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.OneSwitch
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the disk is only connected to one switch.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s and other disks on this loop are only connected to one switch. For availability reasons, it should be connected to two separate switches.
<b>Parameters</b>	<b>disk</b> (STRING): name of the disk

<b>EMS Identifier</b>	config.repl.bypass.disabled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the configuration replication bypass has been disabled. Configuration replication to any partner clusters will now resume.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The configuration replication bypass has been disabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.repl.bypass.enabled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the configuration replication bypass has been enabled. Configuration replication to any partner clusters will cease until the bypass is disabled using the 'debug crs replication-bypass disable' command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The configuration replication bypass has been enabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	config.sameHA
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is multipathed to the same host adapter. The second disk interface should be attached to a different host adapter.
<b>Corrective Action</b>	Move one of the connections attaching the disk shelf to a different host adapter.
<b>Syslog Message</b>	Disk %s and other disks attached to the same port are dual-attached to the same adapter. For improved availability you should dual-attach them to separate adapters.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.sameSlot
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SAS disk is multipathed to host adapters in the same controller slot. The second disk interface should be attached to a host adapter in a different slot.
<b>Corrective Action</b>	Move one of the connections attaching the disk shelf to a host adapter in a different slot.
<b>Syslog Message</b>	Disk %s and other disks attached to the same port are dual-attached to adapters in the same slot . For improved availability you should dual-attach them to adapters in separate slots.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.SameSwitch
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when both ports of a disk is found to be attached to the same switch.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disks on port %s:%d are also connected to the same switch at port %s:%d. This is an illegal configuration.
<b>Parameters</b>	<b>switch1</b> (STRING): name of the switch <b>port1</b> (INT): port number of 1st connection. <b>switch2</b> (STRING): (None). <b>port2</b> (INT): port number of 2nd connection.

<b>EMS Identifier</b>	config.SameSwitchWarn
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when both ports of a disk are found to be attached to the same switch. Higher availability is achieved by cabling disk ports to different switches.
<b>Corrective Action</b>	Recable one of the indicated ports to a different switch.
<b>Syslog Message</b>	Disks on port %s:%d are also connected to the same switch at port %s:%d. For availability reasons, they should be connected to two separate switches.
<b>Parameters</b>	<b>switch1</b> (STRING): Name of the switch. <b>port1</b> (INT): Port number of first connection. <b>switch2</b> (STRING): (None). <b>port2</b> (INT): Port number of second connection.

<b>EMS Identifier</b>	config.SAS2Domain
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is multipathed to one SAS domain; that is, both ports of the disk are visible from the same HBA port.
<b>Corrective Action</b>	Recable the disk shelf containing the specified disk, so that the two disk ports are in different SAS domains.
<b>Syslog Message</b>	Disk %s is multipathed to the same SAS domain. The two disk ports must be in different SAS domains.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	config.SCSIdisk
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a SCSI disk is found in a CFO configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s is a SCSI disk, and is illegal in a Clustered Failover configuration.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the SCSI disk which was found.

## "connectx" Event Group

<b>EMS Identifier</b>	connectx.cmdInterface.hung
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the command interface of ConnectX HA interconnect hardware is temporarily hung. If the command interface fails to recover, the HA interconnect goes down.
<b>Corrective Action</b>	Typically, the command interface recovers after a few seconds. If not, an AutoSupport message is generated when the HA interconnect goes down.
<b>Syslog Message</b>	HA interconnect ConnectX hardware command interface is temporarily hung.
<b>Parameters</b>	

<b>EMS Identifier</b>	connectx.fatalError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a fatal error is polled from the ConnectX(tm) InfiniBand(R) adapter. Controller failover will be disabled.
<b>Corrective Action</b>	Contact NetApp technical support. ConnectX registers have been dumped to the /etc/mlxlog/ConnectX_regdump file.
<b>Syslog Message</b>	HA interconnect HBA failure, ConnectX fatal error was polled.
<b>Parameters</b>	

<b>EMS Identifier</b>	connectx.lbCableDetected
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an InfiniBand cable is detected on the InfiniBand port.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Detected %s of length %dM on InfiniBand port %s.
<b>Parameters</b>	<b>cable_type</b> (STRING): InfiniBand cable type. <b>cable_length</b> (INT): Length of the InfiniBand cable in meters. <b>port_str</b> (STRING): InfiniBand port in which the cable is plugged.

<b>EMS Identifier</b>	connectx.IBLinkRetrainNotReqd
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the software detects that the previous InfiniBand link training was successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	InfiniBand Link training was successful for ConnectX in slot %d, port %d.
<b>Parameters</b>	<b>pcie_slot</b> (INT): PCIe slot in which ConnectX is present. <b>port_num</b> (INT): Port number where the success was detected.

<b>EMS Identifier</b>	connectx.IBLinkRetrainReqd
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the software detects that the previous InfiniBand link training was unsuccessful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	InfiniBand Link training failed for ConnectX in slot %d, port %d. Link Retraining Request status %d.
<b>Parameters</b>	<b>pcie_slot</b> (INT): PCIe slot in which ConnectX is present. <b>port_num</b> (INT): Port number where the issue was detected. <b>status</b> (INT): Status of the link retraining request.

<b>EMS Identifier</b>	connectx.lbQsfpDumpCtrl
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when InfiniBand retimer programming fails due to a quad small form-factor pluggable (QSFP) transceiver register dump failure, causing the control registers of QSFP to be dumped.
<b>Corrective Action</b>	Automatic retry of InfiniBand retimer programming will be done and an AutoSupport(tm) message will be generated if two retries fail.
<b>Syslog Message</b>	InfiniBand retimer programming failed on port %s due to %s. Dumping registers: control 0x%0x, data 0x%0x, timeout 0x%0x, clock 0x%0x.
<b>Parameters</b>	<b>port_str</b> (STRING): InfiniBand port in which the cable is plugged. <b>reason</b> (STRING): Reason for the failure of InfiniBand retimer programming. <b>ctrlreg</b> (INTHEX): Contents of the QSFP control register in hexadecimal notation. <b>datareg</b> (INTHEX): Contents of the QSFP data register in hexadecimal notation. <b>timeoutreg</b> (INTHEX): Contents of the QSFP timeout register in hexadecimal notation. <b>clockreg</b> (INTHEX): Contents of the QSFP clock register in hexadecimal notation.

<b>EMS Identifier</b>	connectx.lbQsfpDumpData
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when InfiniBand retimer programming fails due to a quad small form-factor pluggable (QSFP) transceiver parse error, and 128 bytes of QSFP data are dumped.
<b>Corrective Action</b>	Automatic retry of InfiniBand retimer programming will be done and an AutoSupport(tm) message will be generated if two retries fail.
<b>Syslog Message</b>	InfiniBand retimer programming failed on port %s due to %s. Dumping registers: %s.
<b>Parameters</b>	<b>port_str</b> (STRING): InfiniBand port in which the cable is plugged. <b>reason</b> (STRING): Reason for the failure of InfiniBand retimer programming. <b>qsfp_data</b> (STRING): Contents of QSFP data registers from offset 128 to 256 in hexadecimal notation.

<b>EMS Identifier</b>	connectx.lbRetimerFailCount
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when InfiniBand retimer programming fails due to one of the following reasons: InfiniBand device not found, GPIO read failure or retimer chip failure.
<b>Corrective Action</b>	Automatic retry of InfiniBand retimer programming will be done and an AutoSupport(tm) message will be generated if two retries fail.
<b>Syslog Message</b>	InfiniBand retimer programming failed on port %s due to %s.
<b>Parameters</b>	<b>port_str</b> (STRING): InfiniBand port in which the cable is plugged. <b>reason</b> (STRING): Reason for the failure of InfiniBand retimer programming.

<b>EMS Identifier</b>	connectx.lbRetimerProgrmPass
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when InfiniBand retimer programming is successfully completed after the system detects that a cable is plugged in.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	InfiniBand retimer programming was successful on port %s.
<b>Parameters</b>	<b>port_str</b> (STRING): InfiniBand port in which the cable is plugged.

<b>EMS Identifier</b>	connectx.lbRetimerSkipProgrm
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when InfiniBand retimer programming is skipped after the system detects that a cable is plugged in, because there was no change in the cable's type and length.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	InfiniBand retimer programming was skipped on port %s for %s cable.
<b>Parameters</b>	<b>port_str</b> (STRING): InfiniBand port in which the cable is plugged. <b>cable_type</b> (STRING): InfiniBand cable type.

<b>EMS Identifier</b>	connectx.lbUnsupportCable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unsupported InfiniBand cable is detected on the InfiniBand port.
<b>Corrective Action</b>	Unplug the unsupported InfiniBand cable and plug in a supported cable. Search the support site "Hardware Universe" for information about supported InfiniBand cables.
<b>Syslog Message</b>	Detected unsupported %s on InfiniBand port %s.
<b>Parameters</b>	<b>cable_type</b> (STRING): InfiniBand cable type. <b>port_str</b> (STRING): InfiniBand port in which the cable is plugged.

<b>EMS Identifier</b>	connectx.portDisabled
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the HA interconnect port experiences persistent node advertisement send timeouts. Port reinitialization does not correct the problem. The port is disabled.
<b>Corrective Action</b>	Reboot the controller. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	Node advertisement send timed out for the ConnectX device in slot %d, port %d. The port is disabled. Device registers have been dumped to the /etc/mlxlog/ConnectX_regdump file.
<b>Parameters</b>	<b>phys_slot</b> (INT): Physical slot in which ConnectX is present. <b>port_num</b> (INT): Port number that is disabled.

## "copy" Event Group

<b>EMS Identifier</b>	copy.dst.raid.convert.fail
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a SnapMirror or aggregate copy operation attempts to update a flexible volume RAID block on the destination but is unable to do so.
<b>Corrective Action</b>	Verify the source and destination have flexible volumes with compatible versions.
<b>Syslog Message</b>	Unable to convert volume RAID block %llu during copy transfer.
<b>Parameters</b>	<b>block</b> (LONGINT): Block with the error

## "coredump" Event Group

<b>EMS Identifier</b>	coredump.all.disks.used
<b>Severity</b>	ERROR
<b>Description</b>	All disks available to coredump already contain unsaved cores.
<b>Corrective Action</b>	There are three choices. First, add more disks to the system. Second, delete any unsaved cores by running "savecore -k". Third, save any unsaved cores by running "savecore". It may be necessary to run "savecore -f" to save the cores, if previous attempts to save these cores have failed.
<b>Syslog Message</b>	No disks available for dumpcore
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.compress.failed
<b>Severity</b>	ERROR
<b>Description</b>	An error was encountered while compressing data for the coredump. This core will be deleted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Error compressing core data: %s
<b>Parameters</b>	<b>msg</b> (STRING): The error message

<b>EMS Identifier</b>	coredump.compression.details
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a compressed kernel core is generated. Details about compression are reported.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s, compression time %llu msec, compression count %llu, bytes before compression %llu, bytes after compression %llu, compression ratio %llu%%, compression bandwidth %llu MB/s, total compression time %llu msec, all-zero chunk count %llu.
<b>Parameters</b>	<b>type</b> (STRING): Type of dump. Possible types are compressed core, compressed spraycore, spraycore and sparecore. <b>compressTime</b> (LONGINT): Compression time, in milliseconds. <b>compressCount</b> (LONGINT): Number of compressions. <b>compressBytesIn</b> (LONGINT): Number of bytes before compression. <b>compressBytesOut</b> (LONGINT): Number of bytes after compression. <b>compressRatio</b> (LONGINT): Compression ratio expressed as a percentage. <b>compressBandwidth</b> (LONGINT): Compression bandwidth, in MBps. <b>totalCompressTime</b> (LONGINT): Total compression time, in milliseconds. <b>allZeroChunks</b> (LONGINT): Number of all-zero chunks.

<b>EMS Identifier</b>	coredump.coreid.not.found
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	Could not find the specified core
<b>Corrective Action</b>	Double-check the core id, and try again.
<b>Syslog Message</b>	Core %d could not be found
<b>Parameters</b>	<b>coreid</b> (INT): The core id that could not be found

<b>EMS Identifier</b>	coredump.delete.denied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a requested coredump delete cannot occur because an aggregate relocation or a takeover is in progress. The system cannot delete a core while either an aggregate relocation or a takeover is in progress.
<b>Corrective Action</b>	Retry the coredump delete after aggregate relocation or takeover completes.
<b>Syslog Message</b>	Coredump delete disallowed because an aggregate relocation or a takeover in progress.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.disk.write.details
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a kernel core is written to disk. Details about disk operations are reported.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s, disk write time %llu msec, disk write count %llu, disk write bytes %llu, disk write bandwidth %llu MB/s.
<b>Parameters</b>	<b>type</b> (STRING): Type of dump. Possible types are compressed core, compressed spraycore, spraycore and sparecore. <b>writeTime</b> (LONGINT): Disk write time, in milliseconds. <b>writeCount</b> (LONGINT): Number of disk writes. <b>writeBytes</b> (LONGINT): Number of bytes written to disk. <b>writeBandwidth</b> (LONGINT): Disk write bandwidth, in MBps.

<b>EMS Identifier</b>	coredump.dr.dump.not.started
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when coredump subsystem detects that disaster recovery (DR) partner sparecore dump did not start.
<b>Corrective Action</b>	Log in to service processor and power cycle the DR partner that may not have started dumping core.
<b>Syslog Message</b>	DR partner sparecore dump failed to start.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dr.spare.abort
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when coredump subsystem attempts to abort any sparecore dump that might be in progress on disaster recovery (DR) partner. This process can take up to 60 seconds. During this time, other coredump operations are not serviced.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Pausing to abort DR partner sparecore dump on %s because %s.
<b>Parameters</b>	<b>diskuid</b> (STRING): UID of DR partner sparecore dump disk. <b>reason</b> (STRING): Reason for aborting the DR partner sparecore dump.

<b>EMS Identifier</b>	coredump.dr.spare.noAbort
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when coredump subsystem is unable to abort any sparecore dump that might be in progress on disaster recovery (DR) partner.
<b>Corrective Action</b>	Log in to service processor and power cycle the DR partner that is still dumping core.
<b>Syslog Message</b>	DR partner sparecore dump could not be aborted on disk %s because %s.
<b>Parameters</b>	<b>diskuid</b> (STRING): UID of DR partner sparecore dump disk. <b>reason</b> (STRING): Reason for abort failure.

<b>EMS Identifier</b>	coredump.dump.abort
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an unsaved core on the dump device. The abort prevents a new crash from overwriting the original dump core, which is expected to contain more interesting information for analysis.
<b>Corrective Action</b>	If the default behavior is not desired, then set the boot option 'save-latest-core?' to true.
<b>Syslog Message</b>	Dump is aborted because a core in the dump device is not saved yet.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.disk.failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs once for each core disk that has read or write errors while dumping the core. Each disk is marked as failed, so further writes to the disks are dropped. Dumpcore tries to recover from this error, and continue dumping the core.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s had %u read and %u write error(s) during dumpcore.
<b>Parameters</b>	<b>disk</b> (STRING): Name of this core disk marked failed with read or write errors. <b>readErrorCount</b> (INT): Number of read errors seen on this core disk. <b>writeErrorCount</b> (INT): Number of write errors seen on this core disk.

<b>EMS Identifier</b>	coredump.dump.disk_failed.count
<b>Severity</b>	ERROR
<b>Description</b>	During the last dumpcore attempt, disk write errors are ignored, and dumpcore continues. In this case, too many disks failed during the last dump attempt for savecore to create a core file. The core will be deleted, and no core will be available from this panic.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%d of %d disks failed during dumpcore
<b>Parameters</b>	<b>failed</b> (INT): Number of failed disks <b>total</b> (INT): Number of disks used

<b>EMS Identifier</b>	coredump.dump.disks.count
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system fails to write a coredump due to lack of disk space.
<b>Corrective Action</b>	Disk space needed for a coredump can be reduced by enabling sparse cores, which is the default setting. Verify that sparse cores are enabled by using the "system node coredump config show" command. If not, enable them by using the "system node coredump modify -node local -sparse-enabled true" command. If there is still not enough disk space to write a coredump, add a spare disk that is at least 0.6 times the sum of primary memory size and NVRAM memory size. You can obtain sizes of primary memory and NVRAM memory by using the "run local sysconfig" command and reading entries for system board and NVRAM.
<b>Syslog Message</b>	Not enough disks to write core dump.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.dont
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a core dump is not performed because the system was configured to not dump cores or dump is disabled in the code path that caused the system to panic. Any of the following configuration methods can disable coredump: - Environment variable "dont-dump-core?" is "true" - Parameter "-coredump-attempts" in the command "system node coredump config" is "0".
<b>Corrective Action</b>	If the reason is "dump disabled in the current code path", there is no corrective action that can be taken. If the reason is "coredump configured to not dump cores", 1. "-coredump-attempts" parameter might be set to "0". Check the "Max Dump Attempts" value in the output of the "system node coredump config show -node node_name" command. If "0", use the "system node coredump config modify <-node node_name> -coredump-attempts " command to set a non-zero value. The default is 2 attempts. 2. "dont-dump-core?" environment variable might be set to "true". From the nodeshell, use the (priv: diag) "bootargs dump" command to check whether "dont-dump-core?" exists and is set to "true". To unset the variable, use the "bootargs unset dont-dump-core?" command.
<b>Syslog Message</b>	Coredump not performed because %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason that coredump was not performed.

<b>EMS Identifier</b>	coredump.dump.failed
<b>Severity</b>	EMERGENCY
<b>Description</b>	Coredump failed to complete.
<b>Corrective Action</b>	Previously logged coredump.dump.* events should help explain the exact cause of the failure.
<b>Syslog Message</b>	Dumpcore failed
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.find.all.used
<b>Severity</b>	ERROR
<b>Description</b>	Unsaved cores occupy all the disks available to dumpcore.
<b>Corrective Action</b>	Save the unsaved cores using "savecore" or "savecore -f". If the cores aren't needed, run "savecore -k" to delete them.
<b>Syslog Message</b>	All available disks contain unsaved cores
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.find.disks.failed
<b>Severity</b>	ERROR
<b>Description</b>	Could not find any suitable disks for dumping a core.
<b>Corrective Action</b>	Make sure there are non-broken disks connected to (and owned by) the panicing host.
<b>Syslog Message</b>	No valid disks found
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.find.spare.failed
<b>Severity</b>	ERROR
<b>Description</b>	A sparecore dump is supposed to be done, but no suitable spare disk can be found. In these situations, it is more important to allow a fast takeover than it is to get the core, so the dump is terminated, and takeover begins.
<b>Corrective Action</b>	Add a spare disk to the system, or disable the "cf.takeover.on_panic" option.
<b>Syslog Message</b>	No valid spare disk found
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.nvram.copy.failed
<b>Severity</b>	ERROR
<b>Description</b>	Error while copying NVRAM into main memory during dumpcore. The resulting coredump will have dummy data in the NVRAM segment.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Error while copying NVRAM contents into main memory
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.raid.notready
<b>Severity</b>	ERROR
<b>Description</b>	RAID has not yet processed the labels on the, disks, so dumpcore cannot proceed. This is typically the case for panics very early during boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	RAID not ready to dump cores
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.recursive.late
<b>Severity</b>	ERROR
<b>Description</b>	A recursive panic situation has been encountered. The location of the second panic makes it unsafe to attempt another dump.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Late recursive panic caused dumpcore to abort
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.save.latest.core
<b>Severity</b>	ERROR
<b>Description</b>	The boot option save-latest-core? is set to true. This will discard all unsaved cores during coredump.
<b>Corrective Action</b>	If the behavior is not desired then set the boot option save-latest-core? to false.
<b>Syslog Message</b>	Saving the latest core and discarding all unsaved cores.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.segments.count
<b>Severity</b>	ERROR
<b>Description</b>	Dumpcore ran out of space for the core segments in the header. This core cannot be dumped.
<b>Corrective Action</b>	Disable the "coredump.metadata_only" option.
<b>Syslog Message</b>	Out of segment space in the core header
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.spare.no.space
<b>Severity</b>	ERROR
<b>Description</b>	The selected spare disk might not be big enough to hold the core. The dump attempt has been aborted.
<b>Corrective Action</b>	Make sure a spare disk is available that is at least as big as the sum of main memory and NVRAM. Set the option "coredump.metadata_only" to "on". If the problem persists, turn off the option "cf.takeover.on_panic". This will disable the sparecore feature, and delay takeovers until the panicing partner has finished dumping the core.
<b>Syslog Message</b>	Spare disk too small for coredump
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.started
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	Basic info about start of dumpcore
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s starting with %d disks
<b>Parameters</b>	<b>type</b> (STRING): Type of dump. Possible types are compressed, sprayed, and sparecore. <b>disks</b> (INT): Number of disks being used

<b>EMS Identifier</b>	coredump.dump.time
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	Information about how long dumpcore took to complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s completed in %d seconds
<b>Parameters</b>	<b>type</b> (STRING): Type of dump. Possible types are compressed, sprayed, and sparecore. <b>seconds</b> (INT): Number of seconds spent on the dump

<b>EMS Identifier</b>	coredump.dump.write.blocks.failed
<b>Severity</b>	ERROR
<b>Description</b>	Failed to write dump data blocks to disk. If the write failed because of disk problems, dumpcore will restart, without the disk that failed. If the write failed for other reasons (eg. attempt to write to a bad position on the disk), dumpcore will be aborted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Error dumping %llu blocks starting at block %llu to disk %s
<b>Parameters</b>	<b>blocks</b> (LONGINT): Number of blocks trying to be dumped <b>start</b> (LONGINT): Starting block number <b>disk</b> (STRING): Name of disk on which the write failed

<b>EMS Identifier</b>	coredump.dump.write.error
<b>Severity</b>	ERROR
<b>Description</b>	An i/o error occurred while attempting to write a coredump to disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	An i/o error occurred while attempting to dump core.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.dump.write.header.failed
<b>Severity</b>	ERROR
<b>Description</b>	Failed to write the core header to disk during dumpcore.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Error writing core header to block %llu on disk %s
<b>Parameters</b>	<b>header</b> (LONGINT): Block number of the core header block <b>disk</b> (STRING): Name of disk on which the write failed

<b>EMS Identifier</b>	coredump.findcore.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the core dump process detects an error while checking for an unsaved core in the dump device. The dump is not aborted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Ignored the error (%d: %s) when trying to find an unsaved core in the dump device.
<b>Parameters</b>	<b>errCode</b> (INT): Error code. <b>errString</b> (STRING): Error code represented as a string.

<b>EMS Identifier</b>	coredump.findcore.nospace
<b>Severity</b>	ERROR
<b>Description</b>	There are too many unsaved cores on the system to handle them all at one time. Some cores are being ignored.
<b>Corrective Action</b>	Run "savecore" multiple times to save all the cores. Alternatively, run "savecore -k" to delete all of them.
<b>Syslog Message</b>	Too many unsaved cores
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.findcore.partial
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during a core dump, when only a partial core is found. Although enough of this core is present for the core to be partially saved, there might be errors while doing so. These occur when data essential to the core creation process is lost with the missing disks.
<b>Corrective Action</b>	Run the "savecore" command to attempt to save the partial core, or run the "savecore -k" command to delete all unsaved cores.
<b>Syslog Message</b>	Partial core %s is missing %d of %d disks.
<b>Parameters</b>	<b>corefile</b> (STRING): Name of the kernel core file. <b>missing</b> (INT): Number of disks that are missing. <b>total</b> (INT): Total number of disks used in this dump.

<b>EMS Identifier</b>	coredump.findcore.partial.nosave
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a partial core is found with too much missing to be saved.
<b>Corrective Action</b>	Run the "savecore -k" command to delete all unsaved cores.
<b>Syslog Message</b>	Cannot save partial core %s, missing %d of %d disks.
<b>Parameters</b>	<b>corefile</b> (STRING): Name of the kernel core file. <b>missing</b> (INT): Number of disks that are missing. <b>total</b> (INT): Total number of disks used in this dump.

<b>EMS Identifier</b>	coredump.host.spare.none
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when no sparecore disk is found at boot/takeover time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	No sparecore disk was found for host %d.
<b>Parameters</b>	<b>host</b> (INT): Host for which no sparecore disk was found.

<b>EMS Identifier</b>	coredump.host.spare.save
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs to tell you which disk was identified as the sparecore disk at boot/takeover time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s was identified as the sparecore disk at boot/takeover time for host %d.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the sparecore disk. <b>host</b> (INT): Host that the sparecore disk belongs to.

<b>EMS Identifier</b>	coredump.host.spare.set
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a disk is identified as a sparecore disk and the host's sparecoreinfo is updated during assimilation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>disk</b> (STRING): Name of the sparecore disk <b>host</b> (INT): Host whose sparecoreinfo was updated.

<b>EMS Identifier</b>	coredump.job.notstarted
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system can not automatically save a core failed.
<b>Corrective Action</b>	Use the 'system node coredump save' command to save the core.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.job.notswitchedback
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot automatically save cores because a MetroCluster(tm) switchback was not performed.
<b>Corrective Action</b>	Return storage to the MetroCluster member by using the "metrocluster switchback" command, and then use the "coredump save-all" command to save any unsaved cores.
<b>Syslog Message</b>	System cannot automatically save cores because a MetroCluster switchback was not performed.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.mcc.nso.veto
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the coredump subsystem vetoes MetroCluster(tm) negotiated switchover because a coredump save is in progress.
<b>Corrective Action</b>	Use the "node coredump status" command to verify the completion of the active coredump save, or use the "-override-vetoes true" option when performing MetroCluster switchover. Using the "-override-vetoes true" option will abort the active coredump save.
<b>Syslog Message</b>	MetroCluster switchover vetoed because a coredump save was in progress.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.micro.completed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	Microcore generation has completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Microcore (%s) generation completed
<b>Parameters</b>	<b>file</b> (STRING): Pathname of microcore that was created

<b>EMS Identifier</b>	coredump.micro.failed
<b>Severity</b>	ERROR
<b>Description</b>	Microcore generation has failed.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	Generation of microcore failed
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.nvlog.replay.dump.dont
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when one or more unsuccessful attempts have been made to process information in the WAFL (R) NVlog after a previous failure. The number of allowed core dumps has been exceeded and this core dump will not be taken.
<b>Corrective Action</b>	The node will reboot. No further action is necessary.
<b>Syslog Message</b>	Core dump was not taken for the latest failure while processing the WAFL NVlog.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.save.aborted
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the savecore operation is aborted while saving a kernel core. The core is preserved for a future iteration of savecore.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s processing savecore aborted%s%s.
<b>Parameters</b>	<b>file</b> (STRING): Name of the kernel core file being created. <b>operation</b> (STRING): Type of operation that is being attempted when the abort occurs. <b>action</b> (STRING): Type of action being taken when the abort occurs.

<b>EMS Identifier</b>	coredump.save.attempts.count
<b>Severity</b>	NOTICE
<b>Description</b>	Previous attempts to save this core have failed, either due to reboots or panics. To prevent a panic loop, savecore is aborting this attempt.
<b>Corrective Action</b>	Use either "savecore -f" to save the core, or "savecore -k" to erase the core.
<b>Syslog Message</b>	Too many attempts to save this core
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.save.completed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when all the core segments belonging to a coredump have been saved.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Saved core %s for node %s in %llu seconds. Core size is %llu bytes.
<b>Parameters</b>	<b>file</b> (STRING): Primary core segment file that was created. <b>node</b> (STRING): Name of the node whose core was saved. <b>seconds</b> (LONGINT): Number of seconds spent on saving all the core segments. <b>size</b> (LONGINT): Size of primary core segment in bytes. <b>chksum</b> (STRING): Checksum of primary core segment file's data.

<b>EMS Identifier</b>	coredump.save.denied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the coredump subsystem cannot finish saving a core because an aggregate relocation or a takeover is in progress. The system cannot save a core while either an aggregate relocation or a takeover is in progress.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Coredump save disallowed because an aggregate relocation or a takeover in progress.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.save.disk.missing
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	A disk being used by coredump is now missing. This could be due to the ownership of the disk changing, the disk being removed, etc. Most savecore operations will proceed, but if further errors are encountered, or an expected core cannot be found, corrective action will be necessary.
<b>Corrective Action</b>	If this disk has failed, no action is possible. If this message was seen while running a "savecore -s", "savecore -i", or "savecore -l" operation, replace the missing disk. This might be done by undoing the ownership change, or reinserting the missing disk. If this message was seen while saving the core, and no further errors were seen, no action is necessary. If more errors were seen, replace the missing disk as above, and run "savecore" again.
<b>Syslog Message</b>	Disk %s being used by coredump is missing
<b>Parameters</b>	<b>disk</b> (STRING): Name of the missing disk

<b>EMS Identifier</b>	coredump.save.diskio.zone
<b>Severity</b>	ERROR
<b>Description</b>	A disk IO operation was attempted outside of the allowed regions on the disk. This behavior indicates a corrupt core, and it will be deleted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	IO to %d block(s) starting at %llu on disk %s is not allowed
<b>Parameters</b>	<b>count</b> (INT): Number of blocks in IO request <b>start</b> (LONGINT): Starting block number on the disk <b>disk</b> (STRING): Name of the disk causing trouble

<b>EMS Identifier</b>	coredump.save.error
<b>Severity</b>	NOTICE
<b>Description</b>	A correctable error was encountered while saving the core. Savecore will continue saving other cores.
<b>Corrective Action</b>	Once savecore finishes, address errors that may have appeared, and restart savecore.
<b>Syslog Message</b>	%s processing encountered error
<b>Parameters</b>	<b>file</b> (STRING): The core file that savecore was attempting to create

<b>EMS Identifier</b>	coredump.save.failed
<b>Severity</b>	NOTICE
<b>Description</b>	An unrecoverable error was encountered while saving the core. This core will be deleted, and savecore will continue saving other cores.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s processing failed
<b>Parameters</b>	<b>file</b> (STRING): The core file that savecore was attempting to create

<b>EMS Identifier</b>	coredump.save.internal.error
<b>Severity</b>	ERROR
<b>Description</b>	An internal coredump error was encountered. This indicates the dumped core is corrupt, and will be deleted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Internal coredump error
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.save.nospace
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when there is not enough space in the root volume to save the core. Savecore is making a worst-case estimate when determining how much space might be needed to save the core, and does not start unless that much space is available.
<b>Corrective Action</b>	Try performing the following steps to make sufficient room in root volume: Delete old or unneeded core files by using the "coredump delete" command. Delete old or unneeded core file segments by using the "coredump segment delete" command. Delete any Snapshot(R) copies that include the deleted files. Adjust minimum free space on the root file system by using "coredump config modify" command. Once there is sufficient room, take the following steps to save the cores: To save all core files using "coredump save-all" command, run the "coredump status -instance" command and ensure that "Space Available On Internal Filesystem" is greater than "Space Needed to Save All Unsaved Cores" plus "Minimum Free Bytes on Root Filesystem". To save a specific core file, run the "coredump save" command, when available space of "Space Needed To Save Core" (from the "coredump show" command) plus "Minimum Free Bytes on Root Filesystem" is sufficient.
<b>Syslog Message</b>	Available space (%llu %dKB blocks) is not enough to save the core image (requires up to %llu blocks) and maintain the minimum free space of %llu blocks.
<b>Parameters</b>	<b>avail</b> (LONGINT): Number of blocks available for saving the core image. <b>blocksize</b> (INT): Block size in kilobytes. <b>needed</b> (LONGINT): Number of blocks needed for saving the core image. <b>minfree</b> (LONGINT): Number of blocks reserved for normal system operation.

<b>EMS Identifier</b>	coredump.save.partial.not.ok
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	Can not save partial core that was dumped using disks with different sizes. Savecore can not determine the size of the missing disks. Attempting a save in this condition will most likely end up in an error.
<b>Corrective Action</b>	Run "savecore -k" to delete all unsaved cores.
<b>Syslog Message</b>	Cannot save partial core (%s) that used disks with different sizes, missing %llu of %llu disks
<b>Parameters</b>	<b>panic</b> (STRING): Panic string of the partial core. <b>missing</b> (LONGINT): The number of disks that are missing <b>total</b> (LONGINT): Total number of disks used in this dump

<b>EMS Identifier</b>	coredump.save.read.header.failed
<b>Severity</b>	NOTICE
<b>Description</b>	An error was encountered while trying to read the core header block from disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Could not read core header block (%llu) from disk %s
<b>Parameters</b>	<b>block</b> (LONGINT): Block number being searched for the core header <b>disk</b> (STRING): Name of the disk that could not be read

<b>EMS Identifier</b>	coredump.save.started
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the savecore operation starts saving a kernel core.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Saving %llu MB to %s via %s ("%s") for node %s.
<b>Parameters</b>	<b>size</b> (LONGINT): Number of MB being saved. <b>file</b> (STRING): Name of the kernel core file to be created. <b>dumpcoretype</b> (STRING): Kernel coredump type. <b>panic</b> (STRING): Panic string of the kernel core being saved. <b>node</b> (STRING): Name of the node whose core is being saved.

<b>EMS Identifier</b>	coredump.segment.auto.fail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system encounters an error while trying to send a core segment request.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to start automatic segmenting for core file, %s , for host %d.
<b>Parameters</b>	<b>file</b> (STRING): Name of the core file that would have been segmented. <b>host</b> (INT): Host that owns the core file.

<b>EMS Identifier</b>	coredump.segment.auto.pfail
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system cannot start the segmenting of a core file because the node is no longer in takeover mode.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cannot start segmenting a core file, %s. Node is no longer in takeover mode.
<b>Parameters</b>	<b>file</b> (STRING): Name of core file that would have been segmented.

<b>EMS Identifier</b>	coredump.segment.completed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the segmenting of a full core file has been completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Saved core segment %s for node %s. Core size is %llu bytes and core data checksum is %s.
<b>Parameters</b>	<b>file</b> (STRING): Name of the core file segmented. <b>node</b> (STRING): Name of the node whose core segment was saved. <b>size</b> (LONGINT): Size of core segment in bytes. <b>chksum</b> (STRING): Checksum of the core segment file's data.

<b>EMS Identifier</b>	coredump.shutdown.trace
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a core is about to be generated. Durations of various activities at that time are reported.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	coredump shutdown times: kmod dumper start %llu, panic_info set %llu, sf_dumpcore sent %llu, sparecore id sent %llu, fmot_outage info sent %llu, disk_dump_start done %llu, coredump begin %llu (all in msec).
<b>Parameters</b>	<b>kmodDumperStartTime</b> (LONGINT): Duration from panic start to dump processing start, in milliseconds. <b>panicInfoTime</b> (LONGINT): Duration until panic information is collected, in milliseconds. <b>sfDumpcoreSentTime</b> (LONGINT): Duration until SF_DUMPCORE state is sent over the interconnect, in milliseconds. <b>sparecoreSentTime</b> (LONGINT): Duration for sending the sparecore ID over the interconnect, in milliseconds. <b>fmotOutageSentTime</b> (LONGINT): Duration for sending FMOT (Failover Monitor Outage Tracker) Outage information over the interconnect, in milliseconds. <b>diskDumpStartTime</b> (LONGINT): Duration until disk dump start stage, in milliseconds. <b>coredumpBeginTime</b> (LONGINT): Duration until the start of the actual core dump, in milliseconds.

<b>EMS Identifier</b>	coredump.spare.abort
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when coredump attempts to terminate any sparecore dump that might be in progress on the partner. This process can take up to 60 seconds. During this time, other coredump operations are not serviced.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Pausing to abort partner sparecore dump because %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for aborting the partner sparecore dump.

<b>EMS Identifier</b>	coredump.spare.abort.failed
<b>Severity</b>	ERROR
<b>Description</b>	Unable to reserve the sparecore disk. This disk cannot be used by RAID until it is successfully reserved.
<b>Corrective Action</b>	If the other partner can be booted, do a giveback. Otherwise, periodic attempts will automatically be made to reserve the disk in question.
<b>Syslog Message</b>	Sparecore disk could not be reserved
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.spare.abort.release
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system encounters an error while trying to release the disk reservation from a disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Could not release disk reservation from disk %s (0x%x)
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk whose disk reservation could not be released. <b>diskid</b> (INHEX): ID of the disk whose disk reservation could not be released.

<b>EMS Identifier</b>	coredump.spare.dump
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs to tell you which disk was used as the sparecore disk at dumpcore time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s was used as the sparecore disk at dumpcore time.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the sparecore disk.

<b>EMS Identifier</b>	coredump.spare.invalid.size
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when coredump subsystem encounters a spare disk with an invalid size. If an unsaved core file exists on this disk, it will be deleted because it can no longer be saved.
<b>Corrective Action</b>	Run the "storage disk show -disk disk_name" command to make sure that the disk is still connected as a spare disk. If so, replace the disk. If not, the disk is part of an aggregate or is in the process of being assigned to one, and no action is required.
<b>Syslog Message</b>	sparecore disk: %s has invalid size: %llu, skipping it from all coredump subsystem operations
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>size</b> (LONGINT): Size available on the disk, reported by RAID.

<b>EMS Identifier</b>	coredump.sparecore.killed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	Sparecore was aborted by partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Sparecore was aborted by partner.
<b>Parameters</b>	

<b>EMS Identifier</b>	coredump.sparecoreinit.times
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when sparecore initialization is completed. Durations of constituent activities within sparecore initialization are reported.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	sparecore_init: update firmware %llu msec, write partial headers %llu msec, clear abort area %llu msec.
<b>Parameters</b>	<b>fwUpdateTime</b> (LONGINT): Time taken to update firmware, in milliseconds. <b>partialHeaderTime</b> (LONGINT): Time taken to write partial headers, in milliseconds. <b>clearAbortAreaTime</b> (LONGINT): Time taken to clear sparecore abort area, in milliseconds.

## "cpeer" Event Group

<b>EMS Identifier</b>	cpeer.access.restricted
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an access request from a peer cluster is rejected, either because the request is made to a restricted Vserver or to a restricted table.
<b>Corrective Action</b>	Check the Vserver peering relationships with the peer cluster. If additional Vserver access is required, use the "vserver peer create" command to initiate the peering relationship with the peer cluster.
<b>Syslog Message</b>	An access request from peer cluster %s (IP: %s) was denied. Reason: %s.
<b>Parameters</b>	<b>peer</b> (STRING): Name of the peer cluster making the request to the local cluster. <b>address</b> (STRING): Source IP address of the incoming request. <b>reason</b> (STRING): Reason for the access restriction.

<b>EMS Identifier</b>	cpeer.addr.bad.dns
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a stable address for the peer cluster cannot be resolved because of a bad name-server. This will make the peer cluster unreachable and cross-cluster operations will fail. Stable addresses are normally provided by the administrator during cluster peer creation.
<b>Corrective Action</b>	Delete the incorrect DNS server entry for the local cluster using the 'vserver services dns delete' command. Create a new DNS entry with the correct name-server using the 'vserver services dns create' command. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Failed to resolve address %s of peer cluster %s, Reason: bad name-server.
<b>Parameters</b>	<b>addr</b> (STRING): Peer cluster stable IP addresses that cannot be contacted. <b>peer</b> (STRING): Name of the peer cluster whose stable address cannot be contacted.

<b>EMS Identifier</b>	cpeer.addr.bad.host
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a stable IP address for the peer cluster is no longer valid. This will make the peer cluster unreachable and cross-cluster operations will fail. Stable addresses are normally provided by the administrator during cluster peer creation.
<b>Corrective Action</b>	Correct the stable IP address using the 'cluster peer modify' command. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Failed to resolve address %s of peer cluster %s, Reason: invalid address.
<b>Parameters</b>	<b>addr</b> (STRING): Peer cluster stable addresses that is not valid. <b>peer</b> (STRING): Name of the peer cluster whose stable address is not valid.

<b>EMS Identifier</b>	cpeer.addr.stable.down
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a stable address cannot be contacted. Stable addresses are provided by the administrator during peer creation.
<b>Corrective Action</b>	Verify network connectivity between the local cluster and the peer cluster. Check the logs, trace buffers, and UI output for more information about the nature of the failure.
<b>Syslog Message</b>	Stable address %s of cluster %, in IPspace %, cannot be contacted.
<b>Parameters</b>	<b>addr</b> (STRING): Stable address that cannot be contacted. <b>peer</b> (STRING): Name of the peer cluster whose address cannot be contacted. <b>ipspace</b> (STRING): IPspace in which the contact attempt was made.

<b>EMS Identifier</b>	cpeer.addr.warn.host
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a stable IP address for the peer cluster is no longer valid, making the peer cluster unreachable and causing cross-cluster operations to fail.
<b>Corrective Action</b>	Correct the stable IP address using the "cluster peer modify" command. Valid addresses for the remote ("peer") cluster are given under "Active IP Addresses" when you use the "cluster peer show -instance" command. Verify connectivity by using the "cluster peer ping" command. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Address %s is not any of the addresses that peer cluster %s considers valid for the cluster peer relationship; Details: %s
<b>Parameters</b>	<b>addr</b> (STRING): Peer cluster stable address that is not valid. <b>peer</b> (STRING): Name of the peer cluster whose stable address is not valid. <b>complaint</b> (STRING): Details, if any, of the issue with the stable address.

<b>EMS Identifier</b>	cpeer.authentication.create
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when authentication is successfully established with a peer cluster.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The peering relationship with cluster %s is now authenticated.
<b>Parameters</b>	<b>peer</b> (STRING): Peer cluster with which this cluster is now mutually authenticated.

<b>EMS Identifier</b>	cpeer.authentication.disable
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when authentication is disabled for a cluster peer relationship.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The peering relationship with cluster %s is now unauthenticated.
<b>Parameters</b>	<b>peer</b> (STRING): Peer cluster that is now peered to this cluster without authentication.

<b>EMS Identifier</b>	cpeer.authentication.revoke
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when authentication is revoked for a cluster peer relationship.
<b>Corrective Action</b>	Modify the relationship to match on both of the peered clusters. To have them agree on an unauthenticated relationship, use the 'cluster peer modify -authentication no-auth' command. To have them agree on an authenticated relationship, use the same passphrase with the 'cluster peer modify -authentication use-auth' command.
<b>Syslog Message</b>	The peering relationship with cluster %s is now revoked and is no longer functional.
<b>Parameters</b>	<b>peer</b> (STRING): Peer cluster for which the peering relationship has had its peering authentication revoked.

<b>EMS Identifier</b>	cpeer.authentication.viol
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a cross-cluster access should be authenticated, but is not. The access has been denied successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Access as peer cluster %s was claimed from network address %s, but has not been granted because %s.
<b>Parameters</b>	<b>peer</b> (STRING): Peer cluster on behalf of which this access was made. <b>remoteAddress</b> (STRING): Remote network address of the violating connection. <b>reason</b> (STRING): Justification for the violation claim.

<b>EMS Identifier</b>	cpeer.create.reciprocal.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a peer cluster reciprocal join fails.
<b>Corrective Action</b>	Verify network connectivity between the local cluster and the peer cluster. Check the logs, trace buffers, and UI output for more information about the nature of the failure.
<b>Syslog Message</b>	Cluster %s attempted to create a reciprocal peer relationship with this cluster but failed.
<b>Parameters</b>	<b>peer</b> (STRING): Peer cluster which executed the reciprocal join.

<b>EMS Identifier</b>	cpeer.create.reciprocal.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a peer cluster reciprocal join succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cluster %s is now peered with this cluster.
<b>Parameters</b>	<b>peer</b> (STRING): Peer cluster that executed the reciprocal join.

<b>EMS Identifier</b>	cpeer.dns.family.mismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt is made to resolve and insert a stable address that is a Domain Name System (DNS) style host name. If it resolves to an address family that does not match the family style specified for the cluster peer relationship, it is indicative of incorrect addresses being provided by the administrator or DNS configuration issues. Stable addresses are typically provided by the administrator during cluster peer creation and can be modified by modifying the peer relationship.
<b>Corrective Action</b>	Correct the stable IP address by using the 'cluster peer modify' command. Ensure that LIFs of the appropriate address family exist on both the local cluster and the remote peer. Confirm that the DNS services are appropriately specified by using the 'vserver services dns show' command. Also, the DNS server in question should be configured correctly to be able to resolve the DNS style host name to an IP address belonging to the appropriate address family. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Host name %s of peer cluster %s resolved to %s, which does not match the peer relationship's selected address type.
<b>Parameters</b>	<b>addr</b> (STRING): Peer cluster host name that is being inserted. <b>peer</b> (STRING): Name of the peer cluster for which an address family mismatch was seen. <b>resolved_address</b> (STRING): Address resolved to, which belongs to the incorrect address family.

<b>EMS Identifier</b>	cpeer.duplicate.remote.addr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an IP address from a peer cluster is also in use by the local cluster in the same IPspace. This may prevent the cluster peering relationship from reaching an available state.
<b>Corrective Action</b>	Replace the duplicate address on the local cluster with a different address.
<b>Syslog Message</b>	Cannot use address %s from peer cluster %s because it is already in use on the local cluster.";
<b>Parameters</b>	<b>address</b> (STRING): Duplicate address from the peer cluster. <b>peer</b> (STRING): Name of the peer cluster.

<b>EMS Identifier</b>	cpeer.ip.family.mismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt is made to insert an IP address whose address family does not match the family style specified for the cluster peer relationship. This is indicative of incorrect addresses being provided by the administrator. Stable addresses are typically provided by the administrator during cluster peer creation and can be modified by modifying the peer relationship.
<b>Corrective Action</b>	Correct the stable IP address by using the 'cluster peer modify' command. Ensure that the LIFs of the appropriate address family exist on both the local cluster and the remote peer. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Failed to insert address %s of peer cluster %s, reason: %s
<b>Parameters</b>	<b>addr</b> (STRING): Peer cluster address that is being inserted. <b>peer</b> (STRING): Name of the peer cluster for which an address family mismatch was seen. <b>reason</b> (STRING): Reason that the EMS message was sent.

<b>EMS Identifier</b>	cpeer.localid.bad
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an issue reading the local cluster ID. This indicates a serious problem with the cluster which may affect processes outside of cluster peering.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	Unexpected local cluster ID: %s.
<b>Parameters</b>	<b>id</b> (STRING): The string representation of the bad cluster ID.

<b>EMS Identifier</b>	cpeer.long.remote.update
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a cross-cluster update takes longer than 15 minutes. This indicates a communication failure between the clusters.
<b>Corrective Action</b>	Ensure cross-cluster network connectivity by performing network diagnostics using the "cluster peer ping" command and either the "network ping" or "network ping6" command. Correct IP address issues by using the "cluster peer modify" command. Ensure that LIFs of the appropriate address family exist on both the local cluster and the remote peer. Confirm that the DNS services are appropriately configured by using the "vserver services dns show" command. You can use "cluster peer show" to list the state of all peer clusters. This is a point-in-time command and the health of remote clusters might not have been updated yet. If you need further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Cross-cluster update job took longer than 15 minutes. Potential network connectivity issues.
<b>Parameters</b>	

<b>EMS Identifier</b>	cpeer.modify.address.family
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the address family for a peering relationship is modified. The same configuration change should be made at the peered cluster in a timely manner. Peering services are maintained while intercluster LIFs of both address families are configured on each cluster.
<b>Corrective Action</b>	This is a notification of a configuration change. No corrective action applies.
<b>Syslog Message</b>	Address family change for peer cluster %s to address family %s.
<b>Parameters</b>	<b>peer</b> (STRING): Name of the peer cluster affected by the address family change. <b>family</b> (STRING): The new address family of the peering relationship.

<b>EMS Identifier</b>	cpeer.passphrase.expired
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the cluster peer offer for anonymous cluster with system-generated passphrase expired and deleted.
<b>Corrective Action</b>	If required, use the "cluster peer create" command with "generate-passphrase" option to generate the additional cluster peer offers.
<b>Syslog Message</b>	The cluster peer offer with system-generated passphrase (%s) expired and deleted.
<b>Parameters</b>	<b>passphrase_details</b> (STRING): Cluster peer passphrase details.

<b>EMS Identifier</b>	cpeer.ping.family.mismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt is made to check the cluster peering relationship and no intercluster LIFs of the same address family and the correct IPspace are found on this node. Stable addresses are typically provided by the administrator during cluster peer creation and can be modified by modifying the peer relationship. The IPspace for a cluster peer relationship may be supplied when creating or modifying the relationship.
<b>Corrective Action</b>	Correct the stable IP address by using the "cluster peer modify" command. Ensure that LIFs of the appropriate address family exist on both the local cluster and the remote peer. Ensure that LIFs of the local cluster exist in the given IPspace.
<b>Syslog Message</b>	Failed to find LIFs of type %s on node %s for destination address %s in IPspace %s belonging to destination cluster %s.
<b>Parameters</b>	<b>peering_family</b> (STRING): IP address family. <b>node</b> (STRING): Originating node. <b>dest_address</b> (STRING): Destination IP address. <b>ipspace</b> (STRING): IPspace for the relationship. <b>dest_cluster</b> (STRING): Destination cluster.

<b>EMS Identifier</b>	cpeer.ping.no.lifs
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt is made to check the cluster peering relationship and no intercluster LIFs in the correct IPspace are found on this node.
<b>Corrective Action</b>	Create intercluster LIFs with the same address family and IPspace as the peering relationship. If the peering relationship is obsolete, remove it by using the "cluster peer delete" command.
<b>Syslog Message</b>	Failed to find intercluster LIFs in IPspace %s on node %s.
<b>Parameters</b>	<b>ipspace</b> (STRING): IPspace for the relationship. <b>node</b> (STRING): Originating node.

<b>EMS Identifier</b>	cpeer.pm.update.warn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the peer manager job experiences a transient failure. The peer manager job periodically contacts one peer cluster and performs updates of cluster-wide state necessary to support cross-cluster enabled features.
<b>Corrective Action</b>	Verify network connectivity between the local cluster and its peer clusters. It might be necessary to manually correct the peer clusters' configurations using the 'cluster peer modify' command if peer addresses have changed recently. Verify that each cluster is up.
<b>Syslog Message</b>	Periodic update of peer information from %s failed. The following operations are incomplete: %s
<b>Parameters</b>	<b>peer</b> (STRING): Peer whose updates failed. <b>failures</b> (STRING): Failed peer updates.

<b>EMS Identifier</b>	cpeer.receiver.noindex
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an incoming cluster peer request using the system-generated passphrase. However, the cluster peer request failed because there is no matching outstanding cluster peer offers for the request in the system.
<b>Corrective Action</b>	Verify the peer request with peer cluster admin. If required, use the "cluster peer create" command with "generate-passphrase" option to generate the additional cluster peer offers.
<b>Syslog Message</b>	The cluster peer request from the remote cluster (%s) using the system-generated passphrase (Index: %d) has failed because cluster peer offer with system-generated passphrase is not available for this index.
<b>Parameters</b>	<b>remote_cluster_details</b> (STRING): Remote cluster name. <b>ppindex</b> (INT): Cluster peer passphrase index.

<b>EMS Identifier</b>	cpeer.recv.pp.mismatch
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when there is an incoming cluster peer request using the system-generated passphrase. However, the cluster peer request authentication failed due to passphrase mismatch and so the cluster peer offer is deleted.
<b>Corrective Action</b>	Verify the peer request with peer cluster admin. If required, use the "cluster peer create" command with "generate-passphrase" option to generate the additional cluster peer offers.
<b>Syslog Message</b>	The cluster peer offer with system-generated passphrase was attempted for cluster peering by the remote cluster (%s:%s) with address %s but cluster peer request failed due to passphrase mismatch. So, the offer is deleted.
<b>Parameters</b>	<b>remotename</b> (STRING): Remote cluster name. <b>remoteuuid</b> (STRING): Remote cluster UUID. <b>address</b> (STRING): Remote cluster IP address.

<b>EMS Identifier</b>	cpeer.unavailable
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a peer cluster becomes unavailable.
<b>Corrective Action</b>	Verify network connectivity between the local cluster and the peer cluster. It might be necessary to manually correct the peer configuration using the 'cluster peer modify' command if peer addresses have changed recently. Verify that the peer cluster is up.
<b>Syslog Message</b>	Peer cluster %s is no longer available.
<b>Parameters</b>	<b>peer</b> (STRING): Peer cluster that became unavailable.

<b>EMS Identifier</b>	cpeer.xcm.addr.disc.warn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when address discovery fails for a peer cluster.
<b>Corrective Action</b>	Verify network connectivity between the local cluster and the peer cluster. It might be necessary to manually correct the peer configuration using the 'cluster peer modify' command if peer addresses have changed recently. Verify that the peer cluster is up.
<b>Syslog Message</b>	Address discovery failed for peer cluster %s. Reason: %s.
<b>Parameters</b>	<b>peer</b> (STRING): Peer cluster whose address discovery failed. <b>reason</b> (STRING): Reason for address discovery failure.

<b>EMS Identifier</b>	cpeer.xcm.update.warn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the cross-cluster manager job experiences a transient failure. The cross-cluster manager job periodically contacts each peer cluster, requests configuration information, and maintains the node-local network configuration for the remote peer cluster.
<b>Corrective Action</b>	Verify network connectivity between the local cluster and its peer clusters. It might be necessary to manually correct the peer clusters' configurations using the 'cluster peer modify' command if peer addresses have changed recently. Verify that each cluster is up.
<b>Syslog Message</b>	Periodic update of peer network information failed. The following operations are incomplete: %s.
<b>Parameters</b>	<b>failures</b> (STRING): Failed peer updates.

## "cr" Event Group

<b>EMS Identifier</b>	CR.Data.File.Inaccessible
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the namespace scanner skips an inode for which it cannot access the data file. This might be due to the data volume being offline.
<b>Corrective Action</b>	Bring the data volume back online using the "volume online" command. If the problem persists, retry the scan operation.
<b>Syslog Message</b>	The redirector file [%s] on namespace volume [%s] will be skipped by "Volume Check" because the corresponding data file on data volume [%s] in Vserver [%s] is not accessible.
<b>Parameters</b>	<b>redirPath</b> (STRING): Path of the redirector file that will be skipped. <b>nsVol</b> (STRING): Name of the constituent namespace volume that hosts the redirector file. <b>dataVol</b> (STRING): Name of the constituent data volume that hosts the data file. <b>vserver</b> (STRING): Vserver hosting the constituent volumes.

<b>EMS Identifier</b>	CR.Del.CrptStreamData.Fail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to delete corrupt stream data fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Deletion failed for corrupt stream data [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): Stream path. <b>volume</b> (STRING): Name of the constituent volume where the stream resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Del.CrptStreamRedir.Fail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to delete corrupt stream redirector failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Deletion failed for corrupt stream redirector [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): Stream path. <b>volume</b> (STRING): Name of the constituent volume where the stream resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Del.DangStreamData.Fail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to delete dangling stream data fails. This stream was created when there was a failure in cleaning up stream data on the data constituent, which left dangling data that is unnecessarily consuming resources.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Deletion failed for dangling stream data [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): Stream path. <b>volume</b> (STRING): Name of the constituent volume where the stream data resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Del.DangStreamRedir.Fail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to delete dangling stream redirector failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Deletion failed for dangling stream redirector [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): Stream path. <b>volume</b> (STRING): Name of the constituent volume where the redirector resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Fix.Corrupt.Redir.Failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when corrective action for corrupt redirector file failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Corrective action failed for corrupt redirector of data file [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): File path. <b>volume</b> (STRING): Name of the constituent volume where the data file resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Fix.Crpt.Data.Dir.Failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the corrective action for a corrupt data directory fails. These entries were created when they were moved to the [lost+found] folder by wafliron, on the data constituents.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Corrective action failed for corrupt data directory [%s] on volume [%s].
<b>Parameters</b>	<b>path</b> (STRING): Directory path. <b>volume</b> (STRING): Name of the constituent volume where the directory resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Fix.Crpt.Data.File.Failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the corrective action for a corrupt data file fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Corrective action failed for corrupt data file [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): File path. <b>volume</b> (STRING): Name of the constituent volume where the file resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Fix.CrptStreamRedir.Fail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the fix for corrupt stream redirector fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Corrective action failed for corrupt stream redirector of stream data [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): Stream path. <b>volume</b> (STRING): Name of the constituent volume where the stream redirector resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Fix.Dang.Data.File.Failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the corrective action for a dangling data file fails. This file was created when there was a failure in cleaning up a file on the data constituent, which left a dangling file that is unnecessarily consuming resources.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Corrective action failed for dangling data file [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): File path. <b>volume</b> (STRING): Name of the constituent volume where the file resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Fix.Nlinks.Failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the corrective action for an Nlinks (number of hardlinks on the file) mismatch fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Corrective action failed for Nlinks mismatch on file [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): File path. <b>volume</b> (STRING): Name of the constituent volume where the file resides. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.RDB.Counters.Not.Updated
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the RDB (replicated database) cannot be updated with the inode counters for a particular scan.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The inode counters [percentage scan complete: %d], [estimated time remaining: %s], [number of issues detected: %d] and [number of issues fixed: %d] could not be updated in the RDB due to [error: %s] for [volume: %s] in [Vserver: %s].
<b>Parameters</b>	<b>percentComplete</b> (INT): Percentage of the inodes scanned. <b>estimatedTime</b> (STRING): Estimated time remaining for the scan to finish. <b>issuesDetected</b> (INT): Number of issues detected by the scan so far. <b>issuesFixed</b> (INT): Number of issues fixed by the scan so far. <b>reason</b> (STRING): Reason for the failed update. <b>volume</b> (STRING): Name of the constituent volume for which the RDB could not be updated. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.RDB.State.Not.Updated
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the RDB (replicated database) cannot be updated with the final state of the scan, that is, success/failure.
<b>Corrective Action</b>	Run the 'volume check stop' command on the respective volume.
<b>Syslog Message</b>	The final state [%s] of the 'volume check' scan could not be updated in the RDB due to [error: %s] for volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>state</b> (STRING): Final state of the scan that has to be updated. <b>reason</b> (STRING): Reason for the failed update. <b>volume</b> (STRING): Name of the constituent volume for which the RDB could not be updated. <b>vserver</b> (STRING): Vserver hosting the volume.

<b>EMS Identifier</b>	CR.Redir.File.Inaccessible
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the data scanner skips an inode for which it cannot access the redirector file. This might be due to the namespace volume being offline.
<b>Corrective Action</b>	Bring the namespace volume back online using the "volume online" command. If the problem persists, retry the scan operation.
<b>Syslog Message</b>	The data file [%s] on data volume [%s] will be skipped by "Volume Check" because the corresponding redirector file on namespace volume [%s] on Vserver [%s] is not accessible.
<b>Parameters</b>	<b>dataFilePath</b> (STRING): Path of the data file that will get skipped. <b>dataVol</b> (STRING): Name of the constituent data volume that hosts the data file. <b>nsVol</b> (STRING): Name of the constituent namespace volume that hosts the redirector file. <b>vserver</b> (STRING): Vserver hosting the constituent volumes.

<b>EMS Identifier</b>	CR.Snapshot.Not.Deleted
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a temporary Snapshot(tm) copy created by the 'volume check' command could not be deleted.
<b>Corrective Action</b>	Delete the Snapshot copy by using the following command from "diag" mode: volume snapshot delete -vserver -volume -snapshot -ignore-owners
<b>Syslog Message</b>	The temporary Snapshot copy [%s] created by the 'volume check' command for volume [%s] in Vserver [%s] could not be deleted [error: %s].
<b>Parameters</b>	<b>snapshot</b> (STRING): Name of the Snapshot copy. <b>volume</b> (STRING): Name of the constituent volume for which the Snapshot copy could not be deleted. <b>vserver</b> (STRING): Vserver hosting the volume. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	CR.Sync.ACL.Fail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to synchronize the ACL from data to redirector fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ACL synchronizing failed for file [%s] on volume [%s] in Vserver [%s].
<b>Parameters</b>	<b>path</b> (STRING): Stream path. <b>volume</b> (STRING): Name of the constituent volume where the file resides. <b>vserver</b> (STRING): Vserver hosting the volume.

## "crypto" Event Group

<b>EMS Identifier</b>	crypto.debug
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	The Crypto module debug event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s.
<b>Parameters</b>	<b>debug_string</b> (STRING): Description of the event being logged.

<b>EMS Identifier</b>	crypto.export.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the export of a cryptographic key fails.
<b>Corrective Action</b>	This message might be seen when attempting to create an encrypted volume. Contact NetApp technical support if further attempts to create the encrypted volume fail.
<b>Syslog Message</b>	ERROR: Export of key with key ID %s failed. Additional information: %s.
<b>Parameters</b>	<b>key_id</b> (STRING): Key ID for the cryptographic key. <b>msg</b> (STRING): Associated failure message.

<b>EMS Identifier</b>	crypto.import.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the import of a cryptographic key fails.
<b>Corrective Action</b>	This message might be seen when attempting to bring an encrypted volume online. Contact NetApp technical support if manual attempts to bring the encrypted volume online fail.
<b>Syslog Message</b>	ERROR: Import of key with key ID %s failed. Additional information: %s.
<b>Parameters</b>	<b>key_id</b> (STRING): Key ID for the cryptographic key. <b>msg</b> (STRING): Associated failure message.

<b>EMS Identifier</b>	crypto.key.deleted
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a cryptographic key is deleted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Deleted key with key ID %s.
<b>Parameters</b>	<b>key_id</b> (STRING): Key ID for the cryptographic key.

<b>EMS Identifier</b>	crypto.key.stored
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a cryptographic key is stored.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Stored key with key ID %s.
<b>Parameters</b>	<b>key_id</b> (STRING): Key ID for the cryptographic key.

<b>EMS Identifier</b>	crypto.okmrecovery.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the boot menu "recover_onboard_keymanager" command fails to recover the onboard key hierarchy.
<b>Corrective Action</b>	This message is usually seen when an incorrect cluster passphrase was entered during a previous boot menu "recover_onboard_keymanager" command. To recover the key hierarchy, enter "recover_onboard_keymanager" at the boot menu prompt. You will need to have the cluster passphrase and a copy of the output from the "security key-manager backup show" command. If the boot menu recovery process fails again, contact NetApp technical support.
<b>Syslog Message</b>	ERROR: Import of the onboard key hierarchy failed: %s. Additional information: %s.
<b>Parameters</b>	<b>failure_msg</b> (STRING): Message describing what operation failed. <b>additional_msg</b> (STRING): Additional information regarding the failure.

## "csm" Event Group

<b>EMS Identifier</b>	csm.badAuthAccess
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a blade fails an attempt to authenticate as a given peer cluster, and Cluster Session Manager (CSM), which establishes and manages SpinNP sessions between blades in the cluster, denies access of the unauthenticated blade. This could indicate that an interloper is attempting to gain access to the cluster.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Access as peer cluster %s was claimed from network address %s, but has not been granted because %s.
<b>Parameters</b>	<b>clusterUuid</b> (STRING): UUID of the cluster to which the blade claimed to belong. <b>addrstr</b> (STRING): Remote network address of the blade. <b>msg</b> (STRING): Reason that access could not be authenticated.

<b>EMS Identifier</b>	csm.mismatchRemoteDevice
<b>Severity</b>	ERROR
<b>Description</b>	The message occurs when the Cluster Session Manager (CSM) establishes a connection between nodes over the cluster network interface, but the node's remote device IDs do not match.
<b>Corrective Action</b>	Ensure that the Cisco Discover Protocol (CDP) is running on the nodes and switches. In addition, ensure that the cluster ports are up and the cluster LIFs are configured and hosted according to the suggested cluster configuration.
<b>Syslog Message</b>	CSM connection between source LIF %d and destination address %s might not be optimal for session %s. The source is currently connected to %s remote device and the destination is currently connected to %s remote device.
<b>Parameters</b>	<b>sourceLIF</b> (INT): Source logical interface. <b>destAddr</b> (STRING): Destination IP address. <b>uniquifier</b> (STRING): Unique qualifier for this session. <b>sourceRemoteDevice</b> (STRING): Remote device associated with the source logical interface. <b>destRemoteDevice</b> (STRING): Remote device associated with the destination IP address.

## "ctl" Event Group

<b>EMS Identifier</b>	ctl.ctlbe.IOInternalError
<b>Severity</b>	ERROR
<b>Description</b>	IO failure due to internal error
<b>Corrective Action</b>	The command failure associated with the device specified in this event is caused by some internal error.
<b>Syslog Message</b>	Device Serial Number %s - Internal error reason: %s - SCSI error : %s
<b>Parameters</b>	<b>devSerial</b> (STRING): Device Serial Number <b>reason</b> (STRING): Internal error <b>scsiError</b> (STRING): SCSI error code

<b>EMS Identifier</b>	ctl.ctlbe.lunCreationFailed
<b>Severity</b>	ERROR
<b>Description</b>	LUN creation failed in the CAM target layer.
<b>Corrective Action</b>	The creation of a CAM target end point for the LUN failed. This will cause the disk or partition to not be exported to the DR cluster, and therefore cannot be used for storage mirroring.
<b>Syslog Message</b>	LUN %d - endpoint creation failed, reason: %s
<b>Parameters</b>	<b>lunId</b> (INT): The LUN ID <b>errorString</b> (STRING): Description of the error

<b>EMS Identifier</b>	ctl.ctlbe.lunError
<b>Severity</b>	ERROR
<b>Description</b>	The LUN has been deleted or is not configured properly
<b>Corrective Action</b>	The command failure associated with the device specified in this event is caused by the device being not configured or in error state. The device may be in the process of being deleted or the path to this device may not be accessible. Check the state of the device.
<b>Syslog Message</b>	Device Serial Number %s - Device is not configured or in error state - SCSI error : %s - LUN flags : 0x%x
<b>Parameters</b>	<b>devSerial</b> (STRING): Device Serial Number <b>scsiError</b> (STRING): SCSI error code <b>lunFlags</b> (INT): Internal CTL Backend LUN flags

<b>EMS Identifier</b>	ctl.ctlbe.lunNotConfigured
<b>Severity</b>	ERROR
<b>Description</b>	The LUN is not configured
<b>Corrective Action</b>	The command failure associated with the device specified in this event is caused by the device not being configured. Check the state of the device.
<b>Syslog Message</b>	Device Serial Number %s - Device is not configured - SCSI error : %s
<b>Parameters</b>	<b>devSerial</b> (STRING): Device Serial Number <b>scsiError</b> (STRING): SCSI error code

<b>EMS Identifier</b>	ctl.session.stateChanged
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when iSCSI CAM target layer session status is changed.
<b>Corrective Action</b>	If the identified iSCSI CAM target layer session is experiencing unexpected events (disconnecting, reconnecting, or connected), examine the link for excessive errors or latency.
<b>Syslog Message</b>	iSCSI CAM target layer's session state is changed to %s for the initiator %s (address: %s). %s
<b>Parameters</b>	<b>ctl_session_state</b> (STRING): New iSCSI CAM target layer session state. <b>ctl_initiator</b> (STRING): iSCSI CAM target layer initiator's name. <b>ctl_initiator_address</b> (STRING): iSCSI CAM target layer initiator's address. <b>ctl_session_state_change_reason</b> (STRING): Reason for the iSCSI CAM target layer session state change. <b>ctl_timeout_value</b> (INT): iSCSI CAM target layer timeout value.

## "ctran" Event Group

<b>EMS Identifier</b>	ctran.disabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Kernel Cluster Services (KCS) Cluster Transaction Manager (CTRAN) subsystem is disabled.
<b>Corrective Action</b>	This happens only when the local node went out of CLAM quorum. Take the corrective action specified in EMS_clam_node_ooq event.
<b>Syslog Message</b>	CTRAN subsystem is now disabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	ctran.enabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Kernel Cluster Services (KCS) Cluster Transaction Manager (CTRAN) subsystem is enabled.
<b>Corrective Action</b>	No action is needed.
<b>Syslog Message</b>	CTRAN subsystem is now enabled.
<b>Parameters</b>	

<b>EMS Identifier</b>	ctran.gbuf.alloc.unsuccessful
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when one or more attempts to allocate a message buffer to convey messages between nodes for the Kernel Cluster Services (KCS) Cluster Transaction Manager (CTRAN) has been unsuccessful.
<b>Corrective Action</b>	If this message occurs more than 10 times in a hour KCS CTRAN logs will need to be collected for further analysis. Trigger an ALL autosupport by using, "autosupport invoke -node * -message "ctran.gbuf.alloc.unsuccessful" -type all", a diagnostic autosupport by using "autosupport invoke-diagnostic -node * -message "ctran.gbuf.alloc.unsuccessful" -subsystem kcs" and contact NetApp technical support support.
<b>Syslog Message</b>	Attempt to allocate a message buffer for CTRAN has been unsuccessful. Total number of unsuccessful attempts is %u.
<b>Parameters</b>	<b>attempts_failed</b> (LONGINT): Total number of message buffer allocation attempts that have been unsuccessful.

<b>EMS Identifier</b>	ctran.gc.proposal.stuck
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the Cluster Transaction Manager (CTRAN) Group Coordinator (GC) of a group runs a prop-done probe for a proposal longer than anticipated.
<b>Corrective Action</b>	Perform a planned takeover, giveback, or takeover and giveback.
<b>Syslog Message</b>	CTRAN group %s has attempted a prop_done probe %d times against gm_id %ld on node UUID %s for txn %ld.
<b>Parameters</b>	<b>group_name</b> (STRING): Name of the group being polled. <b>attempts</b> (LONGINT): Number of attempts <b>gm_id</b> (LONGINT): Group member ID. <b>node_uuid</b> (STRING): UUID of the node the group member (GM) resides on. <b>trans_id</b> (LONGINT): ID of stuck transaction.

<b>EMS Identifier</b>	ctran.gc.reselection.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when some Kernel Cluster Services (KCS) Cluster Transaction Manager (CTRAN) groups lose their Group co-ordinator (GC) and a subsequent GC reselection process fails to complete.
<b>Corrective Action</b>	Reboot the node, and if the node is waiting for giveback then perform a giveback.
<b>Syslog Message</b>	CTRAN GC Reselection failed on local node (name=%s, id=%llu).
<b>Parameters</b>	<b>localhostname</b> (STRING): The host name of the local node. <b>localnodeid</b> (LONGINT): The node ID of the local node.

<b>EMS Identifier</b>	ctran.group.reset.failed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an attempt to reset a group by Kernel Cluster Services (KCS) Cluster Transaction Manager (CTRAN) fails.
<b>Corrective Action</b>	KCS CTRAN logs will need to be collected for further analysis. Trigger an ALL autosupport by using "autosupport invoke -node * -message "ctran.group.reset.failed" -type all", a diagnostic autosupport by using "autosupport invoke-diagnostic -node * -message "ctran.group.reset.failed" -subsystem kcs" and contact NetApp technical support support.
<b>Syslog Message</b>	Group reset for %s has failed on node %s.
<b>Parameters</b>	<b>localhostname</b> (STRING): The host name of the local node. <b>group_name</b> (STRING): The group on which the group reset operation is attempted.

<b>EMS Identifier</b>	ctran.jpc.assigned
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a Join Proposal Coordinator (JPC) node is assigned by Kernel Cluster Services (KCS) Cluster Transaction Manager (CTRAN).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cluster node (name=%s, ID=%llu) is the Join Proposal Coordinator (JPC) node.
<b>Parameters</b>	<b>nodename</b> (STRING): Host name of the JPC node. <b>node_id</b> (LONGINT): Node id of the JPC node.

<b>EMS Identifier</b>	ctran.jpc.multiple.nodes
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when multiple Join Proposal Coordinator (JPC) nodes for the Cluster Transaction Manager (CTRAN) are detected.
<b>Corrective Action</b>	KCS CTRAN logs will need to be collected for further analysis. Trigger an ALL autosupport by using, "autosupport invoke -node * -message "ctran.jpc.multiple.nodes" -type all", a diagnostic autosupport by using "autosupport invoke-diagnostic -node * -message "ctran.jpc.multiple.nodes" -subsystem kcs" and contact NetApp technical support support.
<b>Syslog Message</b>	Cluster node %u detected multiple JPC nodes (node %u reports JPC %u, node %u reports JPC %u)
<b>Parameters</b>	<b>local_node_id</b> (LONGINT): ID of the local node. <b>src_node_id_1</b> (LONGINT): ID of the first node reporting a JPC. <b>jpc_node_id_1</b> (LONGINT): ID of the JPC node reported by src_node_id_1. <b>src_node_id_2</b> (LONGINT): ID of the second node reporting a JPC. <b>jpc_node_id_2</b> (LONGINT): ID of the JPC node reported by src_node_id_2.

<b>EMS Identifier</b>	ctran.jpc.not.found
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when this node cannot find a Join Proposal Coordinator (JPC) within the cluster for Kernel Cluster Services (KCS) Cluster Transaction Manager (CTRAN). Until this error is resolved the reporting node will not be able to participate in distributed operations.
<b>Corrective Action</b>	Perform a planned takeover/giveback sequence to reset the reporting node non-disruptively by using the "takeover -ofnode (reporting node)" and "giveback -ofnode (reporting node)" commands. If the error message is still seen KCS CTRAN logs will need to be collected for further analysis. Trigger an ALL autosupport by using, "autosupport invoke -node * -message "ctran.jpc.not.found" -type all", a diagnostic autosupport by using "autosupport invoke-diagnostic -node * -message "ctran.jpc.not.found" -subsystem kcs" and contact NetApp technical support support.
<b>Syslog Message</b>	This node was unable to locate a Join Proposal Coordinator (JPC) node.
<b>Parameters</b>	

<b>EMS Identifier</b>	ctran.jpc.valid.failed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the Join Proposal Coordinator (JPC) validation fails due to an inconsistent state of some of the Cluster Transaction Manager (CTRAN) group members following a JPC reselection event. In some cases, this can result in loss of SAN data access, CLI command failures and/or giveback failures.
<b>Corrective Action</b>	Reset the CTRAN subsystem during a maintenance window by placing the node specified ineligible by using "cluster modify -node (node reporting error) -eligibility false". Once complete return the node to service by entering "cluster modify -node (node reporting error) -eligibility true". Note, making a node ineligible impacts all protocols on that node. During the time that a node is ineligible, it will not serve any data. If a non-disruptive resolution is desired, takeover the reporting node by using "takeover -of-node (reporting-node)", and then returning it to service by "giveback -of-node (reporting-node)" when it is ready. If the error is still seen KCS CTRAN logs will need to be collected for further analysis. Trigger an ALL autosupport by using "autosupport invoke -node * -message "ctran.jpc.valid.failed" -type all", a diagnostic autosupport by using "autosupport invoke-diagnostic -node * -message "ctran.jpc.valid.failed" -subsystem kcs" and contact NetApp technical support support.
<b>Syslog Message</b>	CTRAN JPC validation failed on local node (name=%s, id=%llu, num_groups=%llu).
<b>Parameters</b>	<b>localhostname</b> (STRING): Host name of the local node. <b>localnodeid</b> (LONGINT): Node ID of the local node. <b>numgroups</b> (LONGINT): Number of inconsistent groups.

<b>EMS Identifier</b>	ctran.net.unreachable
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Cluster Transaction Manager (CTRAN) on the local node is unable to reach a peer node that it believes is in CLAM quorum.
<b>Corrective Action</b>	Check all cluster interfaces on the node initiating this error message and the peer node specified in the message. * Ensure all interfaces are in up state with "network interface show -role cluster". * Ensure that each node initiating this message can reach their peer node with "cluster ping". * Check the cluster interconnect switches and correct any issues found with the health or configuration found. If the error still persists KCS CTRAN logs will need to be collected for further analysis. Trigger an ALL autosupport by using, "autosupport invoke -node * -message "ctran.net.unreachable" -type all", a diagnostic autosupport by using "autosupport invoke-diagnostic -node * -message "ctran.net.unreachable" -subsystem kcs" and contact NetApp technical support support.
<b>Syslog Message</b>	Node %s (id=%llu) is unable to reach peer node %s (id=%llu) on connection %s (ACN=0x%08llx).
<b>Parameters</b>	<b>local_node_name</b> (STRING): Node name of the local node. <b>local_node_id</b> (LONGINT): Node ID of the local node. <b>peer_node_name</b> (STRING): Node name of the unreachable peer node. <b>peer_node_id</b> (LONGINT): Node ID of the unreachable peer node. <b>connection</b> (STRING): Name of connection that is unreachable. <b>acn</b> (LONGINTEX): The ACN value.

## "ctrl" Event Group

<b>EMS Identifier</b>	ctrl.link.degraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the software detects either symbol errors or out-of-sequence errors on HA interconnect links.
<b>Corrective Action</b>	If possible, replace the degraded interconnect cables and reenale automatic switchover by using the "options -option-name rdma.link_monitor -option-value on" command. If the problem persists after replacing both interconnect cables, replace the interconnect hardware on both nodes.
<b>Syslog Message</b>	Link errors detected on card in slot %d. Number of symbol errors (Port1:Port2): %d:%d; Number of OOS errors(RQ:SQ): %d:%d.
<b>Parameters</b>	<b>slot</b> (INT): Slot number of the HA Interconnect device. <b>sym_err1</b> (INT): Symbol errors on the first port. <b>sym_err2</b> (INT): Symbol errors on the second port. <b>rq_oos</b> (INT): Out-of-sequence errors on the receive queue. <b>sq_oos</b> (INT): Out-of-sequence errors on the send queue.

<b>EMS Identifier</b>	ctrl.link.switchover
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the software initiates a switchover of the active interconnect link, which has been declared degraded.
<b>Corrective Action</b>	If possible, replace the degraded interconnect cable and reenale the automatic switchover by using the "options -option-name rdma.link_monitor -option-value on" command. If the problem persists after replacing both the interconnect cables, replace the interconnect hardware on both nodes.
<b>Syslog Message</b>	Link switchover initiated to switch active interconnect link %s.
<b>Parameters</b>	<b>degraded_port_name</b> (STRING): Port name of the degraded link that is being switched from.

<b>EMS Identifier</b>	ctrl.rdma.badSystemId
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an invalid system ID is found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Invalid system ID %d. High-availability interconnect might not work properly.
<b>Parameters</b>	<b>name</b> (INT): Invalid system ID value.

<b>EMS Identifier</b>	ctrl.rdma.heartBeat
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message logs heartbeat messages.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA interconnect: %s.
<b>Parameters</b>	<b>hb</b> (STRING): Heartbeat string.

<b>EMS Identifier</b>	ctrl.rdma.partnerOK
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the partner resumes from pause state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Partner node (system ID: %lld IP address: %s) has resumed from pause state.
<b>Parameters</b>	<b>sysid</b> (LONGINT): Partner system ID. <b>ipaddr</b> (STRING): Partner IP address.

<b>EMS Identifier</b>	ctrl.rdma.partnerPause
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the partner enters pause state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Partner node (system ID: %lld IP address: %s) has entered pause state.
<b>Parameters</b>	<b>sysid</b> (LONGINT): Partner system ID. <b>ipaddr</b> (STRING): Partner IP address.

<b>EMS Identifier</b>	ctrl.rdma.portStateChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the state of the HA interconnect link changed frequently in the last hour.
<b>Corrective Action</b>	Verify that both controllers in the HA pair are operational. For externally connected links, make sure that the interconnect cables are connected properly and that small form-factor pluggable (SFP) modules, if applicable, are seated properly on both controllers. For internally connected links, disable and reenab the links one at a time by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands. When one link is down on platforms with two available links, HA link redundancy is lost. However, HA services are still working and enabled on the secondary link.
<b>Syslog Message</b>	HA interconnect: Link to %s changed state %d times in the last hour.
<b>Parameters</b>	<b>ip</b> (STRING): IP address of the peer. <b>num_times</b> (INT): Number of times the state changed.

## "dcs" Event Group

<b>EMS Identifier</b>	dcs.framework.disabled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the DCS framework has been disabled on this node. This node will not allow any updates to any counters stored in the DCS framework on this node. However, the values for existing counters may be retrieved for display purposes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The DCS framework is disabled on this node.
<b>Parameters</b>	

<b>EMS Identifier</b>	dcs.framework.enabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the DCS framework has been enabled on this node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The DCS framework is enabled on this node.
<b>Parameters</b>	

## "dev" Event Group

<b>EMS Identifier</b>	dev.driver.throttling
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an I/O driver is throttling I/O requests because the underlying controller is overloaded with I/O requests.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s driver unit %d throttling I/O requests due to %s.
<b>Parameters</b>	<b>devname</b> (STRING): Name of the device. <b>unit</b> (INT): Unit number of the controller. <b>reason</b> (STRING): Reason for throttling. <b>current_throttle_sendq</b> (INT): Current throttle value for send requests <b>lowest_throttle_sendq</b> (INT): Lowest throttle value for send requests

## "device" Event Group

<b>EMS Identifier</b>	device.install.successful
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Data ONTAP(R) successfully installs one or more devices after a prior installation failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Device type %s installation successful for one or more devices that reported installation failure previously.
<b>Parameters</b>	<b>devtype</b> (STRING): SCSI device type.

<b>EMS Identifier</b>	device.max.count.exceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) cannot install one or more discovered devices since the device type count is at full capacity.
<b>Corrective Action</b>	If possible, remove an existing device of the same type so that device installation can proceed. If the failure persists, contact NetApp technical support.
<b>Syslog Message</b>	Unable to install one or more %s devices discovered on initiator port %s, target port WWNN: %s, WWPN: %s. The device limit (%d) has been reached.
<b>Parameters</b>	<b>devtype</b> (STRING): SCSI device type. <b>adapter</b> (STRING): Name of the initiator port discovering the device(s). <b>wwnn</b> (STRING): World Wide Node Name of the target port exporting the device(s). <b>wwpn</b> (STRING): World Wide Port Name of the target port exporting the device(s). <b>limit</b> (INT): Device maximum count.

## "dfu" Event Group

<b>EMS Identifier</b>	dfu.badBridgeShelfConfig
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disk firmware update aborts because it cannot contact the two peer FC-to-SAS bridges.
<b>Corrective Action</b>	Make sure that the storage controller is correctly cabled to the two peer FC-to-SAS bridges and that the bridges are correctly cabled to the SAS disk shelves. Then retry the 'disk_fw_update' command.
<b>Syslog Message</b>	Error contacting two peer FC-to-SAS bridges. Unable to download firmware to disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialNo</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.clusterDiskNotReady
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the controller failover partner reports that a disk selected for download is in the NOT READY state.
<b>Corrective Action</b>	Only disks in the READY state can be downloaded to. If a disk is in the NOT READY state, it indicates that the disk has probably failed for some reason and should be returned for RMA.
<b>Syslog Message</b>	Controller failover partner reports disk as NOT READY. Unable to download firmware to disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialNo</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.clusterlcDown
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the high-availability (HA) interconnect is not available.
<b>Corrective Action</b>	The HA interconnect was not functional. Make sure that controller failover is enabled. Check that the HA interconnect cables are connected properly, and if applicable (based on the HA interconnect type), that the SFPs (Small Form-Factor Pluggables) are seated properly on both controllers.
<b>Syslog Message</b>	HA interconnect not available (cf disabled?). Unable to download firmware to disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.clusterlcError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when communication with the controller failover partner cannot be established.
<b>Corrective Action</b>	Typically, these errors are related to cable or transmission errors from the HA interconnect. Check that the HA interconnect cables are connected properly, and if applicable (based on the HA interconnect type), that the SFPs (Small Form-Factor Pluggables) are seated properly on both controllers.
<b>Syslog Message</b>	HA interconnect error %d encountered. Unable to download firmware to disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>clusterError</b> (INT): High-availability (HA) interconnect error number. <b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.clusterPartner
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when automatic firmware download is performed as part of system boot and partner disks are downrev.
<b>Corrective Action</b>	Firmware download is not allowed to update partner disks automatically. Manual invocation of the "storage disk firmware update" command is required. See the "storage disk firmware update" man page for details.
<b>Syslog Message</b>	Operator must issue disk_fw_update command to download firmware to partner Disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.clusterTakeover
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when firmware download is attempted while in takeover mode.
<b>Corrective Action</b>	Firmware download is not allowed while in takeover mode. Exit takeover mode and attempt the "storage disk firmware update" command again. See the "storage disk firmware update" man page for details.
<b>Syslog Message</b>	Unable to download firmware while in takeover mode to Disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product id of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.diskSizeChanged
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a size change is detected after a firmware update. This can be either an increase or decrease in physical size of the disk.
<b>Corrective Action</b>	The disk might not be usable any longer by the RAID subsystem because of the size change that occurred. If RAID cannot access the disk any longer, it will be failed and should be returned for RMA. If the disk is still accessible, leaving it in the system is perfectly fine.
<b>Syslog Message</b>	Disk %s [%s %s %s] S/N [%s] size changed (%x:%x %llx:%llx %llx:%llx %llx:%llx %llx:%llx)
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialNo</b> (STRING): Serial number of the disk. <b>oldSectorSize</b> (INTEG): Old sector size of the disk. <b>newSectorSize</b> (INTEG): New sector size of the disk. <b>oldLastSector</b> (LONGINTEG): Old right-size of the disk. <b>newLastSector</b> (LONGINTEG): New right-size of the disk. <b>oldDiskBlocks</b> (LONGINTEG): Old right-sized blocks on the disk. <b>newDiskBlocks</b> (LONGINTEG): New right-sized blocks on the disk. <b>oldRealLastSector</b> (LONGINTEG): Old raw size of the disk. <b>newRealLastSector</b> (LONGINTEG): New raw size of the disk. <b>oldRealDiskBlocks</b> (LONGINTEG): Old raw blocks on the disk. <b>newRealDiskBlocks</b> (LONGINTEG): New raw blocks on the disk.

<b>EMS Identifier</b>	dfu.firmwareDownloading
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when firmware is being downloaded for a specific product ID of disks on the system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Now downloading firmware file %s on %d disk(s) of plex [%s]...
<b>Parameters</b>	<b>file</b> (STRING): Firmware file which is being downloaded. <b>diskcount</b> (INT): Number of disks being downloaded to. <b>plex</b> (STRING): Plex name being downloaded to.

<b>EMS Identifier</b>	dfu.firmwareDownrev
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system finds disks with a downrev version of firmware, as defined by the installed version of Data ONTAP(R).
<b>Corrective Action</b>	Use the "storage disk firmware update" command to update the downrev firmware on the disks. Check your support provider for more information about obtaining the latest disk firmware. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Downrev firmware on %d disks.
<b>Parameters</b>	<b>downrev</b> (INT): Number of disks with downrev firmware.

<b>EMS Identifier</b>	dfu.firmwareUpToDate
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when all eligible disks are determined to be updated to the latest version of firmware available on the system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Firmware is up-to-date on all eligible disks.
<b>Parameters</b>	

<b>EMS Identifier</b>	dfu.fwDownloadFailedMultFiles
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when more than one file is found for downloading to an ATA drive. Because there is no version string control, only one file at a time is allowed on the system.
<b>Corrective Action</b>	Two or more firmware files were found for download. Delete all except the one that should be downloaded to the drive. Background firmware update should download on the next check cycle.
<b>Syslog Message</b>	Download failed due to multiple firmware files found for Disk type [%s %s].
<b>Parameters</b>	<b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk.

<b>EMS Identifier</b>	dfu.fwDownloadFailedStatus
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a firmware download failure occurs.
<b>Corrective Action</b>	Decode sense codes based on drive supplier to determine the reason for the failure. Most situations can be recovered by attempting to download firmware again using the "disk_fw_update" command. See the disk_fw_update man page for complete details.
<b>Syslog Message</b>	Status: (0x%x/0x%x/0x%x) (SCSI sense 0x%x/0x%x/0x%x/0x%x)
<b>Parameters</b>	<b>OpStatus</b> (INTEX): Status of the passthru I/O. <b>HostStatus</b> (INTEX): Host Status of the passthru I/O. <b>TargetStatus</b> (INTEX): Target Status of the passthru I/O. <b>sense_key</b> (INTEX): SCSI Sense key. <b>sense_code</b> (INTEX): SCSI Sense Code. <b>sense_code_qualifier</b> (INTEX): SCSI Sense Code Qualifier. <b>fru</b> (INTEX): SCSI Sense Code FRU identifier.

<b>EMS Identifier</b>	dfu.fwDownloadFailedWbuf
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when retries are exhausted on the write buffer command that is used to download firmware to a disk.
<b>Corrective Action</b>	Disk firmware might still need to be updated. See the disk_fw_update man page for complete details on performing this.
<b>Syslog Message</b>	Write buffer command failed to Disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialNo</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.init.noMemory
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disk firmware update initialization routine cannot allocate memory.
<b>Corrective Action</b>	Memory allocation relies on the availability of memory resources in the system. If possible, reduce the workload so that fewer resources are needed. If the failure persists after reducing the workload, contact NetApp technical support.
<b>Syslog Message</b>	Could not allocate memory for disk firmware update. Requested size=%d bytes.
<b>Parameters</b>	<b>size</b> (INT): Size (in bytes) of the memory allocation request.

<b>EMS Identifier</b>	dfu.mallocFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) cannot allocate memory to read the disk firmware file and aborts the disk firmware update.
<b>Corrective Action</b>	Inability to allocate memory for this action indicates a failure within Data ONTAP. Take a core for reference, and then open a support case to address the underlying issue. The reboot process when you take the core resolves the immediate problem.
<b>Syslog Message</b>	Cannot allocate memory to read disk firmware file %s; disk firmware update aborted.
<b>Parameters</b>	<b>filename</b> (STRING): Name of the disk firmware file.

<b>EMS Identifier</b>	dfu.noMemory
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disk firmware update routine cannot allocate memory to update the disk firmware.
<b>Corrective Action</b>	Memory allocation relies on the availability of memory resources in the system. If possible, reduce the workload so that fewer resources are needed. Rebooting the system can recover memory resources that might have been lost. If the failure persists after reducing the workload and rebooting, contact NetApp technical support for assistance in determining whether additional system memory is indicated.
<b>Syslog Message</b>	Could not allocate memory for disk firmware update. Unable to download firmware to disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Name of the vendor of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.readTestFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a read of the disk fails after downloading firmware to a disk.
<b>Corrective Action</b>	Disk was unable to be read from after a firmware update occurred. I/O will be retried. If the retries are not successful, you should fail the disk and return it for RMA.
<b>Syslog Message</b>	Media Access test failed on Disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.readTestFailed.fatal
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a read of the disk fails after downloading firmware to a disk and all retries have been exhausted.
<b>Corrective Action</b>	Disk was unable to be read from after a firmware update occurred. I/O will be retried. If the retries are not successful, you should fail the disk and return it for RMA.
<b>Syslog Message</b>	Unable to access media after firmware update on Disk %s [%s %s %s] S/N [%s].
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorName</b> (STRING): Vendor name of the disk. <b>productId</b> (STRING): Product ID of the disk. <b>fwVersion</b> (STRING): Firmware version of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	dfu.readTestFailedStatus
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a read test failure occurs after a firmware download.
<b>Corrective Action</b>	Decode sense codes based on drive supplier to determine the reason for the failure. Most situations can be recovered by the system automatically retrying the I/O operation.
<b>Syslog Message</b>	Status: (0x%x/0x%x/0x%x) (SCSI sense 0x%x/0x%x/0x%x/0x%x)
<b>Parameters</b>	<b>OpStatus</b> (INTEX): Status of the read I/O. <b>HostStatus</b> (INTEX): Host Status of the read I/O. <b>TargetStatus</b> (INTEX): Target Status of the read I/O. <b>sense_key</b> (INTEX): SCSI Sense key. <b>sense_code</b> (INTEX): SCSI Sense Code. <b>sense_code_qualifier</b> (INTEX): SCSI Sense Code Qualifier. <b>fru</b> (INTEX): SCSI Sense Code FRU identifier.

<b>EMS Identifier</b>	dfu.refreshInquiryFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs after a successful disk firmware update, when the 'SCSI inquiry' command, which is issued to all disks as part of the disk firmware download process, fails to finish. It is also possible to get messages indicating that disks have downrev firmware.
<b>Corrective Action</b>	When this error happens, check the connection to the partner node and manually retry the firmware download process. If the problem still persists, open a support case to investigate the underlying cause.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>retryCount</b> (INT): Number of times the command was retried and failed.

## "dhcp" Event Group

<b>EMS Identifier</b>	dhcp.client.packet.port <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when client Port does not match the expected received port.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Discarding packets for DHCP client port originating from server %s port %d.
<b>Parameters</b>	<b>serverAddress</b> (STRING): DHCP server Address. <b>serverPort</b> (INT): DHCP server Port Number.

<b>EMS Identifier</b>	dhcp.Config.aborted <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message message occurs when a user aborts the DHCP configuration during DHCP initialization.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	DHCP configuration aborted by user.
<b>Parameters</b>	

<b>EMS Identifier</b>	dhcp.Config.unSuccessful <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when DHCP configuration fails during DHCP initialization because the interface pointer is NULL, the console encountered CTRL 'X' or 'C' or DHCP configuration status is not matched.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	DHCP configuration failed.
<b>Parameters</b>	

<b>EMS Identifier</b>	dhcp.lease.if.exp <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when the interface is using an IP address whose lease is no longer valid.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Interface %s is using an IP address %s whose lease has expired.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>IpAddress</b> (STRING): IP Address.

<b>EMS Identifier</b>	dhcp.lease.renew <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when bringing DHCP configuration up, it is a reboot initialization and there previous assigned IP address is still valid which results in renewing lease.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s : Previously assigned IP address %s still valid. Contacting DHCP server to renew lease.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>IpAddress</b> (STRING): IP Address.

<b>EMS Identifier</b>	dhcp.mem.alloc <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Dynamic Host Configuration Protocol (DHCP) initialization or client services tries to allocate memory to the specified buffer, but there is not enough memory available.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	dhcp: Not enough memory while allocating %s.
<b>Parameters</b>	<b>info</b> (STRING): Information.

<b>EMS Identifier</b>	dhcp.mem.ifList <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when creating new interface list for timeout entry, but cannot allocate one.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	dhcpc_main: Cannot allocate timeout ifnet list entry.
<b>Parameters</b>	

<b>EMS Identifier</b>	dhcp.mem.shortage <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when there is shortage of memory while initializing dhcp info about interfaces.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	DHCP info init unsuccessful - shortage of memory.
<b>Parameters</b>	

<b>EMS Identifier</b>	dhcp.mem.timeList <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when creating new interface list for timeout entry, but cannot allocate one.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	dhcpc_main: cannot allocate timeout list.
<b>Parameters</b>	

<b>EMS Identifier</b>	dhcp.nak.receive <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when the received dhcp option is of DHCPNAK(DHCP Negative Acknowledgment) message type while Finite State Machine(FSM) state is as specified.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Received DHCPNAK from %s while %s %s.
<b>Parameters</b>	<b>serverAddress</b> (STRING): DHCP server Address. <b>status</b> (STRING): DHCP status. <b>info</b> (STRING): Information.

<b>EMS Identifier</b>	dhcp.nak.receive.err <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when received dhcp option is of DHCPNAK (Negative Acknowledgment for DHCP) message type while Finite State Machine (FSM) state is requesting, but DHCPNAK contains error message.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	DHCPNAK contains the error message "%s".
<b>Parameters</b>	<b>errMsg</b> (STRING): Error message.

<b>EMS Identifier</b>	dhcp.noEnough.memory <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when DHCP initialization or client services tries to allocate memory to specified buffer, but there is not enough memory available.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	DHCP: Not enough memory while allocating %s.
<b>Parameters</b>	<b>info</b> (STRING): Information.

<b>EMS Identifier</b>	dhcp.opt.notSupported <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when other processes request for information collected by DHCP, but that option is not supported.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Requested DHCP Option %d is not supported.
<b>Parameters</b>	<b>option</b> (INT): DHCP option number.

<b>EMS Identifier</b>	dhcp.reg.delete <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when DHCP process called update registry routine with delete entry option, but could not delete one.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Could not delete registry entry %s.
<b>Parameters</b>	<b>regKey</b> (STRING): Registry key upon which entry is found.

<b>EMS Identifier</b>	dhcp.request.create <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when DHCP could not make any specified request.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: Could not make DHCP %s request.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>info</b> (STRING): Information about DHCP request.

<b>EMS Identifier</b>	dhcp.request.retrans <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when DHCP process times out, it sends retransmission request.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: DHCP retransmission request.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name.

<b>EMS Identifier</b>	dhcp.request.send <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when DHCP could not send any specified request.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: Could not send DHCP %s request.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>info</b> (STRING): Information about DHCP request.

<b>EMS Identifier</b>	dhcp.request.sent <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when DHCP specified request is sent.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s : DHCP %s SENT.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>info</b> (STRING): Information about DHCP request.

<b>EMS Identifier</b>	dhcp.send.decline <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services to log the message of sending DHCP decline.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Send DHCPDECLINE(%s).
<b>Parameters</b>	<b>IpAddress</b> (STRING): IP Address.

<b>EMS Identifier</b>	dhcp.send.release <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services to log the message of sending DHCP release.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Send DHCPRELEASE(%s).
<b>Parameters</b>	<b>IpAddress</b> (STRING): IP Address.

<b>EMS Identifier</b>	dhcp.timeQueue.add.end <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when Finite State Machine (FSM) state is as specified and DHCP END could not be added to timeout queue.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s:%s Could not add DHCP END to timeout queue.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>info</b> (STRING): Information.

<b>EMS Identifier</b>	dhcp.timeQueue.add.req <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when Finite State Machine (FSM) state is as specified and the system could not add the specified DHCP request to the timeout queue.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: Could not add DHCP %s request to %s queue.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>info</b> (STRING): Information about DHCP request. <b>info2</b> (STRING): Information.

<b>EMS Identifier</b>	dhcp.timeQueue.add.t1 <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when Finite State Machine (FSM) state is as specified and DHCP T1 could not be added to timeout queue.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s:%s Could not add DHCP T1 to timeout queue.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>info</b> (STRING): Information.

<b>EMS Identifier</b>	dhcp.timeQueue.add.t2 <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during Dynamic Host Configuration Protocol (DHCP) client services when Finite State Machine (FSM) state is as specified and DHCP T2 could not be added to the timeout queue.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s:%s Could not add DHCP T2 to timeout queue.
<b>Parameters</b>	<b>ifName</b> (STRING): Interface Name. <b>info</b> (STRING): Information.

## "diff" Event Group

<b>EMS Identifier</b>	diff.svcs.setting.topartner
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot automatically apply the Differentiated Services (diff-svcs) setting to the High Availability (HA) partner. In the event there is a setting mismatch between HA pairs the node with the incorrect setting may produce an incorrect At-Risk-System (ARS) report.
<b>Corrective Action</b>	Manually apply the diff-svcs setting to the HA partner to ensure the setting is consistent across both nodes in the HA pair. In the event of a failure, issue the following command on the HA partner: "system node modify -node nodename -diff-svcs true false" .
<b>Syslog Message</b>	Differentiated services setting was not automatically applied to the HA partner of node %s: %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node where the setting was successfully applied. A failure occurred while trying to apply the same setting to its HA partner. <b>error</b> (STRING): Error reported when attempting to apply the setting to the HA partner.

## "disk" Event Group

<b>EMS Identifier</b>	disk.adapterError
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an adapter error is detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s: unexpected adapter error 0x%x
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>error</b> (INTEG): Adapter status.

<b>EMS Identifier</b>	disk.checksum.offlineAdapter
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when multiple errors are detected during checksum verification. The adapter is taken offline.
<b>Corrective Action</b>	Replace the adapter. Contact NetApp technical support. for assistance with a Return Material Authorization.
<b>Syslog Message</b>	Adapter %s taken offline due to checksum verification failure on multiple disks.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the adapter.

<b>EMS Identifier</b>	disk.checksum.verifyFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when disk checksum verify fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk level checksum verification failed on WRITE VERIFY: Disk %s, Block #llu: Volume %s, Fileid %d, Block #llu
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>blo</b> (LONGINT): block id <b>vol</b> (STRING): Volume name. <b>fileid</b> (INT): File ID. <b>block</b> (LONGINT): File block ID.

<b>EMS Identifier</b>	disk.cksum.bno.verifyFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects a block number mismatch during disk checksum verification. The expected Virtual Block Number (VBN)/Disk Block Number (DBN) is not the same as the stored VBN/DBN from the checksum entry, indicating that the block is read from the wrong location.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Block number mismatch on WRITE VERIFY: Disk %s, expected_dbn = %u, stored_dbn = %u, expected_vbn = %llu, stored_vbn = %llu, Volume %s, Fileid %d, Block #%llu.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>expected_dbn</b> (INT): Expected physical disk block number. <b>stored_dbn</b> (INT): Physical disk block number stored in the checksum entry. <b>expected_vbn</b> (LONGINT): Expected volume block number. <b>stored_vbn</b> (LONGINT): Volume block number stored in the checksum entry. <b>vol</b> (STRING): Volume name. <b>fileid</b> (INT): File ID. <b>block</b> (LONGINT): File block ID.

<b>EMS Identifier</b>	disk.ddr.dqp.out.of.date
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Dynamic Drive Recognition (DDR) Scanner detects a disk that is not part of its qualification table.
<b>Corrective Action</b>	Check your support provider's web site or knowledgebase for more information about downloading and installing an updated Disk Qualification Package (DQP) file.
<b>Syslog Message</b>	The DDR Scanner has detected that the latest DQP is not present on this system.
<b>Parameters</b>	

<b>EMS Identifier</b>	disk.ddr.invalid.azcs.capacity
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when the DDR Scanner detects a capacity value that does not match with the alias string associated with it.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The DDR Scanner has detected an invalid AZCS alias capacity on disk %s
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>capacity_value</b> (LONGINT): The value of the invalid capacity

<b>EMS Identifier</b>	disk.ldr.invalid.bcs.capacity
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when the DDR Scanner detects a capacity value that does not match with the alias string associated with it.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The DDR Scanner has detected an invalid BCS alias capacity on disk %s
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>capacity_value</b> (LONGINT): The value of the invalid capacity

<b>EMS Identifier</b>	disk.ldr.scanner.ldr.failure
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a the ddr scanner has failed to read the new DDR label it just placed on the disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s Shelf %s Bay %s [%s %s %s] S/N [%s] [%s]: DDR label verify Failure - DDR Error
<b>Parameters</b>	<b>disk_name</b> (STRING): The name of the disk <b>shelf</b> (STRING): Shelf identifier where the disk is located <b>bay</b> (STRING): Disk bay within the shelf where disk is located <b>vendor</b> (STRING): Name of the vendor of the disk <b>model</b> (STRING): Model string of the disk drive <b>firmware_revision</b> (STRING): Firmware revision of the disk <b>serialno</b> (STRING): Serial number of the disk <b>ldr_error</b> (STRING): DDR Error string which has been parsed

<b>EMS Identifier</b>	disk.ldr.scanner.label.done
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a the ddr scanner has completed has completed scanning a disk successfully
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s Shelf %s Bay %s [%s %s %s] S/N [%s] : DDR label write complete
<b>Parameters</b>	<b>disk_name</b> (STRING): The name of the disk <b>shelf</b> (STRING): Shelf identifier where the disk is located <b>bay</b> (STRING): Disk bay within the shelf where disk is located <b>vendor</b> (STRING): Name of the vendor of the disk <b>model</b> (STRING): Model string of the disk drive <b>firmware_revision</b> (STRING): Firmware revision of the disk <b>serialno</b> (STRING): Serial number of the disk

<b>EMS Identifier</b>	disk.ldr.scanner.verify.failure
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a the ddr scanner has failed to read the new DDR label it just placed on the disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s Shelf %s Bay %s [%s %s %s] S/N [%s] : DDR label verify Failure
<b>Parameters</b>	<b>disk_name</b> (STRING): The name of the disk <b>shelf</b> (STRING): Shelf identifier where the disk is located <b>bay</b> (STRING): Disk bay within the shelf where disk is located <b>vendor</b> (STRING): Name of the vendor of the disk <b>model</b> (STRING): Model string of the disk drive <b>firmware_revision</b> (STRING): Firmware revision of the disk <b>serialno</b> (STRING): Serial number of the disk

<b>EMS Identifier</b>	disk.ldr.scanner.write.failure
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a the ddr scanner has failed to write a new DDR label to the disk
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s Shelf %s Bay %s [%s %s %s] S/N [%s] : DDR label write Failure
<b>Parameters</b>	<b>disk_name</b> (STRING): The name of the disk <b>shelf</b> (STRING): Shelf identifier where the disk is located <b>bay</b> (STRING): Disk bay within the shelf where disk is located <b>vendor</b> (STRING): Name of the vendor of the disk <b>model</b> (STRING): Model string of the disk drive <b>firmware_revision</b> (STRING): Firmware revision of the disk <b>serialno</b> (STRING): Serial number of the disk

<b>EMS Identifier</b>	disk.ldr.unable.add.disk
<b>Severity</b>	ALERT
<b>Description</b>	This event is generated when the DDR Scanner is unable to re-add a disk to the filer after trying for 2 minutes. This means there are no more spare disk_Cbs in the filer.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The filer has not freed a disk_Cb for over 2 mintues for %s.
<b>Parameters</b>	<b>diskuid</b> (STRING): The unique identifier of the disk

<b>EMS Identifier</b>	disk.dynamicqual.fail.parse
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when dynamic device qualification fails due to an invalid /etc/qual_devices file. The system is unable to properly recognize disk drives or fully enable all resiliency and performance features.
<b>Corrective Action</b>	For further information about correcting the problem, search the knowledgebase of the NetApp technical support support web site for the "[disk.dynamicqual.fail.parse]" keyword. Request an updated qual_devices file from NetApp.
<b>Syslog Message</b>	Device qualification information file (/etc/qual_devices) is invalid. The following error, "%s" has been detected. For further information about correcting the problem, search the knowledgebase of the NetApp technical support support web site for the "[disk.dynamicqual.fail.parse]" keyword.
<b>Parameters</b>	<b>errorstring</b> (STRING): Error string for parsing error in /etc/qual_devices file.

<b>EMS Identifier</b>	disk.dynamicqual.failure.cleared
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a previous dynamic device qualification error has been corrected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Device qualification failure condition has been corrected. All devices have been qualified.
<b>Parameters</b>	

<b>EMS Identifier</b>	disk.dynamicqual.failure.invalidFile
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when dynamic device qualification fails due to an invalid /etc/qual_devices file.
<b>Corrective Action</b>	See the qual_devices man page for information about updating device qualification data. Request an updated qual_devices file from NetApp.
<b>Syslog Message</b>	Device qualification information file (/etc/qual_devices) is invalid. See the qual_devices man page for corrective action. This problem must be corrected within %d hour(s) to avoid a forced system shutdown. The following disk(s) remain unqualified: %s.
<b>Parameters</b>	<b>time</b> (INT): Time until forced shutdown. <b>disklist</b> (STRING): List of disks that are still not qualified.

<b>EMS Identifier</b>	disk.dynamicqual.failure.missingFile
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when dynamic device qualification fails with a missing qualification file.
<b>Corrective Action</b>	See the qual_devices man page for information about updating device qualification data. Request a qual_devices file from NetApp.
<b>Syslog Message</b>	Device Qualification information file (/etc/qual_devices) is missing. See the qual_devices man page for corrective action. This problem must be corrected within %d hour(s) to avoid a forced system shutdown. The following disk(s) remain unqualified: %s.
<b>Parameters</b>	<b>time</b> (INT): Time until forced shutdown. <b>disklist</b> (STRING): List of disks that are still not qualified.

<b>EMS Identifier</b>	disk.dynamicqual.failure.occurred
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when dynamic device qualification fails with an unknown error.
<b>Corrective Action</b>	See the qual_devices man page for information about updating device qualification data.
<b>Syslog Message</b>	Device qualification failure occurred. See the qual_devices man page for corrective action. This problem must be corrected within %d hour(s) to avoid a forced system shutdown. The following disk(s) remain unqualified: %s.
<b>Parameters</b>	<b>time</b> (INT): Time until forced shutdown. <b>disklist</b> (STRING): List of disks that are still not qualified.

<b>EMS Identifier</b>	disk.dynamicqual.failure.shutdown
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when one or more disks are not recognized by Data ONTAP(R). This can result in a forced system shutdown if the offending disks are not removed or recognized properly within the allowed window of time.
<b>Corrective Action</b>	Download the latest Drive Qualification Package (DQP) from NetApp technical support, and then install it on your system.
<b>Syslog Message</b>	Device qualification failure has not been corrected for the past %d hour(s). The following disk(s) remain unqualified: %s. System is SHUTTING DOWN.
<b>Parameters</b>	<b>time</b> (INT): Time until forced shutdown. <b>disklist</b> (STRING): List of disks that are still not qualified.

<b>EMS Identifier</b>	disk.encrypt.destroy.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the disk encrypt destroy operation is completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s [S/N %s] has completed encrypt destroy.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>serialno</b> (STRING): Serial number of the device.

<b>EMS Identifier</b>	disk.encryptAccessErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk reports a SCSI data protection error, and Data ONTAP(R) cannot restore permission to access the data through storage encryption methods.
<b>Corrective Action</b>	If the disk is known to be an encrypting disk, then Data ONTAP might not have the correct storage encryption passphrase for this device. If possible, import the proper passphrase. If the passphrase cannot be recovered, or if the disk is not an encrypting disk, then all data on the disk is permanently inaccessible. You can return an encrypting disk to service as a spare through the use of the 'disk encrypt sanitize' command. If the device cannot be recovered, then it must be removed from the system.
<b>Syslog Message</b>	Unable to restore data access on encrypting disk %s; status %s (0x%x).
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>status_string</b> (STRING): Status code description from the SCSI driver. <b>status</b> (INT): Status code from the SCSI driver.

<b>EMS Identifier</b>	disk.encryptAccessFWErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk reports a SCSI data protection error on an attempt to download firmware and Data ONTAP(R) cannot restore permission to access the firmware through storage encryption methods.
<b>Corrective Action</b>	If the disk is known to be an encrypting disk, then Data ONTAP might not have the correct storage encryption passphrase for this device. If possible, import the proper passphrase. If the passphrase cannot be recovered, or if the disk is not an encrypting disk, then the firmware cannot be downloaded. If the device cannot be recovered, then it must be removed from the system.
<b>Syslog Message</b>	Unable to restore firmware download access on encrypting disk %s; status %s (0x%x).
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>status_string</b> (STRING): Status code description from the SCSI driver. <b>status</b> (INT): Status code from the SCSI driver.

<b>EMS Identifier</b>	disk.encryptCmdFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the indicated 'disk encrypt' command fails on an encrypting disk that supports storage encryption methods.
<b>Corrective Action</b>	Verify that storage encryption key servers, if required, are available and functioning, or that expected on-board keys are present.
<b>Syslog Message</b>	Encrypting disk %s failed disk encrypt %s command with error status %s (0x%x).
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>command</b> (STRING): Disk encrypt command. <b>error_string</b> (STRING): Error status code description. <b>error</b> (INT): Error status code.

<b>EMS Identifier</b>	disk.encryptFIPSPassphNoSync
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a system with NetApp Storage Encryption (NSE) enabled detects that the authentication keys (AKs, or passphrases) for the FIPS-compliance authorities in an NSE disk are not the same for all its FIPS authorities. This condition can occur when a previous attempt to modify the FIPS-compliance passphrases failed.
<b>Corrective Action</b>	Use the "storage encryption disk modify -fips-key-id" command to assign the desired AK to the FIPS-compliance authorities in the disk. View existing AKs in the output of the "storage encryption disk show", "storage encryption show -fips", or "security key-manager query" commands. If the condition persists after the modify operation, replace the disk.
<b>Syslog Message</b>	The FIPS-compliance authorities in NSE disk %s have different authentication keys (AKs). Modify the FIPS AK again to reconcile the AKs.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	disk.encryptGetMSIDFailed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an encrypting disk reports a SCSI data protection error, but Data ONTAP(R) cannot obtain the Manufacturer's Secure ID (MSID) that is mandatory on disks that support storage encryption methods. Some conditions can cause this error temporarily.
<b>Corrective Action</b>	If the error persists, replace the disk or remove it from the system.
<b>Syslog Message</b>	Unable to obtain MSID from disk %s; status "%s" (0x%x).
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>status_string</b> (STRING): Status code description from the SCSI driver. <b>status</b> (INT): Status code from the SCSI driver.

<b>EMS Identifier</b>	disk.encryptNoSupport
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) detects one or more encrypting disks, but the 'bootarg.storageencryption.support' bootarg is not present or is set to "false" to indicate that Storage Encryption is not supported.
<b>Corrective Action</b>	Encrypting disks are employed to cryptographically protect the data. If this system is intended to support storage encryption, then halt the system, remove all nonencrypting disks, set the bootarg at the loader prompt using 'setenv bootarg.storageencryption.support true', and reboot the system. If the system is not intended for Storage Encryption use, then remove all encrypting disks.
<b>Syslog Message</b>	Detected encrypting disk %s but bootarg.storageencryption.support indicates that encrypting disks should not be present. %d of %d disks checked are encrypting disks.
<b>Parameters</b>	<b>disk</b> (STRING): Name of an encrypting disk. <b>encrypting_disks</b> (INT): Number of encrypting disks detected. <b>disk_count</b> (INT): Total number of disks checked. For a High-Availability pair, this might be fewer than the total number of disks.

<b>EMS Identifier</b>	disk.encryptSupportReqd
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) detects one or more disks that do not support storage encryption methods, but the 'bootarg.storageencryption.support' bootarg is set to "true" to indicate that all disks must be encrypting disks.
<b>Corrective Action</b>	Encrypting disks are employed to cryptographically protect the data. If this system is intended to support storage encryption, then remove all nonencrypting disks. If the system is not intended for storage encryption use, then halt the system, remove all encrypting disks, and set the bootarg at the loader prompt using 'setenv bootarg.storageencryption.support false' (or remove the bootarg altogether using 'unsetenv bootarg.storageencryption.support'), and then reboot.
<b>Syslog Message</b>	Detected nonencrypting disk %s but bootarg.storageencryption.support indicates that only encrypting disks should be present. %d of %d disks checked are encrypting disks.
<b>Parameters</b>	<b>disk</b> (STRING): Name of a nonencrypting disk. <b>encrypting_disks</b> (INT): Number of encrypting disks detected. <b>disk_count</b> (INT): Total number of disks checked. For a High-Availability pair, this might be fewer than the total number of disks.

<b>EMS Identifier</b>	disk.EOS.OS.error
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk is detected that is not supported in this version of Data ONTAP(R) or later
<b>Corrective Action</b>	Remove the disk and replace it with a disk that is supported.
<b>Syslog Message</b>	%s support ended in version of %s. Current version is %s.
<b>Parameters</b>	<b>disk_information</b> (STRING): Disk information. <b>EOS_OS_version</b> (STRING): Latest version of Data ONTAP supported by the disk. <b>cur_OS_version</b> (STRING): Current version of Data ONTAP.

<b>EMS Identifier</b>	disk.exceed.cmd.completeTime
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is generated during disk qualification testing when READ/WRITE I/O requests exceed their expected maximum completion time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s has exceeded %d ms limit -- required %llu ms to complete command %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>timeLimit</b> (INT): Time limit to complete command. <b>timeTaken</b> (LONGINT): Time taken to complete command. <b>commandSTR</b> (STRING): Disk qualification command in string.

<b>EMS Identifier</b>	disk.fail.ssdstats
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a disk is marked failed, is being sanitized, or has entered Maintenance Center.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s (%s) failed with rated life used %s, percent spare blocks %s, spare blocks %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>serialNo</b> (STRING): Serial number. <b>ratedLife</b> (STRING): Rated life used. <b>percentSpare</b> (STRING): Percent spare blocks consumed. <b>spareBlks</b> (STRING): Spare blocks consumed limit.

<b>EMS Identifier</b>	disk.failmsg
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a disk is marked failed, is being sanitized, or has entered Maintenance Center.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s (%s)%s. %d %s
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>serialNo</b> (STRING): Serial number. <b>reason</b> (STRING): Reason for failure. <b>powerOnTime</b> (INTEG): Power on minutes when failed. <b>disk_information</b> (STRING): Formatted information about the disk. This includes the disk's vendor, model, firmware revision, and serial number.

<b>EMS Identifier</b>	disk.fakereassignSuccess
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a fake reassign is detected on a disk and the sector verify succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	disk %s: A fake reassign was issued on sector %llu for disk %s. Disable with boot arg disable-disk-fake-reassign? true.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>sector</b> (LONGINT): Sector where the error was detected. <b>disk_information</b> (STRING): Formatted information about the disk. This includes the disk's vendor, model, firmware revision, and serial number.

<b>EMS Identifier</b>	disk.fw.autodownrev
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system detects disks with firmware that is not up-to-date. The background firmware update program will update the firmware automatically if the correct firmware files are in place.
<b>Corrective Action</b>	Download the correct firmware file onto the system. Check your support provider's web site or knowledgebase for more information about obtaining the latest disk firmware.
<b>Syslog Message</b>	%d disks have downrev firmware. They will be updated automatically using background disk firmware update if the correct firmware files are in place.
<b>Parameters</b>	<b>driveCount</b> (INT): Number of disks that need to have updated firmware.

<b>EMS Identifier</b>	disk.fw.downrevWarning
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects disks with firmware that is not up-to-date.
<b>Corrective Action</b>	Download and install the latest disk firmware file. Check your support provider's web site or knowledgebase for more information about obtaining the latest disk firmware.
<b>Syslog Message</b>	%d disks have downrev firmware that you need to update.
<b>Parameters</b>	<b>driveCount</b> (INT): Number of disks that need to have updated firmware.

<b>EMS Identifier</b>	disk.healthTrigger
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the disk returns a health trigger event.
<b>Corrective Action</b>	No action is required because this message is informational only. If the disk is having problems processing I/O, an error will be returned.
<b>Syslog Message</b>	Disk %s received NHT health trigger (0x%x 0x%x 0x%x 0x%x)
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>sense_key</b> (INTHEX): SCSI sense key. <b>sense_code</b> (INTHEX): SCSI sense code. <b>qualifier</b> (INTHEX): SCSI sense code qualifier. <b>fru_failed</b> (INTHEX): SCSI FRU code.

<b>EMS Identifier</b>	disk.init.badSectorSize
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk reports a sector size that does not match the drive qualification table.
<b>Corrective Action</b>	Replace the disk.
<b>Syslog Message</b>	Disk %s has an unexpected sector size (%d bytes) and cannot be used.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>sector_size</b> (INT): Invalid sector size.

<b>EMS Identifier</b>	disk.init.err.flashOptimized
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a hard disk drive (HDD) is detected by a node configured with the All-Flash Optimized personality. With this personality, only solid-state drives (SSD) can be used.
<b>Corrective Action</b>	Remove the disk from the system.
<b>Syslog Message</b>	Disk %s cannot be used on a node configured as All-Flash Optimized.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	disk.init.error.capacity
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk reports an unexpected capacity.
<b>Corrective Action</b>	Replace the disk.
<b>Syslog Message</b>	Disk %s has an unexpected capacity (%llu sectors) and cannot be used. Replace it.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>lastSector</b> (LONGINT): Last sector of the disk. <b>productID</b> (STRING): Product name of the disk.

<b>EMS Identifier</b>	disk.init.error.serialno
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the inquiry command does not return a valid serial number or device ID for the device. The device is failed during initialization.
<b>Corrective Action</b>	Replace the disk.
<b>Syslog Message</b>	Serial number or device ID not available for %s.
<b>Parameters</b>	<b>disk_name</b> (STRING): Disk name. <b>page_code</b> (INT): Page code that was sent. <b>error_pcode</b> (INT): Page code received in error.

<b>EMS Identifier</b>	disk.init.failure.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk fails initialization.
<b>Corrective Action</b>	Replace the disk.
<b>Syslog Message</b>	Disk %s failed initialization due to error %d.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>errorCode</b> (INT): Internal E_SCSI return code.

<b>EMS Identifier</b>	disk.init.failure.spinup
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk cannot spin up during initialization. The disk is marked as failed and is not used.
<b>Corrective Action</b>	Removed the disk from the system.
<b>Syslog Message</b>	Disk %s has failed to spin up and cannot be used. Replace it with a new drive.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	disk.init.failureBytes
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system discovers a previously failed disk. The system will not use the disk and it should be replaced.
<b>Corrective Action</b>	Replace the failed disk.
<b>Syslog Message</b>	Failed disk %s detected during disk initialization.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	disk.init.invalidDDR
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a disk contains a Dynamic Drive Recognition (DDR) label entry that is not for this disk. The system rewrites the DDR label with proper values.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s has an invalid DDR entry. DDR label will be corrected and rewritten automatically.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorID</b> (STRING): Vendor name of the disk. <b>productID</b> (STRING): Product name of the disk.

<b>EMS Identifier</b>	disk.init.protype.incompat
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a hard disk drive (HDD) has a protection type enabled that is not supported. Protection type is a disk option that determines how information is physically saved on the disk.
<b>Corrective Action</b>	Remove the disk from the system.
<b>Syslog Message</b>	Disk %s has protection type %x enabled and cannot be used. %s
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>protType</b> (INTHEX): Value indicating the version of the enabled protection type. <b>disk_information</b> (STRING): Formatted information about the disk. This includes the disk's vendor, model, firmware revision, and serial number.

<b>EMS Identifier</b>	disk.init.recognizedDDR
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a Dynamic Drive Recognition (DDR) label on a drive with dynamically qualified data is properly updated with aliased data.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s has been updated with the proper drive name alias. The DDR label will be rewritten automatically.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>vendorID</b> (STRING): Vendor name of the disk. <b>productID</b> (STRING): Product name of the disk.

<b>EMS Identifier</b>	disk.init.unknownDisk
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a unique identifier cannot be created for a disk due to internal disk problems.
<b>Corrective Action</b>	The disk needs to be replaced, remove it from the system.
<b>Syslog Message</b>	Unable to identify disk %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	disk.ioMediumError
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the drive reports a medium error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Medium error on disk %s: op %s sector %llu %s - %s %s (%x %x %x %x) (%d) %s
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>op</b> (STRING): I/O operation being performed. <b>sector</b> (LONGINT): Sector where the error was detected. <b>senseInfo</b> (STRING): Sense data. <b>sCode</b> (STRING): Sector code. <b>disk_info</b> (STRING): Static description of events on the disk. <b>sense_key</b> (INTHEX): Actual sense key. <b>sense_code</b> (INTHEX): Actual sense code. <b>qualifier</b> (INTHEX): Actual sense code qualifier. <b>fru_failed</b> (INTHEX): Actual FRU code. <b>CTime</b> (INT): Time, in milliseconds, from when the command was first issued until this I/O operation completed. <b>disk_information</b> (STRING): Formatted information about the disk. This includes the disk's vendor, model, firmware revision, and serial number.

<b>EMS Identifier</b>	disk.ioReassignFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk reports a medium error and the sector reassignment fails. The system will fail the disk after possible recovery of retrievable disk data.
<b>Corrective Action</b>	Replace the disk when the system indicates that you should remove it in subsequent logged events.
<b>Syslog Message</b>	disk %s: sector %llu failed to be reassigned (%d). %s
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the disk.</p> <p><b>sector</b> (LONGINT): Sector where the error was detected.</p> <p><b>ETime</b> (INT): Time, in milliseconds, from when the command was first issued until this I/O operation failed.</p> <p><b>disk_information</b> (STRING): Formatted information about the disk. This includes the disk's vendor, model, firmware revision, and serial number.</p>

<b>EMS Identifier</b>	disk.ioReassignSuccess
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a medium error is detected on a disk and the sector reassignment succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	disk %s: sector %llu was reassigned (%d). %s
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the disk.</p> <p><b>sector</b> (LONGINT): Sector where the error was detected.</p> <p><b>CTime</b> (INT): Time, in milliseconds, from when the command was first issued until this I/O operation completed.</p> <p><b>disk_information</b> (STRING): Formatted information about the disk. This includes the disk's vendor, model, firmware revision, and serial number.</p>

<b>EMS Identifier</b>	disk.ioRecoveredError.pfa
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk determines that it will fail shortly. This occurs when a threshold internal to the disk indicates that a failure is imminent.
<b>Corrective Action</b>	To avoid an uncontrolled failure, replace the disk as soon as possible. If the disk is a member of a RAID volume, the disk will be failed by RAID when this error occurs on a RAID I/O and the raid group is not in degraded mode.
<b>Syslog Message</b>	Recovered error predictive failure alert on disk %s: op %s sector %llu %s - %s (%x %x %x %x)
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>op</b> (STRING): I/O operation being performed. <b>sector</b> (LONGINT): Sector where the error was detected. <b>senseInfo</b> (STRING): Sense data. <b>disk_info</b> (STRING): Static description of events on the disk. <b>sense_key</b> (INTHEX): Actual sense key. <b>sense_code</b> (INTHEX): Actual sense code. <b>qualifier</b> (INTHEX): Actual sense code qualifier. <b>fru_failed</b> (INTHEX): Actual FRU code.

<b>EMS Identifier</b>	disk.ioRecoveredError.reassign
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a disk automatically reassigns a sector on a disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Recovered error on disk %s: op %s sector %llu %s - %s (%x %x %x %x) %s
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>op</b> (STRING): I/O operation being performed. <b>sector</b> (LONGINT): Sector where the error was detected. <b>senseInfo</b> (STRING): Sense data. <b>disk_info</b> (STRING): Static description of events on the disk. <b>sense_key</b> (INTHEX): Actual sense key. <b>sense_code</b> (INTHEX): Actual sense code. <b>qualifier</b> (INTHEX): Actual sense code qualifier. <b>fru_failed</b> (INTHEX): Actual FRU code. <b>disk_information</b> (STRING): Formatted information about the disk. This includes the disk's vendor, model, firmware revision, and serial number.

<b>EMS Identifier</b>	disk.ioRecoveredError.retry
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a recovered error is detected on a disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Recovered error on disk %s: op %s sector %llu %s - %s (%x %x %x %x) (%d) %s
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the disk.</p> <p><b>op</b> (STRING): I/O operation being performed.</p> <p><b>sector</b> (LONGINT): Sector where the error was detected.</p> <p><b>senseInfo</b> (STRING): Sense data.</p> <p><b>disk_info</b> (STRING): Static description of events on the disk.</p> <p><b>sense_key</b> (INTHEX): Actual sense key.</p> <p><b>sense_code</b> (INTHEX): Actual sense code.</p> <p><b>qualifier</b> (INTHEX): Actual sense code qualifier.</p> <p><b>fru_failed</b> (INTHEX): Actual FRU code.</p> <p><b>ETime</b> (INT): Time, in milliseconds, from when the command was first issued until this I/O operation failed.</p> <p><b>disk_information</b> (STRING): Formatted information about the disk. This includes the disk's vendor, model, firmware revision, and serial number.</p>

<b>EMS Identifier</b>	disk.lipStormDetect
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a Fibre Channel disk detects a large number of Loop Initialization Procedure requests (a LIP storm) and has reset itself.
<b>Corrective Action</b>	None required. If this happens a second time, the disk will be failed.
<b>Syslog Message</b>	shm: disk %s reports a LIP storm reset. %s. Error %x/%x/%x/%x.
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the disk (host adapter, loop ID).</p> <p><b>disk_info</b> (STRING): Static description of events on the disk.</p> <p><b>sense_key</b> (INT): Actual sense key.</p> <p><b>sense_code</b> (INT): Actual sense code.</p> <p><b>qualifier</b> (INT): Actual sense code qualifier.</p> <p><b>fru_failed</b> (INT): Actual FRU code.</p>

<b>EMS Identifier</b>	disk.lostwriteDetected
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects a lost write.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk level lost write detected on WRITE VERIFY: Disk %s, Block #%%llu: Volume %s, Fileid %d, Block #%%llu: Expected 0x%x, Recomputed as 0x%x.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>bno</b> (LONGINT): Block ID. <b>vol</b> (STRING): Volume name. <b>fileid</b> (INT): File ID. <b>block</b> (LONGINT): File block ID. <b>cksum</b> (INTHEX): Expected checksum. <b>cksum2</b> (INTHEX): Computed checksum.

<b>EMS Identifier</b>	disk.lun.allMemoryAvailable
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs to confirm that enough memory is present to successfully allocate command blocks for all of the disks in the system and for additional LUNS.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	disk_init :Allocated all memory required for array LUNs.
<b>Parameters</b>	

<b>EMS Identifier</b>	disk.lun.outOfMemory
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system cannot allocate the additional memory for LUNs.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	disk_init: Unable to allocate memory for array LUN commands on %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device that could not allocate memory.

<b>EMS Identifier</b>	disk.lun.sizeTooLarge
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an array LUN on an external RAID storage subsystem or a virtual disk is too large to be used as storage by the controller.
<b>Corrective Action</b>	Reduce this array LUN size, or re-create the virtual disk within the parameter limit.
<b>Syslog Message</b>	Array LUN or virtual disk %s is too large (%s bytes) and cannot be used. The maximum permissible array LUN or virtual disk size is %s. Reduce this array LUN size by %lld bytes, or re-create the virtual disk within the parameter limit (%lld %d byte blocks).
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN or virtual disk that is too large. <b>lunSize</b> (STRING): Size, expressed in bytes, of the array LUN or virtual disk that is too large. <b>maxSize</b> (STRING): Maximum permissible array LUN or virtual disk size, expressed in bytes. <b>byteDiff</b> (LONGINT): Difference, expressed in bytes, between the array LUN or virtual disk size and the maximum size Data ONTAP(R) supports. <b>blockDiff</b> (LONGINT): Difference, expressed in blocks, between the array LUN or virtual disk size and the maximum size Data ONTAP supports. <b>blockSize</b> (INT): Block size of the array LUN or virtual disk.

<b>EMS Identifier</b>	disk.lun.sizeTooSmall
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an array LUN on an external RAID storage subsystem or a virtual disk is too small to be used as storage by the controller.
<b>Corrective Action</b>	Delete the array LUN or virtual disk and re-create it within the parameter limit.
<b>Syslog Message</b>	LUN or virtual disk %s is too small (%s bytes) and cannot be used. The minimum permissible LUN or virtual disk size is %s. Increase this LUN or virtual disk size by %lld bytes (%lld %d byte blocks).
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the LUN or virtual disk that is too small. <b>lunSize</b> (STRING): Size, in bytes, of the LUN or virtual disk that is too small. <b>minSize</b> (STRING): Minimum permissible LUN or virtual disk size, expressed in bytes. <b>byteDiff</b> (LONGINT): Difference, in bytes, between the LUN or virtual disk size and the minimum size Data ONTAP(R) supports. <b>blockDiff</b> (LONGINT): Difference, in blocks, between the LUN or virtual disk size and the minimum size Data ONTAP supports. <b>blockSize</b> (INT): Block size of the LUN or virtual disk.

<b>EMS Identifier</b>	disk.lun.unsupportedBlkSize
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an array logical unit (LUN) on the external RAID storage subsystem reports an unsupported block size.
<b>Corrective Action</b>	Reformat the array LUN with a supported block size.
<b>Syslog Message</b>	disk_init: Array LUN %s reports a block size of %u bytes and it cannot be used. Reformat the array LUN with a supported block size.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN with the unsupported block size. <b>sector_size</b> (INT): Unsupported block size.

<b>EMS Identifier</b>	disk.min.OS.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is detected that is not supported in this version of Data ONTAP(R).
<b>Corrective Action</b>	Remove the disk and replace it with a disk that is supported, or upgrade the kernel to the required version.
<b>Syslog Message</b>	%s is not supported because it requires a minimum kernel version of %s. Current version is %s.
<b>Parameters</b>	<b>disk_information</b> (STRING): Disk information. <b>min_OS_version</b> (STRING): Disk's minimum supported Data ONTAP version. <b>cur_OS_version</b> (STRING): Current version of the Data ONTAP.

<b>EMS Identifier</b>	disk.partDiskNotSuppMCC
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a partitioned disk is found in a MetroCluster(TM) configuration.
<b>Corrective Action</b>	Remove the partitioned disk, because it is not supported in a MetroCluster configuration.
<b>Syslog Message</b>	Ignoring disk %s because partitioned disks are not supported in a MetroCluster(TM) configuration.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	disk.partition.exceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disk partition layout contains more partitions than are supported by the system.
<b>Corrective Action</b>	Fix the unsupported disk partition layout by using the 'disk unpartition' command to make the disk a spare disk.
<b>Syslog Message</b>	Disk %s has %d partitions, which exceeds the maximum of %d partitions.
<b>Parameters</b>	<b>disk_name</b> (STRING): Name of the disk. <b>partition_count</b> (INT): Number of partitions on the disk. <b>max_partition_count</b> (INT): Maximum number of partitions supported per disk.

<b>EMS Identifier</b>	disk.partner.sanitizeStart
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a message is received from the partner for a disk sanitize start.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The partner has started a disk sanitize on %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	disk.readReservationFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SCSI (Small Computer System Interface) read reservation fails.
<b>Corrective Action</b>	This is not a problem if seen occasionally. If this message is seen repeatedly, or is blocking access to a LUN for longer than 10 minutes, open a support case to investigate the underlying cause.
<b>Syslog Message</b>	Disk read reservation failed on %s CDB %s - %s (%x %x %x)
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the device.</p> <p><b>cdb</b> (STRING): CDB (Command Descriptor Block) containnig the I/O operation being performed.</p> <p><b>sSenseKey</b> (STRING): Sense key value.</p> <p><b>iSenseKey</b> (INTHEX): Actual sense key.</p> <p><b>iASC</b> (INTHEX): SCSI Additional Sense Code.</p> <p><b>iASCQ</b> (INTHEX): SCSI Additional Sense Code Qualifier.</p> <p><b>sm</b> (STRING): SCSI Persistent Reservation state machine.</p> <p><b>state</b> (INT): SCSI Persistent Reservation state machine step.</p> <p><b>out_status_flags</b> (INTHEX): Status flag contains bits describing which of the following status values are valid.</p> <p><b>ha_status</b> (INTHEX): Value returned by the host adapter driver describing completion status of I/O request execution at the transport or physical link layer.</p> <p><b>target_status</b> (INTHEX): Value returned by the target describing completion status of I/O request.</p> <p><b>target_rsp_code</b> (INTHEX): Target response code.</p>

<b>EMS Identifier</b>	disk.releaseFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SCSI release reservation fails.
<b>Corrective Action</b>	This is not a problem if seen occasionally. If this message is seen repeatedly, or is blocking access to a LUN for longer than 10 minutes, open a support case to investigate the underlying cause.
<b>Syslog Message</b>	Disk release failed on %s CDB %s - %s (%x %x %x)
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the device.</p> <p><b>cdb</b> (STRING): CDB (Command Descriptor Block) containing the I/O operation being performed.</p> <p><b>sSenseKey</b> (STRING): Sense key value.</p> <p><b>iSenseKey</b> (INTHEX): Actual sense key.</p> <p><b>iASC</b> (INTHEX): SCSI Additional Sense Code.</p> <p><b>iASCQ</b> (INTHEX): SCSI Additional Sense Code Qualifier.</p> <p><b>sm</b> (STRING): SCSI Persistent Reservation state machine.</p> <p><b>state</b> (INT): SCSI Persistent Reservation state machine step.</p> <p><b>out_status_flags</b> (INTHEX): Status flag contains bits describing which of the following status values are valid.</p> <p><b>ha_status</b> (INTHEX): Value returned by the host adapter driver describing completion status of I/O request execution at the transport or physical link layer.</p> <p><b>target_status</b> (INTHEX): Value returned by the target describing completion status of I/O request.</p> <p><b>target_rsp_code</b> (INTHEX): Target response code.</p>

<b>EMS Identifier</b>	disk.reserveDelay
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a SCSI reservation command has a longer latency than expected during takeover. This delay could cause a system outage in which case the disk should be removed to prevent further problems. .
<b>Corrective Action</b>	If you see this message before an outage on takeover, remove the specified disk.
<b>Syslog Message</b>	The disk reservation command sent to %s has taken longer than expected: %d msecs during takeover.
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the device.</p> <p><b>elapsed_time</b> (INT): Number of milliseconds for the command to complete.</p>

<b>EMS Identifier</b>	disk.reserveError
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a SCSI reservation is requested for a disk or LUN that is no longer seen.
<b>Corrective Action</b>	A disk or LUN might have been removed from the storage subsystem or the path to a disk or LUN has been lost. Verify that all paths to the disk or LUN are visible to the appliance using the storage show disk -p command.
<b>Syslog Message</b>	disk_reserve: %s was not found: CDB %s - %s (%x %x %x)
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the device.</p> <p><b>cdb</b> (STRING): CDB (Command Descriptor Block) containing the I/O operation being performed.</p> <p><b>sSenseKey</b> (STRING): Sense key string.</p> <p><b>iSenseKey</b> (INTHEX): Sense key value.</p> <p><b>iASC</b> (INTHEX): SCSI Additional Sense Code.</p> <p><b>iASCQ</b> (INTHEX): SCSI Additional Sense Code Qualifier.</p> <p><b>sm</b> (STRING): SCSI Persistent Reservation state machine.</p> <p><b>state</b> (INT): SCSI Persistent Reservation state machine step.</p> <p><b>out_status_flags</b> (INTHEX): Status flag containing bits describing which of the following status values are valid.</p> <p><b>ha_status</b> (INTHEX): Value returned by the host adapter driver describing completion status of I/O request execution at the transport or physical link layer.</p> <p><b>target_status</b> (INTHEX): Value returned by the target describing completion status of I/O request.</p> <p><b>target_rsp_code</b> (INTHEX): Target response code.</p>

<b>EMS Identifier</b>	disk.reserveFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SCSI reservation fails.
<b>Corrective Action</b>	This is not a problem if seen occasionally. If this message is seen repeatedly, or is blocking access to a LUN for longer than 10 minutes, contact NetApp technical support to open a support case to investigate the underlying cause.
<b>Syslog Message</b>	Disk reservation failed on %s CDB %s - %s (%x %x %x)
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the device.</p> <p><b>cdb</b> (STRING): CDB (Command Descriptor Block) containing the I/O operation being performed.</p> <p><b>sSenseKey</b> (STRING): Sense key string.</p> <p><b>iSenseKey</b> (INTHEX): Actual sense key.</p> <p><b>iASC</b> (INTHEX): SCSI Additional Sense Code.</p> <p><b>iASCQ</b> (INTHEX): SCSI Additional Sense Code Qualifier.</p> <p><b>sm</b> (STRING): SCSI Persistent Reservation state machine.</p> <p><b>state</b> (INT): SCSI Persistent Reservation state machine step.</p> <p><b>out_status_flags</b> (INTHEX): Status flag containing bits describing which of the following status values are valid.</p> <p><b>ha_status</b> (INTHEX): Value returned by the host adapter driver describing completion status of I/O request execution at the transport or physical link layer.</p> <p><b>target_status</b> (INTHEX): Value returned by the target describing completion status of I/O request.</p> <p><b>target_rsp_code</b> (INTHEX): This is the target response code</p>

<b>EMS Identifier</b>	disk.rewriteDataFailed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system encounters an error and cannot rewrite data that was difficult to read on ATA drives.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Unable to rewrite %s on disk %s.
<b>Parameters</b>	<p><b>command</b> (STRING): SCSI command that reported a problem.</p> <p><b>diskName</b> (STRING): Name of the device.</p>

<b>EMS Identifier</b>	disk.sanit.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when disk sanitization has been completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s [S/N %s] has completed sanitization.
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the device.</p> <p><b>serialNo</b> (STRING): Serial number of the device.</p>

<b>EMS Identifier</b>	disk.sanit.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk returns an error during sanitization.
<b>Corrective Action</b>	Verify that the drive is capable of sanitization. See the ONTAP(R) Physical Storage Management Guide <a href="https://library.netapp.com/ecmdocs/ECMP12458210/html/GUID-1DC1DEC2-AAB3-483E-805D-82E722023AA6.html">https://library.netapp.com/ecmdocs/ECMP12458210/html/GUID-1DC1DEC2-AAB3-483E-805D-82E722023AA6.html</a> for more information.
<b>Syslog Message</b>	Disk %s has received an error %d (0%hx/0%hx/0%hx/0%hx) during sanitization.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>scsi_error</b> (INT): SCSI error code. <b>sense_key</b> (INT): Actual sense key. <b>sense_code</b> (INT): Actual sense code. <b>qualifier</b> (INT): Actual sense code qualifier. <b>fru_failed</b> (INT): Actual FRU code.

<b>EMS Identifier</b>	disk.sanit.formatComplete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the disk sanitization format phase is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk sanitization format complete for disk %s [S/N %s], begin pattern writes.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>serialno</b> (STRING): Serial number of the device.

<b>EMS Identifier</b>	disk.sanit.formatError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when disk sanitization formatting fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s has received an error %d (0%hx/0%hx/0%hx) during the formatting of the drive. Format will be retried within fifteen minutes.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>status</b> (INT): Error code. <b>sense_key</b> (INTHEX): Actual sense key. <b>sense_code</b> (INTHEX): Actual sense code. <b>qualifier</b> (INTHEX): Actual sense code qualifier.

<b>EMS Identifier</b>	disk.sanit.formatFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when disk sanitization reformatting has been retried unsuccessfully the maximum number of times.
<b>Corrective Action</b>	Disk sanitization reformatting attempts have been unsuccessful. To make the disk usable, it must be reformatted. You can do this in maintenance mode with the SCSI "format" command.
<b>Syslog Message</b>	Disk sanitization reformat has failed for disk %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device.

<b>EMS Identifier</b>	disk.sanit.patternDone
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when disk sanitization has completed a cycle of a pattern write.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s [S/N %s] cycle %d pattern write of 0x%02x completed in %02d:%02d:%02d.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>serialNo</b> (STRING): Serial number of the device. <b>cycle</b> (INT): Sanitization cycle. <b>pattern</b> (INT): Pattern byte. <b>hours</b> (INT): Time in hours. <b>minutes</b> (INT): Time in minutes. <b>seconds</b> (INT): Time in seconds.

<b>EMS Identifier</b>	disk.sanit.randomPatternDone
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when disk sanitization has completed a cycle of random data write.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s [S/N %s] cycle %d pattern write of random data completed in %02d:%02d:%02d.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>serialNo</b> (STRING): Serial number of the device. <b>cycle</b> (INT): Sanitization cycle. <b>hours</b> (INT): Time in hours. <b>minutes</b> (INT): Time in minutes. <b>seconds</b> (INT): Time in seconds.

<b>EMS Identifier</b>	disk.sanit.reformatComplete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when disk sanitization reformatting is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s has been successfully reformatted. To sanitize disk, restart the disk sanitize command. To bypass format, use -s option.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device.

<b>EMS Identifier</b>	disk.sanit.sanitComplete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the SCSI sanitize command phase of a 'disk sanitize' command is complete, and the data pattern write phase begins.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Sanitization phase of the 'disk sanitize' command was completed for disk %s [S/N %s]. Pattern writes have begun.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>serialno</b> (STRING): Serial number of the device.

<b>EMS Identifier</b>	disk.selectionTimeout
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a selection timeout is received.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s: selection timeout
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device.

<b>EMS Identifier</b>	disk.senseError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the drive reports an error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s: op %s sector %llu %s - %s (%x %x %x %x)
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>op</b> (STRING): I/O operation being performed. <b>sector</b> (LONGINT): Sector where the error was detected. <b>senseInfo</b> (STRING): Sense data. <b>sCode</b> (STRING): Sector code. <b>sense_key</b> (INTHEX): SCSI sense key. <b>sense_code</b> (INTHEX): SCSI sense code. <b>qualifier</b> (INTHEX): SCSI sense code qualifier. <b>fru_failed</b> (INTHEX): SCSI FRU code.

<b>EMS Identifier</b>	disk.senseInfoNotValid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when invalid sense information is returned.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s: sense data information field is not valid.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device.

<b>EMS Identifier</b>	disk.setArrayLQD
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when you set the LUN queue depth for all the LUNs of an array.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	All the LUNs on array '%s' have a LUN queue depth value set to %d.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array. <b>lqd</b> (INT): LUN queue depth value.

<b>EMS Identifier</b>	disk.spindleError.detect
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk returns a spindle detect error. The disk will be recommended for failure.
<b>Corrective Action</b>	Disk firmware has detected spindle motor problems. The disk will be recommended for failure. If the disk is a member of a RAID volume, it will be failed by RAID when this error occurs on a RAID I/O and the raid group is not in degraded mode.
<b>Syslog Message</b>	Disk %s has reported a spindle detect error: (%x %x %x %x)
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>sense_key</b> (INTHEX): Actual sense key <b>sense_code</b> (INTHEX): Actual sense code. <b>qualifier</b> (INTHEX): Actual sense code qualifier. <b>fru_failed</b> (INTHEX): Actual FRU code.

<b>EMS Identifier</b>	disk.spindleError.notice
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a disk returns a spindle detect error.
<b>Corrective Action</b>	Disk firmware has detected spindle motor problems. The option to recommend the drive for failure is not set, so the disk will not be automatically recommended for failure.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>sense_key</b> (INT): Actual sense key. <b>sense_code</b> (INT): Actual sense code. <b>qualifier</b> (INT): Actual sense code qualifier. <b>fru_failed</b> (INT): Actual FRU code.

<b>EMS Identifier</b>	disk.stalledTooLong
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk has been stalled too long.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	I/O for disk %s has been suspended %d times for %d seconds.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>count</b> (INT): Count of times suspended. <b>error</b> (INT): Time suspended.

<b>EMS Identifier</b>	disk.tooManyPartitionedDisks
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) finds more partitioned disks present on a platform than the platform supports. The system ignores any partitioned disks above the limit, and they will be unusable.
<b>Corrective Action</b>	Too many partitioned disks have been installed. Reconfigure the system to the maximum number of partitioned disks supported.
<b>Syslog Message</b>	Ignoring partitioned disk %s because the maximum limit of %d partitioned disks supported on this system has been reached.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>maxPartitionedDisks</b> (INT): Maximum number of partitioned disks supported on this platform.

<b>EMS Identifier</b>	disk.tooManyReassignments
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a reassignment fails due to table overflow.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s: sector %llu was NOT reassigned, too many reassignments.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device. <b>error</b> (LONGINT): Bad sector.

<b>EMS Identifier</b>	disk.tooManySpindles
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) finds more disks present on a platform than the platform actually supports. Additional disks above the support number are ignored. Correct this issue before rebooting the system.
<b>Corrective Action</b>	Too many disks have been installed. Reconfigure the system to the maximum number of disks supported.
<b>Syslog Message</b>	Found %d disks, but maximum of %d disks are supported on this system. All additional disks will be ignored. This problem must be resolved before the system is rebooted.
<b>Parameters</b>	<b>actualSpindle</b> (INT): Actual number of disks configured. <b>maxSpindle</b> (INT): Maximum number of disks supported on this platform.

<b>EMS Identifier</b>	disk.uid.changed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a SCSI (Small Computer System Interface) INQUIRY command done during a disk drive initialization sequence finds different data in the INQUIRY response for page 0x83. The unique id (UID) derived from this information has changed unexpectedly.
<b>Corrective Action</b>	Locate the failed disk drive by looking for a disk drive whose amber LED fault light is lit. Replace the disk drive.
<b>Syslog Message</b>	Disk %s has unexpectedly changed its unique ID. vendor:%s product:%s serial_number:%s
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk that had the UID change. <b>disk_vendor_id</b> (STRING): Vendor name of the disk that had the UID change. <b>disk_product_id</b> (STRING): Product name of the disk that had the UID change. <b>disk_serialno</b> (STRING): Serial number of the disk that had the UID change.

<b>EMS Identifier</b>	disk.unableToRewriteData
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Data ONTAP(R) receives too many errors reading from a particular location on an ATA disk drive, but its attempt to rewrite the data to the disk drive fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Difficulty reading disk drive %s with the command %s; could not rewrite the data.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk drive with the problem. <b>command</b> (STRING): SCSI command that reported a problem.

<b>EMS Identifier</b>	disk.vendorSpecificCode
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk returns a vendor-specific error.
<b>Corrective Action</b>	Replace the disk.
<b>Syslog Message</b>	Drive %s has failed with a vendor specific error: class 0x%x segment 0x%x sense_key 0x%x info 0x%x 0x%x 0x%x 0x%x length 0x%x resv_1 0x%x sense_code %d sense_code_qualifier %d fru_failed 0x%x flags 0x%x field_pointer 0x%x.
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the disk.</p> <p><b>class</b> (INTHEX): Sense class.</p> <p><b>segment</b> (INTHEX): Segment.</p> <p><b>sense_key</b> (INTHEX): Actual sense key.</p> <p><b>info0</b> (INTHEX): Vendor-specific information[0].</p> <p><b>info1</b> (INTHEX): Vendor-specific information[1].</p> <p><b>info2</b> (INTHEX): Vendor-specific information[2].</p> <p><b>info3</b> (INTHEX): Vendor-specific information[3].</p> <p><b>len</b> (INTHEX): Length.</p> <p><b>resv</b> (INTHEX): Resv field.</p> <p><b>sense_code</b> (INT): Actual sense code.</p> <p><b>qualifier</b> (INT): Actual sense code qualifier.</p> <p><b>fru_failed</b> (INTHEX): Actual FRU code.</p> <p><b>flags</b> (INTHEX): Flags of the error.</p> <p><b>field_ptr</b> (INTHEX): Sense field pointer.</p>

<b>EMS Identifier</b>	disk.writeVerifyError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a write verify error occurs.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WRITE VERIFY on disk %s received an unexpected status %d.
<b>Parameters</b>	<p><b>diskName</b> (STRING): Name of the device.</p> <p><b>error</b> (INT): Returned error code</p>

## "diskown" Event Group

<b>EMS Identifier</b>	diskown.AAShelf.InterPools
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the controller cannot automatically assign a disk because disks on the shelf and disks on the loop have the same owner but belong to different pools.
<b>Corrective Action</b>	1) Find all of the disks belonging to the same shelf, loop and owners as disk %s (S/N %s) by using the "storage disk show" command with the "-fields shelf, owner, dr-home, pool" option. 2) Assign all of the disks with the same owners on this shelf and other shelves to the same pool. Alternatively, manually assign all unowned disks belonging to this shelf.
<b>Syslog Message</b>	The controller could not automatically assign disk %s (S/N %s) and any other unassigned disks in the same shelf because the disks are shared across multiple pools within the same loop.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	diskown.AAShelf.MoreShelf
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when more than the supported number of shelves are connected to a storage stack.
<b>Corrective Action</b>	1) Check which adapter has more than the supported number of shelves attached by using the "run local storage show shelf" command. 2) Reconfigure the shelves so that the adapter is not connected to more than the supported number of shelves.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.AAShelf.MultiOwners
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the controller cannot automatically assign disks because the disks on the shelf are owned by multiple systems.
<b>Corrective Action</b>	1) Find all of the disks belonging to the same shelf as disk %s (S/N %s) by using the "storage disk show" command. 2) View the list of systems by using the "run local disk show -v" command. 3) Either assign all of the disks on this shelf to a single system, or assign all unowned disks belonging to this shelf.
<b>Syslog Message</b>	The controller could not automatically assign disk %s (S/N %s) because disks on the shelf are owned by multiple systems. Because of this problem, the controller also could not assign any unowned disks on this shelf.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	diskown.AAShelf.MultiPools
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the controller cannot automatically assign a disk because the disks on the shelf are shared across multiple pools.
<b>Corrective Action</b>	1) Find all of the disks belonging to the same shelf as disk %s (S/N %s) by using the "storage disk show" command. 2) View the list of pools by using the "run local disk show -v" command. 3) Either assign all of the disks on this shelf to a single pool, or assign all unowned disks belonging to this shelf.
<b>Syslog Message</b>	The controller could not automatically assign disk %s (S/N %s) and any other unassigned disks in the same shelf because the disks are shared across multiple pools.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	diskown.AAShelf.NoMemory
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the node cannot allocate memory for shelf-level automatic assignment.
<b>Corrective Action</b>	Initiate the automatic disk assign by running the "storage disk assign -auto true -node node-name" CLI command. If the out-of-memory condition persists, perform a manual disk assign.
<b>Syslog Message</b>	Memory not allocated for shelf-level automatic assignment.
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.AAShelf.NoOwner
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the controller cannot automatically assign a disk because none of the disks on the shelf are owned by any system.
<b>Corrective Action</b>	1) Find all of the disks belonging to the same shelf as disk %s (S/N %s) by using the "storage disk show" command. 2) View the list of systems by using the "run local disk show -v" command. 3) Either assign all of unowned disks in this shelf or assign one of the disks on this shelf by using the "storage disk assign" command.
<b>Syslog Message</b>	The controller could not automatically assign disk %s (S/N %s) (and other unassigned disks in the same shelf, if any) because no disks on the shelf are owned by any system.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	diskown.assign.splitOwner
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the "storage disk assign" command fail to assign a disk to a different owner from the other disks within the carrier. This is because the "storage disk assign" command with the -f option must be used in such cases.
<b>Corrective Action</b>	Use the "storage disk assign" command with the -f option to assign the disk to a different owner from the other disks within the carrier.
<b>Syslog Message</b>	Assigning ownership failed for disk %s. Use the "storage disk assign" command with the -f option to assign the disk to a different owner from the other disks within the carrier.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	diskown.AssignExceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt is made to assign more disks than are supported by this node.
<b>Corrective Action</b>	Review the system capacity limits and the assigned disks on this system.
<b>Syslog Message</b>	The maximum number of disks that can be assigned to this node has been exceeded. Attempted to assign %d, maximum supported: %d.
<b>Parameters</b>	<b>attempted</b> (INT): Number of disks attempted to assign. <b>supported</b> (INT): Number of disks supported.

<b>EMS Identifier</b>	diskown.AutoAssign.MultipleOwners
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when automatic assigning of a disk fails because the disks on the loop are owned by multiple systems.
<b>Corrective Action</b>	Use the "storage disk show" command to view the list of systems, and then assign all of the disks on this loop to a single system. Or use the "storage disk assign" command to manually assign this disk.
<b>Syslog Message</b>	Automatic assigning failed for disk %s (S/N %s) because the disks on the loop are owned by multiple systems. Automatic assigning failed for all unowned disks on this loop.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	diskown.AutoAssign.MultiplePools
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when automatic assigning of a disk fails because the disks on the loop are shared across multiple pools.
<b>Corrective Action</b>	Use the "storage disk assign -pool" command to assign all of the disks on this loop to a single pool. Or use the "storage disk assign" command to manually assign this disk.
<b>Syslog Message</b>	Automatic assigning failed for disk %s (S/N %s) because the disks on the loop are shared across multiple pools. Automatic assigning failed for all unowned disks on this loop.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	diskown.AutoAssign.NoOwner
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when automatic assigning of a disk fails because none of the disks on the loop are owned by any system.
<b>Corrective Action</b>	Use the "run local disk show -v" command to get the list of systems and unowned disks. Manually assign one of the disks on this loop by using the "storage disk assign" command.
<b>Syslog Message</b>	Automatic assigning failed for disk %s (S/N %s) because none of the disks on the loop are owned by any system. Automatic assigning failed for all unowned disks on this loop.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	diskown.AutoAssignProblem
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) attempts to assign a disk automatically, but the request fails. The failure could be due to a disk error or a user simultaneously assigning the disk to a storage system.
<b>Corrective Action</b>	Use the "disk show -v" nodeshell command to determine the status of the disk. Use the "storage disk assign" command to assign the disk.
<b>Syslog Message</b>	Automatic assigning failed for disk %s (S/N %s). Reason: %s
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	diskown.changingOwner
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the ownership of a disk is being changed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Changing ownership of disk %s (S/N %s) from node "%s" (ID %u, DR home ID %u) to node "%s" (ID %u, DR home ID %u).
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk. <b>oldownername</b> (STRING): Name of the former owner node. <b>oldownerid</b> (INT): System ID of the former owner node. <b>olddrhomeownerid</b> (INT): System ID of the former disaster recovery home node. <b>newownername</b> (STRING): Name of the new owner node. <b>newownerid</b> (INT): System ID of the new owner node. <b>newdrhomeownerid</b> (INT): System ID of the new disaster recovery home node. <b>thread</b> (STRING): Name of the thread that issued the ownership change request. <b>APIname</b> (STRING): Name of the API that issued ownership change request.

<b>EMS Identifier</b>	diskown.cleaningOwnership
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a "storage disk assign -f" command is run for an SES drive and the system discovers that the newly assigned owner already owns an SES drive on the same loop and shelf as the supplied drive. The assign is completed because it is a forced assign, but the error message is generated as an alert.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s (S/N %s) contains software-based disk ownership information that indicates it was previously in use by system ID %u. The ownership information is being cleared.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk. <b>ownerid</b> (INT): System ID of the system that owned the disk.

<b>EMS Identifier</b>	diskown.completion.timer.reEnabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the COMPLETION events from sanown layer remain after an aggregate is migrated from a source to a destination. Typically the events are enabled automatically, and if that doesn't happen within a certain amount of time, the system reenables the COMPLETION events and logs this message.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Sanown completion event timer reenabled after a giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.delayed.completionEvent
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the software disk ownership module completes the process of updating its view of the disks attached to the system but delays notifying other layers of the completion of this process. Typically, this happens when an SFO aggregate giveback is in progress on the HA partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Software disk ownership module temporarily delayed notification that it has completed updating its view of the disks.
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.disk.already.deleted
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during an attempt to assign a disk that is being deleted. This can happen if the disk is deleted at the storage layer while disk assignment is in progress.
<b>Corrective Action</b>	Run the "run local disk show -v" command to see the list of available disks, and then retry the operation using one of the listed disks.
<b>Syslog Message</b>	Assign request failed for disk %s because it is being deleted.
<b>Parameters</b>	<b>disk_name</b> (STRING): Name of the disk that is being deleted.

<b>EMS Identifier</b>	diskown.diskHasWrongInfo
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disk ownership information on a disk does not belong to the disk that it was read from. This could be a result of a read going to the wrong disk or a prior write intended for some other disk getting written to the disk.
<b>Corrective Action</b>	On the controller that owns the disk, use the "storage disk assign" command to rewrite the ownership information to the disk.
<b>Syslog Message</b>	Disk %s (S/N %s) has ownership information for disk %s (S/N %s) on it.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk from which the ownership information was read. <b>serialNo</b> (STRING): Serial number of the disk from which the ownership information was read. <b>infoForDiskname</b> (STRING): Name of the disk that the ownership information is for. <b>infoForSerialNo</b> (STRING): Serial number of the disk that the ownership information is for.

<b>EMS Identifier</b>	diskown.diskNotSup
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when newly inserted disks are only supported with software disk ownership enabled, but it is not enabled.
<b>Corrective Action</b>	Halt the system by using the "halt" command, and then turn on software disk ownership by using the "storage disk assign" command. After you assign the disks, the system can recognize them.
<b>Syslog Message</b>	Newly added disk %s (and others) is only supported with software disk ownership enabled.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	diskown.diskWasStolen
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the ownership of a disk owned by the system is changed such that the disk is no longer owned by the system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s (S/N %s) has had its ownership changed so that it is no longer owned by this system. This can lead to a system panic if the disk is a filesystem disk.
<b>Parameters</b>	<b>diskname</b> (STRING): The name of the disk <b>serialno</b> (STRING): The serial number of the disk

<b>EMS Identifier</b>	diskown.duplicateSoftEntries
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we find duplicate entries in the sanown filer table.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>ems_txt</b> (STRING): The warning message

<b>EMS Identifier</b>	diskown.errorDuringIO
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when an I/O error occurs during a sanown disk operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	error %d (%s) on disk %s (S/N %s) while %s
<b>Parameters</b>	<b>errorno</b> (INT): The error number that occurred <b>errortext</b> (STRING): The error description as text <b>diskname</b> (STRING): The name of the disk <b>serialno</b> (STRING): The serial number of the disk <b>details</b> (STRING): The operation that was going on

<b>EMS Identifier</b>	diskown.errorReadingOwnership
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we get an error while reading all the DOWNs at once. The recovery is to read them individually.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	error %d (%s) while reading ownership on disk %s (S/N %s)
<b>Parameters</b>	<b>errorno</b> (INT): The error that occurred <b>errortext</b> (STRING): The error description as text <b>diskname</b> (STRING): The name of the disk <b>serialno</b> (STRING): The serial number of the disk

<b>EMS Identifier</b>	diskown.generated.completionEvent
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the software disk ownership module notifies other layers that it has completed the process of updating its view of the disks attached to the system. These notifications were previously disabled for a short time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Software disk ownership module notified other layers that it has completed updating its view of the disks.
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.hlfShlf.assignStatus
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when half shelf based disk assignment is enabled or disabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Half shelf based automatic disk assignment is "%s".
<b>Parameters</b>	<b>state</b> (STRING): Half shelf-based disk assignment state - enabled or disabled.

<b>EMS Identifier</b>	diskown.hlfShlf.invalidShlf
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the controller cannot automatically assign disks to a shelf using half shelf-based disk assignment, either because the shelf is offline, or is temporarily unavailable and therefore cannot be queried for the information required to properly divide the disks for assignment to the controller. Automatic half shelf-based disk assignment is bypassed for disks in this shelf until the shelf is back online.
<b>Corrective Action</b>	Use the "storage shelf show" command to ensure that the specified shelf is online and to ensure connectivity from the controller to all paths to the shelf.
<b>Syslog Message</b>	Half shelf based disk assignment will be skipped for shelf "%d" because the shelf is in invalid state.
<b>Parameters</b>	<b>shelf_id</b> (INT): Shelf identifier.

<b>EMS Identifier</b>	diskown.hlfShlf.MultiOwners
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the controller cannot automatically assign disks using half shelf based disk assignment because disks in a shelf are assigned to multiple systems in a conflicting manner.
<b>Corrective Action</b>	1) Find all of the disks belonging to the shelf specified by using the "storage disk show" command. 2) View the list of systems by using the "run local disk show -v" command. 3) Ensure that disks assigned on lower half bays of the shelf are owned by a single owner. Similarly, ensure that disks assigned on higher half bays of that shelf are owned by a single owner. Ensure that disks assigned on lower half bays have a different owner than disks assigned on higher half bays.
<b>Syslog Message</b>	The controller cannot automatically assign disks using half shelf based disk assignment because disks in shelf "%d" are assigned to multiple systems in a conflicting manner.
<b>Parameters</b>	<b>shelf_id</b> (INT): Shelf identifier.

<b>EMS Identifier</b>	diskown.IncorrectOwnerName
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when we find a system finds a disk that it owns, but which has a different owner name than the system name.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s has incorrect owner name information (%s). It will be changed to match the system name (%s).
<b>Parameters</b>	<b>diskname</b> (STRING): The name of the disk for which this was observed <b>wrong_ownername</b> (STRING): The owner name, which is incorrect, that the disk currently has <b>system_name</b> (STRING): The system name that should be the owner name for the disk

<b>EMS Identifier</b>	diskown.isBeingEnabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when the system is being converted from non-software based disk ownership to software based disk ownership
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	System is being changed to use software based disk ownership
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.isEnabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when enable sanown.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	software ownership has been enabled for this system
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.mccip.assignStatus
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when MCC quarter shelf-based disk assignment is enabled or disabled. It is enabled when the system is a member of an All Flash FAS (AFF) HA pair in a 4-node MCC IP configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	MCC quarter shelf-based automatic disk assignment is "%s".
<b>Parameters</b>	<b>state</b> (STRING): MCC quarter shelf-based disk assignment status - enabled or disabled.

<b>EMS Identifier</b>	diskown.mccip.invalidShlf
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the controller cannot automatically assign disks because the shelf is either offline, or temporarily unavailable and therefore cannot be queried for the information that is required to properly assign the disks to the controller. Automatic disk assignment fails for the disks in this shelf until the shelf is back online.
<b>Corrective Action</b>	Use the "storage shelf show" command to verify that the specified shelf is online and to verify connectivity from the controller to all of the paths to the shelf.
<b>Syslog Message</b>	The system cannot automatically assign disks for shelf "%d" because the shelf is in an invalid state.
<b>Parameters</b>	<b>shelf_id</b> (INT): Shelf identifier.

<b>EMS Identifier</b>	diskown.mccip.MultiOwners
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot automatically assign disks because some of the disks are assigned to multiple systems in a conflicting manner.
<b>Corrective Action</b>	1) Find all of the disks belonging to the specified shelf by using the "storage disk show" command. 2) View the list of systems by using the "disk show -v" command. 3) Ensure that the disks on each shelf are assigned such that lower half bays are assigned to the local high-availability (HA) pair and the higher half bays are assigned to the remote HA pair. Additionally within each half shelf, ensure that the disks are assigned equally to the HA pair such that the lower quarter bays are assigned to one node and the higher quarter bays are assigned to the node's HA partner.
<b>Syslog Message</b>	The system cannot automatically assign disks because the disks in shelf "%d" are assigned to multiple systems in a conflicting manner.
<b>Parameters</b>	<b>shelf_id</b> (INT): Shelf identifier.

<b>EMS Identifier</b>	diskown.ownerChangeFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk ownership change request fails.
<b>Corrective Action</b>	Verify that there are no disk connectivity issues, that disks are not in a failed state, and that the procedures for executing the "storage disk assign" command are being followed.
<b>Syslog Message</b>	Disk ownership change request failed on disk %s (S/N %s). Reason: %s.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk. <b>status</b> (STRING): Description of the error in the ownership change request. <b>thread</b> (STRING): Name of the thread that issued the ownership change request. <b>APIname</b> (STRING): Name of the API that issued the ownership change request.

<b>EMS Identifier</b>	diskown.OwnerNameUpdateFailed
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we have to rewrite a DOWN because it is out of date wrt the other DOWNS.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	owner name update failed for disk %s (S/N %s)
<b>Parameters</b>	<b>diskname</b> (STRING): The name of the disk <b>serialno</b> (STRING): The serial number of the disk

<b>EMS Identifier</b>	diskown.ownerReservationMismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system discovers a disk that is supposed to be owned by one node, but the persistent reservation is owned by another node.
<b>Corrective Action</b>	1) Find the disk causing the conflict from EMS messages. 2) If the disk is in the spare pool, go to step 5. 3) Run the "storage aggr status -r" command to find the aggregate containing the disk. 4) If the aggregate is online, bring it offline by using the "storage aggr modify -aggr aggr_name -state offline" command. 5) Run the "storage disk show -fields owner-id,reserver-id" command to identify the reservation owner of the disk. 6) Run the "storage disk assign disk_name -s partner_sys_id -f" command to perform the disk assignment change from the node that owns the reservation for the disk.
<b>Syslog Message</b>	disk %s (S/N %s) is supposed to be owned by this node but has a persistent reservation placed by node %s (ID %u).
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk. <b>resvownername</b> (STRING): Name of the system owning the reservation. <b>resvowner</b> (INT): System ID of the node owning the reservation.

<b>EMS Identifier</b>	diskown.RAID.Ownershipchange
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk assign or disk remove ownership request is rejected at the RAID layer.
<b>Corrective Action</b>	Review the error message and verify that the request was not for a file system disk.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>err_msg</b> (STRING): Reason the request failed.

<b>EMS Identifier</b>	diskown.ReassignFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk reassign request fails.
<b>Corrective Action</b>	Verify that there are no disk connectivity issues and that the procedures for executing the 'storage disk reassign' command are being followed.
<b>Syslog Message</b>	Disk reassign request failed. Reason: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for failure.

<b>EMS Identifier</b>	diskown.releasingMismatchedReservation
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we release the reservation because the DOWN says the disk is owned by someone else.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s is releasing reservation on disk %s (S/N %s) as it is owned by %s (ID %u)
<b>Parameters</b>	<b>originator</b> (STRING): The internal component of diskown issuing the event <b>diskname</b> (STRING): The name of the disk <b>serialno</b> (STRING): The serial number of the disk <b>filername</b> (STRING): The name of the filer that owns the disk <b>systemid</b> (INT): The system id of the filer that owns the disk

<b>EMS Identifier</b>	diskown.replayingOwnership
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event occurs during a boot or takeover when a disk ownership request is replayed from NVRAM.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Replaying ownership request for %d disks
<b>Parameters</b>	<b>diskcount</b> (INT): The number of disks in the ownership request

<b>EMS Identifier</b>	diskown.replayingOwnership.Nv
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during takeover, when a disk ownership request is replayed from NVRAM but NVRAM corruption is detected.
<b>Corrective Action</b>	1) If you changed the ownership of disks on the partner in the last five minutes prior to takeover, verify their ownerships were stored by using the "storage disk show" command. 2) If you see this message often or in other modules, the partner's NVRAM card might be faulty and might need to be replaced.
<b>Syslog Message</b>	Failed to replay disk ownership because NVRAM corruption was detected.
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.rescan.notConnected
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the high-availability (HA) messaging layer fails to connect to the specified node for disk ownership updates.
<b>Corrective Action</b>	Run the command "run local disk show -v" from the node specified in the node parameter to correct disk ownership.
<b>Syslog Message</b>	HA messaging layer on the local node failed to connect to node %s for disk ownership updates.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node where disk ownership might be outdated. <b>status</b> (INT): Error number returned by the HA messaging layer from the HA message error space. <b>scope</b> (INT): Internal scope identifier for the module that returned the error. <b>scope_err</b> (INT): Internal error number returned by the module.

<b>EMS Identifier</b>	diskown.rescan.notSent
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the high-availability (HA) messaging layer fails to send a disk ownership update message.
<b>Corrective Action</b>	Run the command "run local disk show -v" from the node specified in the node parameter to correct disk ownership.
<b>Syslog Message</b>	HA messaging layer on the local node failed to send a disk ownership update message to node %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node where disk ownership might be outdated. <b>status</b> (INT): Error number returned by the HA messaging layer from the HA message error space. <b>scope</b> (INT): Internal scope identifier for the module that returned the error. <b>scope_err</b> (INT): Internal error number returned by the module.

<b>EMS Identifier</b>	diskown.RescanMessageFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs while transferring the ownership of a disk to another node, when a rescan message is sent but does not go through.
<b>Corrective Action</b>	Use the "disk show" command on the nodeshell of %s for the node to rescan the disks which changed ownership.
<b>Syslog Message</b>	Could not send rescan message to %s.
<b>Parameters</b>	<b>hostname</b> (STRING): Name of the host that the message was sent to.

<b>EMS Identifier</b>	diskown.rescanWait
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the disk ownership rescan code waits.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>status</b> (STRING): Description on the type of wait.

<b>EMS Identifier</b>	diskown.rewriteOwner
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when we have to rewrite a DOWN because it is out of date wrt the other DOWNS.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	rewriting ownership information for disk %s (S/N %s)
<b>Parameters</b>	<b>diskname</b> (STRING): The name of the disk <b>serialno</b> (STRING): The serial number of the disk

<b>EMS Identifier</b>	diskown.sharedDsk.nonHACfg
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk is shared by multiple nodes in a non-HA or stand-alone configuration. If the procedure to convert an HA configuration to a non-HA configuration is not followed properly, the system may end up either having disks whose partitions are owned by another node, or owning partitions on non-local disks.
<b>Corrective Action</b>	Refer to the High-Availability Configuration Guide.
<b>Syslog Message</b>	Either some local disks have partitions that are not owned by the local node, or the local node owns partitions on non-local disks.
<b>Parameters</b>	

<b>EMS Identifier</b>	diskown.statusReadOwnership
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an event is logged to track that an error was encountered while reading all data ownership blocks at once. Data ONTAP(R) will attempt to recover by reading each disk ownership block individually.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>errorno</b> (INT): Error that occurred. <b>errortext</b> (STRING): Error description as text. <b>diskname</b> (STRING): Name of the disk. <b>serialno</b> (STRING): Serial number of the disk.

<b>EMS Identifier</b>	diskown.StealingDisk
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a user reassigns a disk that is owned and has a reservation from another system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Ownership for disk %s (S/N %s) is being stolen from node "%s" (System ID: %u).
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk whose ownership is being reassigned. <b>serialno</b> (STRING): Serial number of the disk. <b>hostname</b> (STRING): Name of the host that currently owns the disk. <b>systemid</b> (INT): System ID of the host that currently owns the disk. <b>thread</b> (STRING): Name of the thread that issued the ownership change request. <b>APIname</b> (STRING): Name of the API that issued the ownership change request.

<b>EMS Identifier</b>	diskown.StealingDiskPrevented
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a "storage disk assign" operation is performed on a disk that is owned and has a reservation from another system. The reservation prevents the disk ownership change from being completed.
<b>Corrective Action</b>	Perform the "storage disk assign" operation on the system that currently owns the disk.
<b>Syslog Message</b>	Ownership for disk %s (S/N %s) cannot be changed because node "%s" (System ID: %u) currently owns the persistent reservation.
<b>Parameters</b>	<b>diskname</b> (STRING): Name of the disk whose ownership is being assigned. <b>serialno</b> (STRING): Serial number of the disk. <b>hostname</b> (STRING): Name of the host that currently owns the disk. <b>systemid</b> (INT): System ID of the host that currently owns the disk. <b>thread</b> (STRING): Name of the thread that issued the ownership change request. <b>APIname</b> (STRING): Name of the API that issued the ownership change request.

<b>EMS Identifier</b>	diskown.UpRevVersion
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when disk ownership information has been read and found to be from a version that is higher (newer) than what the current version of Data ONTAP understands. New fields in the ownership information will be ignored.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>diskname</b> (STRING): The name of the disk with the newer version. <b>serialno</b> (STRING): The serial number of the disk. <b>foundversion</b> (INT): The version of the disk ownership information found on the disk. <b>curversion</b> (INT): The version of the disk ownership information that the current Data ONTAP uses.

<b>EMS Identifier</b>	diskown.WaitingForReassign
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a giveback is occurring and the "storage disk reassign" is in progress. The giveback must wait until the reassign operation is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Waiting for ownership of the partner disks to be updated as a result of a "storage disk reassign" command.
<b>Parameters</b>	

## "diskshelf" Event Group

<b>EMS Identifier</b>	diskShelf.psu.added
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a power supply unit is added to the disk shelf.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s power supply was added to %s.shelf%d
<b>Parameters</b>	<b>location</b> (STRING): Which power supply was added. <b>channelName</b> (STRING): Channel connected to disk shelf. <b>shelfIdent</b> (INT): ID number displayed on the disk shelf OPS panel. <b>serialNumber</b> (STRING): Serial number of disk shelf.

<b>EMS Identifier</b>	diskShelf.psu.removed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a power supply unit is removed from the disk shelf.
<b>Corrective Action</b>	Insert a functional power supply unit into the disk shelf.
<b>Syslog Message</b>	%s power supply was removed from %s.shelf%d
<b>Parameters</b>	<b>location</b> (STRING): Which power supply was removed. <b>channelName</b> (STRING): Channel connected to disk shelf. <b>shelfIdent</b> (INT): ID number displayed on the disk shelf OPS panel. <b>serialNumber</b> (STRING): Serial number of disk shelf.

<b>EMS Identifier</b>	diskShelf.support.file
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a new disk shelf support file is detected. Current support level of existing shelves will be checked.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	New disk shelf support file (DQP) detected.
<b>Parameters</b>	

<b>EMS Identifier</b>	diskShelf.supported
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a newly supported disk shelf is detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk shelf %s (%s) is now supported.
<b>Parameters</b>	<b>device</b> (STRING): Device address of the disk shelf. <b>product_id</b> (STRING): Product ID of the disk shelf.

<b>EMS Identifier</b>	diskShelf.unsupported
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when ONTAP(R) software detects an unsupported disk shelf.
<b>Corrective Action</b>	Verify that the disk shelf attached is supported by the version of ONTAP running on the storage controller. If the disk shelf is supported, replace the disk shelf module.
<b>Syslog Message</b>	Disk shelf %s (%s) is unsupported.
<b>Parameters</b>	<b>device</b> (STRING): Device address of the disk shelf. <b>product_id</b> (STRING): Product ID of the disk shelf.

## "dm" Event Group

<b>EMS Identifier</b>	dm.cluster.rebaselinefailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when resynchronization of the cluster configuration failed in a MetroCluster(tm) configuration.
<b>Corrective Action</b>	Use the "metrocluster check config-cluster resync" command to resynchronize the cluster configuration.
<b>Syslog Message</b>	Cluster configuration resynchronization failed for cluster %s.
<b>Parameters</b>	<b>cluster</b> (STRING): Name of the cluster whose configuration is being replicated.

<b>EMS Identifier</b>	dm.vserver.mcc.rebaselinefailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when resynchronization of the Vserver configuration failed in a MetroCluster(tm) configuration.
<b>Corrective Action</b>	Use the "metrocluster vserver resync" command to resynchronize the Vserver configuration.
<b>Syslog Message</b>	Vserver configuration resynchronization failed for Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver whose configuration is being replicated.

<b>EMS Identifier</b>	dm.vserver.sm.rebaselinefailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when resynchronization of the Vserver configuration failed in a Vserver DR relationship.
<b>Corrective Action</b>	Use the "snapmirror resync" command to resynchronize the Vserver configuration.
<b>Syslog Message</b>	Vserver configuration resynchronization failed for Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver whose configuration is being replicated.

<b>EMS Identifier</b>	dm.vserver.unlockfailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when unlocking the Vserver failed after resynchronization of the Vserver configuration in a MetroCluster(tm) configuration or Vserver DR setup. Management operations on this Vserver will fail, until an unlock operation is done by the admin manually.
<b>Corrective Action</b>	Use the "vserver unlock -force true" command at diagnostic privilege to manually unlock the Vserver.
<b>Syslog Message</b>	Vserver unlock failed for Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver whose unlock operation failed.

## "dns" Event Group

<b>EMS Identifier</b>	dns.disabled.configs.removed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the last system to be upgraded in a cluster removes DNS configurations that were marked as disabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	All DNS configurations with the "-state" parameter set to "disabled" were removed.
<b>Parameters</b>	

<b>EMS Identifier</b>	dns.server.timed.out
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the DNS server fails to respond to a query and timeout occurs.
<b>Corrective Action</b>	Make sure that the DNS server is up and running and that there are no networking issues preventing the Vserver from communicating with the DNS server.
<b>Syslog Message</b>	DNS server %s did not respond to vserver = %s within timeout interval.
<b>Parameters</b>	<b>ipaddr</b> (STRING): Ip address of the DNS server. <b>vsName</b> (STRING): Name of the Vserver for which DNS response timed out.

## "download" Event Group

<b>EMS Identifier</b>	download.request
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when a user-initiated download is initiated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Operator requested download initiated
<b>Parameters</b>	

<b>EMS Identifier</b>	download.requestDone
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when a user-initiated download has completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Operator requested download completed
<b>Parameters</b>	

<b>EMS Identifier</b>	download.requestDoneError
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when a user-initiated download did not complete successfully because of a problem. See console log for problem and corrective action.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Operator requested download failed.
<b>Parameters</b>	

## "ds" Event Group

<b>EMS Identifier</b>	ds.sas.config.warning
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects a configuration problem on the shelf I/O module.
<b>Corrective Action</b>	Reseat the disk shelf I/O module. If that does not fix the problem, replace the disk shelf I/O module.
<b>Syslog Message</b>	Configuration error on Serial Attached SCSI (SAS) I/O module %s channel %s shelf ID %lld - %s of %d expected %d
<b>Parameters</b>	<b>module_id</b> (STRING): Module (A or B) that is experiencing the problem. <b>channel</b> (STRING): Channel of the shelf that is experiencing the problem. <b>shelfId</b> (LONGINT): Shelf ID of the shelf that is experiencing the problem. <b>desc</b> (STRING): Description of the parameter that is misconfigured. <b>actual</b> (INT): Actual value for this configuration parameter on the shelf I/O module. <b>expected</b> (INT): Expected value for this configuration parameter on the disk shelf I/O module.

<b>EMS Identifier</b>	ds.sas.drivephy.disableErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a drive physical layer device (phy) on a Serial Attached SCSI (SAS) I/O module is disabled due to one of the following reasons: manually bypassed; exceeded loss of double word synchronization threshold; exceeded running disparity threshold; Transmitter fault; exceeded CRC error threshold; exceeded invalid double word threshold; exceeded phy reset problem threshold; exceeded broadcast change threshold; or mirroring disabled on the other I/O module.
<b>Corrective Action</b>	Replace the disabled disk drive.
<b>Syslog Message</b>	Disk %s%s on channels %s shelf ID %lld %s%s%s
<b>Parameters</b>	<b>phy</b> (STRING): Physical layer device (phy) that is being disabled. <b>disk_data</b> (STRING): Disk data includes vendor name, model, firmware revision and the serial number of the disabled disk. If unable to access the disk then, this field is blank. <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (LONGINT): Shelf ID of the disk shelf reporting the error. <b>element</b> (STRING): IOM (I/O module) designator (A or B). <b>bay</b> (STRING): Bay in which the disk is installed. <b>reason</b> (STRING): Reason the disk phy was disabled.

<b>EMS Identifier</b>	ds.sas.element.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Serial Attached SCSI (SAS) module in a disk shelf reports an error.
<b>Corrective Action</b>	Check cabling to the shelf. Check the status LED on the shelf, making sure that the fault LEDs are not on. Clear any fault condition, if possible.
<b>Syslog Message</b>	State of shelf module %s is %s on channels %s shelf id %d
<b>Parameters</b>	<b>element</b> (STRING): Shelf module designator (A or B). <b>state</b> (STRING): Current state of IOM. <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Shelf ID (0-99) of the shelf reporting the error.

<b>EMS Identifier</b>	ds.sas.element.xport.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Serial Attached SCSI (SAS) disk shelf module reports a transport error.
<b>Corrective Action</b>	Check cabling to the shelf. Check the status LED on the shelf, making sure that the fault LEDs are not on. Clear any fault condition, if possible.
<b>Syslog Message</b>	Shelf module %s XPORT ERROR on channels %s shelf id %d
<b>Parameters</b>	<b>element</b> (STRING): Shelf module designator (A or B). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Shelf ID (0-99) of the shelf reporting the error.

<b>EMS Identifier</b>	ds.sas.hostphy.disableErr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a host physical layer device (phy) on a Serial Attached SCSI (SAS) I/O module is disabled due to one of the following reasons: manually bypassed; exceeded loss of double word synchronization threshold; exceeded running disparity threshold Transmitter fault; exceeded CRC error threshold; exceeded invalid double word threshold; exceeded phy reset problem threshold; exceeded broadcast change threshold; or mirroring disabled on the other I/O module.
<b>Corrective Action</b>	Replace the shelf module to which the concerned host phy belongs.
<b>Syslog Message</b>	%s on channels %s shelf id %lld %s%s
<b>Parameters</b>	<b>phy</b> (STRING): Host phy which is being disabled. <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (LONGINT): Shelf ID of the shelf reporting the error. <b>element</b> (STRING): I/O module designator (A or B). <b>reason</b> (STRING): Reason the host phy was bypassed.

<b>EMS Identifier</b>	ds.sas.id.conflict.cleared
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a shelf ID conflict on a channel reported earlier is resolved.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Shelf ID conflict on channel %s (shelf ID: %lld, S/N: %s) was cleared.
<b>Parameters</b>	<b>channel</b> (STRING): Channel that the shelf is attached to. <b>shelfId</b> (LONGINT): Shelf ID. <b>SerialNumber</b> (STRING): Shelf serial number.

<b>EMS Identifier</b>	ds.sas.id.conflict.detected
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SAS shelf ID conflict is detected on a channel.
<b>Corrective Action</b>	Ensure that all of the disk shelves in a high-availability pair have a unique shelf ID. For instructions, see "Changing the disk shelf ID" in the Disk Shelf Installation and Service Guide for the shelf model.
<b>Syslog Message</b>	SAS shelf on channel %s (shelf ID: %lld, S/N: %s) reported a shelf ID conflict.
<b>Parameters</b>	<b>channel</b> (STRING): Channel that the shelf is attached to. <b>shelfId</b> (LONGINT): Shelf ID. <b>SerialNumber</b> (STRING): Shelf serial number.

<b>EMS Identifier</b>	ds.sas.multPhys.disableErr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects that multiple Physical Layer Devices (PHYs) are disabled on a SAS disk shelf.
<b>Corrective Action</b>	Check whether the problems on the PHYs are valid by looking for PHY errors in nearby events. If multiple PHYs are disabled at the same time in a particular disk shelf module, replace the disk shelf module.
<b>Syslog Message</b>	Multiple phys have been disabled on the disk shelf %d on Channels %s, %s.
<b>Parameters</b>	<b>shelfID</b> (INT): ID of the disk shelf reporting the error. <b>channels</b> (STRING): Channels that have the error. "Channel" can be an adapter port, (for example, 0c), or PARTNER for high-availability partner, or UNUSED if unconnected. <b>element</b> (STRING): Disk shelf module designator (A or B).

<b>EMS Identifier</b>	ds.sas.ses.disableErr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a virtual (SES) physical layer device (phy) on a Serial Attached SCSI (SAS) I/O module is disabled due to one of the following reasons: manually bypassed; exceeded loss of double word synchronization threshold; exceeded running disparity threshold; Transmitter fault; exceeded CRC error threshold; exceeded invalid double word threshold; exceeded phy reset problem threshold; or exceeded broadcast change threshold.
<b>Corrective Action</b>	Replace the shelf module.
<b>Syslog Message</b>	SES phy on channel %s shelf id %lld module %s is disabled.
<b>Parameters</b>	<b>channel</b> (STRING): Channel that has the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (LONGINT): Shelf ID of the shelf reporting the error. <b>element</b> (STRING): I/O module designator (A or B).

<b>EMS Identifier</b>	ds.sas.xfer.element.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an element had a fault during an I/O request. It might be due to a transient condition in link connectivity.
<b>Corrective Action</b>	Check cabling to the shelf. Check the status LED on the shelf, making sure that the fault LEDs are not on. Clear any fault condition, if possible.
<b>Syslog Message</b>	I/O failure on shelf module %s on channels %s shelf id %d, status is %s.
<b>Parameters</b>	<b>element</b> (STRING): Shelf module designator (A or B). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Shelf ID (0-99) of the shelf reporting the error. <b>state</b> (STRING): Current state of IOM.

<b>EMS Identifier</b>	ds.sas.xfer.not.sent
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an I/O transfer could not be sent. It might be due to a transient condition in link connectivity.
<b>Corrective Action</b>	Check cabling to the shelf. Check the status LED on the shelf, making sure that the fault LEDs are not on. Clear any fault condition, if possible.
<b>Syslog Message</b>	Shelf module %s I/O failure NOT_SENT channels %s shelf id %d
<b>Parameters</b>	<b>element</b> (STRING): Shelf module designator (A or B). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Shelf ID (0-99) of the shelf reporting the error.

<b>EMS Identifier</b>	ds.sas.xfer.unknown.error
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an unknown error occurs during an I/O request.
<b>Corrective Action</b>	Ensure that the shelf module firmware and ONTAP(R) software are compatible versions. Find firmware versions at the NetApp technical support web site.
<b>Syslog Message</b>	Shelf module %s I/O failure UNKNOWN: %d channels %s shelf id %d
<b>Parameters</b>	<b>element</b> (STRING): Shelf module designator (A or B). <b>status</b> (INT): Error status code. <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Shelf ID (0-99) of the shelf reporting the error.

<b>EMS Identifier</b>	ds.sas.xfer.xport.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a transport error occurs during an I/O request. It might be due to a transient condition in link connectivity.
<b>Corrective Action</b>	Check cabling to the shelf. Check the status LED on the shelf, making sure that the fault LEDs are not on. Clear any fault condition, if possible.
<b>Syslog Message</b>	Shelf module %s I/O failure TRANSPORT_ERROR channels %s shelf id %d.
<b>Parameters</b>	<b>element</b> (STRING): Shelf module designator (A or B). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Shelf ID (0-99) of the shelf reporting the error.

## "dump" Event Group

<b>EMS Identifier</b>	dump.bitmap.fail
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated during dump restarting and looking for the bitmap file and it is unable to locate
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Missing bitmap files.
<b>Parameters</b>	

<b>EMS Identifier</b>	dump.fail.snapreserve
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated while dump is trying to restart and there is no space left in the snap reserve
<b>Corrective Action</b>	Please increase the snap reserve space to avoid this error.
<b>Syslog Message</b>	Snapshots overflow reserved space.
<b>Parameters</b>	

<b>EMS Identifier</b>	dump.inconsistent.acl_data
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the dump engine encounters a disk error in an ACL file in a Snapshot(tm) copy. Backup will abort.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Dump of source path (%s), Snapshot copy ID (%d): WAFL ACL data inconsistent due to disk errors. Aborting the backup.
<b>Parameters</b>	<b>src_path</b> (STRING): Source path being backed up. <b>snap_id</b> (INT): ID of the Snapshot copy where the disk error was encountered.

<b>EMS Identifier</b>	dump.inconsistent.file_data
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the dump engine encounters a disk error in a file in a Snapshot(tm) copy. Backup will abort because the user selected the option to abort on disk error.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Dump of source path (%s), Snapshot copy ID (%d), inum (%u): WAFL data inconsistent due to disk errors. Aborting the backup as directed by ndmpd.abort_on_disk_error option.
<b>Parameters</b>	<b>src_path</b> (STRING): Source path being backed up. <b>snap_id</b> (INT): ID of the Snapshot copy where the disk error was encountered. <b>inum</b> (INT): Inode number of the file that encountered the disk error.

<b>EMS Identifier</b>	dump.inconsistent.ind_buf
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the dump engine encounters a disk error in indirect buffers of a file in a Snapshot(tm) copy. Backup will abort because the user selected the option to abort on disk error.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Dump of source path (%s), Snapshot copy ID (%d), inum (%u): WAFL metadata and data inconsistent due to disk errors. Aborting the backup as directed by ndmpd.abort_on_disk_error option.
<b>Parameters</b>	<b>src_path</b> (STRING): Source path being backed up. <b>snap_id</b> (INT): ID of the Snapshot copy where the disk error was encountered. <b>inum</b> (INT): Inode number of the file that encountered the disk error.

<b>EMS Identifier</b>	dump.inconsistent.stream_data
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the dump engine encounters a disk error in a stream associated with a file in a Snapshot(tm) copy. Backup will abort because the user selected the option to abort on disk error.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Dump of source path (%s), Snapshot copy ID (%d), stream inum (%u), base inum(%u): WAFL data inconsistent due to disk errors. Aborting the backup as directed by ndmpd.abort_on_disk_error option.
<b>Parameters</b>	<b>src_path</b> (STRING): Source path being backed up. <b>snap_id</b> (INT): ID of the Snapshot copy where the disk error was encountered. <b>sinum</b> (INT): Inode number of the stream that encountered the disk error. <b>inum</b> (INT): Inode number of the basefile whose associated stream encountered the disk error.

<b>EMS Identifier</b>	dump.inconsistent.wafl_metadata
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the dump engine encounters a disk error in either the inode file, a directory or a stream directory in a Snapshot(tm) copy. As a result of this error, the backup is aborted.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Dump of source path (%s), Snapshot copy ID (%d): WAFL metadata inconsistent due to disk errors. Aborting the backup.
<b>Parameters</b>	<b>src_path</b> (STRING): Source path being backed up. <b>snap_id</b> (INT): ID of the Snapshot copy where the disk error was encountered.

<b>EMS Identifier</b>	dump.inconsistent_streamdir_lunclone
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the dump engine encounters a disk error in a stream directory of an inconsistent LUN clone in a Snapshot(tm) copy. Backup will abort because the user selected the option to abort on disk error.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Dump of source path (%s), Snapshot copy ID (%d): WAFL metadata inconsistent due to disk errors. Aborting the backup.
<b>Parameters</b>	<b>src_path</b> (STRING): Source path being backed up. <b>snap_id</b> (INT): ID of the Snapshot copy where the disk error was encountered.

<b>EMS Identifier</b>	dump.max.limit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when new dump or restore sessions cannot be started because the limit for this platform has been reached.
<b>Corrective Action</b>	Dump/restore operation limit has been reached for this platform.
<b>Syslog Message</b>	Maximum limit of dump/restore sessions (%d) has been reached.
<b>Parameters</b>	<b>max_limit</b> (INT): Maximum dump and restore session limits.

<b>EMS Identifier</b>	dump.register.commit
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when a registry transaction failed to commit
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to flush backup table entry upgrade to registry: %s
<b>Parameters</b>	<b>subject</b> (STRING): Error description

<b>EMS Identifier</b>	dump.register.create
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when a registry creation is failed. Memory allocation failure
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to create a registry transaction for dump(%d).
<b>Parameters</b>	<b>dump_id</b> (INT): Dump ID

<b>EMS Identifier</b>	dump.register.set
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when a registry is tried to set and failed because a freed transaction is being tried to set
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to write context update information to registry.
<b>Parameters</b>	

<b>EMS Identifier</b>	dump.snapshot.fail
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated during dump restarting and looking for the snapshot that was created by the dump while it was terminating last time and we are unable to locate the snapshot
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Unable to locate snapshot needed by dump context ID (%d).
<b>Parameters</b>	<b>dump_id</b> (INT): Dump ID

<b>EMS Identifier</b>	dump.terminate
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated during dump termination, we see if we can retrieve the name of the dump. If we are unable to retrieve the name of the dump then dump id that is terminated is notified or else both dump id and name of the dump are notified
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Terminating dump(%d)%s
<b>Parameters</b>	<b>dump_id</b> (INT): Dump ID <b>dump_name</b> (STRING): Dump Name

<b>EMS Identifier</b>	dump.terminate.reserved
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when we tried to terminate dump and have checked if dump is in the reserved state. This is just a notification message for dump termination and it is also restartable.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Terminating restartable dump(%d)
<b>Parameters</b>	<b>dump_id</b> (INT): Dump ID

<b>EMS Identifier</b>	dump.transit.fail
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when the failover is still in transit while waiting for the dump to be initialized
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover is still in transit.
<b>Parameters</b>	

<b>EMS Identifier</b>	dump.volume.memory
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when we are trying to dump a volume which is full and we cannot write the offsetmap on to the disk and we are using memory instead of disk to do this.
<b>Corrective Action</b>	Please free up some of the disk space for this volume in order to avoid this memory consumption.
<b>Syslog Message</b>	DUMP using memory due to lack of disk space on /vol/%s.
<b>Parameters</b>	<b>vol_name</b> (STRING): Name of the volume that is full which needs to be freed

<b>EMS Identifier</b>	dump.xfercomplete.inconsistent_data
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the dump engine completes data backup with disk errors in user files.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Dump of source path (%s): One or more files in the backup encountered disk errors. Refer to /etc/log/backup for a list of files that encountered disk errors.
<b>Parameters</b>	<b>src_path</b> (STRING): Source path being backed up.

## "ems" Event Group

<b>EMS Identifier</b>	ems.asup.noteto.transition
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the e-mail addresses for deprecated AutoSupport "noteto" messages are copied to EMS event notification destinations during an upgrade to Data ONTAP(R) 9.0 or later. This results in duplicate event notifications: one EMS notification and one AutoSupport short note message. Use the "event notification destination {show modify}" command to view or modify deprecated "noteto" e-mail addresses to use new e-mail destinations. This copy action also creates an event notification that maps the "important-events" filter to all of the newly created destinations. Use the "event notification {show modify}" command to view or modify the new event notification, as necessary. All events that match the "important-events" filter send notifications to the new destinations, including the AutoSupport triggers with "noteto" enabled.
<b>Corrective Action</b>	To remove event message duplication, remove the AutoSupport "noteto" addresses by entering the "system node autosupport modify -node * -noteto -" command.
<b>Syslog Message</b>	AutoSupport -noteto e-mail addresses have been copied and transitioned to EMS event notification destinations.
<b>Parameters</b>	

<b>EMS Identifier</b>	ems.engine.event.dnsLkupFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Event Management System (EMS) fails to send an event to a mail destination due to name resolution lookup failures for the mail server specified in EMS configuration options. Possible reasons for failure: DNS servers are not reachable, name services might not be configured correctly or, the configured mail server host name is no longer valid.
<b>Corrective Action</b>	Use the "vserver services name-service dns show" command to check the DNS configuration. If DNS is not configured correctly, use the "vserver services name-service dns modify" command to correct DNS server information, or the "vserver services name-service dns host modify" to correct static host name-to-IP address mapping information. Use the "event config {show modify}" command to verify or change the configured mail server.
<b>Syslog Message</b>	Failed to send EMS event %s to mail server "%s" because the host name could not be resolved.
<b>Parameters</b>	<b>emsId</b> (STRING): EMS identifier of the event that was not sent to the mail destination. <b>mailserver</b> (STRING): Mail server specified in EMS configuration options that could not be resolved.

<b>EMS Identifier</b>	ems.engine.event.undefinedEvent
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Event Management System (EMS) receives an event that it does not recognize. The event cannot be processed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>requestedEventName</b> (STRING): EMS identifier of the event that was undefined. <b>requestedEventParams</b> (STRING): List of parameters provided with the requested event.

<b>EMS Identifier</b>	ems.engine.event.unrecognizedEventVersion
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Event Management System (EMS) receives an event name that it recognizes, but the event has unexpected parameters. This might occur naturally when the EMS tries to replay an event that occurred before an upgrade (or revert) and the event definition changed between versions.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>originalEventXml</b> (STRING): Event name and parameters that were not recognized.

<b>EMS Identifier</b>	ems.engine.flush
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the event queues are flushed. Event queues are flushed on system shutdown and before some types of AutoSupport(TM) data collection.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	ems.snmp.parse.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when SNMP parsing of an input packet fails. It could fail for various reasons. The most common failures are due to invalid values for the integer and string fields in the Protocol Data Unit (PDU) and message overflows.
<b>Corrective Action</b>	An agent is incorrectly communicating with the system using SNMP. Find and disable or correct this agent. An Ethernet "sniffer" might be required to identify the client source that is sending the unsupported or incorrect SNMP request.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>errorMsg</b> (STRING): Returned error message from the parsing of the input packet.

<b>EMS Identifier</b>	ems.test.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system generates a test EMS message of notice severity in response to a user test request.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

## "enc" Event Group

<b>EMS Identifier</b>	enc.operation.aborted
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when rekey or conversion to encryption scan is aborted in a flexible volume.
<b>Corrective Action</b>	Ensure that there is enough space in the aggregate, and then run "vol encryption restart -vserver -volume " command to restart the scan.
<b>Syslog Message</b>	%s scan is aborted in the volume '%s' (aggr '%s').
<b>Parameters</b>	<b>op</b> (STRING): Rekey or conversion operation. <b>volume</b> (STRING): Volume name. <b>aggr</b> (STRING): Name of the containing aggregate.

<b>EMS Identifier</b>	enc.operation.completed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when rekey or conversion to encryption operation is completed in a flexible volume.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s operation is completed in the volume '%s' (aggr '%s').
<b>Parameters</b>	<b>op</b> (STRING): Rekey or conversion operation. <b>volume</b> (STRING): Volume name. <b>aggr</b> (STRING): Name of the containing aggregate.

<b>EMS Identifier</b>	enc.operation.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure in encryption operation. The operation description explains the nature of operation and reason for failure.
<b>Corrective Action</b>	Ensure that there is enough space in the aggregate, cluster is healthy, volume location database is online, and then retry the volume encryption operation.
<b>Syslog Message</b>	Failure in %s operation on volume '%s' (aggr '%s'). Reason '%s'.
<b>Parameters</b>	<b>op</b> (STRING): Rekey or conversion operation. <b>volume</b> (STRING): Volume name. <b>aggr</b> (STRING): Name of the containing aggregate. <b>desc</b> (STRING): Describes the reason for the failure of operation with arguments.

<b>EMS Identifier</b>	enc.operation.started
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when rekey or conversion to encryption operation is started in a flexible volume.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s operation is started in the volume '%s' (aggr '%s').
<b>Parameters</b>	<b>op</b> (STRING): Rekey or conversion operation. <b>volume</b> (STRING): Volume name. <b>aggr</b> (STRING): Name of the containing aggregate.

## "esh" Event Group

<b>EMS Identifier</b>	esh.async.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an error allocating memory for an asynchronous message during disk shelf discovery processing.
<b>Corrective Action</b>	If the error occurs upon addition of a disk shelf to a running system, disconnect the shelf and reattach it. If the error occurs during boot, reboot the controller.
<b>Syslog Message</b>	Could not allocate memory for an asynchronous message.
<b>Parameters</b>	

<b>EMS Identifier</b>	esh.auto.term.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an error in autotermination. Major causes of this include: 1) Last disk shelf in the loop has the termination switch set improperly. 2) Communication is lost to some number of disk shelves in the loop due to an incorrect speed setting for DS14mk2 disk shelves, a bad cable connection, or unavailable power.
<b>Corrective Action</b>	Use the 'fcstat device_map' command to verify that all disk shelves in the loop are still accessible. If the disk shelf reporting the autotermination event is not the last disk shelf in the loop, a problem exists with some number of disk shelves in the loop. Check the speed, power, and cabling of all disk shelves in the loop after the disk shelf reporting the autotermination.
<b>Syslog Message</b>	AUTO TERMINATION ERROR: TERM switch set improperly on ESH %s on channels %s disk shelf ID %d.
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.

<b>EMS Identifier</b>	esh.bypass.err.disk
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a disk bypass event. It indicates that a disk is bypassed by the embedded switched hub (ESH) due to one of the following reasons: Manually bypassed; Transmitter fault; LIP F8; Data timeout; Receiver loss of signal; Comma loss of signal; Loop test before insert failure; Redundant port configuration; Exceeded stall threshold; Exceeded word error threshold; Exceeded CRC error threshold; or Exceeded clock delta error threshold.
<b>Corrective Action</b>	Replace the bypassed disk.
<b>Syslog Message</b>	Disk %s%son channels %s disk shelf ID %d %s%s%s.
<b>Parameters</b>	<p><b>diskID</b> (STRING): Disk that is being bypassed.</p> <p><b>disk_data</b> (STRING): disk data includes vendor name, model, firmware revision and the serial number of the disabled disk. If won't be able to access the disk then this field will be blank.</p> <p><b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected.</p> <p><b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.</p> <p><b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module).</p> <p><b>bay</b> (STRING): Bay in which the disk is installed.</p> <p><b>reason</b> (STRING): Reason the disk was bypassed.</p>

<b>EMS Identifier</b>	esh.bypass.host.port
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when there is a host port bypass event. It indicates that a host port is bypassed by the embedded switched hub (ESH) due to one of the following reasons: Manually bypassed; Transmitter fault; LIP F8; Data timeout; Receiver loss of signal; Comma loss of signal; Loop test before insert failure; Redundant port configuration; Exceeded stall threshold; Exceeded word error threshold; Exceeded CRC error threshold; or Exceeded clock delta error threshold.
<b>Corrective Action</b>	Replace the disk shelf module to which the concerned host port belongs.
<b>Syslog Message</b>	%s on channels %s disk shelf ID %d %s%s.
<b>Parameters</b>	<p><b>portID</b> (STRING): Host port that is being bypassed.</p> <p><b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected.</p> <p><b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.</p> <p><b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module).</p> <p><b>reason</b> (STRING): Reason the host port was bypassed.</p>

<b>EMS Identifier</b>	esh.element.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the filer cannot communicate with the ESH module.
<b>Corrective Action</b>	Check the cabling to the disk shelf. Verify that the SCSI Enclosure Services (SES) disk drives (0-1) are properly inserted. Check the status LED on the disk shelf, making sure that the fault LEDs are not lit. Clear any fault condition, if possible. Refer to the quick reference card beneath the disk shelf for information about the meanings of the LEDs.
<b>Syslog Message</b>	State of ESH module %s is %s on channels %s disk shelf id %d
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>state</b> (STRING): Current state of ESH Module. <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.

<b>EMS Identifier</b>	esh.element.xport.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a transport error.
<b>Corrective Action</b>	Check the cabling to the disk shelf. Verify that the SCSI Enclosure Services (SES) disk drives (0-1) are properly inserted. Check the status LED on the disk shelf, making sure that the fault LEDs are not lit. Clear any fault condition, if possible. Refer to the quick reference card beneath the disk shelf for information about the meanings of the LEDs.
<b>Syslog Message</b>	ESH %s XPORT ERROR on channels %s disk shelf ID %d.
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.

<b>EMS Identifier</b>	esh.init.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot allocate memory for a required service. The controller might not have sufficient memory to run the operating system, or installed memory is not functioning properly.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Could not allocate memory for ESH globals.
<b>Parameters</b>	

<b>EMS Identifier</b>	esh.module.multiprob
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the ESH might have failed because it is reporting multiple problems.
<b>Corrective Action</b>	Replace the ESH module if the reported multiple problems are not valid.
<b>Syslog Message</b>	channels %s disk shelf ID %d %s%s.
<b>Parameters</b>	<p><b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected.</p> <p><b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.</p> <p><b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module).</p> <p><b>reason</b> (STRING): Reason the message is being sent.</p>

<b>EMS Identifier</b>	esh.pctl.bpCPLDFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'power control' command cannot be performed on the specified disk device because the backplane CPLD (Complex Programmable Logic Device) is not operational.
<b>Corrective Action</b>	Power-cycle the disk shelf. If the problem persists, replace the disk shelf.
<b>Syslog Message</b>	Cannot execute a 'power control' command on disk %d [%s:%s:%s] serial number [%s] in disk shelf %d on channel %s. Backplane CPLD (Complex Programmable Logic Device) in the disk shelf is not operational.
<b>Parameters</b>	<p><b>loopID</b> (INT): Loop ID of the disk for which the 'power control' command failed.</p> <p><b>vendor</b> (STRING): Vendor name of the disk.</p> <p><b>model</b> (STRING): Model name of the disk.</p> <p><b>fwrev</b> (STRING): Firmware revision of the disk.</p> <p><b>serno</b> (STRING): Serial number of the disk.</p> <p><b>shelfID</b> (INT): Disk shelf ID of the disk shelf that reported an error.</p> <p><b>channelName</b> (STRING): Name of the Fibre Channel adapter port.</p>

<b>EMS Identifier</b>	esh.pctl.connFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'power control' command cannot be performed on the specified disk device because the CPLD (Complex Programmable Logic Device) serial link on the specified module has a problem.
<b>Corrective Action</b>	Replace the specified I/O module.
<b>Syslog Message</b>	Cannot execute a 'power control' command on disk %d [%s:%s:%s] serial number [%s] in disk shelf %d on channel %s. The CPLD (Complex Programmable Logic Device) serial link on I/O module %s has a problem.
<b>Parameters</b>	<b>loopID</b> (INT): Loop ID of the disk for which the 'power control' command failed. <b>vendor</b> (STRING): Vendor name of the disk. <b>model</b> (STRING): Model name of the disk. <b>fwrev</b> (STRING): Firmware revision of the disk. <b>serno</b> (STRING): Serial number of the disk. <b>shelfID</b> (INT): Disk shelf ID of the disk shelf that reported an error. <b>channelName</b> (STRING): Name of the Fibre Channel adapter port. <b>module</b> (STRING): Name of the module with a bad CPLD serial link.

<b>EMS Identifier</b>	esh.pctl.modCPLDFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'power control' command cannot be performed on the specified disk device because the CPLD (Complex Programmable Logic Device) on an I/O module is not operational.
<b>Corrective Action</b>	Replace the specified I/O module.
<b>Syslog Message</b>	Cannot execute a 'power control' command on disk %d [%s:%s:%s] serial number [%s] in disk shelf %d on channel %s. The CPLD (Complex Programmable Logic Device) on I/O module %s is not operational.
<b>Parameters</b>	<b>loopID</b> (INT): Loop ID of the disk for which the 'power control' command failed. <b>vendor</b> (STRING): Vendor name of the disk. <b>model</b> (STRING): Model name of the disk. <b>fwrev</b> (STRING): Firmware revision of the disk. <b>serno</b> (STRING): Serial number of the disk. <b>shelfID</b> (INT): Disk shelf ID of the disk shelf that reported an error. <b>channelName</b> (STRING): Name of the Fibre Channel adapter port. <b>module</b> (STRING): I/O module with the failed CPLD.

<b>EMS Identifier</b>	esh.speed.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an error in the link speed of the disk shelves that are attached to the node. Major causes of this include: 1) Last disk shelf in the loop has the termination switch set improperly. 2) Communication is lost to some number of disk shelves in the loop due to an incorrect speed setting for DS14mk2 disk shelves, a bad cable connection, or unavailable power.
<b>Corrective Action</b>	Use the 'fcstat device_map' command to verify that all disk shelves in the loop are still accessible. Check the speed, power, and cabling of all disk shelves in the loop after the disk shelf reporting the autotermination.
<b>Syslog Message</b>	Disk shelf previously connected to the OUT port of ESH %s on channels %s disk shelf ID %d is now inaccessible. (Check cables, speed selection.)
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.

<b>EMS Identifier</b>	esh.term.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an error related to loop termination.
<b>Corrective Action</b>	Set the termination switch to the OFF position on the ESH module that is reporting the error.
<b>Syslog Message</b>	FORCED TERMINATION ERROR: TERM switch set improperly on ESH %s on channels %s disk shelf ID %d. The disk shelf connected to the OUT port of this ESH module is inaccessible.
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.

<b>EMS Identifier</b>	esh.unable.add.shelf
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk shelf cannot be added due to a memory allocation failure during disk shelf discovery processing.
<b>Corrective Action</b>	If the error occurs upon addition of a disk shelf to a running system, disconnect the shelf and reattach it. If the error occurs during boot, reboot the controller.
<b>Syslog Message</b>	Could not perform disk shelf add because of memory allocation failure (%s).
<b>Parameters</b>	<b>name</b> (STRING): Where in the disk shelf add path the error occurred.

<b>EMS Identifier</b>	esh.unexpected.status
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a disk shelf reports an unknown status.
<b>Corrective Action</b>	Ensure that the shelf module firmware and ONTAP(R) software are compatible versions. Find firmware versions at the NetApp technical support web site.
<b>Syslog Message</b>	Unexpected ESH status of: %d.
<b>Parameters</b>	<b>status</b> (INT): Unexpected/unknown status code that was received.

<b>EMS Identifier</b>	esh.xfer.element.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an element is unreachable during an I/O request. It might be due to a transient condition in loop connectivity.
<b>Corrective Action</b>	Check the cabling to the disk shelf. Verify that the SCSI Enclosure Services (SES) disk drives (0-1) are properly inserted. Check the status LED on the disk shelf, making sure that the fault LEDs are not lit. Clear any fault condition, if possible. Refer to the quick reference card beneath the disk shelf for information about the meanings of the LEDs.
<b>Syslog Message</b>	I/O failure on ESH module %s on channels %s disk shelf id %d, status is %s.
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error. <b>state</b> (STRING): State of ESH module.

<b>EMS Identifier</b>	esh.xfer.not.sent
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an I/O transfer cannot be sent. It might be due to a transient condition in loop connectivity.
<b>Corrective Action</b>	Check the cabling to the disk shelf. Verify that the SCSI Enclosure Services (SES) disk drives (0-1) are properly inserted. Check the status LED on the disk shelf, making sure that the fault LEDs are not lit. Clear any fault condition, if possible. Refer to the quick reference card beneath the disk shelf for information about the meanings of the LEDs.
<b>Syslog Message</b>	ESH %s I/O failure NOT_SENT channels %s disk shelf ID %d.
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.

<b>EMS Identifier</b>	esh.xfer.pctl.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an error is encountered while sending a disk 'power control' command to SCSI Enclosure Services (SES).
<b>Corrective Action</b>	Check the cabling to the disk shelf. Verify that the SES disk drives in slots 0 and 1 are properly seated. Check the status LEDs on the disk shelf and make sure that the fault LEDs are not lit. Clear any fault condition, if possible. See the quick reference cards beneath the fault disk shelf for information about interpreting the LEDs.
<b>Syslog Message</b>	Error sending disk 'power control' command to SCSI Enclosure Services (SES) in disk shelf %d on channel %s.
<b>Parameters</b>	<b>shelfID</b> (INT): Disk shelf ID of the disk shelf that reported an error. <b>channelName</b> (STRING): Name of the Fibre Channel adapter port.

<b>EMS Identifier</b>	esh.xfer.unknown.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an unknown error during an I/O request.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	ESH %s I/O failure UNKNOWN: %d channels %s disk shelf ID %d.
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>status</b> (INT): Error status code. <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.

<b>EMS Identifier</b>	esh.xfer.xport.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a transport error during an I/O request. It might be due to a transient condition in loop connectivity.
<b>Corrective Action</b>	Check the cabling to the disk shelf. Verify that the SCSI Enclosure Services (SES) disk drives (0-1) are properly inserted. Check the status LED on the disk shelf, making sure that the fault LEDs are not lit. Clear any fault condition, if possible. Refer to the quick reference card beneath the disk shelf for information about the meanings of the LEDs.
<b>Syslog Message</b>	ESH %s I/O failure TRANSPORT_ERROR channels %s disk shelf ID %d.
<b>Parameters</b>	<b>element</b> (STRING): ESH module designator (A is the upper module, B is the lower module). <b>channels</b> (STRING): Channels that have the error if local, PARTNER for high-availability partner, UNUSED if unconnected. <b>shelfID</b> (INT): Disk shelf ID (1-7) of the disk shelf reporting the error.

## "ethroutput" Event Group

<b>EMS Identifier</b>	EthrOutput.FamilyType.Err <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the the system can not handle the family type while attempting to process the ethernet output.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: Can not handle family type%d.
<b>Parameters</b>	<b>IntName</b> (STRING): Fulll name of the interface. <b>FamilyType</b> (INT): Packet family type for the local net.

## "exports" Event Group

<b>EMS Identifier</b>	exports.anon.noCredForId
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when we cannot get UNIX credentials for a user id when evaluating the "-anon" portion of an export-policy rule.
<b>Corrective Action</b>	If "-anon" is a UID, ensure that a valid UID exists on the configured name servers. If "-anon" is a username, ensure that a mapping exists between the username and the UID on the configured name servers and the resulting UID is also present.
<b>Syslog Message</b>	Cannot retrieve credentials for UID "%u" present in the "-anon" entry for the export-policy rule for Vserver "%d".
<b>Parameters</b>	<b>anonId</b> (INT): UNIX UID for which we cannot acquire credentials. <b>vserver</b> (INT): Identifier of the Vserver owning the export-policy.

<b>EMS Identifier</b>	exports.dns.config
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a name services lookup request finds that DNS is configured as an ns-switch source for hosts, but DNS is not configured for the Vserver. Name services lookups using DNS do not function.
<b>Corrective Action</b>	Check the ns-switch sources for hosts database configured for the Vserver using "vserver services name-service ns-switch show -database hosts" and the DNS configuration for the Vserver using "vserver services name-service dns show". Either remove DNS as an ns-switch source, or configure DNS using the "vserver services name-service dns create" command.
<b>Syslog Message</b>	DNS is configured as a ns-switch source for hosts, but the DNS configuration is not found for Vserver "%s".
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver on which the problem is occurring.

<b>EMS Identifier</b>	exports.dom.notFound
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the reverse lookup record mapping an IP address to its hostname cannot be found in the configured name servers. This record must be present to evaluate the export-policy rule that has a domain name in its clientmatch entry.
<b>Corrective Action</b>	The reverse mapping record might have been incorrectly entered, inadvertently removed from the name service, or never entered at all. Check the configuration with the appropriate tools for each name service.
<b>Syslog Message</b>	IP address "%s" does not have a reverse mapping for its corresponding hostname in the configured name servers when evaluating the export-policy rule at index "%u" in policy-id "%llu" for Vserver "%s".
<b>Parameters</b>	<b>ipaddr</b> (STRING): IP address of the client that does not have the reverse lookup record. <b>ruleindex</b> (INT): Index of the export-policy rule for which the problem is occurring. <b>policyid</b> (LONGINT): Identifier for the export-policy owning the export-policy rule. <b>vserver</b> (STRING): Name of the data Vserver for which the problem is occurring.

<b>EMS Identifier</b>	exports.dom.transient
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when reverse lookup of the IP address of a client using the configured name servers in a data Vserver is unsuccessful for an export-policy rule that uses the domain name in clientmatch.
<b>Corrective Action</b>	The name service might not be functioning correctly. Check the configuration with the appropriate tools for each name service.
<b>Syslog Message</b>	IP address "%s" could not be resolved to a hostname (error %d) when evaluating export-policy rule at index "%u" in policy-id "%llu" in Vserver "%s".
<b>Parameters</b>	<b>ipaddr</b> (STRING): IP address of the client encountering the reverse lookup error. <b>retcode</b> (INT): Error code returned by the name service reverse lookup. <b>ruleindex</b> (INT): Index of the export-policy rule for which the problem is occurring. <b>policyid</b> (LONGINT): Identifier for the export-policy owning the export-policy rule. <b>vserver</b> (STRING): Name of the data Vserver for which the problem is occurring.

<b>EMS Identifier</b>	exports.hostname.notFound
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the forward lookup record mapping a host name to its IP address is not found in the configured name servers in a Vserver. This record must be present to evaluate the export-policy rule that has a host name in its clientmatch entry.
<b>Corrective Action</b>	Ensure that the host has an interface configured for this address family, that the host name is correctly entered, that the host was not inadvertently removed from the name service, or that the host name was never entered at all. If the host should have an address for this address family, then check the configuration by using the appropriate tools for each name service.
<b>Syslog Message</b>	Hostname "%s" does not have a forward mapping for its corresponding %s address in the configured name servers when evaluating the export-policy rule at index "%u" in policy-id "%llu" for Vserver "%s".
<b>Parameters</b>	<b>hostname</b> (STRING): Name of the host that is not found. <b>addrfamily</b> (STRING): Name of the address family for which the problem occurs. <b>ruleindex</b> (INT): Index of the export-policy rule for which the problem occurs. <b>policyid</b> (LONGINT): Identifier for the export-policy that owns the export-policy rule. <b>vserver</b> (STRING): Name of the Vserver for which the problem occurs.

<b>EMS Identifier</b>	exports.hostname.transient
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a host named in a clientmatch entry of an export-policy rule is not resolved to an IP address using the configured name servers in a data Vserver.
<b>Corrective Action</b>	Ensure that the name service is functioning correctly by checking the configuration by using the appropriate tools for each name service.
<b>Syslog Message</b>	Hostname "%s" could not be resolved to an %s address (error %d) when evaluating export-policy rule at index "%u" in policy-id "%llu" on Vserver "%s".
<b>Parameters</b>	<b>hostname</b> (STRING): Name of the host that is not resolved. <b>addrfamily</b> (STRING): Name of the address family for which the problem occurs. <b>retcode</b> (INT): Error code returned by the name service lookup. <b>ruleindex</b> (INT): Index of the export-policy rule for which the problem occurs. <b>policyid</b> (LONGINT): Identifier for the export-policy that owns the export-policy rule. <b>vserver</b> (STRING): Name of the data Vserver for which the problem occurs.

<b>EMS Identifier</b>	exports.netgroup.dnsNoPtrRec
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the reverse lookup record mapping an IP address to its hostname cannot be found in the configured name servers. This record must be present to evaluate the membership of a hostname in the netgroup named in the clientmatch of an export-policy rule.
<b>Corrective Action</b>	The reverse mapping record might have been incorrectly entered, inadvertently removed from the name service, or never entered at all. Check the configuration with the appropriate tools for each name service.
<b>Syslog Message</b>	IP address "%s" does not have a reverse mapping for its corresponding hostname in the configured name servers when evaluating the export-policy rules for netgroup "%s" on Vserver "%s".
<b>Parameters</b>	<b>ipaddr</b> (STRING): IP address of the client that does not have the reverse lookup record. <b>netgroup</b> (STRING): Name of the netgroup that is being evaluated. <b>vserver</b> (STRING): Name of the Vserver for which the problem is occurring.

<b>EMS Identifier</b>	exports.netgroup.notFound
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a netgroup named in a clientmatch of an export-policy rule is not found in the configured name servers.
<b>Corrective Action</b>	The netgroup name might have been incorrectly entered, inadvertently removed from the name service, or never entered at all. Check the configuration with the appropriate tools for each name service.
<b>Syslog Message</b>	Netgroup "%s" cannot be found when evaluating export-policy rules on Vserver "%s".
<b>Parameters</b>	<b>netgroup</b> (STRING): Name of the netgroup that is not being found. <b>vserver</b> (STRING): Name of the Vserver for which the problem is occurring.

<b>EMS Identifier</b>	exports.netgroup.partial
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when partial netgroup results are returned by the name services because of errors in the netgroup mapping.
<b>Corrective Action</b>	If the netgroup mapping is greater than 1024 characters for netgroups on Network Information Service (NIS) or 4096 for netgroups in a local file, consider creating a sub netgroup to divide it. If the nesting of the netgroup is too deep, consider reducing the depth by adding the entries directly to the netgroup instead of adding to sub netgroups. If the netgroup has a sub netgroup that is not available as a top level netgroup in the mapping, add an empty entry for the sub netgroup to resolve the error. Ensure the line length and nesting limits are not exceeded.
<b>Syslog Message</b>	Netgroup %s expansion failed with %s (error: %d) when evaluating export-policy rules on Vserver "%s".
<b>Parameters</b>	<b>netgroup</b> (STRING): Name of the netgroup that could not be expanded. <b>reason</b> (STRING): Specific reason for the netgroup expansion failure. <b>error</b> (INT): Error code returned during netgroup expansion. <b>vserver</b> (STRING): Name of the Vserver in which the problem is occurring.

<b>EMS Identifier</b>	exports.ngbh.allFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a netgroup by host request fails because all ns-switch sources for the netgroup database have returned connection errors and files are unusable as a source.
<b>Corrective Action</b>	There might be temporary connectivity issues with the Vserver's configured ns-switch sources for the netgroup database. Check connectivity to the name servers configured for netgroups.
<b>Syslog Message</b>	Connectivity issues encountered in all ns-switch sources when matching Client IP "%s" in Netgroup "%s" for Vserver "%s".
<b>Parameters</b>	<b>client</b> (STRING): IP address of the client for which the lookup failed. <b>netgroup</b> (STRING): Name of the netgroup being evaluated. <b>vserver</b> (STRING): Name of the Vserver where the problem is occurring.

<b>EMS Identifier</b>	exports.nsdb.anonNameTold
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a user string cannot be mapped to a user id when evaluating the "-anon" portion of an export-policy rule.
<b>Corrective Action</b>	If the "-anon" value is a name, ensure that a mapping from that name to a UID exists in the configured name services. For both a name and a UID entry in "-anon", ensure that the resulting UID exists in the configured name services.
<b>Syslog Message</b>	Cannot retrieve UID for UNIX username "%s" present in the "-anon" entry for the export-policy rule for Vserver "%d".
<b>Parameters</b>	<b>anon</b> (STRING): Anonymous string that cannot be mapped to a user id. <b>vserver</b> (INT): Name of the Vserver owning the export-policy.

<b>EMS Identifier</b>	exports.policy.empty
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an export policy with no rules is assigned to a volume or a qtree. Such an empty policy makes the volume or qtree inaccessible to NFS and CIFS protocol clients.
<b>Corrective Action</b>	If access is needed for the volume or qtree, then create an export policy rule using the "export-policy rule create" command.
<b>Syslog Message</b>	An export policy "%s" with no rules was assigned to a %s "%s" on the Vserver %s.
<b>Parameters</b>	<b>policyName</b> (STRING): Name of the export policy with no rules. <b>type</b> (STRING): Type of object (volume or qtree). <b>typeName</b> (STRING): Name of the volume or qtree. <b>vserver</b> (STRING): Name of the Vserver with this issue.

<b>EMS Identifier</b>	exports.policy.last.rule
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the last rule from the export policy assigned to a volume or qtree is deleted. An empty policy will make the volume or qtree inaccessible to clients using NFS or CIFS protocol.
<b>Corrective Action</b>	If access is needed for the volume or qtree, then create an export policy rule using the "export-policy rule create" command.
<b>Syslog Message</b>	The last rule from export policy "%s" was deleted on Vserver %s.
<b>Parameters</b>	<b>policyName</b> (STRING): Name of the export policy from which the rule is being deleted. <b>vserver</b> (STRING): Name of the Vserver where the issue occurs.

## "extcache" Event Group

<b>EMS Identifier</b>	extCache.aggregate.invalidate
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message provides diagnostic information about background work taking place in the WAFL(R) external cache subsystem.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache: %s
<b>Parameters</b>	<b>detail</b> (STRING): Specific diagnostic information related to the aggregate invalidation event.

<b>EMS Identifier</b>	extCache.configUnsupported
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the controller contains an external cache hardware configuration that cannot be supported on the controller.
<b>Corrective Action</b>	Consult the release documentation, check the Interoperability Matrix Tool (IMT) for a supported configuration, or contact Contact NetApp technical support. to understand and correct the hardware configuration.
<b>Syslog Message</b>	WAFL external cache hardware configuration is not supported: %s.
<b>Parameters</b>	<b>description</b> (STRING): String providing information about why the configuration is unsupported.

<b>EMS Identifier</b>	extCache.control
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache software cannot signal its administrative thread.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache: %s
<b>Parameters</b>	<b>detail</b> (STRING): Specific details of the event.

<b>EMS Identifier</b>	extCache.io.BlockChecksumError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the external cache detects a block checksum verification error while performing a read operation. Checksum errors are infrequent. Some combinations of external cache hardware and software handle these errors automatically without the need for administrator action. If further action is required, other messages will be generated. The operation will be retried from persistent storage (RAID).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>block_num</b> (INT): Block number that failed checksum verification.

<b>EMS Identifier</b>	extCache.io.extInfo
<b>Severity</b>	NOTICE
<b>Description</b>	This message accompanies read or write errors and prints out any relevant information about the failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: fbn: %lld, pvbn: %lld, vvbn: %lld, inum: %d, ecbn: %lld, vol: %s, aggr: %s.
<b>Parameters</b>	<b>description</b> (STRING): String providing information about the message. <b>fileBlockNum</b> (LONGINT): fbn of the block that errored. <b>physBlockNum</b> (LONGINT): pvbn of the block that errored. <b>volBlockNum</b> (LONGINT): vvbn of the block that errored. <b>fileId</b> (INT): Inode number of the file that owns the block. <b>ECblockNum</b> (INT): The ecbn of the block. <b>volName</b> (STRING): Name of the volume. <b>aggrName</b> (STRING): Name of the aggregate.

<b>EMS Identifier</b>	extCache.io.readError
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache detects an error on a read. Read errors are infrequent and are usually handled automatically by the external cache without the need for administrator action. The operation will be retried from persistent storage (RAID).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache I/O read error: %s, code %d.
<b>Parameters</b>	<b>description</b> (STRING): String providing information about why the operation failed. <b>detail</b> (INT): Detailed error code about why the operation failed.

<b>EMS Identifier</b>	extCache.io.writeError
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache detects an error on a write. Write errors are infrequent and are usually handled automatically by the external cache without the need for administrator action.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache I/O write error: %s, code %d.
<b>Parameters</b>	<b>description</b> (STRING): String providing information about why the operation failed. <b>detail</b> (INT): Detailed error code about why the operation failed.

<b>EMS Identifier</b>	extCache.offline
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the external cache is automatically taken offline. This can happen after an I/O error on the external cache and may result in degraded performance until the problem is corrected.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	External cache has been taken offline on error (rc=%d). Check the EMS log for earlier errors.
<b>Parameters</b>	<b>code</b> (INT): A unique error code for this event.

<b>EMS Identifier</b>	extCache.QoS
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when External Cache Quality of Service (QoS) monitoring is enabled/disabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	External Cache QoS is: %s.
<b>Parameters</b>	<b>description</b> (STRING): State of External Cache QoS

<b>EMS Identifier</b>	extCache.rw.alloc
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an external cache cannot obtain sufficient system resources. This causes the external cache component to be unable to rewarm after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache could not allocate resources: %s.
<b>Parameters</b>	<b>description</b> (STRING): String identifying the specific resources that were not obtained.

<b>EMS Identifier</b>	extCache.rw.canceled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache cannot complete cache rewarming. This causes the external cache component to start with no data cached, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache reconstruct was canceled.
<b>Parameters</b>	

<b>EMS Identifier</b>	extCache.rw.configChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the external cache warming logic detects a change in cache hardware configuration. This causes the external cache component to start with no data cached for any aggregates, which can cause a temporary performance impact. The problem should resolve itself at the next reboot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming aborted due to hardware configuration change.
<b>Parameters</b>	

<b>EMS Identifier</b>	extCache.rw.emptyCache
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the external cache warming process terminates due to a lack of active cache entries.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming canceled: cache is not in use.
<b>Parameters</b>	

<b>EMS Identifier</b>	extCache.rw.entry
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache cannot rebuild cache entries from stored data. This event is caused by an internal error and results in a small portion of the cache remaining empty during rewarming.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache experienced an internal error during reconstruct.
<b>Parameters</b>	

<b>EMS Identifier</b>	extCache.rw.headerInvalid
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache warming process encounters an invalid file header. This causes the external cache component to start with no data cached for one or all aggregates, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming encountered an invalid file header: %s.
<b>Parameters</b>	<b>section</b> (STRING): String identifying the header section in question.

<b>EMS Identifier</b>	extCache.rw.io.readLimit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache exceeds the allowable threshold for I/O errors on reads. This causes the external cache component to start with no data cached for any aggregates and might result in temporarily degraded performance.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming encountered too many read errors: %s (%d).
<b>Parameters</b>	<b>description</b> (STRING): String providing information about the operation. <b>number</b> (INT): Number of unsuccessful reads detected.

<b>EMS Identifier</b>	extCache.rw.io.write
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the external cache detects an I/O error on a write. This causes the external cache component to be unable to reconstruct portions of the cache and might result in slightly degraded performance.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache I/O write: %s, code %d.
<b>Parameters</b>	<b>description</b> (STRING): String providing information about the operation. <b>detail</b> (INT): Detailed error code about the operation.

<b>EMS Identifier</b>	extCache.rw.io.writeLimit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache exceeds the allowable threshold for I/O errors on writes. This causes the external cache component to start with no cached data for any aggregates and might result in temporarily degraded performance.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming encountered too many write errors: %s (%d).
<b>Parameters</b>	<b>description</b> (STRING): String providing information about the operation. <b>number</b> (INT): Number of unsuccessful writes detected.

<b>EMS Identifier</b>	extCache.rw.log.bufLoad
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache invalidation log cannot load a WAFL(R) buffer. This causes the external cache component to be unable to rewarm the aggregate in question after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache invalidation log buf could not be loaded: aggregate %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the problem.

<b>EMS Identifier</b>	extCache.rw.log.disabled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when external cache invalidation logging is disabled for an aggregate. This causes the external cache component to be unable to rewarm that aggregate after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache invalidation log disabled: aggregate %s: %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the problem. <b>reason</b> (STRING): String indicating the cause of the problem.

<b>EMS Identifier</b>	extCache.rw.log.freeSpace
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an external cache log file cannot be written due to lack of free space. This causes the external cache component to be unable to rewarm a specific aggregate or the entire cache after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	Make sufficient space available on the aggregate.
<b>Syslog Message</b>	WAFL external cache log out of space on aggregate %s (needs %d bytes).
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the failure. <b>bytes</b> (INT): Number of free bytes needed to successfully open the log file.

<b>EMS Identifier</b>	extCache.rw.log.maxSize
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an external cache log file reaches its maximum size. This causes the external cache component to be unable to rewarm a specific aggregate or the entire cache after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache log reached maximum size: aggregate %s, log %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the problem. <b>logtype</b> (STRING): String identifying the log file that reached the maximum size.

<b>EMS Identifier</b>	extCache.rw.log.open
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache cannot open a log file. This causes the external cache component to be unable to rewarm some or all of the cached aggregates after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache log could not be opened: aggregate %s, log %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the problem. <b>logtype</b> (STRING): String identifying the type of log file that could not be opened.

<b>EMS Identifier</b>	extCache.rw.log.range
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache invalidation log has a block address that is not within an aggregate's address range. This causes the external cache component to be unable to rewarm the aggregate in question after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache invalidation log block out of range: aggregate %s block %lld.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the failure. <b>block</b> (LONGINT): Block encountered in the invalidation log.

<b>EMS Identifier</b>	extCache.rw.log.read
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache cannot read from a log file. This causes the external cache component to be unable to rewarm some or all of the cached aggregates during a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache log could not be read: aggregate %s, log %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the problem. <b>logtype</b> (STRING): String identifying the log file that could not be read.

<b>EMS Identifier</b>	extCache.rw.log.seek
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache cannot manipulate a log file. This causes the external cache component to be unable to rewarm after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache log could not be read: aggregate %s, log %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the problem. <b>logtype</b> (STRING): String identifying the log file that could not be read.

<b>EMS Identifier</b>	extCache.rw.log.write
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache cannot write to a log file. This causes the external cache component to be unable to rewarm some or all of the cached aggregates after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache log could not be written: aggregate %s, log %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate that experienced the problem. <b>logtype</b> (STRING): String identifying the log file that could not be written.

<b>EMS Identifier</b>	extCache.rw.replay.canceled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache cannot successfully process the invalidation logs for an individual aggregate. This causes the external cache component to start with no data cached for the aggregate, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache replay canceled for aggregate %s: %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate in question. <b>description</b> (STRING): String providing information about the operation.

<b>EMS Identifier</b>	extCache.rw.replay.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the external cache finishes processing the invalidation logs for an individual aggregate.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming replay complete for aggregate %s with invalidation log %d%% full.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate in question. <b>percent</b> (INT): Percentage of ilog that is full.

<b>EMS Identifier</b>	extCache.rw.replay.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the external cache begins processing the invalidation logs for an individual aggregate.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming replay has begun for aggregate %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate in question.

<b>EMS Identifier</b>	extCache.rw.replay.timeout
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache timed out waiting for an aggregate to come online and purged old cache entries for it. This causes the external cache component to start with no data cached for the aggregate, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache replay timed out for aggregate %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): String identifying the aggregate in question.

<b>EMS Identifier</b>	extCache.rw.snap.canceled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache cannot save a warming snapshot copy. This causes the external cache component to be unable to rewarm after a reboot, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache snapshot copy canceled: %s.
<b>Parameters</b>	<b>description</b> (STRING): String providing information about why the operation was canceled.

<b>EMS Identifier</b>	extCache.rw.terminated
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache warming process is terminated. This causes the external cache component to start with no data cached for any aggregates, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming process terminated.
<b>Parameters</b>	

<b>EMS Identifier</b>	extCache.rw.timeout
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the external cache warming process terminates after exceeding its allowed time. This causes the external cache component to start with a subset of cached data, which might cause a temporary performance impact.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache warming process exceeded its maximum allowable time and was aborted.
<b>Parameters</b>	

<b>EMS Identifier</b>	extCache.unallowed.option
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an external cache bootarg or setflag is set without the required privilege. The default value is used instead.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL external cache %s %s is set without the required privilege; using the default value.
<b>Parameters</b>	<b>type</b> (STRING): Whether the option set is a bootarg or a setflag. <b>option</b> (STRING): Option name.

## "fabric" Event Group

<b>EMS Identifier</b>	fabric.mgmt.interface
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system fails to establish a management interface on the fabric.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cannot establish a management (Status/Control/Maintenance) interface on fabric %s.
<b>Parameters</b>	<b>fabName</b> (STRING): Fabric name.

<b>EMS Identifier</b>	fabric.sdm.mem.alloc
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system fails to allocate a message for storage device monitor (SDM) notification.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to allocate a message for SDM notification to fabric_man.
<b>Parameters</b>	

## "fabricpool" Event Group

<b>EMS Identifier</b>	fabricpool.nearly.full
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the total, cluster-wide FabricPool space usage of object stores from capacity-licensed providers has nearly reached the license limit.
<b>Corrective Action</b>	To find the percentage of the licensed capacity used by each FabricPool, use the "storage aggregate object-store show-space" command. To create more space, delete Snapshot(R) copies from volumes with the tiering policy "snapshot" or "backup" by using the the "volume snapshot delete" command. To increase the licensed capacity, install a new license on the cluster.
<b>Syslog Message</b>	Total, cluster-wide FabricPool space usage of object stores from capacity-licensed providers has nearly reached the licensed limit. Current usage: %s, licensed capacity: %s.
<b>Parameters</b>	<b>used_capacity</b> (STRING): Total usage of capacity-licensed object stores. <b>licensed_capacity</b> (STRING): FabricPool licensed capacity.

## "fal" Event Group

<b>EMS Identifier</b>	fal.chan.online.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FAL (Flash Adaptation Layer) fails to bring online a channel of a caching module for the mentioned reason.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to bring online channel %u due to reason: %s.
<b>Parameters</b>	<b>channel</b> (INT): Channel number. <b>reason</b> (STRING): Reason for failure.

<b>EMS Identifier</b>	fal.chan.online.rep.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FAL (Flash Adaptation Layer) fails to bring online all channels in a caching module. The reasons for failure are listed in the accompanying fal.chan.online.fail events.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Failed to bring online %u channels of the caching module in slot %u (model: %s, serial number: %s, part number: %s).
<b>Parameters</b>	<b>nchannels</b> (INT): Number of channels in the caching module. <b>slot</b> (INT): Slot number of the caching module. <b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part</b> (STRING): Part number of the caching module.

<b>EMS Identifier</b>	fal.chan.online.rep.part
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FAL (Flash Adaptation Layer) fails to bring online some channels in a caching module. The reasons for failure are listed in the accompanying fal.chan.online.fail events.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Failed to bring online %u out of %u channels of the caching module in slot %u (model: %s, serial number: %s, part number: %s).
<b>Parameters</b>	<b>nfailed</b> (INT): Number of channels failed. <b>nchannels</b> (INT): Number of channels in the caching module. <b>slot</b> (INT): Slot number of the caching module. <b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part</b> (STRING): Part number of the caching module.

<b>EMS Identifier</b>	fal.chan.online.rep.ver.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FAL (Flash Adaptation Layer) fails to bring online all channels in a caching module because of version mismatch.
<b>Corrective Action</b>	Follow the documented revert procedure.
<b>Syslog Message</b>	Caching module (model name %s, serial number %s, part number %s): Failed to bring online %u channels of the caching module in slot %u due to version mismatch.
<b>Parameters</b>	<b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part</b> (STRING): Part number of the caching module. <b>nchannels</b> (INT): Number of channels. <b>slot</b> (INT): Slot number of the caching module.

<b>EMS Identifier</b>	fal.init.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FAL (Flash Adaptation Layer) fails to initialize.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	FAL initialization failed. Reason: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for failure.

## "fal\_nvme" Event Group

<b>EMS Identifier</b>	fal_nvme.init.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Flash Adaptation Layer (FAL) NVMe subsystem fails to initialize.
<b>Corrective Action</b>	Reboot the node. If the problem persists, contact technical support for assistance.
<b>Syslog Message</b>	FAL NVMe subsystem initialization failed. Reason: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for failure.

<b>EMS Identifier</b>	fal_nvme.online.succ
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Flash Adaptation Layer (FAL) NVMe subsystem successfully brings online all resources in a caching module.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully brought online %lu GB of the caching module.
<b>Parameters</b>	<b>capacity</b> (LONGINT): Total capacity.

## "fcadmin" Event Group

<b>EMS Identifier</b>	fcadmin.bridge.prog.disk
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event reports the WWN written to a device.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Programming Disk %s LUN=%d on Path=0x%0x with WWN %02x:%02x:%02x:%02x:%02x:%02x:%02x:%02x.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>LUNid</b> (INT): Logical Unit Number identifier. <b>pathAddress</b> (INTHEX): Device address. <b>WWNbyte0</b> (INTHEX): 0th byte of World Wide Name. <b>WWNbyte1</b> (INTHEX): 1st byte of World Wide Name. <b>WWNbyte2</b> (INTHEX): 2nd byte of World Wide Name. <b>WWNbyte3</b> (INTHEX): 3rd byte of World Wide Name. <b>WWNbyte4</b> (INTHEX): 4th byte of World Wide Name. <b>WWNbyte5</b> (INTHEX): 5th byte of World Wide Name. <b>WWNbyte6</b> (INTHEX): 6th byte of World Wide Name. <b>WWNbyte7</b> (INTHEX): 7th byte of World Wide Name.

<b>EMS Identifier</b>	fcadmin.bridge.prog.done
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message indicates that WWN programming has been successfully completed on a disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s LUN=%d on path=0x%0x successfully programmed. Reboot the drive to see the updated WWN.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>LUNid</b> (INT): Logical Unit Number identifier. <b>pathAddress</b> (INTHEX): Device address.

<b>EMS Identifier</b>	fcadmin.bridge.prog.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message indicates that the attempt to write the WWN to the disk has failed.
<b>Corrective Action</b>	Retry the command after sometime, error might be transient.
<b>Syslog Message</b>	Error programming disk %s LUN=%d on path=0x%0x. Error status=0x%0x.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>LUNid</b> (INT): Logical Unit Number identifier. <b>pathAddress</b> (INTHEX): Device address. <b>commandStatus</b> (INTHEX): Returned SCSI error code.

<b>EMS Identifier</b>	fcadmin.bridge.progWWN
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message reports the statistics of the operation to write the World Wide Name (WWN) to the drives.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Total LUNs/drives reported = %d. Total LUNs/drives programmed = %d.
<b>Parameters</b>	<b>reportedLUNs</b> (INT): Total number of LUN instances reported for entire session. <b>programmedLUNs</b> (INT): Total number of LUN instances programmed for entire session.

<b>EMS Identifier</b>	fcadmin.bridge.retrieve.fail
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when the drive is not qualified for DDB (Disk Drive Behavior) update while programming the WWNs.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Error retrieving DDB data for disk=%s on path=0x%0x. Drives on the current path could not be programmed with WWN.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>pathAddress</b> (INTHEX): Device address.

<b>EMS Identifier</b>	fcadmin.bridge.rprt.fault
<b>Severity</b>	ERROR
<b>Description</b>	This message is generated when the Report LUNs response completed with some error.
<b>Corrective Action</b>	Retry the command after sometime, error might be transient.
<b>Syslog Message</b>	Error reported for Report LUN command on disk %s on path 0x%0x, error=0x%0x.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>pathAddress</b> (INTHEX): Device address. <b>commandStatus</b> (INTHEX): Returned SCSI error code.

<b>EMS Identifier</b>	fcadmin.bridge.rprtcmd.fail
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when insufficient SCSI command blocks are available for Report LUN command.
<b>Corrective Action</b>	Retry the command after sometime. As command blocks may have become available.
<b>Syslog Message</b>	Memory allocation failed for Report LUN command. No LUN instances are programmed.
<b>Parameters</b>	

<b>EMS Identifier</b>	fcadmin.bridge.rprtdata.fail
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when insufficient SCSI command blocks are available for Report LUN command.
<b>Corrective Action</b>	Retry the command after sometime. As command blocks may have become available.
<b>Syslog Message</b>	Memory allocation failed for Report LUN data command, bytes Requested=%d Disk %s on Path=0x%0x.
<b>Parameters</b>	<b>requestedMemory</b> (INT): Requested memory for Report LUN data command. <b>diskName</b> (STRING): Name of the disk <b>deviceAddress</b> (INTHEX): Device address.

<b>EMS Identifier</b>	fcadmin.bridge.WWN.prog.stat
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is generated when the programming of the WWNs into the reported LUNs is complete. An error in programming is indicated when the number of reported LUNs is different from the number programmed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WWN update completed on disk %s path 0x%0x, total %d LUNS reported, total %d LUNS programmed.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the disk. <b>pathAddress</b> (INTHEX): Device address. <b>LUNsReported</b> (INT): Number of LUNs reported. <b>LUNsProgrammed</b> (INT): Number of LUNs programmed.

## "fci" Event Group

<b>EMS Identifier</b>	fci.adapter.bootarg.option
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the the Fibre Channel adapter driver is setting an option based on the setting of a bootarg variable.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Bootarg option "%s" configured for Fibre Channel adapter %s.
<b>Parameters</b>	<b>option</b> (STRING): Option being modified. <b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter (HBA).

<b>EMS Identifier</b>	fci.adapter.dump.saved
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an unexpected event or invalid condition is detected by the Fibre Channel(FC) initiator driver and the contents of the FC initiator memory is saved. Dump files are stored in a directory on the system's root volume at /etc/log, with the following directory name format: slfc_[adapterName]_[YYYYMMDD]_[HHMMSS]
<b>Corrective Action</b>	Send the dump file to technical support for analysis.
<b>Syslog Message</b>	A dump for adapter %s was stored in %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated FC host bus adapter. <b>filename</b> (STRING): Name of the file containing the dump.

<b>EMS Identifier</b>	fci.adapter.error
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Fibre Channel adapter driver encounters an error with the adapter. The adapter will be reset to recover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel adapter driver encountered error "%s" on adapter %s.
<b>Parameters</b>	<b>error</b> (STRING): Type of error that occurred. <b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.fabric.login.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel adapter cannot log in with the fabric management server.
<b>Corrective Action</b>	The driver will attempt to recover from this error, but if this error keeps occurring, make sure that the switch is configured correctly and then try disconnecting and then reconnecting the adapter to the switch.
<b>Syslog Message</b>	Fibre Channel adapter %s cannot log in with the fabric management server for reason 0x%x.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>status</b> (INHEX): Status returned from the adapter.

<b>EMS Identifier</b>	fci.adapter.fabric.ns.login.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel adapter cannot log in with the fabric name server.
<b>Corrective Action</b>	The driver will attempt to recover from this error but if this error keeps occurring make sure that the switch is configured correctly, and then try disconnecting and then reconnecting the adapter to the switch.
<b>Syslog Message</b>	Fibre Channel adapter %s was unable to log in with the fabric name server for reason 0x%x.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>status</b> (INHEX): Status returned from the adapter.

<b>EMS Identifier</b>	fci.adapter.fabric.request.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel adapter returns an unexpected status for a fabric query.
<b>Corrective Action</b>	The driver will attempt to recover from this error but if this error keeps occurring make sure that the switch is configured correctly, and then try disconnecting and then reconnecting the adapter to the switch.
<b>Syslog Message</b>	Fibre Channel adapter %s returned unexpected status 0x%x for a fabric query.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>status</b> (INHEX): Status returned from the adapter.

<b>EMS Identifier</b>	fci.adapter.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Fibre Channel adapter driver cannot recover the adapter after resetting it multiple times. The adapter will be put offline.
<b>Corrective Action</b>	If the adapter is in use check the cabling, and if it is connected to disk shelves check the seating of the LRC/ESH cards and disks. If the problem keeps occurring try replacing the adapter. If the issue is still not resolved, contact NetApp technical support for assistance in diagnosing a Fibre Channel issue.
<b>Syslog Message</b>	Failed to recover Fibre Channel HBA %s after multiple resets. Taking the adapter offline.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>reason</b> (STRING): Diagnostic information.

<b>EMS Identifier</b>	fci.adapter.firmware.fault
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a firmware fault is detected on the Fibre Channel adapter and it is being reset to recover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Detected firmware fault 0x%x on Fibre Channel adapter %s.
<b>Parameters</b>	<b>faultCode</b> (INHEX): Firmware fault code. <b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.firmware.pause
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a firmware fault is detected on the Fibre Channel adapter and it is being reset to recover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Detected firmware fault 0x%x on Fibre Channel adapter %s.
<b>Parameters</b>	<b>faultCode</b> (INHEX): Firmware fault code. <b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.link.online
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a Fibre Channel adapter reports online link status, usually after the adapter is reset successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel adapter %s link online.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.notification
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs following a management request from the Fibre Channel(FC) driver to the host bus adapter.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel adapter driver notification: "%s" on adapter %s.
<b>Parameters</b>	<b>info</b> (STRING): Description of the outcome. <b>adapterName</b> (STRING): Name of the associated FC host bus adapter.

<b>EMS Identifier</b>	fci.adapter.nvram.invalid
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when ONTAP(R) software cannot read the NVRAM content of a Fibre Channel adapter. This might cause ONTAP to load an incorrect driver, which could cause the adapter not to work as intended. In addition, the World Wide Node Name (WWNN) and the World Wide Port Name (WWPN) will be incorrect and temporary ones will be assigned. This might cause fabric zoning not to work correctly and might cause problems with anything that depends on consistent WWNNs and WWPNs.
<b>Corrective Action</b>	Reboot the appliance. If the problem still exists, replace the adapter.
<b>Syslog Message</b>	Cannot read NVRAM content of Fibre Channel adapter %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.offline
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system takes a Fibre Channel adapter offline.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel adapter %s is now offline.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.offlining
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system takes a Fibre Channel adapter offline after all outstanding I/O requests have finished.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Taking Fibre Channel adapter %s offline.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.online
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system brings a Fibre Channel adapter online.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel adapter %s is now online.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.online.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Fibre Channel adapter fails to come online.
<b>Corrective Action</b>	If the adapter is in use check the cabling, and if it connected to disk shelves check the seating of the LRC/ESH cards.
<b>Syslog Message</b>	Fibre Channel adapter %s failed to come online.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.onlining
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Fibre Channel adapter begins the process of going online.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Onlining Fibre Channel adapter %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.adapter.speed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when speed auto- negotiation for the Fibre Channel port is disabled because the administrator used either the 'ispfc-force-XG-only?' or the 'mptfc-force-XG-only?' boot argument in conjunction with the 'fc-force-XG-ports' boot argument to force a particular speed. For example, setting 'ispfc-force-2G-only?' to 'true' and setting 'fc-force-2G-ports' to '0a,0c' would force ports 0a and 0c to operate at a rate of 2 Gigabits per second.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The speed of Fibre Channel adapter port %s was forced to %u Gbps by link speed related boot arguments.
<b>Parameters</b>	<b>port</b> (STRING): Name of the adapter port. <b>speed</b> (INT): Speed the adapter port was assigned.

<b>EMS Identifier</b>	fci.adapter.topology
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when topology auto- negotiation for the Fibre Channel port is disabled because the administrator used either the 'fc-force-ptp-ports' or the 'fc-force-loop-ports' boot argument to force a particular topology.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel adapter port %s was forced to negotiate its topology as %s by topology-related boot arguments.
<b>Parameters</b>	<b>port</b> (STRING): Name of the adapter port. <b>topo</b> (STRING): Topology the adapter port was assigned.

<b>EMS Identifier</b>	fci.config.autoReboot
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system reboots automatically to enable correct adapter operation after changing the state of a reconfigurable adapter.
<b>Corrective Action</b>	No user action is required. The system is rebooting to enable the new adapter configuration.
<b>Syslog Message</b>	Rebooting for Fibre Channel adapter %s to become available.
<b>Parameters</b>	<b>adapters</b> (STRING): Affected adapters.

<b>EMS Identifier</b>	fci.config.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an error during the Fibre Channel adapter auto-reconfiguration process. The specified adapters will be unavailable until the problem is fixed.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Auto-reconfiguration for Fibre channel %s adapter(s) %s has failed.
<b>Parameters</b>	<b>type</b> (STRING): Adapter type. <b>adapters</b> (STRING): Affected adapter(s).

<b>EMS Identifier</b>	fci.config.missing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot find Fibre Channel adapter configuration stored on disk, but the adapter is configured in the boot environment. The boot environment information will be used, but you should update the on-disk configuration to be consistent and to prevent the adapter from getting into an unexpected state if the boot environment settings are lost.
<b>Corrective Action</b>	Use the 'fcadmin config' command to reapply the on-disk configuration to match the setting in the boot environment. If the on-disk configuration is not saved and the boot environment is lost, recovery of this adapter's port personality is not possible. No action is taken automatically to correct the problem.
<b>Syslog Message</b>	Fibre Channel adapter %s is configured in the boot environment but the on-disk configuration information is missing.
<b>Parameters</b>	<b>adapter</b> (STRING): Name of the affected Fibre Channel adapter.

<b>EMS Identifier</b>	fci.config.needsReboot
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the state of a reconfigurable adapter is changed, but the system must be rebooted to place the adapter into service.
<b>Corrective Action</b>	Reboot the system to enable the new adapter configuration.
<b>Syslog Message</b>	Reboot the system for Fibre channel %s adapter %s to become available.
<b>Parameters</b>	<b>type</b> (STRING): Adapter type. <b>adapters</b> (STRING): Affected adapter(s).

<b>EMS Identifier</b>	fci.config.offline
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a configurable Fibre Channel adapter cannot be brought online because the configured adapter type needs to be changed.
<b>Corrective Action</b>	Use the 'fcadmin config' utility to change the adapter configuration state and/or reboot the system to allow the PENDING adapter state change to take effect before bringing the adapter online.
<b>Syslog Message</b>	Fibre Channel adapter %s is offline because it is in the %s state.
<b>Parameters</b>	<b>adapter</b> (STRING): Name of the associated Fibre Channel adapter. <b>state</b> (STRING): Configured adapter state.

<b>EMS Identifier</b>	fci.config.state
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the state of a configurable Fibre Channel adapter changes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel %s adapter %s is in the %s state.
<b>Parameters</b>	<b>type</b> (STRING): Current adapter type. <b>adapter</b> (STRING): Name of the associated Fibre Channel adapter. <b>state</b> (STRING): Configured adapter state.

<b>EMS Identifier</b>	fci.device.general.reject
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Fibre Channel port transmits a frame that is rejected. The reject frame contains a reason code that can help diagnose the problem. In some cases, this might lead to a solution.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The frame transmitted by port %s was rejected by port_id 0x%x with reason code 0x%x '%s', explanation code 0x%x '%s'.
<b>Parameters</b>	<b>port</b> (STRING): Name of the adapter port that transmitted the rejected frame. <b>identifier</b> (INTHEX): Destination port identifier of the rejected frame. <b>reasonCode</b> (INTHEX): Reason code byte provided for the exchange failure. <b>reasonString</b> (STRING): Reason code string provided for the exchange failure. <b>explanationCode</b> (INTHEX): Explanation code byte provided for the exchange failure. <b>explanationString</b> (STRING): Explanation code string provided for the exchange failure.

<b>EMS Identifier</b>	fci.device.invalidate.soft.address
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Fibre Channel disk drive takes a soft-assigned address and is being invalidated because soft-assigned addresses are not allowed.
<b>Corrective Action</b>	Disk drives can take a soft-assigned address if the shelf IDs conflict. Make sure that all of the shelves in the loop have unique shelf IDs, and if different shelf types are being mixed, be sure to follow the documentation guidelines for mixing shelves on the same loop. After setting the shelves correctly, power-cycle the shelves so that the drives acquire the correct hard-assigned address.
<b>Syslog Message</b>	Fibre Channel adapter %s is invalidating disk drive %s, which appears to have taken a soft address. Expected hard address %d (0x%x), assigned soft address %d (0x%x).
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>deviceName</b> (STRING): Name of the associated Fibre Channel device. <b>hardLoopId</b> (INT): Hard loop ID that the device attempted to acquire. <b>hardALPA</b> (INTHEX): Hard AL_PA that the device attempted to acquire. <b>softLoopId</b> (INT): Soft loop ID that the device acquired. <b>softALPA</b> (INTHEX): Soft AL_PA that the device acquired.

<b>EMS Identifier</b>	fci.device.login.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel port login fails during the PLOGI or PRLI frame exchange. This can happen due to the reception of a Reject or Logout frame coming from the target, or due to a timeout.
<b>Corrective Action</b>	Power-cycling the device might allow it to recover from this problem.
<b>Syslog Message</b>	A login failure has occurred between Fibre Channel adapter %s and %s device %s, with error subcode %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>deviceType</b> (STRING): Type of device. <b>deviceName</b> (STRING): Name of the device. <b>code</b> (STRING): Error subcode provided by the firmware for the login failure, "N/A" if not provided.

<b>EMS Identifier</b>	fci.device.login.reject
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Fibre Channel port transmits a PLOGI frame that is rejected. The reject frame contains a reason code that can help diagnose the problem. In some cases, this might lead to a solution.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	The PLOGI transmitted by port %s was rejected by port_id 0x%x with reason code 0x%x '%s', explanation code 0x%x '%s'.
<b>Parameters</b>	<b>port</b> (STRING): Name of the adapter port that transmitted the PLOGI frame. <b>identifier</b> (INTHEX): Destination port identifier of the PLOGI frame. <b>reasonCode</b> (INTHEX): Reason code byte provided for the login failure. <b>reasonString</b> (STRING): Reason code string provided for the login failure. <b>explanationCode</b> (INTHEX): Explanation code byte provided for the login failure. <b>explanationString</b> (STRING): Explanation code string provided for the login failure.

<b>EMS Identifier</b>	fci.device.loop.recovery
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a device reports a break in the Fibre Channel loop, which could be due to a bad or unstable connection.
<b>Corrective Action</b>	Check the cabling and verify that the disk drives and the shelf Fibre Channel modules on the loop are fully inserted. The problem is being caused by a connection in the loop upstream from the device.
<b>Syslog Message</b>	Loop recovery event caused by the device upstream from %s device %s.
<b>Parameters</b>	<b>deviceType</b> (STRING): Type of device. <b>deviceName</b> (STRING): Name of the device.

<b>EMS Identifier</b>	fci.discovery.timeout
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Fibre Channel adapter driver cannot complete device discovery within the specified time. The driver allows ONTAP(R) software to continue booting and continues the discovery process in the background.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Device discovery timeout after %d seconds on adapter %s.
<b>Parameters</b>	<b>time</b> (INT): Amount of time, in seconds, spent waiting for device discovery to be completed. <b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.fabric.max.ports
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a switch in the fabric attached to the Fibre Channel adapter exceeds the maximum number of ports allowed on a switch. Any devices on this switch will not be seen by the Fibre Channel adapter.
<b>Corrective Action</b>	Any devices on this switch will not be seen by the Fibre Channel adapter. If that is okay then this error can be ignored. If the devices need to be seen by the Fibre Channel adapter then they need to be connected to a switch that does not exceed the maximum number of ports supported per switch.
<b>Syslog Message</b>	Switch with WWN %s on Fibre Channel adapter %s exceeded the maximum number of ports supported: Maximum ports supported is %d and this switch has %d ports.
<b>Parameters</b>	<b>switchWWN</b> (STRING): World-Wide Name (WWN) of the switch that has exceeded the maximum number of supported ports. <b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>numMaxSwitches</b> (INT): Maximum number of ports supported per switch. <b>numFabricSwitches</b> (INT): Number of ports on this switch.

<b>EMS Identifier</b>	fci.fabric.max.switches
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the fabric attached to the Fibre Channel adapter exceeds the maximum number of allowed switches. This configuration is not supported and will not work.
<b>Corrective Action</b>	Reduce the number of switches in the fabric.
<b>Syslog Message</b>	Invalid Fabric configuration detected on Fibre Channel adapter %s: Maximum switches supported is %d and this fabric contains %d switches.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>numMaxSwitches</b> (INT): Maximum number of switches supported in a fabric. <b>numFabricSwitches</b> (INT): Number of switches in the fabric.

<b>EMS Identifier</b>	fci.flash.preload.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure updating the Fibre Channel adapter flash preload table. If the preload table cannot be updated, the adapter might not have the best configuration settings for the PCI Express link.
<b>Corrective Action</b>	In most cases the adapter will still function normally. However, if you see PCI Express correctable errors on this adapter, you should replace the adapter.
<b>Syslog Message</b>	Failed to update flash preload table on Fibre Channel adapter %s with error %d.
<b>Parameters</b>	<b>port</b> (STRING): Name of the adapter port. <b>errorCode</b> (INT): Update error code.

<b>EMS Identifier</b>	fci.flash.preload.reboot
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Fibre Channel adapter flash preload table has been updated and the controller is rebooting for the new settings to take effect.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Rebooting for updated Fibre Channel flash preload table to take effect.
<b>Parameters</b>	

<b>EMS Identifier</b>	fci.flash.preload.updated
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Fibre Channel adapter flash preload table is updated. The preload table contains configuration settings for the adapter.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Updated flash preload table on Fibre Channel adapter %s to version %s.
<b>Parameters</b>	<b>port</b> (STRING): Name of the adapter port. <b>version</b> (STRING): Preload table version.

<b>EMS Identifier</b>	fci.fwupdate.AutoBoot
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Service Level Initiator Fibre Channel (SLIFC) Initiator driver successfully updates the firmware of the host bus adapter (HBA).
<b>Corrective Action</b>	None; the controller is rebooted automatically to enable the new HBA firmware.
<b>Syslog Message</b>	FC Initiator HBA %s firmware updated from version %s to %s. The adapter will be reset automatically to enable the new HBA firmware.
<b>Parameters</b>	<b>hba</b> (STRING): HBA where the firmware version update occurred. <b>currentversion</b> (STRING): Firmware version the HBA is running. <b>bundleversion</b> (STRING): Firmware version bundled with ONTAP(R) software.

<b>EMS Identifier</b>	fci.fwupdate.NeedBoot
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Service Level Interface Fibre Channel(SLIFC) Initiator driver successfully updates the firmware version of the host bus adapter (HBA), and requires a reboot of the controller to complete the process.
<b>Corrective Action</b>	Reboot the controller to enable the new HBA firmware.
<b>Syslog Message</b>	FC Initiator HBA %s firmware updated from version %s to %s. Reboot the controller to enable the new HBA firmware.
<b>Parameters</b>	<b>hba</b> (STRING): HBA where the firmware update occurred. <b>currentversion</b> (STRING): Firmware version the HBA was running. <b>bundleversion</b> (STRING): Firmware version bundled with ONTAP(R) software.

<b>EMS Identifier</b>	fci.fwupdate.UpdDone
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Service Level Initiator Fibre Channel (SLIFC) Initiator driver successfully updates the firmware of the host bus adapter (HBA).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC Initiator HBA %s firmware updated successfully from version %s to %s.
<b>Parameters</b>	<b>hba</b> (STRING): HBA where the firmware update occurred. <b>currentversion</b> (STRING): Firmware version the HBA was running. <b>bundleversion</b> (STRING): Firmware version bundled with ONTAP(R) software.

<b>EMS Identifier</b>	fci.fwupdate.UpdErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Service Level Initiator Fibre Channel (SLIFC) Initiator driver encounters an error while updating the firmware of the host bus adapter (HBA).
<b>Corrective Action</b>	Contact NetApp technical support for further analysis.
<b>Syslog Message</b>	FC Initiator HBA %s failed to update the firmware from version %s to %s with the status of %d.
<b>Parameters</b>	<b>hba</b> (STRING): HBA where the firmware update failure occurred. <b>currentversion</b> (STRING): Firmware version the HBA is running. <b>bundleversion</b> (STRING): Firmware version bundled with ONTAP(R) software. <b>status</b> (INT): Status code of the firmware update process.

<b>EMS Identifier</b>	fci.link.break
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel adapter detects a break in the link.
<b>Corrective Action</b>	If the adapter is in use, check the cabling.
<b>Syslog Message</b>	Link break detected on Fibre Channel adapter %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.link.break.shelf.fw.update
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Fibre Channel adapter detects a break in the link due to a shelf firmware update being performed.
<b>Corrective Action</b>	No corrective action is required. This is expected behavior when firmware is being downloaded to a shelf.
<b>Syslog Message</b>	Link break detected on Fibre Channel adapter %s while downloading shelf firmware.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.link.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel adapter cannot recover the link and the link is going offline.
<b>Corrective Action</b>	If the adapter is in use, check the Fibre Channel cabling. If this does not resolve the issue, contact NetApp technical support.
<b>Syslog Message</b>	Could not recover link on Fibre Channel adapter %s after %d seconds. Taking the adapter offline.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>downTime</b> (INT): Amount of time that the link was down.

<b>EMS Identifier</b>	fci.loop.stability
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel loop generates too many loop initialization events. This can be a sign of unstable hardware.
<b>Corrective Action</b>	If the adapter is in use check cabling, and if it is connected to disk shelves check the seating of the LRC/ESH cards and disks. If this does not resolve the issue, contact NetApp technical support for assistance in diagnosing a Fibre Channel issue.
<b>Syslog Message</b>	Fibre Channel adapter %s has a loop stability problem. %d loop-initialization events seen in %d seconds.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>numLips</b> (INT): Number of loop-initialization events that occurred. <b>numSeconds</b> (INT): Time interval that these loop-initialization events were seen.

<b>EMS Identifier</b>	fci.mserr.general
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel fabric cannot successfully complete a request to the Management Server to retrieve configuration information. This query request is issued when the specified adapter is connected to a Fibre Channel fabric. Included in the event is the specific Management Server query along with text describing the reason and explanation codes returned by the fabric.
<b>Corrective Action</b>	If the system happens to issue a Management Server query while the fabric is processing one or more configuration changes, the fabric might not successfully complete the request. After the fabric stabilizes, the Management Server can resume processing requests and the system automatically recovers from the error. This error is expected on McData switches that do not have the OSMS license installed, and devices on those switches cannot be seen by the Fibre Channel adapter. This error might also take place if the configuration has not been cabled properly, particularly if the explanation code translates into something like 'Invalid name for interconnect element or port'. If this error continues to occur after the fabric has stabilized and it is not happening on a McData switch without the OSMS license installed, check cabling, and contact NetApp technical support.
<b>Syslog Message</b>	The Fibre Channel fabric Management Server request (%s) sent from adapter %s for WWN (%s) failed with reason code 0x%x (%s), explanation code 0x%x (%s), and response code 0x%x.
<b>Parameters</b>	<p><b>msRequest</b> (STRING): Name of the failing Fibre Channel Management Server request.</p> <p><b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter (HBA).</p> <p><b>queryWWN</b> (STRING): World Wide Name that was used for the query.</p> <p><b>reasonCode</b> (INTHEX): Reason code provided by the fabric for failure of the Management Server request.</p> <p><b>reason</b> (STRING): Reason text provided by the fabric for failure of the Management Server request.</p> <p><b>explanationCode</b> (INTHEX): Explanation code provided by the fabric qualifying the stated reason.</p> <p><b>explanation</b> (STRING): Explanation text provided by the fabric qualifying the stated reason.</p> <p><b>responseCode</b> (INTHEX): Response code provided by the fabric for failure of the specified Management Server request.</p>

<b>EMS Identifier</b>	fci.nserr.general
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Fibre Channel fabric cannot successfully complete a Name Server query issued to obtain configuration and device information when an adapter is connected to the Fibre Channel fabric. Included in the event are the specific Name Server query and text describing the reason and explanation codes returned by the fabric.
<b>Corrective Action</b>	If the system happens to issue a Name Server query while the fabric is processing one or more configuration changes, the fabric might not successfully complete the request. After the fabric stabilizes, the Name Server can resume processing requests and the system automatically recovers from the error. If this error continues to occur after the fabric has stabilized, contact NetApp technical support.
<b>Syslog Message</b>	The Fibre Channel fabric Name Server request (%s) sent from adapter %s failed with reason code 0x%x (%s), explanation code 0x%x (%s) and response code 0x%x.
<b>Parameters</b>	<b>nsRequest</b> (STRING): Name of the failing Fibre Channel Name Server request. <b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>reasonCode</b> (INTHEX): Reason code provided by the fabric for failure of the Name Server request. <b>reason</b> (STRING): Reason text provided by the fabric for failure of the Name Server request. <b>explanationCode</b> (INTHEX): Explanation code provided by the fabric qualifying the stated reason. <b>explanation</b> (STRING): Explanation text provided by the fabric qualifying the stated reason. <b>responseCode</b> (INTHEX): Response code provided by the fabric for failure of the specified Name Server request.

<b>EMS Identifier</b>	fci.nserr.noDevices
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the fabric to which the specified adapter is attached reports that no Fibre Channel devices are present.
<b>Corrective Action</b>	Check the fabric to ensure that all expected devices appear in the Name Server. If they appear in the Name Server but have not been reported to the specified adapter, review fabric zoning (if zoning is in use) to ensure that devices are present in the zone containing the adapter. If all expected devices are not present in the Name Server, verify the devices are powered-on, in an operational state, and switch connections/ports are operational.
<b>Syslog Message</b>	The Fibre Channel fabric attached to adapter %s reports the presence of no Fibre Channel devices.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.nserr.peerWWN
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the fabric connected to the specified adapter is zoned such that the adapter (or switch port if port zoning is in use) is not included in a fabric zone.
<b>Corrective Action</b>	Check the fabric to ensure that the specified adapter is included in a fabric zone. If port zoning is in use, make sure that the switch port to which the adapter is attached is included in the active zone configuration. If WWN zoning is in use, ensure that the WWN of the specified adapter is included in the active zone configuration. Also make sure that the associated switch port is in an operational state.
<b>Syslog Message</b>	Adapter %s is not in a fabric zone.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter.

<b>EMS Identifier</b>	fci.set.wwn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the World-Wide Name (WWN) for this adapter is set to the value in the fci-wwn-"adapter_name" bootarg.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Setting WWN for adapter %s to %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the associated Fibre Channel host bus adapter. <b>wwn</b> (STRING): WWN that will be used by the adapter.

<b>EMS Identifier</b>	fci.sfp.invalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an invalid Small Form-factor Pluggable (SFP) is inserted into the adapter. For example, a 10-GB SFP was inserted into an 8-GB FC adapter.
<b>Corrective Action</b>	Replace the SFP with one that supports the proper speed.
<b>Syslog Message</b>	The SFP in FC adapter %s is not valid. (%s)
<b>Parameters</b>	<b>port</b> (STRING): Name of the adapter port. <b>reason</b> (STRING): Reason for Invalid SFP.

<b>EMS Identifier</b>	fci.wrong.speed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the fixed speed level requested by the fc-force-XG-ports bootarg is out of range for the corresponding FC port.
<b>Corrective Action</b>	If another fixed speed is desired, adjust accordingly. Otherwise, the port will autonegotiate.
<b>Syslog Message</b>	Fibre Channel adapter port %s does not support a speed setting of %u Gbps, which does not fall within port range %x.
<b>Parameters</b>	<b>port</b> (STRING): Name of the adapter port. <b>speed</b> (INT): Speed the adapter port was assigned. <b>range</b> (INTHEX): Range of speeds the adapter port is capable of using.

## "fcmon" Event Group

<b>EMS Identifier</b>	fcmon.status <b>Deprecated:</b> Deprecated as of Data ONTAP 9.2 because FCMON process has been removed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when FCMON starts up, halts or is requested to print it's current state.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	FCMON is %s
<b>Parameters</b>	<b>status</b> (STRING): The status of FCMON (initializing running sleeping halted)

## "fcp" Event Group

<b>EMS Identifier</b>	fcp.service.shutdown
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	The Fibre Channel Protocol (FCP) service has been shutdown.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FCP service shutdown
<b>Parameters</b>	

<b>EMS Identifier</b>	fcp.service.startup
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	The Fibre Channel Protocol (FCP) service has been started.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FCP service startup
<b>Parameters</b>	

## "fcvi" Event Group

<b>EMS Identifier</b>	fcvi.attr.changed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when any of the FCVI attributes changes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: %s changed on port %s. %s
<b>Parameters</b>	<b>attr_type</b> (STRING): Attribute type. <b>port</b> (STRING): FCVI Interconnect NIC. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.cm.timedout
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when connection requests times out.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Connection request timedout on port %s. QP name = %s, QP index = %d, Remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP index. <b>system_id</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.cross.connect.detected
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the fcvi driver detects a cross connection
<b>Corrective Action</b>	Check the FCVI interconnect cabling at the local and remote nodes. FCVI adapter ports fcvi_device_0s and fcvi_device_1s should not be connected to the same fabric. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	FC-VI adapter: Cross Connection detected between local port %s and remote port %s. Local System ID = %llu, Remote System ID = %llu.
<b>Parameters</b>	<b>lname</b> (STRING): Local node's port name. <b>rname</b> (STRING): Remote node's port name. <b>lsid</b> (LONGINT): Local node's system id. <b>rsid</b> (LONGINT): Remote node's system id.

<b>EMS Identifier</b>	fcvi.disabled
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the HA interconnect card is disabled by the ic-type environment variable.
<b>Corrective Action</b>	Either remove the HA interconnect card from the controller or change the ic-type environment variable.
<b>Syslog Message</b>	FC-VI adapter: Port %s has been disabled because of the ic-type environment variable.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC.

<b>EMS Identifier</b>	fcvi.initFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the driver fails to initialize a FC-VI port.
<b>Corrective Action</b>	Reboot the controller. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	FC-VI adapter: %s failed for port %s.
<b>Parameters</b>	<b>operation</b> (STRING): Type of operation <b>port</b> (STRING): FCVI Interconnect NIC.

<b>EMS Identifier</b>	fcvi.invalid.advertisement
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when FCVI driver receives invalid advertisement.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s received invalid advertisement. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.invalid.sfp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SFP (Small Form-Factor Pluggable) module of the Fibre Channel Virtual Interface (FC-VI) is invalid or incompatible.
<b>Corrective Action</b>	Replace the SFP with a compatible one.
<b>Syslog Message</b>	FC-VI adapter: Invalid SFP - Reason: %s on port %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the incompatibility. <b>port</b> (STRING): Interconnect NIC.

<b>EMS Identifier</b>	fcvi.link.down
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the physical link of the Fibre Channel Virtual Interface (FC-VI) adapter goes down.
<b>Corrective Action</b>	1. Ensure that the FC-VI link has not been tampered with. 2. Verify that the physical status of the FC-VI adapter is "Up" by using the command "metrocluster interconnect adapter show". 3. If the configuration includes fabric switches, ensure that they are properly cabled and configured.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>alertId</b> (STRING): Alert ID. <b>alertingResource</b> (STRING): Alerting resource unique name. <b>alertingResourceName</b> (STRING): Alerting resource name. <b>possibleEffect</b> (STRING): Possible effect for link transition. <b>probableCause</b> (STRING): Probable cause of the event. <b>probableCauseDescription</b> (STRING): Probable cause description of the event. <b>additionalInfo</b> (STRING): Any additional information for the event.

<b>EMS Identifier</b>	fcvi.link.up
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the physical link of the Fibre Channel Virtual Interface (FC-VI) adapter comes up.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>alertId</b> (STRING): Alert ID. <b>alertingResource</b> (STRING): Alerting resource unique name.

<b>EMS Identifier</b>	fcvi.qlgc.async.event.overflow
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when total number of async events are overflowed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s async event overflowed. Resetting the adapter.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC.

<b>EMS Identifier</b>	fcvi.qlgc.connErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI adapter detects a connection error. The FC-VI driver will attempt to retry the connection.
<b>Corrective Action</b>	If this message repeats frequently, there may be an issue with the FC fabric or the adapter. Contact NetApp technical support.
<b>Syslog Message</b>	FC-VI adapter: Port %s detects connection error. FC-VI opcode = %s(0x%x), QP name = %s, QP index = %d, Remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): Interconnect NIC. <b>opcode_str</b> (STRING): FCVI opcode. <b>opcode</b> (INHEX): FCVI opcode. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP number. <b>systemID</b> (LONGINT): Remote node's system ID. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.cpr.reset.cancelled
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the CPR reset initiated by the FC-VI port got cancelled.
<b>Corrective Action</b>	Reboot the filer. If issue still persists then replace the FCVI adapter.
<b>Syslog Message</b>	FC-VI adapter: CPR reset initiated by port %s got cancelled. Offlining the port.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect adapter.

<b>EMS Identifier</b>	fcvi.qlgc.cpr.reset.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the CPR reset initiated by the FC-VI port fails.
<b>Corrective Action</b>	Reboot the filer. If issue still persists then replace the FCVI adapter.
<b>Syslog Message</b>	FC-VI adapter: CPR reset initiated by port %s failed.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect adapter.

<b>EMS Identifier</b>	fcvi.qlgc.cpr.reset.unsupported
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the CPR reset is not supported by the adapter.
<b>Corrective Action</b>	Reboot the filer. If issue still persists then replace the FCVI adapter.
<b>Syslog Message</b>	FC-VI adapter: CPR reset is not supported by port %s.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect adapter.

<b>EMS Identifier</b>	fcvi.qlgc.FrameDiscardErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI adapter firmware discards a received frame because of a receive frame error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Discarded a received frame because of a receive frame error. Port %s, QP name = %s, QP index = %d, exchange ID 0x%x, address offset 0x%x, remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qp_name</b> (STRING): QP name. <b>qp_index</b> (INT): QP number. <b>exchange_id</b> (INTHEX): Exchange ID. <b>address</b> (INTHEX): Address offset of the last good frame. <b>system_id</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.hard.reset.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an FC-VI port's soft reset fails.
<b>Corrective Action</b>	If CPR reset is not supported in the platform, then reboot the filer to recover from this issue. If issue persists then replace the FCVI adapter.
<b>Syslog Message</b>	FC-VI adapter: Hard reset failed at port %s.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect adapter.

<b>EMS Identifier</b>	fcvi.qlgc.invalid.data
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when FCVI driver receives invalid data from firmware.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s received invalid data. QP index = %d, completion status = %s(status code = %d), opcode = %s(%d), remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpnum</b> (INT): QP index. <b>status</b> (STRING): Completion status. <b>status_code</b> (INT): Completion status code. <b>opcode_str</b> (STRING): FCVI opcode in string. <b>opcode</b> (INT): FCVI opcode. <b>systemID</b> (LONGINT): Remote node's system Id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.invalid.exch.address
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when FCVI driver receives a response with invalid exchange address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s received invalid exchange address for %s. QP name = %s, QP index = %d, expected exchange address = 0x%x, received exchange address = 0x%x. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>resp_type</b> (STRING): Response type. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP number. <b>exp_oxid</b> (INTHEX): Expected exchange address. <b>rcvd_oxid</b> (INTHEX): Received exchange address. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.invalid.qp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when FCVI driver receives invalid QP index from firmware.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s received invalid QP. Received QP index = %d, completion status = %s(status code = %d), entry type = %s(entry code = %d). %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpnum</b> (INT): QP index. <b>status</b> (STRING): Completion status. <b>status_code</b> (INT): Completion status code. <b>entry_type</b> (STRING): Request/Response entry type. <b>entry_code</b> (INT): Request/Response entry code. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.invalid.response
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when FCVI driver receives invalid response from firmware.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s received invalid response. %s. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>error_type</b> (STRING): Type of error. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.ioErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI driver receives some IO error.
<b>Corrective Action</b>	No corrective action is required. The driver internally resets the adapter if required. However, if you see this message frequently, there might be an issue with the FC fabric or the adapter. Contact NetApp technical support.
<b>Syslog Message</b>	FC-VI adapter: FCVI driver on port %s received IO error. Status = %s(status code = 0x%x), FCVI opcode = %s(0x%x), QP name = %s, QP index = %d, Remote node's system id = %llu.
<b>Parameters</b>	<b>port</b> (STRING): Interconnect NIC. <b>status_str</b> (STRING): Completion status in string. <b>status</b> (INHEX): Completion status code. <b>opcode_str</b> (STRING): FCVI opcode in string. <b>opcode</b> (INHEX): FCVI opcode. <b>qpName</b> (STRING): QP name. <b>qpIndex</b> (INT): QP number. <b>systemID</b> (LONGINT): Remote node's system ID.

<b>EMS Identifier</b>	fcvi.qlgc.login.timeout
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when port login request times out.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Remote port login timeout on port %s. Remote port id = 0x%x, Remote port handle = %d. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>portid</b> (INHEX): Remote port identifier. <b>porthandle</b> (INT): Remote port handle. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.ls.reject
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FCVI firmware rejects a link service.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Link service = %s(code = %d), rejected on port %s. %s
<b>Parameters</b>	<b>ls</b> (STRING): Link service name. <b>ls_code</b> (INT): Link service code. <b>port</b> (STRING): FCVI Interconnect NIC. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.mbox.cmd.pending
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a mailbox command is pending for a long time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Mailbox command '%s(code = 0x%x)' pending on port %s. %s
<b>Parameters</b>	<b>cmd</b> (STRING): Mailbox command. <b>cmd_code</b> (INTHEX): Mailbox command code. <b>port</b> (STRING): FCVI Interconnect NIC. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.mbox.cmd.timedout
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a mailbox command times out.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Mailbox command '%s(code = 0x%x)' timedout on port %s. %s
<b>Parameters</b>	<b>cmd</b> (STRING): Mailbox command. <b>cmd_code</b> (INTHEX): Mailbox command code. <b>port</b> (STRING): FCVI Interconnect NIC. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.no.iu.buffer
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FCVI firmware identifies no more incoming IU buffers in the free pool.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s doesn't have free IU buffer. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.no.recv.buffer
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FCVI firmware identifies no more receive buffers available for the incoming receive frames.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s doesn't have free receive buffer. QP name = %s, QP index = %d, Message ID = 0x%x. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP index. <b>msg_id</b> (INHEX): Message id of the incoming message. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.oodErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI driver receives out of order completions.
<b>Corrective Action</b>	No corrective action is required. The driver internally resets the adapter if required. However, if you see this message frequently, there might be an issue with the FC fabric or the adapter. Contact NetApp technical support.
<b>Syslog Message</b>	FC-VI adapter: FCVI driver on port %s receives out of order completions. FCVI opcode = %s(0x%x), QP name = %s, QP index = %d, Remote node's system id = %llu.
<b>Parameters</b>	<b>port</b> (STRING): Interconnect NIC. <b>opcode_str</b> (STRING): FCVI opcode in string. <b>opcode</b> (INHEX): FCVI opcode. <b>qpName</b> (STRING): QP name. <b>qpIndex</b> (INT): QP number. <b>systemID</b> (LONGINT): Remote node's system ID.

<b>EMS Identifier</b>	fcvi.qlgc.PCIErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI adapter firmware encounters a PCI error because it cannot write a frame to host memory.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: PCI error while writing a frame to host memory. Port %s, QP name = %s, QP index = %d, exchange ID 0x%x, address offset 0x%x, remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qp_name</b> (STRING): QP name. <b>qp_index</b> (INT): QP number. <b>exchange_id</b> (INHEX): Exchange ID. <b>address</b> (INHEX): Address offset of the last good frame. <b>system_id</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.port.reset
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a FCVI port resets.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Resetting the port %s. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>reason</b> (STRING): Reason for port reset.

<b>EMS Identifier</b>	fcvi.qlgc.qp.create.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when QP creation fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Failed to create QP on port %s. Requested QP index = %d, completion status = %s(status code = %d). %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpnum</b> (INT): QP index. <b>status</b> (STRING): Completion status. <b>status_code</b> (INT): Completion status code. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.qp.destroy.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the QP destroy request failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: QP destroy failed on port %s. QP index = %d. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpnum</b> (INT): QP index. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.qpErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI driver receives a QP error from the Firmware. The FC-VI driver will attempt to retry the connection.
<b>Corrective Action</b>	If this message repeats frequently, there may be an issue with the FC fabric or the adapter. Contact NetApp technical support.
<b>Syslog Message</b>	FC-VI adapter: FCVI driver on port %s received QP Error. QP name = %s, QP index = 0x%x, VI state = %s(state code = 0x%x), sub-error = %s(error code = 0x%x). Remote node's system id = %llu. This error has occurred %d times. %s
<b>Parameters</b>	<b>port</b> (STRING): Interconnect Adapter. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INTHEX): QP number. <b>state_str</b> (STRING): QP state. <b>state</b> (INTHEX): QP state code. <b>suberror</b> (STRING): Sub-error. <b>code</b> (INTHEX): Sub-error code. <b>system_id</b> (LONGINT): Remote node's system ID. <b>errcnt</b> (INT): Number of times QP async error was encountered. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.rcvd.invalid.iu.buffer
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI adapter receives invalid information unit buffer.
<b>Corrective Action</b>	No corrective action is required. The driver internally resets the adapter if required. However, if you see this message frequently, there might be an issue with the FC fabric or the adapter. Contact NetApp technical support.
<b>Syslog Message</b>	FC-VI adapter: Port %s received invalid IU buffer. Status = %s(status code = 0x%x), FCVI opcode = %s(0x%x), QP name = %s, QP index = %d, buffer handle = %d, Remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): Interconnect NIC. <b>status_str</b> (STRING): Completion status in string. <b>status</b> (INTHEX): Completion status code. <b>opcode_str</b> (STRING): FCVI opcode in string. <b>opcode</b> (INTHEX): FCVI opcode. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP number. <b>bufhdl</b> (INT): Buffer handle. <b>systemID</b> (LONGINT): Remote node's system ID. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.receive.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FCVI firmware detects an error in the received frame.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Received bad frame on port %s. Mailbox-1 = %d, Mailbox-2 = %d. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>mbox1</b> (INT): Content of mailbox-1. <b>mbox2</b> (INT): Content of mailbox-2. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.received.disconnect
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when FCVI driver receives disconnect request from partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Disconnect request received on port %s. QP name = %s, QP index = %d, Remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP index. <b>system_id</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.received.reject
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when FCVI driver receives connection reject from partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Connect request rejected on port %s. QP name = %s, QP index = %d, Remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP index. <b>system_id</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.recvIUErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI adapter receives some error in received information unit.
<b>Corrective Action</b>	No corrective action is required. The driver internally resets the adapter if required. However, if you see this message frequently, there might be an issue with the FC fabric or the adapter. Contact NetApp technical support.
<b>Syslog Message</b>	FC-VI adapter: Port %s received IU error. Status = %s(status code = 0x%x), FCVI opcode = %s(0x%x), QP name = %s, QP index = %d, buffer handle = %d, Remote node's system id = %llu.
<b>Parameters</b>	<b>port</b> (STRING): Interconnect NIC. <b>status_str</b> (STRING): Completion status in string. <b>status</b> (INTEX): Completion status code. <b>opcode_str</b> (STRING): FCVI opcode in string. <b>opcode</b> (INTEX): FCVI opcode. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP number. <b>bufhdl</b> (INT): Buffer handle. <b>systemID</b> (LONGINT): Remote node's system ID.

<b>EMS Identifier</b>	fcvi.qlgc.regDumped
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the FCVI driver saves a diagnostic dump in a file.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Diagnostic dump for port %s saved to file %s.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>filename</b> (STRING): File to which the diagnostic dump was saved.

<b>EMS Identifier</b>	fcvi.qlgc.RespFrameErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the adapter firmware sends a response frame with the error bit set.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Firmware sent a response with the error bit set. Port %s, QP name = %s, QP index = %d, exchange ID 0x%x, address offset 0x%x, remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpname</b> (STRING): QP name. <b>qp_index</b> (INT): QP number. <b>exchange_id</b> (INTEX): Exchange ID. <b>address</b> (INTEX): Address offset of the last good frame. <b>system_id</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.risc.paused
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when FCVI RISC is paused.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Port %s detected a RISC pause error. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.rmt.link.down
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when FCVI driver lost link to partner port.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Link to partner node over port %s is down. Partner port id = 0x%x, partner node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>port_id</b> (INTEX): Partner port id. <b>system_id</b> (LONGINT): Partner node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.rmt.link.up
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when FCVI driver gets link to partner port.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Link to partner node over port %s is up. Partner port id = 0x%x, partner node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>port_id</b> (INTEX): Partner port id. <b>system_id</b> (LONGINT): Partner node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.sendIUError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FC-VI adapter fails to send an information unit.
<b>Corrective Action</b>	No corrective action is required. The driver internally retries. However, if you see this message frequently, there might be an issue with the FC fabric or the adapter. Contact NetApp technical support.
<b>Syslog Message</b>	FC-VI adapter: Port %s sendIU status = %s(status code = 0x%x), FCVI opcode = %s(0x%x), QP name = %s, QP index = %d, Remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): Interconnect NIC. <b>status_str</b> (STRING): Completion status in string. <b>status</b> (INHEX): Completion status code in hex. <b>opcode_str</b> (STRING): FCVI opcode in string. <b>opcode</b> (INHEX): FCVI opcode in hex. <b>qpName</b> (STRING): QP name. <b>qpIndex</b> (INT): QP number. <b>systemID</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.sent.disconnect
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when FCVI driver sends disconnect request to remote partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Disconnect request sent on port %s. QP name = %s, QP index = %d, Remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qpname</b> (STRING): QP name. <b>qpnum</b> (INT): QP index. <b>system_id</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.soft.reset.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an FC-VI port's soft reset fails.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	FC-VI adapter: Soft reset failed at port %s.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect adapter.

<b>EMS Identifier</b>	fcvi.qlgc.system.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when FCVI driver receives system error from FCVI firmware.
<b>Corrective Action</b>	No corrective action is required. The driver internally resets the adapter. However, if you see this message frequently, there might be an issue with the adapter/firmware. Contact NetApp technical support.
<b>Syslog Message</b>	FC-VI adapter: System Error on port %s. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.TimeOutErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the adapter firmware cannot send a request.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Firmware could not send a request. Port %s, QP name = %s, QP index = %d, exchange ID 0x%x, address offset 0x%x, remote node's system id = %llu. %s
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>qp_name</b> (STRING): QP name. <b>qp_index</b> (INT): QP number. <b>exchange_id</b> (INTHEX): Exchange ID. <b>address</b> (INTHEX): Address offset of the last good frame. <b>system_id</b> (LONGINT): Remote node's system id. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc.transfer.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the FCVI firmware detects a transfer error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: %s transfer error on port %s. Affected queue number = %d. %s
<b>Parameters</b>	<b>trans_type</b> (STRING): Transfer type. <b>port</b> (STRING): FCVI Interconnect NIC. <b>queue_num</b> (INT): Queue number. <b>info</b> (STRING): Additional info.

<b>EMS Identifier</b>	fcvi.qlgc_regDumpFailed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the HA interconnect driver could not save a diagnostic dump.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Failed to save diagnostic dump for port %s. %s.
<b>Parameters</b>	<b>port</b> (STRING): FCVI Interconnect NIC. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	fcvi.unsupported.config
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a network adapter port behavior type is set to use FC-VI on a platform that has not been validated for its use and is therefore unsupported.
<b>Corrective Action</b>	Change the port behavior type to a value other than "FC-VI". Use the "system hardware unified-connect show" command to view network adaptor port information, including the current behavior type. Use the "system hardware unified-connect modify" command to change the network adapter port behavior type.
<b>Syslog Message</b>	FC-VI port behavior type not supported on network adapter port %s.
<b>Parameters</b>	<b>port</b> (STRING): The network adapter port whose behavior type is set to use FC-VI.

<b>EMS Identifier</b>	fcvi.update.link.state
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when there is a change in physical link state of the Fibre Channel Virtual Interface (FC-VI) adapter.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FC-VI adapter: Physical link is %s on port %s.
<b>Parameters</b>	<b>link_state</b> (STRING): New link state. <b>port</b> (STRING): Interconnect NIC.

## "fg" Event Group

<b>EMS Identifier</b>	fg.convert.critical.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the conversion of a FlexVol(R) volume into a FlexGroup fails. The FlexVol volume is inoperable, and can no longer serve data.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	Conversion of FlexVol volume %s to FlexGroup with MSID %llu failed. The FlexVol can no longer serve data. Reason: %s
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of volume being converted to a FlexGroup. <b>flexgroupMsid</b> (LONGINTEX): MSID of the new FlexGroup. <b>reason</b> (STRING): Reason why the conversion failed.

<b>EMS Identifier</b>	fg.convert.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the conversion of a FlexVol(R) volume into a FlexGroup fails. The FlexVol volume is still operable.
<b>Corrective Action</b>	Ensure that the FlexVol volume is a valid candidate for the convert operation, and then retry the command. If the error persists, contact NetApp technical support.
<b>Syslog Message</b>	Conversion of FlexVol volume %s to FlexGroup with MSID %llu failed. Reason: %s
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of volume being converted to a FlexGroup. <b>flexgroupMsid</b> (LONGINTEX): MSID of the new FlexGroup. <b>reason</b> (STRING): Reason why the conversion failed.

<b>EMS Identifier</b>	fg.convert.start
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the conversion of a FlexVol(R) volume to a FlexGroup begins.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Starting conversion of FlexVol volume %s to new FlexGroup with MSID %llu, UUID %s.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of volume being converted to a FlexGroup. <b>flexgroupMsid</b> (LONGINTEX): MSID of the new FlexGroup. <b>flexgroupUuid</b> (STRING): UUID of the new FlexGroup.

<b>EMS Identifier</b>	fg.convert.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the conversion of a FlexVol(R) volume into a FlexGroup succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Conversion of FlexVol volume %s to FlexGroup with MSID %llu successful.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of volume being converted to a FlexGroup. <b>flexgroupMsid</b> (LONGINTEX): MSID of the new FlexGroup.

<b>EMS Identifier</b>	fg.unconvert.critical.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a member of a FlexGroup fails to be converted into an independent FlexVol(R) volume. The original state of this member could not be restored, so the FlexGroup itself is inoperable, and requires repair.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	FlexGroup member #%%u of %u in FlexGroup %s failed to be converted into an independent FlexVol volume. The FlexGroup is inoperable. Reason: %s
<b>Parameters</b>	<b>fgindex</b> (INT): FlexGroup index of the volume being converted to a FlexVol volume. <b>fgmembers</b> (INT): Total number of members in this FlexGroup. <b>fgname</b> (STRING): Name of the FlexGroup containing the member being converted to a FlexVol volume. <b>reason</b> (STRING): Reason why the conversion failed.

<b>EMS Identifier</b>	fg.unconvert.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a member of a FlexGroup has fails to be converted into an independent FlexVol(R) volume. The FlexGroup is still functional.
<b>Corrective Action</b>	Ensure that the FlexGroup is a valid candidate for the unconvert operation, and then retry the command. If the error persists, contact NetApp technical support.
<b>Syslog Message</b>	FlexGroup member #%%u of %u in FlexGroup %s failed to be converted into an independent FlexVol volume. Reason: %s
<b>Parameters</b>	<b>fgindex</b> (INT): FlexGroup index of the volume being converted to a FlexVol volume. <b>fgmembers</b> (INT): Total number of members in this FlexGroup. <b>fgname</b> (STRING): Name of the FlexGroup containing the member being converted to a FlexVol volume. <b>reason</b> (STRING): Reason why the conversion failed.

<b>EMS Identifier</b>	fg.unconvert.start
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a member of a FlexGroup, usually the root constituent, is being converted to an independent FlexVol(R) volume.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Starting conversion of FlexGroup member #%%u of %u in FlexGroup %s into an independent FlexVol volume.
<b>Parameters</b>	<b>fgindex</b> (INT): FlexGroup index of the volume being converted to a FlexVol volume. <b>fgmembers</b> (INT): Total number of members in this FlexGroup. <b>fgname</b> (STRING): Name of the FlexGroup containing the member being converted to a FlexVol volume.

<b>EMS Identifier</b>	fg.unconvert.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a member of a FlexGroup is successfully converted to an independent FlexVol(R) volume.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FlexGroup member #%u of %u in FlexGroup %s was successfully converted into an independent FlexVol volume.
<b>Parameters</b>	<b>fgindex</b> (INT): FlexGroup index of the volume being converted to a FlexVol volume. <b>fgmembers</b> (INT): Total number of members in this FlexGroup. <b>fgname</b> (STRING): Name of the FlexGroup containing the member being converted to a FlexVol volume.

<b>EMS Identifier</b>	fg.writeback.delta.checker
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an inconsistency is discovered during a writeback. The writeback is ignored, so that the inconsistency does not get transferred to the cache origin.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Writeback operation failed for %s at line %d (%s).
<b>Parameters</b>	<b>fh</b> (STRING): File handle of the affected inode. <b>source</b> (INT): Location of the failing writeback validation test. <b>state</b> (STRING): Description of the inconsistency.

## "fips" Event Group

<b>EMS Identifier</b>	fips.post.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unrecoverable error prevents initialization of the cryptographic subsystem into FIPS mode. No SSL communication will be possible with the storage system in this state. Other ONTAP features may also be affected by the lack of cryptographic operations.
<b>Corrective Action</b>	To operate in non FIPS cryptographic mode, turn off FIPS mode for the SSL interface using command "security config modify -interface SSL -is-fips-enabled false" and restart the system. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	SSL interface disabled due to failure of FIPS mode cryptographic services.
<b>Parameters</b>	

## "firmware" Event Group

<b>EMS Identifier</b>	firmware.file.invalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an invalid disk or shelf firmware file. This file cannot be used to update firmware on any disk or shelf device. This message repeats every 24 hours as long as the invalid file is present. There might be other invalid files on the system, and messages for those files are suppressed if they are detected within 24 hours of this event.
<b>Corrective Action</b>	Check your support provider for more information about obtaining the latest disk and shelf firmware. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	%s %s failed verification due to: %s.
<b>Parameters</b>	<b>fwFileType</b> (STRING): Type of the firmware file, for example disk or shelf firmware file. <b>fwFileName</b> (STRING): Name of the firmware file. <b>reason</b> (STRING): Reason for mismatch.

## "flexcache" Event Group

<b>EMS Identifier</b>	flexcache.featureDisabled
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt is made to mount a FlexCache volume. FlexCache is no longer supported, please remove any remaining FlexCache volumes left over from upgrading the cluster.
<b>Corrective Action</b>	Delete all FlexCache volumes in the cluster. They can be displayed by using the "volume flexcache show" command.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>volume</b> (STRING): FlexCache volume involved.

## "fli" Event Group

<b>EMS Identifier</b>	fli.lun.import.checkpoint
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a checkpoint record delete fails. Checkpoint is metadata information stored with the NetApp LUN attribute stream for tracking import progress. An attempt is made to delete this metadata during import stop or delete operations.
<b>Corrective Action</b>	This record can remain in the LUN attribute stream without any harm. It could occupy ~100-200 bytes of space in the LUN attribute stream. If that is an issue, a support personnel could be contacted to delete this record.
<b>Syslog Message</b>	Import checkpoint record could not be deleted for LUN %s - Reason:%s
<b>Parameters</b>	<b>LUNSerialNumber</b> (STRING): Serial number of the LUN. <b>FailureReason</b> (STRING): Internal error reason.

<b>EMS Identifier</b>	fli.lun.import.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a foreign LUN import is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Import of foreign LUN %s of size %lld bytes from array model %s belonging to vendor %s is successfully completed. Destination NetApp LUN is %s.
<b>Parameters</b>	<b>DiskSerialNumber</b> (STRING): Foreign disk serial number. <b>Size</b> (LONGINT): Size of the foreign LUN. <b>ForeignArrayModelID</b> (STRING): Foreign array model ID. <b>ForeignArrayVendor</b> (STRING): Foreign array vendor name. <b>LUNSerialNumber</b> (STRING): Serial number of the LUN.

<b>EMS Identifier</b>	fli.lun.import.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a foreign LUN import goes into failed state. 1. Data could not be read from the source(foreign LUN). 2. Data could not be written to the destination(NetApp LUN). 3. This is an Internal/metadata related error.
<b>Corrective Action</b>	1. Verify the connectivity to the foreign disk. 2. Verify that the destination volume is online and has enough space by using "volume show" command. 3. Run the "lun import pause" command followed by a "lun import resume" command. In certain cases, the import might need to be restarted ( Use "lun import stop" command followed by "lun import start" command). The ultimate recovery is to delete this relationship (with -force option) and create it again.
<b>Syslog Message</b>	Import of foreign LUN %s to LUN %s failed - Reason:%s
<b>Parameters</b>	<b>DiskSerialNumber</b> (STRING): Foreign disk serial number. <b>LUNSerialNumber</b> (STRING): Serial number of the LUN. <b>FailureReason</b> (STRING): Internal error reason.

<b>EMS Identifier</b>	fli.lun.import.inconsistent
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the import inconsistent flag cannot be unset. The import inconsistent flag is a system attribute for the NetApp LUN that is set during import progress, to indicate inconsistent data in the destination LUN. This is to discourage restore operations on LUN Snapshot(tm) copies created during import. A best effort is done to unset this flag after the import is complete, and also during import stop and delete operations. It is safe to perform restore operations if data in the destination LUN is known to be successfully verified.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Import inconsistent flag could not be unset for LUN %s - Reason:%s
<b>Parameters</b>	<b>LUNSerialNumber</b> (STRING): Serial number of the LUN. <b>FailureReason</b> (STRING): Internal error reason.

<b>EMS Identifier</b>	fli.lun.verify.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a foreign LUN import verify is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Import verify of foreign LUN %s of size %lld bytes from array model %s belonging to vendor %s with NetApp LUN %s is successfully completed.
<b>Parameters</b>	<b>DiskSerialNumber</b> (STRING): Foreign disk serial number. <b>Size</b> (LONGINT): Size of the foreign LUN. <b>ForeignArrayModelID</b> (STRING): Foreign array model ID. <b>ForeignArrayVendor</b> (STRING): Foreign array name. <b>LUNSerialNumber</b> (STRING): Serial number of the LUN.

<b>EMS Identifier</b>	fli.lun.verify.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a foreign LUN import verify fails. 1. Data could not be read from the source(foreign LUN). 2. Data could not be written to the destination(NetApp LUN). 3. There was a data mismatch during the verify operation. 4. There was an internal error.
<b>Corrective Action</b>	1. For a data mismatch, start the import operation again. 2. Verify the connectivity to the foreign disk. 3. Verify that destination volume is in a healthy state. In certain cases, the verify operation might need to be restarted (Use "lun import verify stop" command followed by "lun import verify start" command). The ultimate recovery is to delete this relationship (with -force option) and create it again.
<b>Syslog Message</b>	Import verify of foreign LUN %s and NetApp LUN %s failed - Reason:%s
<b>Parameters</b>	<b>DiskSerialNumber</b> (STRING): Foreign disk serial number. <b>LUNSerialNumber</b> (STRING): Serial number of the LUN. <b>FailureReason</b> (STRING): Internal error reason.

## "fm" Event Group

<b>EMS Identifier</b>	fm.cpuUtilDuringARL <b>Deprecated:</b> Deprecated as of version 9.0.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs at the start of an aggregate relocation (ARL) and at the completion of an ARL. It records the maximum, minimum, and average CPU and disk utilization on the node executing the ARL.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CPU and disk utilization during the %d seconds %s: cpu_util_high: %lld; cpu_util_low: %lld; cpu_util_avg: %lld; disk_util_high: %lld; disk_util_low: %lld; disk_util_avg: %lld
<b>Parameters</b>	<b>window_sz</b> (INT): Duration, in seconds, over which CPU and disk utilization are tracked. <b>when</b> (STRING): Event during which CPU and disk utilization are tracked. <b>cpu_util_high</b> (LONGINT): Maximum CPU utilization. <b>cpu_util_low</b> (LONGINT): Minimum CPU utilization. <b>cpu_util_avg</b> (LONGINT): Average CPU utilization. <b>disk_util_high</b> (LONGINT): Maximum disk utilization. <b>disk_util_low</b> (LONGINT): Minimum disk utilization. <b>disk_util_avg</b> (LONGINT): Average disk utilization.

<b>EMS Identifier</b>	fm.cpuUtilDuringTransition
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during various failover and aggregate mobility events, including start of a takeover, end of a successful takeover, start of a CFO giveback, after completion of SFO giveback and completion of an aggregate relocation. This message records the maximum, minimum, and average CPU and disk utilization on the node executing the failover or aggregate mobility operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	CPU and disk utilization during the %d seconds %s: cpu_util_high: %lld; cpu_util_low: %lld; cpu_util_avg: %lld; disk_util_high: %lld; disk_util_low: %lld; disk_util_avg: %lld
<b>Parameters</b>	<b>window_sz</b> (INT): Duration, in seconds, over which CPU and disk utilization are tracked. <b>when</b> (STRING): Event during which CPU and disk utilization are tracked. <b>cpu_util_high</b> (LONGINT): Maximum CPU utilization. <b>cpu_util_low</b> (LONGINT): Minimum CPU utilization. <b>cpu_util_avg</b> (LONGINT): Average CPU utilization. <b>disk_util_high</b> (LONGINT): Maximum disk utilization. <b>disk_util_low</b> (LONGINT): Minimum disk utilization. <b>disk_util_avg</b> (LONGINT): Average disk utilization.

## "fmm" Event Group

<b>EMS Identifier</b>	fmm.domain.card.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Flash Management Module (FMM) detects that a flash device failed. Typically, this is the result of a failure during initialization or a fatal error during normal operation of a flash device.
<b>Corrective Action</b>	The flash device can fail due to many reasons. - If you see "iomem.dma.internal" in the EMS log, reboot the system. - If the state of the flash device in system configuration shows 'Failed firmware', update the device. Follow the corrective action of the "iomem.card.fail.fpga.rev" EMS message. - For all other reasons, replace the flash device.
<b>Syslog Message</b>	%s (Model: %s, Serial#: %s, Part#: %s): Flash device failed and performance might be degraded. Check the EMS log for related events, such as iomem.*.
<b>Parameters</b>	<b>id</b> (STRING): Unique name of the flash device. <b>model</b> (STRING): Flash device model name. <b>serial</b> (STRING): Flash device serial number. <b>part</b> (STRING): Flash device part number. <b>slot</b> (INT): Slot identifier for the flash device.

<b>EMS Identifier</b>	fmm.threshold.card.degraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Flash Management Module (FMM) detects that the offline percentage of a flash device exceeds a specified warning threshold. The FMM responds with the action described by the "action" parameter.
<b>Corrective Action</b>	Repair or replace this degraded flash device.
<b>Syslog Message</b>	%s (model name %s, serial number %s, part number %s): A percentage of flash device is offline that exceeds the warning threshold. The flash device needs to be repaired or replaced.
<b>Parameters</b>	<b>id</b> (STRING): Controller's unique name for the flash device. <b>model</b> (STRING): Flash device model name. <b>serial</b> (STRING): Flash device serial number. <b>part</b> (STRING): Flash device part number. <b>slot</b> (INT): Slot identifier for the flash device. <b>threshold</b> (INT): Percentage of the threshold that is exceeded. <b>pctoff</b> (INT): Percentage of the flash device that is offline. <b>action</b> (STRING): Action taken by the FMM in response to this condition. The default action is to log an EMS event and send an AutoSupport(tm) message. Another possible action is to disable the device.

<b>EMS Identifier</b>	fmm.threshold.card.offline
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Flash Management Module (FMM) detects that an error metric on a flash device exceeds a threshold over a particular time interval, and takes the device offline.
<b>Corrective Action</b>	Replace the flash device.
<b>Syslog Message</b>	%s (model name %s, serial number %s, part number %s) is offline.
<b>Parameters</b>	<p><b>id</b> (STRING): Controller's unique name for the flash device.</p> <p><b>model</b> (STRING): Flash device model name.</p> <p><b>serial</b> (STRING): Flash device serial number.</p> <p><b>part</b> (STRING): Flash device part number.</p> <p><b>metric</b> (STRING): Type of metric for the threshold. Either "percentage" or "rate".</p> <p><b>threshold</b> (INT): Threshold setting for errors.</p> <p><b>errors</b> (INT): Error percentage or rate that exceeded the threshold.</p> <p><b>counter</b> (STRING): Type of error counter. If the counter is not_applicable, the threshold is applied to the percentage of the device that is offline.</p> <p><b>time_slice</b> (STRING): Amount of time used for computing error and threshold rates.</p> <p><b>action</b> (STRING): Action taken by the FMM in response to this condition.</p>

## "fmmb" Event Group

<b>EMS Identifier</b>	fmmb.add.problem
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when the HA mailbox is attempting to add a mailbox disk and a problem occurred.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Error attempting to add disk %s as a %s HA mailbox disk.
<b>Parameters</b>	<b>disk</b> (STRING): The name of the disk. If the disk name is not available, a ?.? will be used. <b>host</b> (STRING): The node which owns the HA mailbox disk. The node can be either local or partner.

<b>EMS Identifier</b>	fmmb.BlobNotFound
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a mailbox 'blob' is not read from the on-disk mailbox data structure. A 'blob' is a piece of data which has been stored for a non-High Availability (HA) Data ONTAP(R) subsystem in the mailbox.
<b>Corrective Action</b>	If the blob id is "3" and this is a 2-node cluster, use the 'cluster ha modify -configure' command to unconfigure ha and then reconfigure it.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>blob_id</b> (INT): 'blob' ID. <b>owner</b> (STRING): Owner of the blob, either PARTNER or LOCAL. <b>reason</b> (STRING): Reason for the problem.

<b>EMS Identifier</b>	fmmb.BlobNotWritten <b>Deprecated:</b> Deprecated as of version 9.2.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a mailbox 'blob' write operation to the on-disk mailbox data structure fails. A 'blob' is a piece of data that has been stored for a non-high availability (HA) Data ONTAP(R) subsystem in the HA mailbox.
<b>Corrective Action</b>	If the blob ID is "3" and this is a two-node cluster, use the 'cluster ha modify -configure' command to unconfigure HA and then reconfigure it.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>blob_id</b> (INT): 'blob' ID. <b>owner</b> (STRING): Owner of the blob, either PARTNER or LOCAL. <b>reason</b> (STRING): Reason for the problem.

<b>EMS Identifier</b>	fmmb.BlobWritten
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a mailbox 'blob' write to the on-disk mailbox data structure succeeds. A 'blob' is a piece of data that has been stored for a non-high availability (HA) Data ONTAP(R) subsystem in the HA mailbox.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Blob %d: bytes written %d: data: %llx.
<b>Parameters</b>	<b>blob_id</b> (INT): 'blob' ID. <b>blob_data_len</b> (INT): Total number of bytes of data written. <b>data</b> (LONGINTEX): First eight bytes of the data written.

<b>EMS Identifier</b>	fmmb.current.lock.disk
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when HA mailbox disks are discovered or allocated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s is a %s HA mailbox disk.
<b>Parameters</b>	<b>disk</b> (STRING): The name of the disk. If the disk name is not available, the name ?? will be used. <b>host</b> (STRING): The node which owns the HA mailbox disk. The node can be either local or partner.

<b>EMS Identifier</b>	fmmb.destroy.mbx
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when the high-availability (HA) Mailbox contents are cleared, typically by the 'mailbox destroy' command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>disk_name</b> (STRING): Disk name on which the mailbox was cleared.

<b>EMS Identifier</b>	fmmb.destroy.mbx.fail
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an attempt is made to destroy the mailbox contents on the disk and this fails. Data ONTAP to a 7.0 or later version.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to clear mailbox on disk:%s, error:%s.
<b>Parameters</b>	<b>disk_name</b> (STRING): disk name on which we are trying to clear the mailbox. <b>error</b> (STRING): The reason why mailbox clear failed.

<b>EMS Identifier</b>	fmmb.disk.IDchange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when the unique identifier of one of the disks used by the HA mailbox has changed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s has changed its unique identifier.
<b>Parameters</b>	<b>disk</b> (STRING): The name of the disk whose identifier has changed.

<b>EMS Identifier</b>	fmmb.disk.notAccsble
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when mailbox disks of the specified host are not accessible.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	All %s mailbox disks are inaccessible.
<b>Parameters</b>	<b>host</b> (STRING): Host string, which is either local or partner.

<b>EMS Identifier</b>	fmmb.exthdr.null
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when the HA Mailbox extension header is invalid. The extension header is an on-disk structure which describes the opaque client blocks and major reset structures.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA Mailbox extension header is null.
<b>Parameters</b>	<b>host</b> (STRING): The node which owns the HA mailbox disk. The node can be either local or partner.

<b>EMS Identifier</b>	fmmb.instStat.change
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs whenever the mailbox instance state changes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s on %s side.
<b>Parameters</b>	<b>buff</b> (STRING): Instance state string. <b>host</b> (STRING): Host string, which is either local or partner.

<b>EMS Identifier</b>	fmmb.lock.disk.remove
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when a disk is removed from the HA mailbox disk lock set.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Disk %s removed from %s mailbox set.
<b>Parameters</b>	<b>disk</b> (STRING): The name of the disk. If the disk name is not available, a ?.? will be used. <b>host</b> (STRING): The node which owns the HA mailbox disk. The node can be either local or partner.

<b>EMS Identifier</b>	fmmb.major.reset.invalid
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when the HA Mailbox major reset data should exist and it doesn't. The major reset data in the mailbox is created and used when there is a major change of information kept in the HA mailbox records.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA %s Mailbox major reset header information is invalid.
<b>Parameters</b>	<b>host</b> (STRING): The node which owns the HA mailbox disk. The node can be either local or partner.

<b>EMS Identifier</b>	fmmb.mediator.lckdiskSuggest
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a mailbox disk from the mediator site is selected to be included in the mailbox disk list.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>side</b> (INT): The mailbox instance side. The value of 0 for local mailbox and the value of 1 for partner mailbox. <b>uuid</b> (STRING): Disk unique ID of the mailbox disk on mediator site.

<b>EMS Identifier</b>	fmmb.mediator.noLckdisk
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is no mediator mailbox detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>side</b> (INT): The mailbox instance side. The value of 0 for local mailbox and the value of 1 for partner mailbox.

<b>EMS Identifier</b>	fmmb.mediator.nullLckdiskSuggest
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is null mediator mailbox detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>side</b> (INT): The mailbox instance side. The value of 0 for local mailbox and the value of 1 for partner mailbox.

<b>EMS Identifier</b>	fmmb.MMR.payload.bad
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when the outbound FM payload area is found to be corrupted and the master mailbox record is missing.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s outbound FM payload area is invalid and the master mailbox record is missing.
<b>Parameters</b>	<b>host</b> (STRING): The node which owns the HA mailbox disk. The node can be either local or partner.

<b>EMS Identifier</b>	fmmb.NewDiskSuggestion
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when RAID sends to the high-availability (HA) mailbox code a list of up to four disks to use for HA mailbox disks.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>count</b> (INT): Number of suggested disks. <b>new</b> (STRING): List of suggested disks. <b>old</b> (STRING): Current list of HA mailbox disks.

<b>EMS Identifier</b>	fmmb.oldFormatCleared
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued when the older format HA mailboxes (special area of disk used for bookkeeping) are cleared on an upgrade from a pre 7.0 version of Data ONTAP to a 7.0 or later version.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Clearing content of %s old format HA mailboxes (special area of disk used for bookkeeping).
<b>Parameters</b>	<b>whichone</b> (STRING): Either local or partner to indicate which set of HA mailboxes are being cleared.

<b>EMS Identifier</b>	fmmb.opaque.hdr.invalid
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when the HA Mailbox opaque header is invalid. The opaque area in the HA Mailbox is used by HA mailbox clients, like RAID, to store persistent information.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA %s Mailbox opaque header is invalid.
<b>Parameters</b>	<b>host</b> (STRING): The node which owns the HA mailbox disk. The node can be either local or partner.

<b>EMS Identifier</b>	fmmb.payload.outbound.bad
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when the outbound FM payload area is found to be corrupted. The invalid fm state information is logged. As a result of this condition the payload is zeroed and HA mailbox re-initialization is done.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s outbound FM payload area is invalid with fmState of %d.
<b>Parameters</b>	<b>host</b> (STRING): The node which owns the HA mailbox disk. The node can be either local or partner. <b>fmState</b> (INT): The invalid FM state information.

<b>EMS Identifier</b>	fmmb.revert.opaque
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when the HA Mailbox opaque receives a write request for the opaque area and a revert_to command is in progress. The write request is rejected. The opaque area in the HA Mailbox is used by non HA mailbox clients, like RAID, to store persistent information.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HA Mailbox RAID write request rejected during revert.
<b>Parameters</b>	

## "fpolicy" Event Group

<b>EMS Identifier</b>	fpolicy.outage.file.invalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when file creation fails under the configured resiliency directory path.
<b>Corrective Action</b>	Check the configured resiliency directory path. To find the configured resiliency directory path by using the "vserver fpolicy policy external-engine show" command.
<b>Syslog Message</b>	Failed to create file under configured resiliency directory path of FPolicy external engine "%s" for policy "%s". Reason: %s.
<b>Parameters</b>	<b>engine</b> (STRING): FPolicy external engine. <b>policy</b> (STRING): FPolicy policy. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	fpolicy.outage.msg.lost
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the send operation fails for the network outage notification.
<b>Corrective Action</b>	Find the file in the configured resiliency directory path.
<b>Syslog Message</b>	Failed to send outage notification message to any FPolicy server for policy "%s" and path "%s".
<b>Parameters</b>	<b>policy</b> (STRING): FPolicy policy. <b>path</b> (STRING): File path.

<b>EMS Identifier</b>	fpolicy.outage.msg.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a network outage notification is successfully sent.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Outage notification message sent to at least one FPolicy server for policy "%s" and file path "%s".
<b>Parameters</b>	<b>policy</b> (STRING): FPolicy policy. <b>path</b> (STRING): File path.

<b>EMS Identifier</b>	fpolicy.outage.over
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the FPolicy external engine, acting asynchronously and with resiliency support enabled, is reconnected after a network outage.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The network outage (duration: "%llu" sec) is over. At least one FPolicy server is now connected successfully for FPolicy external engine "%s" of policy "%s".
<b>Parameters</b>	<b>Duration</b> (LONGINT): Network outage duration in seconds. <b>engine</b> (STRING): Asynchronous FPolicy external engine. <b>policy</b> (STRING): FPolicy policy.

<b>EMS Identifier</b>	fpolicy.outage.start
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the FPolicy external engine, acting asynchronously and with resiliency support enabled, is disconnected due to a network outage.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Network outage for FPolicy external engine "%s" of policy "%s".
<b>Parameters</b>	<b>engine</b> (STRING): Asynchronous FPolicy external engine. <b>policy</b> (STRING): FPolicy policy.

<b>EMS Identifier</b>	fpolicy.outage.timeout
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the maximum notification retention duration for the FPolicy external engine expires, and the engine is configured to operate asynchronously with resiliency support enabled. The storage controller stores no more notifications.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Maximum notification retention time has expired for FPolicy external engine "%s" of policy "%s".
<b>Parameters</b>	<b>engine</b> (STRING): Asynchronous FPolicy external engine. <b>policy</b> (STRING): FPolicy policy.

<b>EMS Identifier</b>	fpolicy.outage.write
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when FPolicy cannot store file notifications using the configured resiliency directory path.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failed to store notifications in configured resiliency directory path of FPolicy external engine "%s" for policy "%s". Reason: %s.
<b>Parameters</b>	<b>engine</b> (STRING): FPolicy external engine. <b>policy</b> (STRING): FPolicy policy. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	fpolicy.outage.writes.lost
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when FPolicy fails multiple consecutive times to store file notifications using the configured resiliency directory path.
<b>Corrective Action</b>	Check the configured resiliency directory path. To find the configured resiliency directory path by using the "vserver fpolicy policy external-engine show" command.
<b>Syslog Message</b>	Unable to store notifications in configured resiliency directory path of FPolicy external engine "%s" for policy "%s".
<b>Parameters</b>	<b>engine</b> (STRING): FPolicy external engine. <b>policy</b> (STRING): FPolicy policy.

<b>EMS Identifier</b>	fpolicy.server.bkPressApply
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the FPolicy server has applied backpressure which means that the server is busy and does not want to receive requests until it removes backpressure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FPolicy server "%s" has applied backpressure.
<b>Parameters</b>	<b>fpserver</b> (STRING): IP Address of the FPolicy server.

<b>EMS Identifier</b>	fpolicy.server.bkPressRemove
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the FPolicy server removes backpressure, which it has previously applied. The FPolicy server removes backpressure when it is ready to receive requests.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FPolicy server "%s" has removed backpressure.
<b>Parameters</b>	<b>fpserver</b> (STRING): IP Address of the FPolicy server.

<b>EMS Identifier</b>	fpolicy.server.connect
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a control channel is established between the node and the FPolicy server.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Control channel with the FPolicy server "%s" established.
<b>Parameters</b>	<b>fpserver</b> (STRING): IP Address of the FPolicy server.

<b>EMS Identifier</b>	fpolicy.server.connectError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the node fails to establish a control channel with the FPolicy server. The control channel is used for communication between the node and the FPolicy server. The error could be because of a failure in establishing TCP connection, SSL failure, FPolicy handshake failure, or some internal error.
<b>Corrective Action</b>	Depending on the failure reason, check the following: On the node, check whether the correct IP and port entries are specified in the policy configuration. Also, the FPolicy server should be running and listening on the port specified in the policy configuration. Run the command "network interface show" to determine that at least one data logical interface (LIF) is configured to the Vserver on the node. Run the command "routing-groups route show" to verify that the network route exists to the FPolicy server. Run the command "network ping" to verify that the FPolicy server is reachable from the node. For any other reason, see the Cluster-Mode documentation.
<b>Syslog Message</b>	Node failed to establish a connection with the FPolicy server "%s" (reason: "%s").
<b>Parameters</b>	<b>fpserver</b> (STRING): IP address of the FPolicy server. <b>reason</b> (STRING): Reason for failure.

<b>EMS Identifier</b>	fpolicy.server.disconnect
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the TCP connection to the FPolicy server is broken.
<b>Corrective Action</b>	If you want to re-establish the connection use command "vserver fpolicy engine-connect".
<b>Syslog Message</b>	Connection to the FPolicy server "%s" is broken ( reason: "%s" ).
<b>Parameters</b>	<b>fpserver</b> (STRING): IP Address of the FPolicy server. <b>reason</b> (STRING): Reason for disconnection.

<b>EMS Identifier</b>	fpolicy.server.maxPendingReq
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the maximum outstanding requests for a FPolicy server from a node has reached. The value is configurable through CLI.
<b>Corrective Action</b>	If you want to increase the maximum pending request modify the "-max-server-reqs" option using command "fpolicy policy external-engine modify" from CLI.
<b>Syslog Message</b>	Maximum outstanding requests for the FPolicy server "%s" has reached.
<b>Parameters</b>	<b>fpserver</b> (STRING): IP Address of the FPolicy server.

## "gb" Event Group

<b>EMS Identifier</b>	gb.cfo.abort.raid.fm
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a high-availability (HA) controller failover (CFO) giveback is canceled due to RAID activity on a partner aggregate.
<b>Corrective Action</b>	Reissue the "storage failover giveback" command to initiate giveback to the partner after the pending or in-progress operation on the partner volume or aggregate is complete.
<b>Syslog Message</b>	%s %s%s is %s; canceling giveback.
<b>Parameters</b>	<b>vol_type</b> (STRING): Volume type. <b>owner</b> (STRING): Current owner of the aggregate. <b>vol</b> (STRING): Name of the aggregate. <b>reason</b> (STRING): Activity that is preventing CFO giveback.

<b>EMS Identifier</b>	gb.cfo.veto.asup.generalNopart
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when AutoSupport vetoes a controller failover (CFO) giveback request because an AutoSupport message for the down partner node was not collected prior to the giveback request.
<b>Corrective Action</b>	Typically, an AutoSupport message for the partner node is collected shortly after takeover is complete. If the CFO giveback was attempted and vetoed within 20 minutes of the takeover, retry the operation later. If time does not permit waiting, use the 'cf giveback -f' command to force a giveback.
<b>Syslog Message</b>	AutoSupport vetoed giveback because an AutoSupport message for the down partner node was not yet collected.
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.cfo.veto.coredump.pardump
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the partner node is still dumping core, and cannot yet resume serving data. The giveback attempt has been canceled.
<b>Corrective Action</b>	Either let the dumpcore operation finish, or use the "-override-vetoes true" parameter to force a giveback.
<b>Syslog Message</b>	Giveback canceled because partner is still dumping core
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.cfo.veto.coredump.parsave
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when savecore is currently saving the partner coredump. This work will be lost if a giveback is done at this time, so the giveback has been canceled.
<b>Corrective Action</b>	Either let the savecore operation finish, or use the "-override-vetoes true" parameter to force a giveback.
<b>Syslog Message</b>	Giveback canceled because savecore is running. %d%% - %d of %d blocks saved
<b>Parameters</b>	<b>percent</b> (INT): Percentage of core that has been saved <b>completed</b> (INT): Number of blocks that have been saved <b>total</b> (INT): Total number of blocks in the core

<b>EMS Identifier</b>	gb.cfo.veto.coredump.savinit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when savecore is getting ready to start saving the partner coredump. The giveback attempt has been canceled.
<b>Corrective Action</b>	Either let the savecore operation finish, or use the "-override-vetoes true" parameter to force a giveback.
<b>Syslog Message</b>	Giveback canceled because savecore is initializing
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.cfo.veto.lmgr.nonCA.broke
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a giveback is forced that causes non-continuously available (non-CA) locks on the volume to be dropped. CA locks are established by opens through CIFS CA shares for regular files on read-write volumes that reside in controller failover (CFO) aggregates. These locks are mirrored to the node's high-availability (HA) partner to support the nondisruptive property of CA shares. The rest of the locks are classified as non-CA locks and are not mirrored to the node's HA partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dropped non-CA locks on volume %s%s%s%s on CFO aggregate %s due to forced giveback.
<b>Parameters</b>	<b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier of the volume in cases where the volume name alone is insufficient. <b>aggrname</b> (STRING): Aggregate name.

<b>EMS Identifier</b>	gb.cfo.veto.lmgr.nonCA.locks
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a giveback has started but cannot proceed because non-continuously available (non-CA) locks are present on the volume. CA locks are established by opens through CIFS CA shares for regular files on read-write volumes that reside in controller failover (CFO) aggregates. These locks are mirrored to the node's high-availability (HA) partner to support the nondisruptive property of CA shares. The rest of the locks are classified as non-CA locks and are not mirrored to the node's HA partner.
<b>Corrective Action</b>	Based on how resilient they are to failures, applications must either gracefully close sessions over which non-CA locks are established or accept lock state disruption. To determine the open files that have these sessions established, run the 'vserver cifs session file show -hosting-aggregate "aggregate list" -continuously-available No' command. "aggregate list" is a list of aggregates that are sent home as a result of the giveback operation. If lock state disruption for all existing non-CA locks is acceptable, retry the giveback operation by using the '-override-vetoes true' option.
<b>Syslog Message</b>	Could not complete giveback because of non-CA locks on volume %s%s%s%s CFO aggregate %s.
<b>Parameters</b>	<b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier of the volume in cases where the volume name alone is insufficient. <b>aggrname</b> (STRING): Aggregate name.

<b>EMS Identifier</b>	gb.cfo.veto.nvsave.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot perform a giveback due to WAFL(R) NVSave file replay activity, and must abort the giveback.
<b>Corrective Action</b>	Retry the giveback operation after completion of NVSave files replay. Replay completion is indicated by the EMS message 'wafl.nvsave.replaying.pass' or 'wafl.nvsave.replaying.fail'.
<b>Syslog Message</b>	%s %s%s%s%s has WAFL NVSave file replay activity underway; canceling giveback.
<b>Parameters</b>	<b>type</b> (STRING): Object type (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): To uniquely identify the volume in cases where the volume name itself is insufficient.

<b>EMS Identifier</b>	gb.cfo.veto.repl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a cluster failover(CFO) giveback is vetoed by a critical replication transfer (for example, volume move in the cutover phase).
<b>Corrective Action</b>	Either abort the replication transfer that is preventing the giveback from being completed, retry the 'storage failover giveback' command with the '-override-vetoes true' option, or wait for the transfer to finish.
<b>Syslog Message</b>	Could not complete giveback because a replication transfer with UUID %s is in progress.
<b>Parameters</b>	<b>transferId</b> (STRING): UUID of the SnapMirror(R) replication transfer that vetoed the giveback.

<b>EMS Identifier</b>	gb.cfo.veto.sanown.ReassignInProgress
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a controller disallows a giveback attempt because the partner's disk ownership is being reassigned. Typically, ownership reassignment is done after a controller replacement.
<b>Corrective Action</b>	Reissue the giveback request after disk ownership assignment is completed.
<b>Syslog Message</b>	Giveback was vetoed because the disk ownership reassignment in progress on the partner cannot be interrupted.
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.cfo.veto.snap.fail
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system cannot perform a giveback due to Snapshot(tm) copy activity, and must abort the giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s%s%s%s has Snapshot copy activity underway; canceling giveback.
<b>Parameters</b>	<b>type</b> (STRING): Object type (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): To uniquely identify the volume in cases where the the volume name itself is insufficient.

<b>EMS Identifier</b>	gb.cfo.veto.snap.warning
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system detects Snapshot(tm) copy activity during giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s%s%s%s has Snapshot copy activity underway.
<b>Parameters</b>	<b>type</b> (STRING): Object type (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): To uniquely identify the volume in cases where the the volume name itself is insufficient.

<b>EMS Identifier</b>	gb.cfo.veto.storageDiskBrkn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a giveback is aborted because a failed disk is present.
<b>Corrective Action</b>	Remove all failed disks and retry the giveback.
<b>Syslog Message</b>	Failed disk %s should be removed before the giveback command is invoked.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the device.

<b>EMS Identifier</b>	gb.cfo.veto.storageDiskByp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a giveback is aborted because one or more bypassed disks are present.
<b>Corrective Action</b>	Remove all bypassed disks and retry the giveback.
<b>Syslog Message</b>	All bypassed disks should be removed before a giveback command is entered.
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.cfo.veto.storageDiskSanit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a giveback is aborted because disk sanitization is in progress.
<b>Corrective Action</b>	Retry the giveback after sanitization is completed.
<b>Syslog Message</b>	Disk sanitization is in the process of formatting a disk. This operation should not be interrupted by a giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.cfo.veto.vservermigrate
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the vserver migrate cutover operation vetoes cfo aggregate giveback because vserver migration cannot be aborted during that time.
<b>Corrective Action</b>	Reissue the 'storage failover giveback' command to initiate giveback to the partner when the vserver migrate cutover operation is completed.
<b>Syslog Message</b>	Vserver migration in progress prevents giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.netra.ca.check.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during the migration of an aggregate as a part of storage failover (SFO) giveback, when the destination node cannot reach the object stores.
<b>Corrective Action</b>	Verify that your intercluster LIF is online and functional by using the 'network interface show' command. Also, check network connectivity to the object store server by using the 'ping' command over the destination node intercluster LIF. Additionally, verify that the configuration of your object store has not changed and that login and connectivity information is still accurate by using the 'aggregate object-store config show' command. It is possible to override this error by specifying false for the "require-partner-waiting" parameter of the giveback command. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	Giveback of aggregate '%s' failed due to %s preventing object store access on the destination node.
<b>Parameters</b>	<b>vol</b> (STRING): Name of the aggregate. <b>reason</b> (STRING): Activity that is preventing the aggregate giveback operation.

<b>EMS Identifier</b>	gb.sfo.abort.raid.fm
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a high-availability (HA) storage failover (SFO) giveback is canceled due to RAID activity on a partner aggregate.
<b>Corrective Action</b>	Reissue the "storage failover giveback" command to initiate giveback to the partner after the pending or in-progress operation on the partner volume or aggregate is complete.
<b>Syslog Message</b>	%s %s%s is %s; canceling giveback.
<b>Parameters</b>	<b>vol_type</b> (STRING): Volume type. <b>owner</b> (STRING): Current owner of the aggregate. <b>vol</b> (STRING): Name of the aggregate. <b>reason</b> (STRING): Activity that is preventing SFO giveback.

<b>EMS Identifier</b>	gb.sfo.netra.ha.dskChkFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when giveback of the partner's storage failover (SFO) aggregate fails because the high-availability (HA) partner cannot see all disks belonging to the aggregate.
<b>Corrective Action</b>	Use the "storage failover show -fields local-missing-disks, partner-missing-disks" command to rescan the disks and to determine the latest ownership. If the disk inventory mismatch is not resolved, check the cabling for loose connections or a bad cable on the partner node.
<b>Syslog Message</b>	Giveback of aggregate %s failed because the partner cannot see all disks belonging to the aggregate.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate that was not given back.

<b>EMS Identifier</b>	gb.sfo.netra.raid.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during migration of an aggregate as part of storage failover (SFO) giveback, when one of the aggregate checks on the destination node fails, including duplicate aggregate name or duplicate Universally Unique Identifier (UUID).
<b>Corrective Action</b>	1. If checks fail due to duplicate aggregate name or UUID, delete the duplicate aggregate created from previous "storage failover giveback" or "storage aggregate relocation" operations. Contact NetApp technical support for assistance with deletion of the unwanted duplicate aggregate.
<b>Syslog Message</b>	Aggregate '%s' (UUID = %s, type = %s, home_owner_id = %llu, dr_home_owner_id = %llu): RAID aggregate migration checks failed on destination node %s.
<b>Parameters</b>	<b>vol</b> (STRING): Name of the aggregate. <b>aggregate_uuid</b> (STRING): UUID of the aggregate. <b>raid_type</b> (STRING): RAID type of the volume. <b>home_owner_id</b> (LONGINT): NVRAM system ID of the aggregate's home owner. <b>dr_home_owner_id</b> (LONGINT): NVRAM system ID of the aggregate's disaster recovery (DR) home owner. <b>reason</b> (STRING): Activity that is preventing the aggregate relocation or giveback operation.

<b>EMS Identifier</b>	gb.sfo.netra.wafl.mcc.veto
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during migration of an aggregate as part of storage failover (SFO) giveback, when one or more online left-behind disaster recovery(DR) aggregates are found on the destination node and the "node-object-limit" option is set to off.
<b>Corrective Action</b>	Check whether there exists any online left-behind DR aggregates on the destination node from a previous switchover operation. If such an aggregate exists, then perform the corrective actions specified in the earlier EMS messages for the left-behind aggregate to return it to its original owner, and then retry the operation. If you cannot perform the corrective action, then use the "override-vetoes" option in the "giveback" command to force the giveback.
<b>Syslog Message</b>	Aggregate '%s': One or more online left-behind DR aggregates were found on the destination node and the "node-object-limit" option is set to off.
<b>Parameters</b>	<b>vol</b> (STRING): Name of the aggregate.

<b>EMS Identifier</b>	gb.sfo.precmt.lmgr.resynabrt
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during giveback, when automatic lock resynchronization with the node's high-availability (HA) partner for files on this aggregate was aborted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Automatic lock resynchronization was aborted for aggregate %s on forced giveback.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate for which resynchronization was aborted.

<b>EMS Identifier</b>	gb.sfo.precmt.lmgr.resyncing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during giveback, when automatic lock resynchronization with the node's high-availability (HA) partner is in progress for files on this aggregate.
<b>Corrective Action</b>	Retry the giveback after verifying that lock synchronization is complete using the 'debug locks auto-resync-status -aggregate ' diagnostic privilege command. If lock state disruption for all CA locks on the aggregate is acceptable, retry the giveback with the '-override-vetoes true' option.
<b>Syslog Message</b>	Could not give back aggregate %s because automatic lock resynchronization was in progress.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate with locks not yet in sync.

<b>EMS Identifier</b>	gb.sfo.precmt.repl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when all replication transfers are aborted because of storage failover (SFO) giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Replication transfers aborted due to SFO giveback.
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.sfo.precmt.vdom.lowMem
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when giveback of the partner's storage failover (SFO) aggregate fails due to the unavailability of Data ONTAP(R) memory on the source node.
<b>Corrective Action</b>	Free some memory and retry the giveback.
<b>Syslog Message</b>	Giveback of aggregate %s failed due to unavailability of Data ONTAP(R) memory on the source node.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate that was not given back.

<b>EMS Identifier</b>	gb.sfo.veto.asup.generalNopart
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when AutoSupport vetoes a storage failover (SFO) giveback (sendhome) request because an AutoSupport message for the down partner node was not collected prior to the giveback request.
<b>Corrective Action</b>	Typically, an AutoSupport message for the partner node is collected shortly after takeover is complete. If an SFO giveback was attempted and vetoed within 20 minutes of the takeover, retry the operation later. If time does not permit waiting, use the 'storage failover giveback -override-vetoes true' command to force a giveback.
<b>Syslog Message</b>	AutoSupport vetoed giveback because an AutoSupport message for the down partner node was not yet collected.
<b>Parameters</b>	

<b>EMS Identifier</b>	gb.sfo.veto.dump
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when dump/restore is aborted during storage failover/ aggregate relocation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dump/restore operations were aborted because %s is in progress.
<b>Parameters</b>	<b>arl_or_sendhome</b> (STRING): Describes whether ARL or SFO

<b>EMS Identifier</b>	gb.sfo.veto.lmgr.nonCA.broke
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a giveback is forced that causes non-continuously available (non-CA) locks on the volume to be dropped. CA locks are established by opens through CIFS CA shares for regular files on read-write volumes that reside in storage failover (SFO) aggregates. These locks are mirrored to the node's high-availability (HA) partner to support the nondisruptive property of CA shares. The rest of the locks are classified as non-CA locks and are not mirrored to the node's HA partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dropped non-CA locks on volume %s%s%s on SFO aggregate %s due to forced giveback.
<b>Parameters</b>	<b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier of the volume in cases where the volume name alone is insufficient. <b>aggrname</b> (STRING): Aggregate name.

<b>EMS Identifier</b>	gb.sfo.veto.lmgr.nonCA.locks
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a giveback has started but cannot proceed because non-continuously available (non-CA) locks are present on the volume. CA locks are established by opens through CIFS CA shares for regular files on read-write volumes that reside in storage failover (SFO) aggregates. These locks are mirrored to the node's high-availability (HA) partner to support the nondisruptive property of CA shares. The rest of the locks are classified as non-CA locks and are not mirrored to the node's HA partner.
<b>Corrective Action</b>	Based on how resilient they are to failures, applications must either gracefully close sessions over which non-CA locks are established or accept lock state disruption. To determine the open files that have these sessions established, run the 'vserver cifs session file show -hosting-aggregate "aggregate list" -continuously-available No' command. "aggregate list" is a list of aggregates that are sent home as a result of the giveback operation. If lock state disruption for all existing non-CA locks is acceptable, retry the giveback operation by using the '-override-vetoes true' option.
<b>Syslog Message</b>	Could not complete giveback because of non-CA locks on volume %s%s%s%s SFO aggregate %s.
<b>Parameters</b>	<b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier of the volume in cases where the volume name alone is insufficient. <b>aggrname</b> (STRING): Aggregate name.

<b>EMS Identifier</b>	gb.sfo.veto.lmgr.recons.left
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a storage failover giveback has started, but cannot proceed because reconstruction of client file locks from mirrored lock information is not yet complete.
<b>Corrective Action</b>	Retry the giveback after checking the status of reconstruction using the 'debug locks reconstruction show' diagnostic privilege command. If the locks reconstruction operation is not completed, restart the giveback and override the veto using the '-override-vetoes true' option.
<b>Syslog Message</b>	Could not perform giveback because lock reconstruction on node %s is in progress.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node reconstructing locks.

<b>EMS Identifier</b>	gb.sfo.veto.lmgr.syncing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a storage failover giveback has started but cannot proceed because synchronization of client file locks ("locks sync") with the partner is not yet complete.
<b>Corrective Action</b>	Retry the giveback after verifying that lock synchronization is completed, by using the 'debug locks lock-sync show' diagnostic privilege command.
<b>Syslog Message</b>	Could not perform giveback because locks sync from node %s to its partner node %s is in progress.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node performing locks sync with its partner. <b>partner</b> (STRING): Name of the partner node with which locks sync is being performed.

<b>EMS Identifier</b>	gb.sfo.veto.repl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a storage failover(SFO) giveback is vetoed by a critical replication transfer (for example, volume move in the cutover phase).
<b>Corrective Action</b>	Either abort the replication transfer that is preventing the giveback from being completed, retry the 'storage failover giveback' command with the '-override-vetoes true' option, or wait for the transfer to finish.
<b>Syslog Message</b>	Could not complete giveback because a replication transfer with UUID %s involving the aggregate %s is in progress.
<b>Parameters</b>	<b>transferId</b> (STRING): UUID of the SnapMirror(R) replication transfer that vetoed the giveback. <b>aggr</b> (STRING): Name of the aggregate.

<b>EMS Identifier</b>	gb.sfo.veto.snaprestore
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot perform a giveback because a volume snaprestore operation is active. The giveback is aborted.
<b>Corrective Action</b>	Retry giveback after the snaprestore operation is finished.
<b>Syslog Message</b>	%s %s%s%s%s is running snaprestore. Canceling giveback.
<b>Parameters</b>	<b>type</b> (STRING): Type of object (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique volume identity when the volume name itself is insufficient.

<b>EMS Identifier</b>	gb.sfo.veto.volmove
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move operation vetoes a giveback because volume move can not be aborted during that time.
<b>Corrective Action</b>	Reissue the 'storage failover giveback' command to initiate giveback to the partner when the volume move is completed. Or use the '-override-vetoes true' option to abort the volume move.
<b>Syslog Message</b>	Volume move in progress for volume %s with DSID %llu prevents giveback.
<b>Parameters</b>	<b>vol_name</b> (STRING): Name of the source or destination volume. <b>volume_dsid</b> (LONGINT): Source or destination volume data set identifier (DSID).

<b>EMS Identifier</b>	gb.sfo.veto.vservermigrate
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the vserver migrate cutover operation vetoes data aggregate giveback because vserver migration cannot be aborted during that time.
<b>Corrective Action</b>	Reissue the 'storage failover giveback' command to initiate giveback to the partner when the vserver migrate cutover operation is completed.
<b>Syslog Message</b>	Vserver migration in progress prevents giveback.
<b>Parameters</b>	

## "gpo" Event Group

<b>EMS Identifier</b>	gpo.CAP.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when applying group policy object (GPO) central access policy (CAP) settings succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied CAP settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.CAP.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) central access policy (CAP) settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply CAP settings to Vserver %s failed, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.frmwork.RSoPApplied
<b>Severity</b>	NOTICE
<b>Description</b>	This event occurs after the resultant set of Group Policy (GPO) is calculated and applied to the Replicated Database (RDB) successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	GPO policy applied into RDB successfully.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.frmwork.secJobFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when starting or restarting the GPO Security Apply job fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then start the job by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to start a GPO Security Apply job run for Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.frmwork.updateFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when updating group policy object (GPO) tables fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then update the tables by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	GPO tables update failed for Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.frmwork.updateRSOPFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when updating group policy object (GPO) RSoP (Resultant Set of Policy) settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then update the settings by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	GPO RSoP update failed for Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.job.mainUpdateFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the GPO Main Update job run fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then run the job again by running the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	GPO Main Update job (%s) run failed for Vserver %s, reason: %s.
<b>Parameters</b>	<b>jobid</b> (STRING): GPO job ID. <b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.job.mainUpdateSuccess
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the GPO Main Update job run succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully completed a GPO Main Update job (%s) run for Vserver %s.
<b>Parameters</b>	<b>jobid</b> (STRING): GPO job ID. <b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.job.outOfMemory
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs when the system has not enough memory to perform the GPO (Group Policy Object) job.
<b>Corrective Action</b>	Ensure there is enough memory available to perform the GPO job.
<b>Syslog Message</b>	GPO job %s failure: Out of memory.
<b>Parameters</b>	<b>jobid</b> (STRING): The GPO job ID.

<b>EMS Identifier</b>	gpo.job.securityApplyFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the GPO Security Apply job run fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then run the job again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	GPO Security Apply job (%s) run failed for Vserver %s, reason: %s.
<b>Parameters</b>	<b>jobid</b> (STRING): GPO job ID. <b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.job.securityApplySuccess
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the GPO Security Apply job run succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully completed a GPO Security Apply job (%s) run for Vserver %s.
<b>Parameters</b>	<b>jobid</b> (STRING): GPO job ID. <b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.reg.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the group policy object (GPO) registry policy settings are applied.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied GPO registry settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.reg.bCache.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the group policy object (GPO) BranchCache settings are applied.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied BranchCache settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.reg.bCache.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) registry BranchCache policy settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply BranchCache settings for Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.reg.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) registry policy settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply GPO registry settings for Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.EvtAdt.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when applying group policy object (GPO) event audit policy settings succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied event audit and log settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.sec.EvtAdt.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) event audit policy settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply event audit and log settings to Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.fsec.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the group policy object (GPO) file security settings are applied.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied file security settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.sec.fsec.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) file security settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply file security settings to Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.fsec.notAppliedFor
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when applying a group policy object (GPO) security descriptor to a given file fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply file security settings to path %s in Vserver %s, reason: %s.
<b>Parameters</b>	<b>path</b> (STRING): File and directory path to which a security descriptor is to be applied. <b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.kerb.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when applying group policy object (GPO) Kerberos settings succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied Kerberos settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.sec.kerb.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) Kerberos settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply Kerberos settings to Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.privR.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when applying group policy object (GPO) privilege-rights settings succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied privilege rights settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.sec.privR.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) privilege-rights settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply privilege-rights settings to Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.privR.notAppliedFor
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when applying group policy object (GPO) privilege-rights fails for a supported setting.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply privilege-rights %s setting to Vserver %s, reason: %s.
<b>Parameters</b>	<b>setting</b> (STRING): Name of the setting: Take ownership, Security privilege, or Bypass traverse. <b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.reg.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when applying group policy object (GPO) security registry settings succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied security registry settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.sec.reg.notAppliedFor
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying a group policy object (GPO) security registry setting fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply security registry %s setting to Vserver %s, reason: %s.
<b>Parameters</b>	<b>setting</b> (STRING): Name of the setting: SMB signing. <b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.resAno.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when applying group policy object (GPO) security restrict anonymous settings succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied restrict anonymous settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.sec.resAno.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) security restrict anonymous settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply restrict anonymous settings to Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.resGrp.applied
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when applying group policy object (GPO) restricted-groups settings succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Successfully applied restricted group settings to Vserver %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name.

<b>EMS Identifier</b>	gpo.sec.resGrp.notApplied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying group policy object (GPO) restricted-groups settings fails.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply restricted-groups settings to Vserver %s, reason: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.sec.resGrp.notAppliedFor
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when applying group policy object (GPO) restricted-groups settings fails for a given group.
<b>Corrective Action</b>	Address the specific reason for the issue, and then apply the settings again by entering the "vserver cifs group-policy update -force-reapply-all-settings true -vserver " command.
<b>Syslog Message</b>	Failed to apply restricted-groups settings for group %s in Vserver %s, reason: %s.
<b>Parameters</b>	<b>group</b> (STRING): Group name. <b>vserver</b> (STRING): Vserver name. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	gpo.security.unrecogFileForm
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs when the GptTmpl.inf file is not in UNICODE (16 bit)format.
<b>Corrective Action</b>	Ensure the security file GptTmpl.inf is in UNICODE 16bit format.
<b>Syslog Message</b>	Security file is not unicoded.
<b>Parameters</b>	<b>filename</b> (STRING): The security filename.

<b>EMS Identifier</b>	gpo.security.unrecogTemplate
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs when the system fails to recognize the security template.
<b>Corrective Action</b>	Ensure the security file GptTmpl.inf has the correct header.
<b>Syslog Message</b>	Unable to recognize the security template.
<b>Parameters</b>	

## "gzip" Event Group

<b>EMS Identifier</b>	gzip.cmpr.not.enabled
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when GZIP compression has not been enabled on the node.
<b>Corrective Action</b>	Contact technical support.
<b>Syslog Message</b>	Volume '%s' has GZIP compression enabled but GZIP compression has not been enabled on the node.
<b>Parameters</b>	<b>vol</b> (STRING): Volume name.

## "ha" Event Group

<b>EMS Identifier</b>	ha.bdfu.notEnabledOnDest
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during storage failover (SFO) giveback or aggregate relocation when the source node cannot reenable background disk firmware update (BDFU) on the destination node. BDFU will be reenabled automatically on the destination node after all the aggregates have been given back.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>nodename</b> (STRING): Destination node.

<b>EMS Identifier</b>	ha.gb.mbxAccessErr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a mailbox disk cannot be accessed prior to a giveback.
<b>Corrective Action</b>	Verify the mailbox disk physical locations and mailbox disk counts by using the "storage failover mailbox-disk show -node node-id" advanced command. If all mailbox disks are present for the indicated physical location, retry the "storage failover giveback" command or sf-send-home-initiate ZAPI. If none of the mailbox disks for the indicated physical location are shown, wait a few minutes, and then retry the show command to see whether all mailbox disks are present. If all mailbox disks are present, retry the "storage failover giveback" command or sf-send-home-initiate ZAPI. If some but not all mailbox disks are present for the indicated physical location, then set the "-override-vetoes" field to "true" for either the "storage failover giveback" command or sf-send-home-initiate ZAPI, and then retry the giveback.
<b>Syslog Message</b>	Problem accessing %s mailbox disks prior to giveback. Found %d disks, expected %d disks. Override vetoes option: %s; Internal error code: %d status: %d.
<b>Parameters</b>	<p><b>physical_location</b> (STRING): Identifies the physical location of the mailbox disks. Values are Local Node, Partner Node, Mediator, or a node name.</p> <p><b>mailbox_disk_count</b> (INT): Current count of mailbox disks having the physical location specified by the physical_location parameter.</p> <p><b>expected_count</b> (INT): Expected count of mailbox disks having the physical location specified by the physical_location parameter.</p> <p><b>override_vetoes</b> (STRING): Value of the "-override-vetoes" field in the "storage failover giveback" command or sf-send-home-initiate ZAPI.</p> <p><b>error_code</b> (INT): Disk I/O or other error code.</p> <p><b>error_status</b> (INT): Additional internal status related to the error code.</p>

<b>EMS Identifier</b>	ha.gb.mbxCountMismatch
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a mailbox disk cannot be accessed prior to a giveback, but giveback is allowed to proceed because the "override-vetoes" field is set to "true" for the "storage failover giveback" command or the sf-send-home-initiate ZAPI.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Problem accessing %s mailbox disks during giveback. Found %d disks, expected %d disks. Override vetoes option: %s; Internal result code: %d status: %d"
<b>Parameters</b>	<p><b>physical_location</b> (STRING): Identifies the physical location of the mailbox disks. Values are Local Node, Partner Node, Mediator, or a node name.</p> <p><b>mailbox_disk_count</b> (INT): Current count of mailbox disks having the physical location specified by the physical_location parameter.</p> <p><b>expected_count</b> (INT): Expected count of mailbox disks having the physical location specified by the physical_location parameter.</p> <p><b>override_vetoes</b> (STRING): Value of the "-override-vetoes" field in the "storage failover giveback" command or sf-send-home-initiate ZAPI.</p> <p><b>result_code</b> (INT): Disk I/O or other result code.</p> <p><b>result_status</b> (INT): Additional internal status related to the result code.</p>

<b>EMS Identifier</b>	ha.gb.mbxNotFound
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a mailbox disk cannot be accessed prior to a giveback.
<b>Corrective Action</b>	Verify the mailbox disk physical locations and mailbox disk counts by using the "storage failover mailbox-disk show -node node-id" advanced command. If all mailbox disks are present, retry the "storage failover giveback" command or the sf-send-home-initiate ZAPI. If none of the mailbox disks for the indicated mailbox owner are shown, wait a few minutes, and then retry the show command to see whether all mailbox disks are present. If all mailbox disks are present, retry the "storage failover giveback" command or sf-send-home-initiate ZAPI. If some but not all mailbox disks are present for the indicated mailbox owner, verify whether all nodes in the cluster are healthy and accessible by using the "cluster show" command, and check whether disks are healthy by using the "disk show" command.
<b>Syslog Message</b>	Problem accessing %s mailbox disks prior to giveback. Found %d disks. Override vetoes option: %s; Internal error code: %d status: %d.
<b>Parameters</b>	<p><b>mailbox_owner</b> (STRING): Identifies the node in the high-availability (HA) pair that owns the missing mailbox disk.</p> <p><b>mailbox_disk_count</b> (INT): Number of mailbox disks found. These disks are owned by the node specified by the mailbox_owner parameter.</p> <p><b>override_vetoes</b> (STRING): Value of the "-override-vetoes" parameter passed to the "storage failover giveback" command or the sf-send-home-initiate ZAPI.</p> <p><b>error_code</b> (INT): Disk I/O or other error code.</p> <p><b>error_status</b> (INT): Additional internal status related to the error code.</p>

<b>EMS Identifier</b>	ha.getTakeoverLockStatus
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the HA subsystem attempts to acquire takeover lock as part of the takeover operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Attempting to acquire takeover lock. Status: %s.
<b>Parameters</b>	<b>status</b> (STRING): Status of the attempt to acquire the lock.

<b>EMS Identifier</b>	ha.giveback.aggrOnlineFailed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the RAID or WAFL(R) subsystem fails to bring online the aggregate or its containing volumes after giveback.
<b>Corrective Action</b>	Check the EMS logs for messages from the RAID and WAFL subsystems to determine the exact cause of the failure and corrective action.
<b>Syslog Message</b>	Bringing online of aggregate %s or its volumes failed after giveback with error %d.
<b>Parameters</b>	<b>aggrName</b> (STRING): Name of the aggregate that was given back. <b>error</b> (INT): Error that occurred while bringing online the aggregate or its volumes after giveback.

<b>EMS Identifier</b>	ha.giveback.aggrOnlineTimeout
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a node fails to bring online the aggregate and its containing volumes within the specified time after giveback.
<b>Corrective Action</b>	Use the "storage aggregate show" command to verify that the aggregate and its volumes are online.
<b>Syslog Message</b>	Node did not bring online the aggregate %s and its volumes after the giveback for %llu milliseconds.
<b>Parameters</b>	<b>aggrUUID</b> (STRING): UUID of the aggregate that was given back. <b>time</b> (LONGINT): Timeout, in milliseconds, to bring online the aggregate and its volumes after the giveback.

<b>EMS Identifier</b>	ha.giveback.aggrPartnerTimeout
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during a giveback operation, when a node does not receive notification from its high-availability (HA) partner within the specified time that the aggregate is online.
<b>Corrective Action</b>	Use the "storage aggregate show" command to verify that the aggregate and its volumes are online on the partner node.
<b>Syslog Message</b>	Node did not receive notification from its partner in %llu milliseconds that aggregate %s is online after the giveback.
<b>Parameters</b>	<b>time</b> (LONGINT): Timeout, in milliseconds, for notification from the partner node that an aggregate is online after giveback. <b>aggrName</b> (STRING): Name of the aggregate that was given back.

<b>EMS Identifier</b>	ha.giveback.commWithPartnerFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the local node cannot communicate over the cluster network with the d-blade of its high-availability (HA) partner while giving back an aggregate.
<b>Corrective Action</b>	1. Verify that the partner node is up. 2. Use the "network interface show" command to verify that the cluster network interfaces on the local and the partner node are up. 3. If the preceding checks pass, then run the "storage failover giveback" command to initiate giveback. To force giveback, use the "storage failover giveback -require-partner-waiting false" command.
<b>Syslog Message</b>	Failed to communicate with the partner %s over the cluster network while giving back aggregate %s.
<b>Parameters</b>	<b>partnerName</b> (STRING): Name of the partner node. <b>aggrName</b> (STRING): Name of the aggregate being given back.

<b>EMS Identifier</b>	ha.giveback.connectToPartnerFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the local node cannot connect over the cluster network to the d-blade of its high-availability (HA) partner while giving back an aggregate.
<b>Corrective Action</b>	1. Verify that the partner node is up. 2. Use the "network interface show" command to verify that the cluster network interfaces on the local node and the partner node are up. 3. If the preceding checks pass, then run the "storage failover giveback" command to initiate giveback. To force giveback, use the "storage failover giveback -require-partner-waiting false" command.
<b>Syslog Message</b>	Failed to connect with the partner node %s (d-blade ID: %s) over the cluster network while giving back aggregate %s.
<b>Parameters</b>	<b>partnerName</b> (STRING): Name of the partner node. <b>partnerDbladeid</b> (STRING): D-blade ID of the partner node. <b>aggrName</b> (STRING): Name of the aggregate being given back.

<b>EMS Identifier</b>	ha.giveback.emptyAggr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the local node does not find any disks in the aggregate being given back.
<b>Corrective Action</b>	1. Use the "storage disk show -aggregate aggrName" command to verify that the aggregate has disks. 2. If the preceding check passes, then run the "storage failover giveback" command to initiate giveback.
<b>Syslog Message</b>	Aggregate %s does not have any disks.
<b>Parameters</b>	<b>aggrName</b> (STRING): Name of the aggregate being given back.

<b>EMS Identifier</b>	ha.giveback.sysCommit
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during the commit phase of the giveback of an aggregate to indicate the time taken by the specified subsystem to commit.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Subsystem %s took %llu msecs to commit giveback of aggregate '%s'.
<b>Parameters</b>	<b>subsys</b> (STRING): Name of the subsystem performing the commit. <b>time</b> (LONGINT): Time taken by the subsystem to commit the giveback. <b>aggr</b> (STRING): Name of the aggregate being given back.

<b>EMS Identifier</b>	ha.giveback.sysVetoChk
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during the veto phase of the giveback of an aggregate to indicate the time taken by the specified subsystem to check whether giveback should be aborted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Subsystem %s took %llu msecs to check whether to veto giveback of aggregate '%s'.
<b>Parameters</b>	<b>subsys</b> (STRING): Name of the subsystem performing the veto check. <b>time</b> (LONGINT): Time taken by the subsystem to check whether giveback should be aborted. <b>aggr</b> (STRING): Name of the aggregate being given back.

<b>EMS Identifier</b>	ha.giveback.totalCommit
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during the giveback of an aggregate to indicate the total time taken by the commit phase.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Total time taken to commit the giveback of aggregate '%s' was %llu msecs.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate being given back. <b>time</b> (LONGINT): Total time taken to commit the giveback.

<b>EMS Identifier</b>	ha.giveback.usingHAInterconnect
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the local node uses the high-availability (HA) interconnect instead of the preferred cluster network to communicate with its HA partner during giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Local node used the HA interconnect to communicate with the partner during giveback of aggregate %s.
<b>Parameters</b>	<b>aggrName</b> (STRING): Name of the aggregate being given back.

<b>EMS Identifier</b>	ha.localNodeShutDown
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when shutdown of the local node is initiated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Shutdown of the local node has been initiated with inhibit_takeover set to %s.
<b>Parameters</b>	<b>inhibit_takeover</b> (STRING): Specifies whether takeover by the partner node is inhibited on shutdown of the local node.

<b>EMS Identifier</b>	ha.mbxResvReleaseDelay
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the takeover node cannot release a disk reservation for a mailbox disk in preparation for a giveback event. The mailbox reservation release will be automatically retried after a few minutes.
<b>Corrective Action</b>	The mailbox reservation release will be automatically retried after a few minutes. If this problem persists and "storage failover giveback" is not run automatically or cannot be run manually, release the mailbox disks reservations manually using maintenance mode.
<b>Syslog Message</b>	Problem releasing reservation for mailbox disk attached to node with System ID %d. Disk name %s, disk owner %s, disk UUID: %s, status: %d.
<b>Parameters</b>	<b>physical_location</b> (LONGINT): System ID of the node directly attached to the mailbox disk on which the reservation release failure occurred. <b>disk_name</b> (STRING): Name of the disk for which the reservation release failed. <b>mbx_disk_owner</b> (STRING): Owner of the mailbox disk where the reservation release failed. Values are Local Node or Partner Node. <b>disk_uid</b> (STRING): Unique identifier of the disk where the reservation release failed. <b>status</b> (INT): Reservation release status code.

<b>EMS Identifier</b>	ha.netPartition
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a Data ONTAP(R) subsystem detects an error potentially due to network partitioning, but cannot take over the partner node or allow the partner to take over because both takeover-of-partner and takeover-by-partner are both disabled. Network partitioning is indicated by concurrent errors on more than one of a node's interfaces, if a halt, reboot, takeover or similar action affecting connectivity is not already in progress.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Network partition error. Internal error code %d; status: 0x%x; internal request ID: %d.
<b>Parameters</b>	<b>error_code</b> (INT): Internal error code. <b>error_status</b> (INTHEX): Additional internal status bits related to error_code. <b>req_id</b> (INT): Internal request ID. <b>duration</b> (LONGINT): Elapsed time in msec spent resolving the reported error.

<b>EMS Identifier</b>	ha.netPartition.reboot
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a Data ONTAP(R) subsystem detects an error potentially due to network partitioning, and reboots the local node due to the network partition. The reboot occurs only if `takeover-by-partner` is enabled on the local node. Network partitioning is indicated by concurrent errors on more than one of a node's interfaces, if a halt, reboot, takeover or similar action affecting connectivity is not already in progress.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Rebooting the local node due to a network partition error. Internal error code %d; status: 0x%x; internal request ID: %d.
<b>Parameters</b>	<b>error_code</b> (INT): Internal error code. <b>error_status</b> (INTHEX): Additional internal status bits related to error_code. <b>req_id</b> (INT): Internal request ID. <b>duration</b> (LONGINT): Elapsed time in msec spent resolving the reported error.

<b>EMS Identifier</b>	ha.netPartition.takeover
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a Data ONTAP(R) subsystem detects an error potentially due to network partitioning, and initiates a takeover of the partner node due to the partition. Network partitioning is indicated by concurrent errors on more than one of a node's interfaces, if a halt, reboot, takeover or similar action affecting connectivity is not already in progress.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Taking over the partner node due to a network partition error. Internal error code %d; status: 0x%x; internal request ID: %d.
<b>Parameters</b>	<b>error_code</b> (INT): Internal error code. <b>error_status</b> (INTHEX): Additional internal status bits related to error_code. <b>req_id</b> (INT): Internal request ID. <b>duration</b> (LONGINT): Elapsed time in msec spent resolving the reported error.

<b>EMS Identifier</b>	ha.netPartToDisabled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when takeovers due to network partitioning are disabled because of the number of previous, consecutive, network-partition takeovers that occurred within a preceding detection period. Subsequent takeovers due to network partitioning are automatically reenabled after the disable time limit is reached or after a takeover is initiated for a different reason.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Network partitioning takeovers are disabled due to %d network-related takeovers in the preceding %d minutes. Takeovers by local node %d; partner node %d. Takeovers will be re-enabled in %d minutes or when another type of takeover occurs.
<b>Parameters</b>	<p><b>takeovers_initiated</b> (INT): Consecutive takeovers initiated from either node within the detection period that were due to network partitioning.</p> <p><b>detection_period</b> (INT): Number of minutes over which the network partition takeover attempts were monitored and counted.</p> <p><b>local_node_initiated</b> (INT): Number of takeovers due to network partitioning occurring within the detection period that were initiated by the local node. This number is included in the takeover_initiated number.</p> <p><b>partner_node_initiated</b> (INT): Number of takeovers due to network partitioning occurring within the detection period that were initiated by the partner node. This number is included in the takeover_initiated number.</p> <p><b>minutes_until_reenable</b> (INT): Minutes until takeover due to network partitioning is reenabled.</p>

<b>EMS Identifier</b>	ha.netra.dskChkNoContDsk
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during an aggregate migration, when the destination node either cannot determine whether at least one disk in the aggregate is a disk partition, or the associated container disk is not visible to the destination node. The aggregate migration operation is aborted.
<b>Corrective Action</b>	Use the (privilege: advanced) "storage disk refresh-ownership" command to rescan the disks and update ownership information. After refreshing the disk ownership info, use the "storage show disk" command to view the ownership of all disks, and the "storage show disk -container-type shared" command to view container-disk ownership. If any disks are incorrectly owned, update the disk ownership information. If the problem persists, use the "storage failover show -fields local-missing-disks, partner-missing-disks" command to check whether there are any disks that are not visible to a subset of the nodes. Use the "storage failover show" command to check whether the high-availability (HA) partner's information is known. If HA partner information is missing, verify the HA Interconnect between both nodes is installed and functioning correctly. If not, fix the HA Interconnect cabling issues to resolve the connectivity problems. Use the "storage disk show" command to check whether there are any failed disks. If failed disks are present, remove or replace them. If there are no failed disks, check the cabling for loose connections or a bad cable on the node where the disk is not visible. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Disk with UUID %s is not visible to node %s, which is the destination of an aggregate migration operation. As a result, the aggregate migration was aborted. Check the event log of the destination node to determine the name of the aggregate whose migration was aborted.
<b>Parameters</b>	<b>disk_uuid</b> (STRING): Universal unique identifier (UUID) of the disk that is not visible to the destination node. <b>node_name</b> (STRING): Name of the destination node.

<b>EMS Identifier</b>	ha.noMediatorMbx
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the non-local mailbox disks of a node are not accessible. The system will not be able to perform a takeover and can potentially prevent a takeover by the partner as well.
<b>Corrective Action</b>	Use the "storage failover show -fields local-mailbox-disks" command to verify that all nodes in the cluster can access their respective mailbox disks. Use the (privilege: advanced) "storage iscsi-initiator show" command to verify that all iSCSI connections are up and healthy. If not healthy, use the "storage iscsi-initiator add-target" and "storage iscsi-initiator connect" commands to add and connect any missing or misconnected iSCSI targets.
<b>Syslog Message</b>	Takeover not possible because non-local mailbox disks owned by node "%s" cannot be accessed.
<b>Parameters</b>	<b>mailbox_owner</b> (STRING): Node that owns the non-local mailbox disks that could not be accessed.

<b>EMS Identifier</b>	ha.noProgrammaticTO
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a takeover is initiated programmatically by Data ONTAP(R) and the takeover request fails because giveback or aggregate relocation cleanup is still in progress.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failover monitor: Programmatic takeover failed due to giveback or aggregate relocation post-processing cleanup not yet complete.
<b>Parameters</b>	

<b>EMS Identifier</b>	ha.panicInfoNotSent
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node cannot send panic information to its high-availability (HA) partner over the HA interconnect. The HA partner might still initiate takeover if it detects that the partner is down by other means, and takeover of the panicking node is allowed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Local node cannot send a panic information message to the HA partner over the HA interconnect due to error: %s. Partner name: %s. Partner system ID: %llu.
<b>Parameters</b>	<b>error</b> (STRING): Reason the node cannot send panic information to its HA partner. <b>partner_name</b> (STRING): Name of the HA partner. <b>partner_systemid</b> (LONGINT): System ID of the HA partner.

<b>EMS Identifier</b>	ha.panicInfoNotSentIC
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node cannot send panic information to its high-availability (HA) partner over the HA interconnect due to an HA interconnect error. The HA partner might still initiate takeover if it detects that the partner is down by other means, and takeover of the panicking node is allowed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Local node cannot send a panic information message to its HA partner due to an HA interconnect error: %s (error code: %d). Partner name: %s. Partner system ID: %llu.
<b>Parameters</b>	<b>error</b> (STRING): Reason the node cannot send panic information to its HA partner. <b>error_code</b> (INT): Specific error generated by the HA Interconnect. Example error codes: 1 (ERR_ICDOWN): Interconnect is down 4 (ERR_SYSERROR): System error 5 (ERR_ICERROR): Interconnect error 6 (ERR_OUTOFMEMORY): Out of memory 11 (ERR_SENDSIZE): Send size is too large 19 (ERR_CKSUM): Checksum error <b>partner_name</b> (STRING): Name of the HA partner. <b>partner_systemid</b> (LONGINT): System ID of the HA partner.

<b>EMS Identifier</b>	ha.panicInfoRcvBadVrsn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the version of the panic information received from the high-availability (HA) partner is not equal to the expected version. The receiving node will discard this panic information message. A takeover might still occur if the local node detects that its HA partner is down by other means, and takeover of the panicking node is allowed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Panic information message received from the HA partner is the wrong version. Expected version: %u. Received version: %u. Partner name: %s. Partner system ID: %llu.
<b>Parameters</b>	<b>expected_version</b> (LONGINT): Expected version of the panic information. <b>received_version</b> (LONGINT): Received version of the panic information. <b>partner_name</b> (STRING): Name of the HA partner. <b>partner_systemid</b> (LONGINT): System ID of the HA partner.

<b>EMS Identifier</b>	ha.panicInfoSent
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node successfully sends panic information to its high-availability (HA) partner over the HA interconnect.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Node successfully sent a panic information message to its HA partner. Partner name: %s. Partner system ID: %llu.
<b>Parameters</b>	<b>local_hostname</b> (STRING): Name of the node that panicked and sent panic information over the HA interconnect. <b>local_systemid</b> (LONGINT): System ID of the node that panicked and sent panic information over the HA interconnect.

<b>EMS Identifier</b>	ha.panicInfoSzNotOk
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the size of the panic information received from the high-availability (HA) partner is not equal to the expected panic information size. The receiving node will discard this panic information message. A takeover might still occur if the local node detects that its HA partner is down by other means, and takeover of the panicking node is allowed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Panic information message received from the HA partner is the wrong size. Expected size: %u. Received size: %u. Partner name: %s. Partner system ID: %llu.
<b>Parameters</b>	<b>expected_size</b> (LONGINT): Expected size of the panic information. <b>received_size</b> (LONGINT): Received size of the panic information. <b>partner_name</b> (STRING): Name of the HA partner. <b>partner_systemid</b> (LONGINT): System ID of the HA partner.

<b>EMS Identifier</b>	ha.resvConflictHalt
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the node halts itself after it finds disks with reservation conflicts. Reservations are placed on disks as part of a node taking over its partner. This disk reservation conflict is due to this node being taken over by its partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A disk reservation conflict was detected on disk %s at %-20s. Typically, this only occurs when the node was taken over by its partner.
<b>Parameters</b>	<b>disk_name</b> (STRING): Name of the disk. <b>time</b> (STRING): Time when the disk reservation was detected. <b>last_update</b> (INT): Time passed since last rescan, in milliseconds.

<b>EMS Identifier</b>	ha.ResvMediatorMbxStatus
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the local node attempts to reserve a mailbox disk while trying to acquire the takeover lock as part of the takeover operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Attempting to reserve mailbox disk %s (UUID: %s) on node "%s" as part of takeover lock. Status: %d.
<b>Parameters</b>	<b>mailbox_disk_name</b> (STRING): Name of the disk being reserved. <b>mailbox_disk_uid</b> (STRING): UUID of the mailbox disk on which a reservation was attempted. <b>mailbox_host</b> (STRING): Name of the node that owns the mailbox disk. <b>mailbox_op_status</b> (INT): Result of the disk reservation attempt on the mailbox disk.

<b>EMS Identifier</b>	ha.takeover.bypOptimChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the value of the 'bypass-takeover-optimization' parameter of the "storage failover" command is changed on a node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>node_name</b> (STRING): Name of the node. <b>new_value</b> (STRING): New value of the 'bypass-takeover-optimization' parameter.

<b>EMS Identifier</b>	ha.takeoverImpDegraded
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the partner node is down and it is currently impossible to perform a takeover because the partner mailbox disks are not available.
<b>Corrective Action</b>	Check connectivity to the partner disks. Identify the mailbox disks on the partner node by using the "storage failover show -instance" command. Verify that this node has connectivity to the partner mailbox disks by using the "storage disk show -instance" command. Resolve any connectivity issues by fixing cabling or shelf issues.
<b>Syslog Message</b>	Takeover of the partner node is impossible due to lack of connectivity to the partner mailbox disks.
<b>Parameters</b>	

<b>EMS Identifier</b>	ha.takeoverImpHotShelf
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the partner node is down and it is currently impossible to perform a takeover due to disk shelves that are overheating.
<b>Corrective Action</b>	Check cooling for the disk shelves.
<b>Syslog Message</b>	Takeover of the partner node is impossible due to disk shelves that are overheating.
<b>Parameters</b>	

<b>EMS Identifier</b>	ha.takeoverImpIC
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the partner node is down and the local node cannot perform a takeover because of interconnect errors.
<b>Corrective Action</b>	Verify that both controllers in the HA pair are operational. For externally connected links, make sure that the interconnect cables are connected properly and that small form-factor pluggable (SFP) modules, if applicable, are seated properly on both controllers. For internally connected links, disable and reenabling the links one at a time by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands. When one link is down on platforms with two available links, HA link redundancy is lost. However, HA services are still working and enabled on the secondary link.
<b>Syslog Message</b>	Takeover of the partner node is not possible due to interconnect errors.
<b>Parameters</b>	

<b>EMS Identifier</b>	ha.takeoverImpLowMem
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the partner node is down; however, due to this node being low on memory, it is currently impossible to perform a takeover.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Takeover of the partner node is impossible due to a low memory situation.
<b>Parameters</b>	

<b>EMS Identifier</b>	ha.takeoverImpNotDef
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the partner node is down and it is currently impossible to perform a takeover.
<b>Corrective Action</b>	Check the reason string and repair the problem reported.
<b>Syslog Message</b>	Takeover of the partner node is impossible due to reason %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason the takeover is currently impossible.

<b>EMS Identifier</b>	ha.takeoverImpUnsync
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the partner node is down and it is currently impossible to perform a takeover because the takeover node does not have partner NVRAM data.
<b>Corrective Action</b>	Verify that the interconnect cables are correctly connected between the nodes. Boot the partner node to reestablish the interconnect if it was shut down. If necessary, force a takeover with the '[run node] cf forcetakeover' command. This action might cause data loss if there is NVRAM data on the partner node not written to disk.
<b>Syslog Message</b>	Takeover of the partner node is impossible due to lack of partner NVRAM data.
<b>Parameters</b>	

<b>EMS Identifier</b>	ha.takeoverImpVersion
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the partner node is down; however, due to a version mismatch, it is currently impossible to perform a takeover.
<b>Corrective Action</b>	Upgrade the downrev node, so that both nodes are on the same release of Data ONTAP(R). If a revert is being performed, downgrade the uprev node to the same release as the partner node.
<b>Syslog Message</b>	Takeover of the partner node is impossible due to version mismatch.
<b>Parameters</b>	

<b>EMS Identifier</b>	ha.tkover.waitARLabort
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a pending takeover is waiting for an in-progress aggregate relocation (ARL) operation to complete or abort before proceeding with the takeover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Node %s has been waiting for an ongoing ARL for %d seconds. It will proceed with takeover when the ARL operation has been completed or aborted.
<b>Parameters</b>	<b>node_name</b> (STRING): Name of the node doing the takeover. <b>wait_time</b> (LONGINT): Amount of time spent waiting for the ongoing ARL operation to be completed or aborted.

<b>EMS Identifier</b>	ha.tkover.waitGBabort
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a pending takeover is waiting for an in-progress SFO giveback operation to complete or abort before proceeding with the takeover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Node %s has been waiting for an ongoing SFO giveback for %d seconds. It will proceed with takeover when the SFO giveback operation has been completed or aborted.
<b>Parameters</b>	<b>node_name</b> (STRING): Name of the node doing the takeover. <b>wait_time</b> (LONGINT): Amount of time spent waiting for the ongoing SFO giveback operation to be completed or aborted.

<b>EMS Identifier</b>	ha.tkoverAbortedNoMediatorMbx
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a planned failover is aborted because the mediator mailbox disks were not detected.
<b>Corrective Action</b>	Run the "storage failover show -fields local-mailbox-disks partner-mailbox-disks" and "storage failover show -instance" commands to check whether the mediator mailbox disks are missing. If the mediator mailbox disks are not present, rescan the disks on both nodes in the HA pair to determine the latest ownership by using the "storage disk refresh-ownership" command. If the rescan does not work, contact NetApp technical support.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	ha.toAfterRcvPanicInfo
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the local node initiates a takeover of its high-availability (HA) partner after detecting a panic of the HA partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Local node initiated takeover after receiving a panic information message from its HA partner. Partner name: %s. Partner system ID: %llu.
<b>Parameters</b>	<b>hostname</b> (STRING): Host name of the node being taken over. <b>systemid</b> (LONGINT): System ID of the node being taken over.

<b>EMS Identifier</b>	ha.tp.testPointHit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the testpoint is encountered or hit.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Testpoint hit: '%s' [%s, %s], [%s:%d], count %d => '%s'.
<b>Parameters</b>	<b>message</b> (STRING): Test message. <b>tpModuleName</b> (STRING): Testpoint module name. <b>tpId</b> (STRING): ID of the testpoint within the module. <b>fileName</b> (STRING): File name. <b>lineNo</b> (INT): Line number. <b>tpCount</b> (INT): Number of times the testpoint triggers before being disabled. <b>tpType</b> (STRING): Type of testpoint.

## "hamsg" Event Group

<b>EMS Identifier</b>	hamsg.diskCheckResp
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node receives a disk inventory check response from its high-availability (HA) partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The local node has received a disk inventory check response (%d) from its HA partner.
<b>Parameters</b>	<b>response</b> (INT): The disk inventory check response received from the HA partner.

<b>EMS Identifier</b>	hamsg.dskChkPopulateErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a disk inventory check cannot be sent to the local node's high-availability (HA) partner because the disk check request could not be correctly constructed.
<b>Corrective Action</b>	Retry the operation. If the problem persists, use the "storage failover show -fields local-missing-disks, partner-missing-disks" command to rescan the disks and to determine the latest ownership. If the disk inventory mismatch is not resolved, check the cabling for either loose connections or for a bad cable on the partner node.
<b>Syslog Message</b>	A disk inventory check cannot be sent to the local node's HA partner. Failure reason: %s.
<b>Parameters</b>	<b>failure_reason</b> (STRING): The reason that the disk inventory check request could not be properly constructed.

## "haosc" Event Group

<b>EMS Identifier</b>	haosc.config.unknown.cf
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the chassis and controller field-replaceable unit programmable read-only memories (FRU PROMs) have inconsistent data.
<b>Corrective Action</b>	Boot into Maintenance mode and run the 'ha-config modify' command to set the controller and chassis configuration to stand-alone or HA, as appropriate. Exercise extreme caution. Setting the wrong configuration might lead to data loss.
<b>Syslog Message</b>	Cannot determine whether configuration should be stand-alone or HA. Chassis is in %s configuration, and controller is in %s configuration.
<b>Parameters</b>	<b>cha_config</b> (STRING): Chassis FRU PROM HA configuration string. <b>cont_config</b> (STRING): Controller FRU PROM HA configuration string.

<b>EMS Identifier</b>	haosc.config.unknown.ls
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the chassis and controller field-replaceable unit programmable read-only memory (FRU PROM) configurations conflict with the HA mode.
<b>Corrective Action</b>	Boot into Maintenance mode and run the 'ha-config modify' command to set the controller and chassis configuration to stand-alone or HA, as appropriate. Setting the wrong configuration might lead to data loss. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Cannot determine whether the configuration should be stand-alone or HA. Chassis is in %s configuration, controller is in %s configuration, and the HA mode is %s.
<b>Parameters</b>	<b>cha_config</b> (STRING): Chassis FRU PROM HA configuration string. <b>cont_config</b> (STRING): Controller FRU PROM HA configuration string. <b>mode</b> (STRING): HA mode string.

<b>EMS Identifier</b>	haosc.config.unknown.nv
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the chassis and controller field-replaceable unit programmable read-only memories (FRU PROMs) have factory default configurations and the nonvolatile memory is dirty.
<b>Corrective Action</b>	Boot into Maintenance mode and run the 'ha-config modify' command to set the controller and chassis configuration to stand-alone or HA, as appropriate. Setting the wrong configuration might lead to data loss. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	Cannot determine whether configuration should be stand-alone or HA. Chassis is in %s configuration, controller is in %s configuration, and the nonvolatile memory is dirty.
<b>Parameters</b>	<b>cha_config</b> (STRING): Chassis FRU PROM HA configuration string. <b>cont_config</b> (STRING): Controller FRU PROM HA configuration string.

<b>EMS Identifier</b>	haosc.fru.op.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the chassis or controller field-replaceable unit programmable read-only memory (FRU PROM) read/write fails.
<b>Corrective Action</b>	Replace the system chassis or controller, and contact NetApp technical support for assistance.
<b>Syslog Message</b>	%s FRU PROM %s operation failed.
<b>Parameters</b>	<b>fru</b> (STRING): Chassis/controller string. <b>op</b> (STRING): Read/write operation string.

<b>EMS Identifier</b>	haosc.invalid.config
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the chassis or controller field-replaceable unit programmable read-only memory (FRU PROM) returns an invalid configuration.
<b>Corrective Action</b>	Boot into Maintenance mode and run the 'ha-config modify' command to set the controller and chassis configuration to stand-alone or HA, as appropriate. Setting the wrong configuration might lead to data loss. If you need assistance, contact NetApp technical support.
<b>Syslog Message</b>	%s FRU PROM returns an invalid configuration.
<b>Parameters</b>	<b>fru</b> (STRING): Chassis/controller string.

<b>EMS Identifier</b>	haosc.sa.config
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when nonvolatile memory on a stand-alone system is configured for a high-availability system. Only half of the available nonvolatile memory will be used and system performance will be affected.
<b>Corrective Action</b>	Reboot the system to use all of the nonvolatile memory.
<b>Syslog Message</b>	Only half of the available nonvolatile memory is in use. This will affect system performance.
<b>Parameters</b>	

## "hashd" Event Group

<b>EMS Identifier</b>	hashd.maxstore.oversize
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the size of hashes in the hash store is greater than the maximum size configured.
<b>Corrective Action</b>	If the hash files are not being retained for a long enough duration, consider resizing the maximum size of the hash store by issuing the 'vserver cifs branchcache modify -hash-store-max-size' command.
<b>Syslog Message</b>	Size of the hashes in the hash store exceeded maximum size configured for Vserver %s.%s
<b>Parameters</b>	<b>vserver_name</b> (STRING): Name of the Vserver where the problem is occurring. <b>oldestKept_timestamp</b> (STRING): Timestamp of the oldest kept hash file.

## "hm" Event Group

<b>EMS Identifier</b>	hm.alert.cleared
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a system health monitor alert is successfully cleared. Because health monitors evaluate the conditions dynamically, they might determine that the alerting condition is no longer valid. The alert is then removed from the system and this message is generated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s cleared by monitor %s
<b>Parameters</b>	<b>detailed_info</b> (STRING): Specific information for the deleted alert. <b>monitor</b> (STRING): Health monitor hm_type value for this alert. <b>alert_id</b> (STRING): Alert ID for the alert. <b>alerting_resource</b> (STRING): Alert resource related to this alert.

<b>EMS Identifier</b>	hm.alert.raised
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a system health monitor alert is detected. Based on predefined policies, alerts are created dynamically as and when conditions are evaluated. The alert is then populated with the actual names of the resources causing it. You can see the alerts in the system by running the "system health alert show" command.
<b>Corrective Action</b>	Run the "system health alert show" command to see the alert that was created with this event. Follow the suggested actions listed in the "Corrective Actions" field of the alert.
<b>Syslog Message</b>	%s raised by monitor %s
<b>Parameters</b>	<b>detailed_info</b> (STRING): Specific information for the created alert. <b>monitor</b> (STRING): Health monitor hm_type value for this alert. <b>alert_id</b> (STRING): Alert ID for the alert. <b>alerting_resource</b> (STRING): Alert resource related to this alert.

## "hotplug" Event Group

<b>EMS Identifier</b>	hotplug.generic.busy_not_ready
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a module replacement or removal command fails because the driver or system is busy. Hot plug functionality is not available at this time.
<b>Corrective Action</b>	Try the command again after a few minutes. If the system remains busy, it is an internal error. Contact NetApp technical support for assistance.
<b>Syslog Message</b>	%s command failed for module %s in slot %s of node %s because the driver or system is busy.
<b>Parameters</b>	<b>command</b> (STRING): Name of the command. <b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	hotplug.insert.badCard.type
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the module type does not match the system's record for this slot.
<b>Corrective Action</b>	Use a replacement module of the same type.
<b>Syslog Message</b>	%s module insertion failed in slot %s of node %s because the module type does not match the system's record for this slot.
<b>Parameters</b>	<b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	hotplug.insert.badCard.ver
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the module revision does not match the system's record for this slot.
<b>Corrective Action</b>	Use a replacement module of the same board revision.
<b>Syslog Message</b>	%s module insertion failed in slot %s of node %s because the module revision does not match the system's record for this slot.
<b>Parameters</b>	<b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	hotplug.insert.illegal_card
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the module inserted is not supported.
<b>Corrective Action</b>	Use vendor-approved modules.
<b>Syslog Message</b>	%s module insertion failed in slot %s of node %s because the module is not supported.
<b>Parameters</b>	<b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	hotplug.insert.link_not_up
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when link on module fails to initialize after module is powered on.
<b>Corrective Action</b>	Reinsert the module and try command again. If problem persists, contact NetApp technical support for assistance.
<b>Syslog Message</b>	%s module insertion failed in slot %s of node %s because the link on module failed to initialize.
<b>Parameters</b>	<b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	hotplug.insert.no_power_up
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a module does not initialize after it is powered on.
<b>Corrective Action</b>	Reinsert the module and try the command again. If the problem persists, contact NetApp technical support for assistance.
<b>Syslog Message</b>	%s module insertion failed in slot %s of node %s because module failed to initialize.
<b>Parameters</b>	<b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	hotplug.insert.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when module insertion is successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s module insertion is successful in slot %s of node %s.
<b>Parameters</b>	<b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	hotplug.remove.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when module removal is successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s module removal is successful in slot %s of node %s.
<b>Parameters</b>	<b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

<b>EMS Identifier</b>	hotplug.replace.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when module replacement is successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s module replacement is successful in slot %s of node %s.
<b>Parameters</b>	<b>card</b> (STRING): Name of the module. <b>slot</b> (STRING): Number of the slot. <b>node</b> (STRING): Name of the node.

## "httpd" Event Group

<b>EMS Identifier</b>	httpd.api.expired.session.limit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Manage ONTAP(R) API request to an internal server expires due to configured session limits.
<b>Corrective Action</b>	Inspect the last error contained in the message to determine why the API request exceeded the configured session limits. The "security session show -interface ontapi" command may be used to display all active and pending API requests across the cluster. Run "security session limit show -interface ontapi" to verify the currently configured session limits.
<b>Syslog Message</b>	A Manage ONTAP(R) API request (%s) has expired after %lu seconds. Last error: %s
<b>Parameters</b>	<b>api_name</b> (STRING): The name of the API. <b>elapsed_time</b> (LONGINT): The age of the API request (in seconds). <b>last_error</b> (STRING): Reason for the warning, indicating the limit category that was exceeded. <b>purge_time</b> (LONGINT): The purge time (in seconds) for outstanding API requests. <b>trace_tag</b> (LONGINTEX): The generated trace tag associated with the API request.

## "hya" Event Group

<b>EMS Identifier</b>	hya.dup_vbn_lookup
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated if we detect redundant lookups of a PVBN without an intervening suspend.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s %s %s %s %s %s %s %s %s %s
<b>Parameters</b>	<b>f2</b> (STRING): Third frame of backtrace. <b>f3</b> (STRING): Fourth frame of backtrace. <b>f4</b> (STRING): Fifth frame of backtrace. <b>f5</b> (STRING): Sixth frame of backtrace. <b>f6</b> (STRING): Seventh frame of backtrace. <b>f7</b> (STRING): Eighth frame of backtrace. <b>f8</b> (STRING): Ninth frame of backtrace. <b>f9</b> (STRING): Tenth frame of backtrace. <b>f10</b> (STRING): Eleventh frame of backtrace. <b>f11</b> (STRING): Twelfth frame of backtrace. <b>f12</b> (STRING): Thirteenth frame of backtrace.

<b>EMS Identifier</b>	hya.dup_vbn_lookup.detail
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated if we detect redundant lookups of a PVBN without an intervening suspend.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s
<b>Parameters</b>	<b>description</b> (STRING): Description of failure. <b>buffers</b> (STRING): Details of buffers that were predirtied.

## "hybaggrcopy" Event Group

<b>EMS Identifier</b>	hybAggrCopy.dstGeomMismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a mismatch between the disk geometries of source and destination hybrid aggregates.
<b>Corrective Action</b>	Satisfy the following conditions: Both aggregates are hybrid. The destination aggregate has at least the same number of HDD and SSD disks as the source aggregate. The disk size and type of each disk of the source aggregate matches those of the destination aggregate.
<b>Syslog Message</b>	Aggregate %s cannot be copied. Source and destination hybrid aggregate geometries do not match.
<b>Parameters</b>	<b>srcaggr</b> (STRING): Aggr copy source aggregate.

<b>EMS Identifier</b>	hybAggrCopy.srcGeomMismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an aggregate cannot be copied. The issue is either that the source is a hybrid aggregate and the destination is not, or there is a mismatch between the disk geometries of the source and destination hybrid aggregates.
<b>Corrective Action</b>	Verify that the source and destination are both hybrid aggregates. Verify that the destination aggregate has at least the same number each of hard disk drives (HDDs) and solid state drives (SSDs) as the source aggregate. Verify that the disk size and type of each disk of the source aggregate matches those of the destination aggregate.
<b>Syslog Message</b>	Aggregate %s cannot be copied. Either the source is a hybrid aggregate but the destination is not, or the source and destination hybrid aggregate geometries do not match.
<b>Parameters</b>	<b>srcaggr</b> (STRING): Name of the source aggregate.

## "hypervisor" Event Group

<b>EMS Identifier</b>	hypervisor.cpu.count
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the number of physical CPUs on the hypervisor are not sufficient for ONTAP(R) Select support.
<b>Corrective Action</b>	Add more CPUs to the ONTAP(R) Select hypervisor configuration.
<b>Syslog Message</b>	Insufficient number of CPUs on the hypervisor is: %d. ONTAP(R) Select requires: %d
<b>Parameters</b>	<b>count</b> (INT): Number of CPUs on the hypervisor. <b>minimum</b> (INT): Minimum number of CPUs required on the hypervisor.

<b>EMS Identifier</b>	hypervisor.cpu.version
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the hypervisor CPU type running ONTAP(R) Select is not supported. Supported types are the XEON E5 v3 or later.
<b>Corrective Action</b>	Move ONTAP(R) Select to a hypervisor with a supported CPU.
<b>Syslog Message</b>	Unsupported hypervisor CPU: %s
<b>Parameters</b>	<b>version</b> (STRING): Current version of the CPU.

<b>EMS Identifier</b>	hypervisor.guest.cpu
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the hypervisor does not have a sufficient number of CPUs configured to support an ONTAP(R) Select guest.
<b>Corrective Action</b>	Configure the required number of CPUs in the hypervisor configuration to support an ONTAP(R) Select guest.
<b>Syslog Message</b>	Insufficient CPUs configured for the ONTAP(R) Select guest on the hypervisor: %d. %d CPUs are required.
<b>Parameters</b>	<b>count</b> (INT): Number of CPUs currently configured. <b>required</b> (INT): Required number of CPUs to be configured.

<b>EMS Identifier</b>	hypervisor.guest.guests
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the number of ONTAP(R) Select guests exceeds the recommended limit.
<b>Corrective Action</b>	Reduce the number of guests on the hypervisor to meet the requirements for ONTAP(R) Select.
<b>Syslog Message</b>	Unsupported number of ONTAP(R) Select guests on the hypervisor: %d. Maximum supported number of guests: %d.
<b>Parameters</b>	<b>count</b> (INT): Number of ONTAP(R) Select guests. <b>required</b> (INT): Maximum number of ONTAP(R) Select guests.

<b>EMS Identifier</b>	hypervisor.guest.if.count
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the hypervisor does not have a sufficient number of virtual network interfaces configured for the guest for ONTAP(R) Select support.
<b>Corrective Action</b>	Verify that enough virtual network interfaces are configured to meet the requirements for ONTAP(R) Select.
<b>Syslog Message</b>	Insufficient number of virtual network interfaces configured for the ONTAP(R) Select guest on the hypervisor: %d. %d interfaces are required.
<b>Parameters</b>	<b>count</b> (INT): Number of virtual network interfaces configured. <b>required</b> (INT): Required number of virtual network interfaces to be configured.

<b>EMS Identifier</b>	hypervisor.guest.if.speed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the speed of the virtual network interface configured for the guest is not sufficient for ONTAP(R) Select support.
<b>Corrective Action</b>	Configured the speed of the virtual network interface to meet the required speed for ONTAP(R) Select support.
<b>Syslog Message</b>	The speed of interface %s configured for the ONTAP(R) Select guest on the hypervisor is insufficient: %s. Required speed: %s.
<b>Parameters</b>	<b>name</b> (STRING): Name of the virtual network interface. <b>speed</b> (STRING): Speed of the configured virtual network interface. <b>required</b> (STRING): Required speed of virtual network interface to be configured.

<b>EMS Identifier</b>	hypervisor.guest.if.status
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a guest's virtual network interface is not operational.
<b>Corrective Action</b>	The interface, port, or cabling needs to be investigated for faults. The interface must be "up" to meet the requirements for ONTAP(R) Select.
<b>Syslog Message</b>	Virtual network interface %s assigned to the ONTAP(R) Select guest is not operational. Current status: %s.
<b>Parameters</b>	<b>name</b> (STRING): Name of the virtual network interface. <b>status</b> (STRING): Operational status of the virtual network interface.

<b>EMS Identifier</b>	hypervisor.guest.memory
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the hypervisor does not have a sufficient amount of memory configured for the guest for ONTAP(R) Select support.
<b>Corrective Action</b>	Configure the required amount of memory in the hypervisor configuration to support an ONTAP(R) Select guest.
<b>Syslog Message</b>	Insufficient amount of memory configured for the ONTAP(R) Select guest on the hypervisor: %s. Required memory: %s.
<b>Parameters</b>	<b>amount</b> (STRING): Amount of memory configured. <b>required</b> (STRING): Required amount of memory to be as configured.

<b>EMS Identifier</b>	hypervisor.hyperthreading
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when hyperthreading is enabled on the hypervisor. Hyperthreading must be disabled for ONTAP(R) Select support.
<b>Corrective Action</b>	Disable hyperthreading in the hypervisor configuration.
<b>Syslog Message</b>	Hyperthreading is enabled on the hypervisor, but it is not supported by ONTAP(R) Select.
<b>Parameters</b>	

<b>EMS Identifier</b>	hypervisor.memory.size
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the amount of memory installed on the hypervisor is not sufficient for ONTAP(R) Select support.
<b>Corrective Action</b>	Add more memory to the ONTAP(R) Select hypervisor configuration.
<b>Syslog Message</b>	Insufficient amount of memory on the hypervisor: %s. ONTAP(R) Select requires: %s of memory.
<b>Parameters</b>	<b>size</b> (STRING): Size of memory active on the hypervisor. <b>required</b> (STRING): Size of memory required on the hypervisor.

<b>EMS Identifier</b>	hypervisor.phy.nic.count
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the number of physical NICs on the hypervisor is not sufficient for ONTAP(R) Select support.
<b>Corrective Action</b>	Add NICs to the hypervisor configuration to meet the requirements for ONTAP(R) Select.
<b>Syslog Message</b>	Insufficient number of physical NICs on the hypervisor: %d. ONTAP(R) Select requires %d NICs.
<b>Parameters</b>	<b>count</b> (INT): Count of physical NICs active on the hypervisor. <b>required</b> (INT): Required number of physical NICs for ONTAP(R) Select to run on the hypervisor.

<b>EMS Identifier</b>	hypervisor.phy.nic.mtu
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the MTU of the physical network interface is not large enough for ONTAP(R) Select support.
<b>Corrective Action</b>	The MTU for the network interface needs to be configured to the required size in the hypervisor configuration to meet the requirements for ONTAP(R) Select.
<b>Syslog Message</b>	Physical interface %s on the hypervisor is configured with MTU: %d. ONTAP(R) Select requires an MTU of %d.
<b>Parameters</b>	<b>name</b> (STRING): Physical network interface name. <b>mtu</b> (INT): MTU of the physical network interface. <b>required</b> (INT): Required MTU of the physical network interface.

<b>EMS Identifier</b>	hypervisor.phy.nic.speed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the speed of the physical network interface is not sufficient for ONTAP(R) Select support.
<b>Corrective Action</b>	Check the cabling or negotiation for the port speed to meet the requirements for ONTAP(R) Select.
<b>Syslog Message</b>	Insufficient speed of physical network interface %s on the hypervisor: %s. ONTAP(R) Select requires %s.
<b>Parameters</b>	<b>name</b> (STRING): Physical network interface name. <b>speed</b> (STRING): Current speed of the physical network interface in bps. <b>required</b> (STRING): Required speed of the physical network interface in bps.

<b>EMS Identifier</b>	hypervisor.phy.nic.status
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a physical network interface on the hypervisor is not operational.
<b>Corrective Action</b>	The interface, port, or cabling needs to be investigated for faults. The interface must be up to meet the requirements for ONTAP(R) Select.
<b>Syslog Message</b>	Physical network interface %s on the hypervisor is not operational. Current status: %s.
<b>Parameters</b>	<b>name</b> (STRING): Physical network interface name. <b>status</b> (STRING): Operational status of the physical network interface.

<b>EMS Identifier</b>	hypervisor.version
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the version of the hypervisor is not supported by ONTAP(R) Select.
<b>Corrective Action</b>	Move ONTAP(R) Select to a supported hypervisor version.
<b>Syslog Message</b>	Unsupported hypervisor version: %s. Supported versions: %s
<b>Parameters</b>	<b>version</b> (STRING): Current version of the hypervisor. <b>supported_versions</b> (STRING): Supported versions of the hypervisor.

## "ic" Event Group

<b>EMS Identifier</b>	ic.HAInterconnectDown
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs every hour when the high-availability (HA) interconnect is down.
<b>Corrective Action</b>	Base the corrective action on the number and type of HA interconnect links supported by the platform and the reason for which the interconnect is down. If links are down: Verify that both controllers in the HA pair are operational. For externally connected links, make sure that the interconnect cables are connected properly and that small form-factor pluggable (SFP) modules, if applicable, are seated properly on both controllers. For internally connected links, disable and reenabling the links one at a time by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands. If links are disabled: Enable the links by using the "system ha interconnect link on" command. If a peer is not connected: Disable and reenabling the links one at a time by using the "system ha interconnect link off" and "system ha interconnect link on" commands. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	HA interconnect: Interconnect down for %d minutes: %s
<b>Parameters</b>	<b>ic_downtime</b> (INT): Amount of time (in minutes) the connection has been down. <b>reason</b> (STRING): Reason that the HA interconnect is down, which might be due to links being down, links being disabled, or an unconnected peer.

<b>EMS Identifier</b>	ic.HAInterconnectLinkDown
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs every hour when one of the high-availability (HA) interconnect links is down.
<b>Corrective Action</b>	Verify that both controllers in the HA pair are operational. For externally connected links, make sure that the interconnect cables are connected properly and that small form-factor pluggable (SFP) modules, if applicable, are seated properly on both controllers. For internally connected links, disable and reenabling the links one at a time by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands. When one link is down on platforms with two available links, HA link redundancy is lost. However, HA services are still working and enabled on the secondary link.
<b>Syslog Message</b>	HA interconnect: %s link #%d has been down for %d minutes.
<b>Parameters</b>	<b>link_type</b> (STRING): Type of link that is down. Possible values are external and backplane. <b>link_num</b> (INT): Number that identifies which link is down. <b>link_downtime</b> (INT): Amount of time (in minutes) the link has been down.

<b>EMS Identifier</b>	ic.linkSpeedDegraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the high-availability (HA) interconnect detects a degraded link speed.
<b>Corrective Action</b>	For externally connected links, make sure that the interconnect cables are connected properly and that small form-factor pluggable (SFP) modules, if applicable, are seated properly on both controllers. For internally connected links, disable and reen able the links one at a time by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	HA interconnect: Link speed of link # <i>%d</i> degraded. Current: <i>%s</i> , expected: <i>%s</i> .
<b>Parameters</b>	<b>link_num</b> (INT): Number that identifies the link. <b>link_speed</b> (STRING): Current link speed. <b>expected_speed</b> (STRING): Link speed expected for the HA interconnect device.

<b>EMS Identifier</b>	ic.linkStatusChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the link status changes for a high-availability (HA) interconnect port.
<b>Corrective Action</b>	Verify that both controllers in the HA pair are operational. For externally connected links, make sure that the interconnect cables are connected properly and that small form-factor pluggable (SFP) modules, if applicable, are seated properly on both controllers. For internally connected links, disable and reen able the links one at a time by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands. When one link is down on platforms with two available links, HA link redundancy is lost. However, HA services are still working and enabled on the secondary link.
<b>Syslog Message</b>	HA interconnect: Port <i>%s</i> link is <i>%s</i> .
<b>Parameters</b>	<b>port_name</b> (STRING): Name of the port for which link status changed. <b>link_status</b> (STRING): Link status string: "up" or "down".

<b>EMS Identifier</b>	ic.linkWidthDegraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the high-availability (HA) interconnect detects a degraded link width. This can affect the write performance of the system.
<b>Corrective Action</b>	For externally connected links, make sure that the interconnect cables are connected properly and that small form-factor pluggable (SFP) modules, if applicable, are seated properly on both controllers. For internally connected links, disable and reen able the links one at a time by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	HA interconnect: Link width of link # <i>%d</i> degraded. Current: <i>%dX</i> , expected: <i>%dX</i> .
<b>Parameters</b>	<b>link_num</b> (INT): Number that identifies the link. <b>link_width</b> (INT): Current link width. <b>expected_width</b> (INT): Link width expected for the HA interconnect type.

<b>EMS Identifier</b>	ic.unsupportCable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unsupported cable is detected on the high-availability interconnect port. An unsupported cable might cause the interconnect to be unstable, resulting in unsynchronized logs.
<b>Corrective Action</b>	Unplug the unsupported cable, and then plug in a supported cable. Search the support site "Hardware Universe" for information about supported high-availability cables for this platform.
<b>Syslog Message</b>	Detected unsupported %s cable with part number %s.
<b>Parameters</b>	<b>cable_type</b> (STRING): Cable type. <b>cable_part</b> (STRING): Cable part number.

<b>EMS Identifier</b>	ic.viif.initFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the driver fails to create a virtual interface.
<b>Corrective Action</b>	Reboot the controller. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	HA interconnect: Virtual interface initialization failure.
<b>Parameters</b>	

## "iclink" Event Group

<b>EMS Identifier</b>	iclink.init.error
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the HA interconnect fails to initialize.
<b>Corrective Action</b>	Reboot the system. If the problem persists, run diagnostics on the memory in the node.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>errorCode</b> (INT): The internal error code.

<b>EMS Identifier</b>	iclink.probe.error
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system cannot detect a High Availability (HA) interconnect card, making HA communication inoperable.
<b>Corrective Action</b>	Verify that the High Availability interconnect card is present and operational on the system. If this message persists, disable and reenabling the link by using the (privilege: advanced) "system ha interconnect link off" and "system ha interconnect link on" commands.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>errorCode</b> (INT): Internal error code.

## "icmp" Event Group

<b>EMS Identifier</b>	icmp.ping.throttle
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system receives a burst of ICMP ping packet within a one-second interval. The packets are dropped by the system because these packets could be due to an ICMP attack.
<b>Corrective Action</b>	If the condition persists, determine the network source of the ICMP ping traffic and then block it by using a firewall rule. For assistance in determining the source, contact your network administrator.
<b>Syslog Message</b>	icmp_input: The system dropped %d ping packets after limiting the packets to %d per second.
<b>Parameters</b>	<b>pingDropped</b> (INT): ICMP_ECHO packets dropped due to throttling since the last time this message was generated. <b>icmpLimit</b> (INT): Maximum number of ICMP packets per second.

## "iomem" Event Group

<b>EMS Identifier</b>	iomem.bbm.init.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects that an operation to a NOR flash memory has failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>slot</b> (INT): Slot number of the caching module. <b>reason</b> (STRING): Reason for the failure. <b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module.

<b>EMS Identifier</b>	iomem.card.disable
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the caching module has been disabled as a result of an explicit diagnostic command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Caching module in slot %u has been disabled.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.card.enable
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the caching module has been enabled as a result of an explicit diagnostic command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Caching module in slot %u has been enabled.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.card.fail.fpga
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects a fatal operational error with the onboard FPGA hardware and is taking the caching module offline. The caching module will be automatically reset and, in most cases, brought back online. If the caching module stays offline, system performance could be degraded.
<b>Corrective Action</b>	The caching module will be automatically reset. If the module stays offline, check the event log for related caching module messages. For further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Caching module (model name %s, serial number %s, part number %s) in slot %u has experienced a fatal FPGA error and is being taken offline.
<b>Parameters</b>	<b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module. <b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>code</b> (INTHEX): Error code for the FPGA fatal error.

<b>EMS Identifier</b>	iomem.card.fail.internal
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the caching module driver detects a fatal internal error on the caching module and is taking the card offline.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Caching module (model name %s, serial number %s, part number %s) in slot %u has experienced a fatal internal error (0x%x) and is being taken offline.
<b>Parameters</b>	<b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module. <b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>code</b> (INTHEX): Error code for the internal fatal error.

<b>EMS Identifier</b>	iomem.dma.internal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the caching module driver detects an internal DMA error during data transfer.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	Caching module (model name %s, serial number %s, part number %s): Internal DMA error (0x%x) detected on the caching module in slot %u.
<b>Parameters</b>	<b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module. <b>code</b> (INT): Internal error code. <b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>channel</b> (INT): DMA channel number. <b>write</b> (INT): DMA data transfer direction flag. <b>local</b> (INT): Local DMA data transfer flag. <b>card_addr</b> (LONGINTEX): Card local memory address for the failed DMA transfer. <b>host_addr</b> (LONGINTEX): Card local memory address for the failed DMA transfer. For local DMA writes, this is the fill data pattern. The value is meaningless for local DMA reads. <b>size</b> (INT): Data transfer size.

<b>EMS Identifier</b>	iomem.firmware.detect
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Data ONTAP(R) detects and initializes the firmware on a caching module.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Caching module in slot %u detected device %s with version %u.%u and build 0x%llx.
<b>Parameters</b>	<b>slot</b> (INT): PCI slot number containing the caching module. <b>device</b> (STRING): Caching module device for which the revision is detected. <b>major</b> (INT): Major version number. <b>minor</b> (INT): Minor version number. <b>build</b> (LONGINTEX): Build version identifier.

<b>EMS Identifier</b>	iomem.firmware.package.access
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver encounters a problem while accessing the firmware package. The caching module might continue to function, but it is recommended that you follow the corrective action at the earliest opportunity.
<b>Corrective Action</b>	Reinstall the Data ONTAP(R) software package or service image.
<b>Syslog Message</b>	Firmware package access problem, code %u.
<b>Parameters</b>	<b>code</b> (INT): Driver-specific access code.

<b>EMS Identifier</b>	iomem.firmware.primary
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the acceleration card driver detects that the card is not running on the primary firmware image. The card does not function unless it is running on the primary image.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Acceleration card (model name %s, serial number %s, part number %s) in slot %u is not running on the primary firmware image.
<b>Parameters</b>	<b>model</b> (STRING): Model name of the acceleration card. <b>serial</b> (STRING): Serial number of the acceleration card. <b>part_num</b> (STRING): Part number of the acceleration card. <b>slot</b> (INT): Number of the PCI slot containing the acceleration card.

<b>EMS Identifier</b>	iomem.firmware.program.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the caching module driver finishes the programming procedure for the card firmware.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Finished firmware programming on the caching module in slot %u.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.firmware.program.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver fails to program the card firmware.
<b>Corrective Action</b>	Perform a takeover and giveback operation or system reboot to clear the error. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Caching module (model name %s, serial number %s, part number %s) in slot %u failed firmware programming (Error: %#x).
<b>Parameters</b>	<b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module. <b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>error</b> (INT): Error associated with the failure of the caching module.

<b>EMS Identifier</b>	iomem.firmware.program.reboot
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the caching module driver triggers a reboot due to programming firmware on one or more caching modules.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Rebooting to use programmed firmware.
<b>Parameters</b>	

<b>EMS Identifier</b>	iomem.firmware.program.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the caching module driver begins the programming procedure for the card firmware.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Begin firmware programming on caching module in slot %u.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.firmware.rev
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP (R) detects an unsupported revision of the firmware image on the caching module. As a result, the caching module is not functional and system performance might degrade.
<b>Corrective Action</b>	Search the event log for iomem.firmware.program.fail messages. If found, contact NetApp technical support for RMA instructions. If not found, work with NetApp technical support in order to verify that acceptable caching module firmware exists within the file system.
<b>Syslog Message</b>	Device %s of the caching module (Model#: %s, Serial#: %s, Part#: %s) on slot %u has an unsupported firmware version %u.%u with build 0x%llx.
<b>Parameters</b>	<b>device</b> (STRING): Device of the caching module that failed the revision validation. <b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module. <b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>detectedMajor</b> (INT): Detected major version number. <b>detectedMinor</b> (INT): Detected minor version number. <b>detectedBuild</b> (LONGINTEX): Detected build number.

<b>EMS Identifier</b>	iomem.flash.config.clock <b>Deprecated:</b> Deprecated as of version 9.2 because the callhome.flash.cache.failed AutoSupport event is already triggered for this failure condition.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the caching module fails to establish its flash clock to the value configured by the Data ONTAP(R) driver. If the flash clock frequency cannot be established, then proper operation and performance cannot be trusted. The card is placed in a failed state.
<b>Corrective Action</b>	Replace the caching module. For further assistance, contact NetApp technical support.
<b>Syslog Message</b>	Flash Cache module (model name %s, serial number %s, part number %s) in slot %u was failed because channel speed could not be set to %u MT/s. Expected frequency was %u MHz, but the actual frequency was %u MHz.
<b>Parameters</b>	<b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module. <b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>channel_speed</b> (INT): Transfer speed configured by the driver in MT/s. <b>exp_freq</b> (INT): Expected flash clock frequency based on channel speed that was configured by the driver. <b>actual_freq</b> (INT): Actual flash clock frequency reported by the caching module after configuration.

<b>EMS Identifier</b>	iomem.fru.badInfo
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects invalid information in the FRU EEPROM of the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Invalid %s detected in the FRU EEPROM for the caching module in slot %u.
<b>Parameters</b>	<b>what</b> (STRING): Name of bad data component in the FRU information. <b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.fru.checksum
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects a checksum error in the card FRU information for the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	FRU information checksum error detected for the caching module in slot %u.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.fru.read
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver encounters an error reading the FRU EEPROM of the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Failed to read the FRU EEPROM of the caching module in slot %u.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.fru.write
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver encounters an error writing the FRU EEPROM of the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Failed to write the FRU EEPROM of the caching module in slot %u.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.i2c.link.down
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects the failure of I2C serial link on the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Caching module in slot %u detected a failure of I2C link number %u.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>link</b> (INT): Link number of the failed I2C link.

<b>EMS Identifier</b>	iomem.i2c.read.addrNACK
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects an address NACK error condition when reading data from an I2C device on the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Caching module in slot %u detected an address NACK error when reading data on I2C link %u from the slave device at address 0x%x.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>link</b> (INT): I2C link number to which the device is connected. <b>address</b> (INT): I2C slave address of the device.

<b>EMS Identifier</b>	iomem.i2c.read.dataNACK
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects a data NACK error condition when reading data from an I2C device on the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Caching module in slot %u detected a data NACK error when reading data on I2C link %u from the slave device at address 0x%x.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>link</b> (INT): I2C link number to which the device is connected. <b>address</b> (INT): I2C slave address of the device.

<b>EMS Identifier</b>	iomem.i2c.read.timeout
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver times out while trying to read data from an I2C device on the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Caching module in slot %u timed out while trying to read data on I2C link %u from the slave device at address 0x%x.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>link</b> (INT): I2C link number to which the device is connected. <b>address</b> (INT): I2C slave address of the device.

<b>EMS Identifier</b>	iomem.i2c.write.addrNACK
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects an address NACK error condition when writing data from an I2C device on the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Caching module in slot %u detected an address NACK error when writing data on I2C link %u to the slave device at address 0x%x.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>link</b> (INT): I2C link number to which the device is connected. <b>address</b> (INT): I2C slave address of the device.

<b>EMS Identifier</b>	iomem.i2c.write.dataNACK
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects a data NACK error condition when writing data from an I2C device on the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Caching module in slot %u detected a data NACK error when writing data on I2C link %u to the slave device at address 0x%x.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>link</b> (INT): I2C link number to which the device is connected. <b>address</b> (INT): I2C slave address of the device.

<b>EMS Identifier</b>	iomem.i2c.write.timeout
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver times out while trying to write data from an I2C device on the caching module.
<b>Corrective Action</b>	Replace the caching module.
<b>Syslog Message</b>	Caching module in slot %u timed out while trying to write data on I2C link %u to the slave device at address 0x%x.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>link</b> (INT): I2C link number to which the device is connected. <b>address</b> (INT): I2C slave address of the device.

<b>EMS Identifier</b>	iomem.init.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver fails to initialize a caching module.
<b>Corrective Action</b>	Look for the specific failure log messages in the EMS log prior to this message; they identify the reason for the failure.
<b>Syslog Message</b>	Failed to initialize caching module (model name %s, serial number %s, part number %s) in slot %u.
<b>Parameters</b>	<b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module. <b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.nor.op.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects that an operation to a NOR flash memory has failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>slot</b> (INT): Slot number of the caching module. <b>op</b> (STRING): Type of NOR operation. <b>reason</b> (STRING): Reason for failure. <b>address</b> (INTHEX): Address targeted when operation failed. <b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module.

<b>EMS Identifier</b>	iomem.pci.error.config.bar
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the caching module driver detects a misconfigured Base Address Register (BAR) on the acceleration hardware.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Caching module in slot %u has BAR %u misconfigured as %s.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>bar</b> (INT): BAR that was misconfigured. <b>setting</b> (STRING): Setting in the BAR that was misconfigured.

<b>EMS Identifier</b>	iomem.pio.op.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the caching module driver detects that a Programmed I/O NAND flash access failed. This will result in the caching module failing to come online.
<b>Corrective Action</b>	This issue might be remedied by a system reboot. If the caching module does not come online after a reboot, contact NetApp technical support.
<b>Syslog Message</b>	Caching module in slot %u has experienced a Programmed I/O NAND flash access failure and will not come online.
<b>Parameters</b>	<b>slot</b> (INT): Number of the PCI slot containing the caching module. <b>reason</b> (STRING): Short description of the type of error. <b>model</b> (STRING): Model name of the caching module. <b>serial</b> (STRING): Serial number of the caching module. <b>part_num</b> (STRING): Part number of the caching module.

<b>EMS Identifier</b>	iomem.remap.block
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a bad erase block is being remapped to a spare block.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Remapping erase block %u in %u/%u/%u/%u (slot/iface/bank/lane) to %u.
<b>Parameters</b>	<b>block</b> (INT): Erase block being remapped. <b>slot</b> (INT): Slot number of the caching module. <b>interface</b> (INT): Interface number in the caching module. <b>bank</b> (INT): Bank number. <b>lane</b> (INT): Lane number. <b>target_block</b> (INT): Erase block that is the target of the remap.

<b>EMS Identifier</b>	iomem.vmargin.high
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the caching module driver has been configured to margin a voltage level high for testing purposes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%sV voltage margined high on the caching module in slot %u.
<b>Parameters</b>	<b>voltage</b> (STRING): Voltage level that has been margined. <b>slot</b> (INT): Number of the PCI slot containing the caching module.

<b>EMS Identifier</b>	iomem.vmargin.low
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the caching module driver has been configured to margin a voltage level low for testing purposes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%sV voltage margined low on the caching module in slot %u.
<b>Parameters</b>	<b>voltage</b> (STRING): Voltage level that has been margined. <b>slot</b> (INT): Number of the PCI slot containing the caching module.

## "ip" Event Group

<b>EMS Identifier</b>	ip.ping.throttle <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed. It is replaced by EMS_icmp_ping_throttle
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event occurs when the appliance receives more than one ICMP ping packet from the same source, within a one-second interval. The packets are dropped by the appliance because these packets could be due to an ICMP attack.
<b>Corrective Action</b>	If this situation persists, take packet traces to try to determine the network from which the ICMP ping packets are arriving. Also, it might be possible to temporarily block all ICMP ping packets from that network by using firewall rules. You can turn off these messages by setting ip.ping_throttle.alarm_interval to 0.
<b>Syslog Message</b>	The appliance dropped %d ping packets received from the source with IP %s in the last one second.
<b>Parameters</b>	<b>pingCount</b> (INT): Number of ICMP ping packets dropped in the last second. <b>sourceIP</b> (STRING): IP address of the node that is sending more than one ICMP ping packet per second. In case of an ICMP attack, this IP address could be a spoofed address and could belong to a victim.

<b>EMS Identifier</b>	ip.ping.throttle.all <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event occurs when the appliance receives more ICMP ping packets than the value specified by the option ip.ping_throttle.drop_level within a one-second interval. The packets are dropped by the appliance because these packets could be due to an ICMP attack.
<b>Corrective Action</b>	If this situation persists, take packet traces to try to determine the network from which the ICMP ping packets are arriving. Also, it might be possible to temporarily block all ICMP ping packets from that network by using firewalls rules. If the ping packets are valid and should not be dropped, you can set the option ip.ping_throttle.drop_level to a higher value. You can turn off these messages by setting ip.ping_throttle.alarm_interval to 0.
<b>Syslog Message</b>	The appliance dropped %d ICMP ping packets in the last second. It dropped all pings that exceeded the value %d that is specified by the option ip.ping_throttle.drop_level.
<b>Parameters</b>	<b>icmpCount</b> (INT): Number of ICMP ping packets dropped in the last second. <b>icmpMaxAllowed</b> (INT): Number of ICMP pings accepted per second.

## "ipfw" Event Group

<b>EMS Identifier</b>	ipfw.ReachedMaxStates
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the ipfw firewall fails to create a new dynamic state entry for a "keep-state" rule because the number of dynamic state entries has reached the maximum allowed value. The "keep-state" rule is used by the firewall to keep track of whether a connection is established. States are maintained by firewall for TCP, UDP, and ICMP packets. This message occurs at most once every 60 seconds; it lists the most recent connections to reach the limit.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The ipfw firewall failed to create dynamic "keep-state" entry. Reason: %s, current # of entries: %d. Recent connections reaching this limit: %s
<b>Parameters</b>	<b>message</b> (STRING): Information about the failed ipfw dynamic state creation. <b>current_states_held</b> (INT): Current total number of ipfw dynamic "keep state" entries held. <b>cnn_message</b> (STRING): Information about recent connections that reached the limit.

## "ipmultipath" Event Group

<b>EMS Identifier</b>	ipmultipath.init.badChksumType
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during IP Multipath session initialization, when an INIT packet with an unknown checksum type is received.
<b>Corrective Action</b>	The two end points are possibly running incompatible versions of Data ONTAP(R). Run identical/compatible versions of Data ONTAP on the two end points and try again.
<b>Syslog Message</b>	Unknown checksum type (%d) in IP Multipath INIT packet.
<b>Parameters</b>	<b>chksum_type</b> (INT): Checksum type received.

<b>EMS Identifier</b>	ipmultipath.init.badVersion
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during IP Multipath session initialization, when an INIT packet with an unknown version number is received.
<b>Corrective Action</b>	The two end points are possibly running incompatible versions of Data ONTAP(R). Run identical/compatible versions of Data ONTAP on the two end points and try again.
<b>Syslog Message</b>	Unknown version (%d) in IP Multipath INIT packet.
<b>Parameters</b>	<b>version</b> (INT): Version number received.

<b>EMS Identifier</b>	ipmultipath.session.noMemory
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an IP Multipath session is dropped due to failure to allocate memory.
<b>Corrective Action</b>	The system is out of memory. Try to reduce load on the system. When memory becomes available, IP Multipath automatically reestablishes the session.
<b>Syslog Message</b>	IP Multipath aborting session due to failure to allocate memory.
<b>Parameters</b>	

<b>EMS Identifier</b>	ipmultipath.setup.bindFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during IP Multipath connection setup, when the IP Multipath listener process cannot bind to any IP address of the source.
<b>Corrective Action</b>	The source host information provided to IP Multipath is probably incorrect. Correct the configuration information and retry.
<b>Syslog Message</b>	IP Multipath failed to bind to %s.
<b>Parameters</b>	<b>src</b> (STRING): Host name on which the failure occurred.

<b>EMS Identifier</b>	ipmultipath.setup.connFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during IP Multipath connection setup, when it cannot connect to the remote end point.
<b>Corrective Action</b>	The destination host information provided to IP Multipath is incorrect or the remote host is unreachable. Correct configuration information and retry. If the remote host is unreachable, IP Multipath automatically establishes the connection after the problem is corrected.
<b>Syslog Message</b>	IP Multipath failed to connect to %s.
<b>Parameters</b>	<b>dst</b> (STRING): Host name of the remote host.

## "iscsi" Event Group

<b>EMS Identifier</b>	iscsi.internalLimit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the iSCSI driver detects that an internal limit was reached.
<b>Corrective Action</b>	This might indicate that the iSCSI driver has reached the limits for the number of initiators that can be connected to the target. Logging out already connected initiators might help clear the condition.
<b>Syslog Message</b>	ISCSI: Internal limit reached, %s.
<b>Parameters</b>	<b>m</b> (STRING): More specific message describing the limit.

<b>EMS Identifier</b>	iscsi.loginFailure
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an initiator fails an iSCSI login attempt.
<b>Corrective Action</b>	Attempt to configure the iSCSI text keys on the initiator such that the iSCSI login succeeds. If the event occurs occasionally but does not affect stability or performance, no corrective action is needed but the event should be monitored. If the event persists and/or iSCSI application performance degrades, starting and stopping the iSCSI service and restarting any iSCSI applications may help clear the condition. Contact NetApp technical support.
<b>Syslog Message</b>	ISCSI: iSCSI login failure, '%s'
<b>Parameters</b>	<b>m</b> (STRING): A more detailed message describing the iSCSI login failure.

<b>EMS Identifier</b>	iscsi.loginIpNotAuthorized
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system rejects an iSCSI login attempt because it originates from an unauthorized IP address.
<b>Corrective Action</b>	Run 'iscsi security show -address-ranges' to see if the initiator IP address has been added to the list of permitted IP addresses from where iSCSI logins are allowed.
<b>Syslog Message</b>	iSCSI login authorization failure. Initiator %s attempted to log in on Vserver %s, LIF %s from IP address %s
<b>Parameters</b>	<b>initiator_name</b> (STRING): Name of the initiator that attempted to login. <b>vserver</b> (STRING): Name of the vserver to which the unauthorized login attempt is made. <b>lif</b> (STRING): Name of the LIF where the login was attempted. <b>initiator_ip_address</b> (STRING): Source IP address of the initiator that attempted to login.

<b>EMS Identifier</b>	iscsi.memoryAlloc
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when the iSCSI driver tries to allocate memory but fails.
<b>Corrective Action</b>	Try to reduce or change the workload so that less resources are needed. If the event occurs occasionally but does not affect stability or performance, no corrective action is needed but the event should be monitored. If the event persists and/or iSCSI application performance degrades, starting and stopping the iSCSI service and restarting any iSCSI applications may help clear the condition. Contact NetApp technical support.
<b>Syslog Message</b>	ISCSI: Unable to allocate memory, size=%d, caller=0x%x
<b>Parameters</b>	<b>s</b> (INT): The size (in bytes) of the memory allocation that failed. <b>ra</b> (INTHEX): The return address of the caller of the memory allocation that failed.

<b>EMS Identifier</b>	iscsi.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a loggable, non-error event occurs within the iSCSI subsystem.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ISCSI: %s
<b>Parameters</b>	<b>m</b> (STRING): A more specific message describing the event.

<b>EMS Identifier</b>	iscsi.pduDigest
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when the target detects a header or data digest error.
<b>Corrective Action</b>	Header and data digests are intended to protect the integrity of an iSCSI PDU. If an error occurs on the digest, this indicates that although the TCP stream in which the iSCSI PDU arrived was in tact (the TCP/IP stack would shutdown a TCP/IP-level violation), something changed the TCP stream data in one or more packets, but not the TCP stream length, sequence numbers, etc. There are two possibilities then: 1) an error occurred on the network such that one or more bits of the TCP data stream was flipped, or 2) there was an error in calculation of the digest by either the iSCSI initiator or the iSCSI target. While possible, the first case is unlikely. The latter case may occur when the iSCSI PDU sequence has become garbled, and the target can no longer determine where the iSCSI PDU boundary is. If the event occurs occasionally but does not affect stability or performance, no corrective action is needed but the event should be monitored. If the event persists and/or iSCSI application performance degrades, starting and stopping the iSCSI service and restarting any iSCSI applications may help clear the condition. Contact NetApp technical support.
<b>Syslog Message</b>	ISCSI: %s digest error, expected/received = 0x%x/0x%x
<b>Parameters</b>	<b>t</b> (STRING): The type of digest error (either "header" or "data") <b>e</b> (INTHEX): The expected digest value <b>r</b> (INTHEX): The received digest value

<b>EMS Identifier</b>	iscsi.protocol.unsupported
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an initiator attempts to use an iSCSI operation or feature that is not supported.
<b>Corrective Action</b>	If the event occurs occasionally but does not affect stability or performance, no corrective action is needed. If the event is frequent, attempt to configure the initiator such that the iSCSI protocol operation is not required.
<b>Syslog Message</b>	ISCSI: iSCSI protocol feature is not supported, '%s'
<b>Parameters</b>	<b>m</b> (STRING): More detailed message describing the iSCSI protocol operation that is not supported.

<b>EMS Identifier</b>	iscsi.protocol.version
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an initiator fails an iSCSI login attempt because the range of iSCSI protocol revisions it supports is incompatible with the range of supported revisions on the target.
<b>Corrective Action</b>	Attempt to configure the initiator such that the protocol version mismatch does not occur.
<b>Syslog Message</b>	ISCSI: Incompatible iSCSI versions, initiator=%d/%d, target=%d/%d.
<b>Parameters</b>	<b>il</b> (INT): Initiator's lowest supported protocol revision number. <b>ih</b> (INT): Initiator's highest supported protocol revision number. <b>tl</b> (INT): Target's lowest supported protocol revision number. <b>th</b> (INT): Target's highest supported protocol revision number.

<b>EMS Identifier</b>	iscsi.protocol.violation
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued when an initiator violates the iSCSI protocol.
<b>Corrective Action</b>	Attempt to configure the initiator such that the protocol violation does not occur. If the event occurs occasionally but does not affect stability or performance, no corrective action is needed but the event should be monitored. If the event persists and/or iSCSI application performance degrades, starting and stopping the iSCSI service and restarting any iSCSI applications may help clear the condition. Contact NetApp technical support.
<b>Syslog Message</b>	ISCSI: iSCSI protocol violation, '%s'
<b>Parameters</b>	<b>m</b> (STRING): A more detailed message describing the iSCSI protocol violation.

<b>EMS Identifier</b>	iscsi.session.stateChanged
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when iSCSI session status is changed.
<b>Corrective Action</b>	If the identified iSCSI session is experiencing unexpected events (disconnecting, reconnecting, or connected), examine the link for excessive errors or latency.
<b>Syslog Message</b>	iSCSI session state is changed to %s for the target %s (type: %s, address: %s). %s
<b>Parameters</b>	<b>iscsi_session_state</b> (STRING): New iSCSI session state. <b>iscsi_target</b> (STRING): iSCSI target name. <b>iscsi_target_type</b> (STRING): iSCSI target type. <b>iscsi_target_address</b> (STRING): iSCSI target address. <b>iscsi_session_state_change_reason</b> (STRING): Reason for the iSCSI session state change. <b>iscsi_timeout_value</b> (INT): iSCSI timeout value.

<b>EMS Identifier</b>	iscsi.socketError
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued if the iSCSI driver attempts to do a TCP socket operation but fails.
<b>Corrective Action</b>	This may indicate an iSCSI NIC failure or a driver error. If the event occurs occasionally but does not affect stability or performance, no corrective action is needed but the event should be monitored. If the event persists and/or iSCSI application performance degrades, starting and stopping the iSCSI service and restarting any iSCSI applications may help clear the condition. Contact NetApp technical support.
<b>Syslog Message</b>	ISCSI: TCP socket error, %s
<b>Parameters</b>	<b>m</b> (STRING): A more specific message describing failure.

<b>EMS Identifier</b>	iscsi.textkey.invalidValue
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an initiator sends an invalid value for an iSCSI text key negotiation.
<b>Corrective Action</b>	Attempt to configure the initiator such that the text key negotiation does not fail in this way. If the event occurs occasionally but does not affect stability or performance, no corrective action is needed but the event should be monitored. If the event persists and/or iSCSI application performance degrades, starting and stopping the iSCSI service and restarting any iSCSI applications may help clear the condition. Contact NetApp technical support.
<b>Syslog Message</b>	ISCSI: Invalid value for iSCSI text key, '%s'
<b>Parameters</b>	<b>m</b> (STRING): A more detailed message describing the negotiation

<b>EMS Identifier</b>	iscsi.textkey.multipleNegotiation
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an initiator attempts to renegotiate an iSCSI text key that was already negotiated during the login process.
<b>Corrective Action</b>	If the event occurs occasionally but does not affect stability or performance, no corrective action is needed but the event should be monitored. If the event persists or iSCSI application performance degrades, attempt to configure the initiator such that the text key negotiation does not fail in this way.
<b>Syslog Message</b>	ISCSI: Attempted multiple negotiation for iSCSI text key, '%s'
<b>Parameters</b>	<b>m</b> (STRING): More detailed message describing the negotiation.

<b>EMS Identifier</b>	iscsi.warning
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued if the iSCSI subsystem detects an abnormal state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ISCSI: %s
<b>Parameters</b>	<b>m</b> (STRING): A more specific message describing the state.

## "isns" Event Group

<b>EMS Identifier</b>	isns.enqueue.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Internet Storage Name Service (iSNS) is not able to enqueue a new operation to the iSNS subsystem.
<b>Corrective Action</b>	The iSNS failed to enqueue an action into the work queue. This may be due to an overloaded system. Please consider moving the Vserver's Management LIF to another node for that Vserver in the cluster with a lighter work-load.
<b>Syslog Message</b>	The iSNS cannot enqueue an operation %s for Vserver %s.
<b>Parameters</b>	<b>event</b> (STRING): Event/Operation that was not enqueued. <b>vserver</b> (STRING): Name of the Vserver

<b>EMS Identifier</b>	isns.portal.info.unavailable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Internet Storage Name Service (iSNS) is not able to retrieve the portal information required for iSNS registration.
<b>Corrective Action</b>	Ensure that at least one node hosting a IP data LIF for SAN is successfully loaded and operating correctly.
<b>Syslog Message</b>	The iSNS cannot retrieve the portal information for %s: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver <b>err_msg</b> (STRING): Reported error.

<b>EMS Identifier</b>	isns.reg.info.unavailable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Internet Storage Name Service (iSNS) registration information is not valid or not available.
<b>Corrective Action</b>	Check the Data ONTAP(R) iSNS configuration to ensure that all configuration information is present. Also check the cluster health for the impacted node to ensure that it is online.
<b>Syslog Message</b>	The iSNS registration information for %s was not valid or not available: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver <b>err_msg</b> (STRING): Reported error.

<b>EMS Identifier</b>	isns.reg.pdu.oversized
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the the Internet Storage Name Service (iSNS) registration query packet data unit (PDU) length is larger than the supported maximum value. iSNS will not function properly until the problem is resolved.
<b>Corrective Action</b>	Reconfigure the networking interfaces to reduce the portals until the iSNS registration query PDU is within its maximum value.
<b>Syslog Message</b>	The iSNS registration query for %s failed due to the oversized iSNS query PDU length. Reduce the networking interface portals.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver

<b>EMS Identifier</b>	isns.reg.period.too_small
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Internet Storage Name Service (iSNS) requests a registration period that is too small. When this happens, the iSNS client service will be automatically disabled.
<b>Corrective Action</b>	Reconfigure the server to increase the registration period.
<b>Syslog Message</b>	The iSNS registration period for %s was too small (%d); increase the registration period.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver <b>period</b> (INT): Registration period received from the iSNS server

<b>EMS Identifier</b>	isns.socket.conn.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the TCP socket connection in the Internet Storage Name Service (iSNS) fails to connect to the iSNS server.
<b>Corrective Action</b>	The iSNS failed to create a socket for communicating with the iSNS server. Check the Data ONTAP(R) network configuration to ensure that the address for the iSNS server is in the routing group for all Vserver Management LIFs for the Vserver and that they are reachable via the clustered Data ONTAP "network ping" command.
<b>Syslog Message</b>	The iSNS TCP socket connection failed for %s to %s: %s
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver <b>ip_address</b> (STRING): IP address for the iSNS server. <b>err_msg</b> (STRING): Reported network error.

<b>EMS Identifier</b>	isns.socket.setup.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Internet Storage Name Service (iSNS) fails to create a socket for communicating with the iSNS server.
<b>Corrective Action</b>	Check the Data ONTAP(R) network configuration to ensure that the address for the iSNS server is in the routing group for all Vserver Management LIFs for the Vserver and that they are reachable via the clustered Data ONTAP "network ping" command.
<b>Syslog Message</b>	The iSNS for %s failed to create a socket to %s; check the Data ONTAP network configuration.
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver <b>ip_address</b> (STRING): IP address for the iSNS server.

## "kern" Event Group

<b>EMS Identifier</b>	kern.cron.dstError
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when the kernel cron daemon is unable to reschedule an internal process due to an error in handling of daylight savings time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Daylight Saving Time change caused %s to be scheduled at an invalid time could not reschedule it, deleting further scheduling
<b>Parameters</b>	<b>owner</b> (STRING): The name of the process that was supposed to be scheduled

<b>EMS Identifier</b>	kern.cron.reschedDst
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the kernel cron daemon reschedules an event to run at a newly scheduled time as a result of a daylight savings time change.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Daylight Savings Time change: rescheduling %s to run at %s
<b>Parameters</b>	<b>owner</b> (STRING): The name of the process that was scheduled <b>time</b> (STRING): The text version of the time string at which the event was scheduled

<b>EMS Identifier</b>	kern.log.rotate
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the system messages log is rotated to a new name. This event will be the first event in the new message file. When in takeover mode, this event is also issued for the partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	System %s (ID %s) is running %s
<b>Parameters</b>	<b>hostname</b> (STRING): The host name of the appliance. <b>serialno</b> (STRING): The serial number of the host. <b>short_version</b> (STRING): The short version string of the OnTap kernel, in the form 'NetApp Release NNNN'.

<b>EMS Identifier</b>	kern.rc.errorMsg
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when an error printf is issued by the kernel in the context of executing the /etc/rc file.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>msg</b> (STRING): The text of the message

<b>EMS Identifier</b>	kern.rc.msg
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a printf is issued by the kernel in the context of executing the /etc/rc file.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>msg</b> (STRING): The text of the message

<b>EMS Identifier</b>	kern.shutdown
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued to indicate a pending shutdown is underway.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	System shut down because : "%s".
<b>Parameters</b>	<b>type</b> (STRING): The type of shutdown (halt or reboot) that is underway.

<b>EMS Identifier</b>	kern.shutdown.cantDeleteEntry
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued when we detect that a halt or reboot is about to occur but a registry entry cannot be deleted
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>key</b> (STRING): The registry key

<b>EMS Identifier</b>	kern.syslog.drops
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when we detect that syslog messages were dropped before being logged. Syslog messages may be dropped if one or more Data ONTAP subsystems are generating many syslog messages over short period of time. That can be an indicator that those subsystems are experiencing problems that need to be resolved.
<b>Corrective Action</b>	Look in the syslog messages file at the messages prior to this message. If they all seem to be coming from a common subsystem, it may indicate that there is a problem with that subsystem. Attempt to resolve the problem with that subsystem.
<b>Syslog Message</b>	Dropped %d syslog messages starting at %s due to lack of internal log buffers
<b>Parameters</b>	<b>numDrops</b> (INT): The number of messages that have been dropped. <b>timestamp</b> (STRING): A timestamp that indicates the time when the syslog messages started being dropped.

<b>EMS Identifier</b>	kern.syslog.msg
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when a kernel syslog message is detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>msg</b> (STRING): The text of the message <b>vfilerName</b> (STRING): The name of the vfiler that generated the message

<b>EMS Identifier</b>	kern.syslogd.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an event is generated to log errors from the syslog daemon.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	syslog daemon error %s.
<b>Parameters</b>	<b>ErrMsg</b> (STRING): Specific error generated by the syslog daemon.

<b>EMS Identifier</b>	kern.timezone.change
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the configured time zone changes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>old_tz</b> (STRING): Previous time zone. <b>old_tz_offset</b> (INT): Seconds east of UTC of the previous time zone. <b>new_tz</b> (STRING): New time zone. <b>new_tz_offset</b> (INT): Seconds east of UTC of the new time zone.

<b>EMS Identifier</b>	kern.uptime.filer
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued to indicate an uptime message from the filer. Typically, this message is generated once per hour.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>msg</b> (STRING): The text message describing the current status of the filer <b>secs</b> (LONGINT): The number of seconds since the filer was booted <b>nfsOps</b> (LONGINT): The number of NFS operations that have been performed <b>cifsOps</b> (LONGINT): The number of CIFS operations that have been performed <b>httpOps</b> (LONGINT): The number of HTTP operations that have been performed <b>fcpOps</b> (LONGINT): The number of FCP operations that have been performed <b>iscsiOps</b> (LONGINT): The number of iSCSI operations that have been performed

<b>EMS Identifier</b>	kern.version.change
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when you reboot your system with a version of the Data ONTAP(R) kernel that is different from the one you ran previously.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Data ONTAP kernel version was changed from %s to %s.
<b>Parameters</b>	<b>oldver</b> (STRING): Previous version of the Data ONTAP kernel. <b>newver</b> (STRING): Current version of the Data ONTAP kernel.

<b>EMS Identifier</b>	kern.vm.mmap.return
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to create a new mapping in the virtual address space of a process has failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	mmap(2) by %s (pid %d) for size %ld failed: %s, limit %ld, error %d.
<b>Parameters</b>	<b>process_name</b> (STRING): Name of the process with the failed attempt. <b>process_id</b> (INT): ID of the process with the failed attempt. <b>size</b> (LONGINT): Size in bytes of the memory map attempt. <b>message</b> (STRING): Details about the failed memory map attempt. <b>limit</b> (LONGINT): Size in bytes of the process's virtual memory limit. <b>errno</b> (INT): The error code returned to the process.

## "km" Event Group

<b>EMS Identifier</b>	km.run.external.setup
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a node successfully performs a join operation to join a cluster, but the other nodes in the cluster have the External Key Manager configured and the new node does not. The new node cannot perform External Key Manager-related tasks, such as creating encrypted volumes, until it has the External Key Manager configured.
<b>Corrective Action</b>	Set up the External Key Manager on the new node by using the "security key-manager setup" command.
<b>Syslog Message</b>	External Key Manager setup required after the cluster "%s" operation for node "%s", serial "%s".
<b>Parameters</b>	<b>operation_type</b> (STRING): Type of cluster operation. <b>node</b> (STRING): Name of the node that successfully joined the cluster. <b>serial</b> (STRING): System serial number of the node that successfully joined the cluster.

<b>EMS Identifier</b>	km.run.onboard.setup
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a node successfully performs a join operation to join a cluster, but the other nodes in the cluster have the Onboard Key Manager configured and the new node does not. The new node cannot perform Onboard Key Manager-related tasks, such as creating encrypted volumes, until it has the Onboard Key Manager configured.
<b>Corrective Action</b>	Set up the Onboard Key Manager on the new node by using the "security key-manager setup" command.
<b>Syslog Message</b>	Onboard Key Manager setup required after the cluster "%s" operation for node "%s", serial "%s".
<b>Parameters</b>	<b>operation_type</b> (STRING): Type of cluster operation. <b>node</b> (STRING): Name of the node that successfully joined the cluster. <b>serial</b> (STRING): System serial number of the node that successfully joined the cluster.

## "kmip" Event Group

<b>EMS Identifier</b>	kmip.cannot.read.client.cert
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the client certificate cannot be read. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.
<b>Corrective Action</b>	Examine the KMIP client certificate and ensure that the certificate has been created properly.
<b>Syslog Message</b>	KMIP Failed to read client certificate with error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code.

<b>EMS Identifier</b>	kmip.cannot.read.private.key
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the client private key certificate can't be read. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.
<b>Corrective Action</b>	Examine the KMIP client private certificate and ensure that the certificate has been created properly.
<b>Syslog Message</b>	KMIP Failed to read client private certificate with error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code.

<b>EMS Identifier</b>	kmip.cannot.verify.cert.chain
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a certificate chain can't be verified. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.
<b>Corrective Action</b>	Examine the KMIP server certificate and ensure that the certificate has been created properly.
<b>Syslog Message</b>	KMIP Failed to verify certificate chain with error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code.

<b>EMS Identifier</b>	kmip.cannot.verify.peer.cert
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the peer certificate can't be verified. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.
<b>Corrective Action</b>	Examine the KMIP server certificate and ensure that the certificate has been created properly.
<b>Syslog Message</b>	KMIP Failed to verify peer certificate with error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code.

<b>EMS Identifier</b>	kmip.cannot.verify.server.cert
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the server certificate can't be verified. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.
<b>Corrective Action</b>	Examine the KMIP server certificate and ensure that the certificate has been created properly.
<b>Syslog Message</b>	KMIP Failed to verify server certificate with error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code.

<b>EMS Identifier</b>	kmip.ssl.cannot.connect
<b>Severity</b>	ALERT
<b>Description</b>	<p>This message occurs when a KMIP SSL/TLS connection error is detected in either a Cloud ONTAP system with encrypted aggregates or a NSE system. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.</p>
<b>Corrective Action</b>	Examine the KMIP certificates and ensure that the certificates have been created properly.
<b>Syslog Message</b>	Unable to make SSL/TLS connection to KMIP server. Error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code with details.

## "kmip2" Event Group

<b>EMS Identifier</b>	kmip2.cannot.import.NSE.key
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the KMIP2 client cannot import an NSE key from a KMIP key server. A key was retrieved from a KMIP key server, but an error occurred when trying to add the key to an ONTAP(R) data structure.
<b>Corrective Action</b>	Run the "security key-manager restore" command to restore keys from external key servers.
<b>Syslog Message</b>	KMIP2 client failed to import NSE key from KMIP key server, error: %d
<b>Parameters</b>	<b>err</b> (INT): Error code from system call to sysctlbyname().

<b>EMS Identifier</b>	kmip2.cannot.import.NVE.key
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the KMIP2 client cannot import an NVE key from a KMIP key server. A key was retrieved from a KMIP key server, but an error occurred when trying to add the key to an ONTAP(R) data structure.
<b>Corrective Action</b>	Run the "security key-manager restore" command to restore keys from external key servers.
<b>Syslog Message</b>	KMIP2 client failed to import NVE key from KMIP key server, error: %d
<b>Parameters</b>	<b>err</b> (INT): Error code from system call to sysctlbyname().

<b>EMS Identifier</b>	kmip2.cannot.read.client.cert
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the client certificate cannot be read. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.
<b>Corrective Action</b>	Examine the KMIP client certificate and ensure that the certificate has been created properly.
<b>Syslog Message</b>	KMIP Failed to read client certificate with error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code.

<b>EMS Identifier</b>	kmip2.cannot.read.private.key
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the client private key certificate can't be read. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.
<b>Corrective Action</b>	Examine the KMIP client private certificate and ensure that the certificate has been created properly.
<b>Syslog Message</b>	KMIP Failed to read client private certificate with error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code.

<b>EMS Identifier</b>	kmip2.ssl.cannot.connect
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a KMIP SSL/TLS connection error is detected in either a Cloud ONTAP system with encrypted aggregates or a NSE system. On a Cloud ONTAP(R) system, this message indicates one of the following: 1) A request to create an encrypted aggregate will not succeed because the key cannot be sent to the external KMIP server, or 2) The request to retrieve a key from the external KMIP server will fail. In this case, the encrypted aggregate will not be able to be mounted. On a NSE system, this message indicates one of the following: 1) A request to re-key a NSE drive will not succeed because the key cannot be sent to the external KMIP server, or 2) The ability to read/write data to/from a NSE drive might be impacted if power to the drive or to the disk shelf is lost.
<b>Corrective Action</b>	Examine the KMIP certificates and ensure that the certificates have been created properly.
<b>Syslog Message</b>	Unable to make SSL/TLS connection to KMIP server. Error: %s
<b>Parameters</b>	<b>err</b> (STRING): KMIP error code with details.

## "krb" Event Group

<b>EMS Identifier</b>	krb.config.updateFail
<b>Severity</b>	ERROR
<b>Description</b>	The CIFS server's security settings could not be written to the configuration file on this node.
<b>Corrective Action</b>	Modify any of the 'vserver cifs security' fields using the 'vserver cifs security modify' command, which will attempt to write to the configuration file again on every node. Change the setting back to its original value if desired. Afterward, verify that the event log does not contain any new instances of this error.
<b>Syslog Message</b>	The CIFS server's security settings could not be written to the configuration file on this node.
<b>Parameters</b>	

## "ktls" Event Group

<b>EMS Identifier</b>	ktls.failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when several successive Transport Layer Security (TLS) connections with a remote system have failed.
<b>Corrective Action</b>	Corrective actions will necessarily depend on what condition is being reported.
<b>Syslog Message</b>	"The TLS connections have failed several times with remote host '%s' in IPspace '%s', for which the latest reason given is: %s."
<b>Parameters</b>	<b>peer</b> (STRING): Network address of the remote peer. <b>ipsname</b> (STRING): IPspace within which the network address is defined. <b>reason</b> (STRING): Reason for failure.

## "ldap" Event Group

<b>EMS Identifier</b>	ldap.false.configs.removed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the last system to be upgraded in a cluster removes LDAP configurations that were marked as disabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	All LDAP configurations with the "-client-enabled" parameter set to "false" were removed.
<b>Parameters</b>	

## "lib" Event Group

<b>EMS Identifier</b>	lib.nvtrace.syslog.relog.alert <b>Deprecated:</b> This event is deprecated as of ONTAP 9.1.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system sorts the syslog messages when syslog is not yet initialized, and the panic messages are relogged.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Relog syslog %s.
<b>Parameters</b>	<b>data</b> (STRING): Syslog data in NVRAM(Non Volatile RAM).

## "license" Event Group

<b>EMS Identifier</b>	license.capac.enforce
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the total storage capacity of all disks currently assigned to your system exceeds the limits of your capacity license. The system will shut down within the next 72 hours.
<b>Corrective Action</b>	To avoid disruption, either contact your sales representative immediately to obtain a license with a larger maximum capacity, or reduce the storage capacity of the system.
<b>Syslog Message</b>	"Storage capacity is at %llu GB, max allowed is %llu GB. Forced system shutdown is imminent."
<b>Parameters</b>	<b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>max_capacity</b> (LONGINT): Maximum storage capacity supported under the current license, in gigabytes.

<b>EMS Identifier</b>	license.capac.eval
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a capacity license intended only for evaluation purposes is approaching its end date. This expiration might result in the forced shutdown of the system.
<b>Corrective Action</b>	To avoid any disruption, copy the contents of the volumes of this system to a new location. Contact your sales representative to purchase a version of the system.
<b>Syslog Message</b>	"Evaluation license allows %llu GB; you have %llu GB installed. License ends on %s."
<b>Parameters</b>	<b>max_capacity</b> (LONGINT): Maximum storage capacity supported under the current license, in gigabytes. <b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>end_date</b> (STRING): Evaluation period end date.

<b>EMS Identifier</b>	license.capac.eval.enforce
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when either the evaluation period has expired or the total storage capacity of all disks currently assigned to your system exceeds the limits of your capacity license. The system will shut down within the next 72 hours.
<b>Corrective Action</b>	To avoid any disruption, move or copy volumes as needed from this system. Contact your sales representative immediately to purchase a version of this system.
<b>Syslog Message</b>	"Storage capacity is at %llu GB, max allowed is %llu GB. License ends on %s. Forced system shutdown is imminent."
<b>Parameters</b>	<b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>max_capacity</b> (LONGINT): Maximum storage capacity supported under the current license, in gigabytes. <b>end_date</b> (STRING): Evaluation period end date.

<b>EMS Identifier</b>	license.capac.eval.shutdown
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when either the evaluation period has expired, or the total storage capacity of all disks currently assigned to your system has exceeded the limits of your capacity license. The system will be shut down within the next 10 minutes.
<b>Corrective Action</b>	Contact your sales representative immediately to purchase a version of this system. Restart the system as needed to move or copy volumes.
<b>Syslog Message</b>	"Storage capacity is at %llu GB, max allowed is %llu GB. License ends on %s. Forced system shutdown is imminent."
<b>Parameters</b>	<b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>max_capacity</b> (LONGINT): Maximum storage capacity supported under the current license, in gigabytes. <b>end_date</b> (STRING): Evaluation period end date.

<b>EMS Identifier</b>	license.capac.shutdown
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the total storage capacity of all disks currently assigned to your system has exceeded the limits of your capacity license. The system will shut down within the next 10 minutes.
<b>Corrective Action</b>	Contact your sales representative immediately to obtain your capacity license. Restart the system as needed to complete the license installation.
<b>Syslog Message</b>	"Storage capacity is at %llu GB, max allowed is %llu GB. Forced system shutdown is imminent."
<b>Parameters</b>	<b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>max_capacity</b> (LONGINT): Maximum storage capacity supported under the current license, in gigabytes.

<b>EMS Identifier</b>	license.capac.unl.enforce
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a valid capacity license has not been installed. The system will shut down within the next 72 hours.
<b>Corrective Action</b>	Contact your sales representative immediately to obtain your capacity license, to avoid any disruption.
<b>Syslog Message</b>	"Storage capacity is at %llu GB. License ends on %s. Forced system shutdown is imminent."
<b>Parameters</b>	<b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>end_date</b> (STRING): Evaluation period end date.

<b>EMS Identifier</b>	license.capac.unl.shutdown
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a valid capacity license has not been installed. The system will shut down within the next 10 minutes.
<b>Corrective Action</b>	Contact your sales representative immediately to obtain your capacity license. Restart the system as needed to complete the license installation.
<b>Syslog Message</b>	"Storage capacity is at %llu GB. License ends on %s. Forced system shutdown is imminent."
<b>Parameters</b>	<b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>end_date</b> (STRING): Evaluation period end date.

<b>EMS Identifier</b>	license.capac.licensed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a valid capacity license has not been installed. This might result in the forced shutdown of the system.
<b>Corrective Action</b>	To avoid any disruption, contact your sales representative immediately to obtain your capacity license.
<b>Syslog Message</b>	"Capacity license for system with %llu GB installed ends on %s."
<b>Parameters</b>	<b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>end_date</b> (STRING): Unlicensed period end date.

<b>EMS Identifier</b>	license.capac.valid
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a valid capacity license has been installed on your system.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	"Capacity license allows %llu GB, you have %llu GB installed."
<b>Parameters</b>	<b>max_capacity</b> (LONGINT): Maximum storage capacity allowed under current license, in gigabytes. <b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes.

<b>EMS Identifier</b>	license.capac.warning
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the total storage capacity of all disks currently assigned to your system is in danger of exceeding the limits of your current license. Exceeding this capacity limit might result in the forced shutdown of the system.
<b>Corrective Action</b>	To avoid disruption, either contact your sales representative immediately to obtain a license with a larger maximum capacity, or reduce the storage capacity of the system.
<b>Syslog Message</b>	"Storage capacity is at %llu GB, max allowed is %llu GB."
<b>Parameters</b>	<b>current_capacity</b> (LONGINT): Current storage capacity of the system, in gigabytes. <b>max_capacity</b> (LONGINT): Maximum storage capacity supported under the current license, in gigabytes.

<b>EMS Identifier</b>	license.cert.expired
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the license validation certificate is expired. No new license can be validated.
<b>Corrective Action</b>	Contact your sales representative or reseller about renewing your license validation certificate.
<b>Syslog Message</b>	No new license can be validated. Certificate expired on %s.
<b>Parameters</b>	<b>exp_date</b> (STRING): Expiration date.

<b>EMS Identifier</b>	license.cert.expired.check
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the license validation certificate is near its expiration date. After the certificate expires, no new license can be validated.
<b>Corrective Action</b>	Contact your sales representative or reseller about renewing your license validation certificate.
<b>Syslog Message</b>	Certificate to validate licenses will expire on %s.
<b>Parameters</b>	<b>exp_date</b> (STRING): Expiration date.

<b>EMS Identifier</b>	license.check.expired
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker determines that the Base license has expired. If this is the case, you cannot add nodes to the cluster
<b>Corrective Action</b>	Install a permanent Base license on this cluster.
<b>Syslog Message</b>	License Checking: Expired Base license (%s)
<b>Parameters</b>	<b>error</b> (STRING): Interpreted error string from the license validation check.

<b>EMS Identifier</b>	license.check.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker has run and has been unable to validate the Base license due to an internal error. If there is not a valid Base license, then no additional nodes can be added to the cluster.
<b>Corrective Action</b>	Install a valid Base license on this cluster.
<b>Syslog Message</b>	License Checking: internal error validating Base license (%s)
<b>Parameters</b>	<b>error</b> (STRING): Interpreted error string from the license validation check.

<b>EMS Identifier</b>	license.check.invalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker determines that the Base license is incorrect in some way. If Base license is invalid, you cannot add nodes to the cluster.
<b>Corrective Action</b>	Install a valid Base license on this cluster.
<b>Syslog Message</b>	License Checking: The Base license is invalid (%s)
<b>Parameters</b>	<b>error</b> (STRING): Interpreted error string from the license validation check.

<b>EMS Identifier</b>	license.check.mirror
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker has run and has determined that at least one volume is being mirrored but there isn't a valid Mirror license installed.
<b>Corrective Action</b>	Install a valid Mirror license on this cluster.
<b>Syslog Message</b>	License Checking: Mirror License failure: (%s)
<b>Parameters</b>	<b>volume</b> (STRING): The first volume detected that requires a Mirror license

<b>EMS Identifier</b>	license.check.missing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker determines that the Base license is missing. If this is the case, you cannot add nodes to the cluster.
<b>Corrective Action</b>	Reinstall the Base license.
<b>Syslog Message</b>	License Checking: Missing Base license
<b>Parameters</b>	

<b>EMS Identifier</b>	license.check.nodes
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker determines that the number of nodes in the cluster exceeds the number of nodes allowed by the Base license
<b>Corrective Action</b>	Install a Base license with the correct node count, or remove nodes from the cluster using the unjoin command until the number of total nodes is equal to, or less than, the specified node count limit.
<b>Syslog Message</b>	License Checking: Current node count (%d) exceeds the licensed node limit (%d)
<b>Parameters</b>	<b>nodecount</b> (INT): Number of nodes detected in the cluster <b>nodelimit</b> (INT): Number of nodes allowed by the Base license

<b>EMS Identifier</b>	license.check.nonodes
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker determines that it cannot retrieve the number of nodes in the cluster to compare against the Base license node count. If this is the case, then you cannot add nodes to the cluster.
<b>Corrective Action</b>	Re-install the Base license so that the node count is correctly reflected. If that fails to fix the problem please contact Customer Support.
<b>Syslog Message</b>	License Checking: Cannot to retrieve the number of nodes in the cluster.
<b>Parameters</b>	

<b>EMS Identifier</b>	license.check.warn.expired
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker determines that a license has expired.
<b>Corrective Action</b>	Install a permanent license on this cluster.
<b>Syslog Message</b>	The license for package "%s" expired on %s.
<b>Parameters</b>	<b>package</b> (STRING): Name of the license package. <b>expiration</b> (STRING): Expiration date.

<b>EMS Identifier</b>	license.check.warn.expiring
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the license checker determines that a license is within a week of its expiration date.
<b>Corrective Action</b>	Install a permanent license on this cluster.
<b>Syslog Message</b>	The license for package "%s" expires on %s.
<b>Parameters</b>	<b>package</b> (STRING): Name of the license package. <b>expiration</b> (STRING): Expiration date.

<b>EMS Identifier</b>	license.fpool.changed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the maximum storage capacity limit for FabricPool is changed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	"FabricPool entitlement: maximum capacity limit now allows %u TB."
<b>Parameters</b>	<b>max_capacity</b> (LONGINT): Current maximum limit supported under the current entitlement, in TB.

<b>EMS Identifier</b>	license.fpool.denied
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to alter the maximum storage capacity limit for FabricPool is denied by FabricPool.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	"FabricPool entitlement: maximum capacity limit not changed to %u from %u TB."
<b>Parameters</b>	<b>requested_max_capacity</b> (LONGINT): Requested maximum capacity supported, in TB. <b>current_max_capacity</b> (LONGINT): Current maximum capacity limit supported under the current entitlement, in TB.

<b>EMS Identifier</b>	license.fpool.no.cloud
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to alter the maximum storage capacity limit for FabricPool is denied, because there is no support for licensing FabricPool directly on instances of Cloud ONTAP(tm).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	"FabricPool entitlement: maximum capacity limit not changed to %u TB - licensing FabricPool directly on instances of Cloud ONTAP not supported."
<b>Parameters</b>	<b>requested_max_capacity</b> (LONGINT): Requested maximum capacity supported, in TB.

<b>EMS Identifier</b>	license.fpool.removed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the license for FabricPool usage is deleted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	"FabricPool entitlement deleted."
<b>Parameters</b>	

<b>EMS Identifier</b>	license.fpool.unsupported
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an attempt to alter the maximum storage capacity limit for FabricPool is denied, because FabricPool is not supported on this instance of ONTAP(tm).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	"FabricPool entitlement: maximum capacity limit not changed to %u TB - feature is not supported."
<b>Parameters</b>	<b>requested_max_capacity</b> (LONGINT): Requested maximum capacity supported, in TB.

<b>EMS Identifier</b>	license.fpool.wrong.cluster
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt to alter the maximum storage capacity limit for FabricPool is rejected. The license used in the attempt contains an incompatible cluster ID.
<b>Corrective Action</b>	Determine the ID of the cluster by using the "cluster identity show" command. Within the license itself, determine the value of the "HostID" field. If the field exists, compare its value to the cluster ID. Confirm that these values match. If not, then the cluster is not the intended target of this license. Apply the license to the correct cluster if possible. For all other scenarios, contact NetApp technical support.
<b>Syslog Message</b>	"FabricPool entitlement: maximum capacity limit not changed to %u TB; license applies to cluster with ID %s."
<b>Parameters</b>	<b>requested_max_capacity</b> (LONGINT): Requested maximum capacity supported, in TB. <b>cluster_ID</b> (STRING): Cluster ID as specified in license.

<b>EMS Identifier</b>	license.subscription.enforcement
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when your Cloud ONTAP(R) license subscription has expired but may still be renewed.
<b>Corrective Action</b>	Contact your sales representative to have your subscription reactivated.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>expiration_msg</b> (STRING): Expiration message.

<b>EMS Identifier</b>	license.subscription.reminder
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when your Cloud ONTAP(R) license subscription is going to expire soon.
<b>Corrective Action</b>	Contact your sales representative to renew your subscription as soon as possible.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>reminder_msg</b> (STRING): Reminder message.

<b>EMS Identifier</b>	license.subscription.warning
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when your Cloud ONTAP(R) license subscription is nearly expired.
<b>Corrective Action</b>	Contact your sales representative to renew your subscription immediately, to avoid any disruption.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>warning_msg</b> (STRING): Warning message.

## "lifp" Event Group

<b>EMS Identifier</b>	lifp.net.bdmismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs while assigning network ports to broadcast domains, when LIF Placement subnet discovery finds a port that is assigned to a broadcast domain that is different from the broadcast domain to which other ports in the same physical broadcast domain are assigned.
<b>Corrective Action</b>	Ports assigned to broadcast-domains need to be corrected by the admin. The ports in one physical broadcast domain must be assigned to a single broadcast-domain.
<b>Syslog Message</b>	In IPspace %s, other ports in the same physical broadcast domain are assigned to broadcast-domain %s but %s is assigned to broadcast-domain %s.
<b>Parameters</b>	<b>ipspace</b> (STRING): IPspace name. <b>broadcastdomainOnOtherPorts</b> (STRING): Broadcast-domain name. <b>port</b> (STRING): Port name. <b>broadcastdomainOnCurrentPort</b> (STRING): Broadcast-domain name.

## "lldp" Event Group

<b>EMS Identifier</b>	lldp.receive.maximum.entries
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the LLDP (Link Layer Discovery Protocol) daemon running on the storage controller receives more unique neighbor advertisements than it can cache. The storage controller can cache 64 unique entries and accommodates new entries after that by removing the oldest entries first. This event is typically observed when connected to Ethernet networks that do not support LLDP broadcasts.
<b>Corrective Action</b>	If the storage system is connected to an Ethernet network that is forwarding LLDP advertisements, disable LLDP on the storage system or disable forwarding LLDP advertisements on the switch.
<b>Syslog Message</b>	LLDP maximum entries exceeded, oldest record replaced by new record received on port %s.
<b>Parameters</b>	<b>port_name</b> (STRING): The network port that received the LLDP advertisement.

## "Imgr" Event Group

<b>EMS Identifier</b>	Imgr.aggr.CA.locks.dropped
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when locks established through CIFS Continuously Available (CA) shares on an aggregate are dropped after takeover, giveback, or aggregate relocation. This causes clients to see a service disruption on the aggregate.
<b>Corrective Action</b>	Confirm that the aggregate is online by using the 'aggr show -aggregate [name of the aggregate] -fields state' command. Then reopen files to reestablish CA locks. For further information about correcting the problem, search the knowledgebase of the NetApp technical support support web site for the "Imgr.aggr.CA.locks.dropped" keyword.
<b>Syslog Message</b>	Continuously Available (CA) locks were dropped on aggregate %s because %s.
<b>Parameters</b>	<b>aggregate</b> (STRING): Name of the aggregate where CA locks were dropped. <b>reason</b> (STRING): Reason for dropping CA locks, such as "remote lock synchronization is in progress".

<b>EMS Identifier</b>	Imgr.badStructure.found
<b>Severity</b>	ERROR
<b>Description</b>	This event is issued whenever the multi-protocol lock manager finds a bad file pointer and turns off the logging of lock manipulation to preserve trace information. This information can be of use during core analysis.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	bad file pointer found, preserving trace information
<b>Parameters</b>	

<b>EMS Identifier</b>	Imgr.CA.recons.mcc.veto
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system vetoes MetroCluster(tm) switchback or negotiated switchover because one of the volumes affected by the switch has CIFS Continuously Available (CA) locks that are still being reconstructed.
<b>Corrective Action</b>	Retry the switchback or negotiated switchover after verifying that lock reconstruction is complete by using the 'debug locks reconstruction show' diagnostic privilege command.
<b>Syslog Message</b>	Vetoed MetroCluster switchback or negotiated switchover because CA lock reconstruction is in progress.
<b>Parameters</b>	

<b>EMS Identifier</b>	lmgr.cb.waiting.limit.hit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a lock manager waiting lock callback object cannot be allocated due to reaching the limit for waiting lock callback objects in the associated pool. It is possible there are too many clients holding locks on files where other clients want locks. Clients will have problems accessing or locking files through NAS protocols while at or above the waiting lock callback object limit.
<b>Corrective Action</b>	Move volumes to a node with a lower utilization of lock manager resources. Lock manager statistics can be displayed from the diagnostic privilege level. Use the "statistics show -raw true -object lmgr_ng" command for displaying all lock manager resource counters. Use the "statistics show -raw true -object lmgr_ng -instance " command for displaying the lock manager statistics for a node's limit pool. Use the "statistics show -raw true -object lmgr_ng -node " command for displaying all lock manager statistics on the specified node.
<b>Syslog Message</b>	The number of waiting callback objects %u has reached the limit %u for the pool %s. The current number/limit of other lock manager objects are: files %u/%u hosts %u/%u locks %u/%u owners %u/%u
<b>Parameters</b>	<b>cb_waiting_total</b> (INT): Number of allocated waiting callback objects in the pool. <b>cb_waiting_limit</b> (INT): Allocated callback waiting objects limit for the pool. <b>pool_name</b> (STRING): Name of the limit pool. <b>files_total</b> (INT): Number of allocated files in the pool. <b>files_limit</b> (INT): Allocated files limit for the pool. <b>hosts_total</b> (INT): Number of allocated hosts in the pool. <b>hosts_limit</b> (INT): Allocated hosts limit for the pool. <b>locks_total</b> (INT): Number of allocated locks in the pool. <b>locks_limit</b> (INT): Allocated locks limit for the pool. <b>owners_total</b> (INT): Number of allocated owners in the pool. <b>owners_limit</b> (INT): Allocated owners limit for the pool.

<b>EMS Identifier</b>	lmgr.delegations.limit.hit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a lock manager WAN FlexCache(R) delegation object cannot be allocated due to reaching the limit for WAN FlexCache delegation objects in the associated pool. It is possible that the system is overloaded. Clients will have problems accessing files through NAS protocols using a FlexCache over a WAN to an origin volume on the node generating this message while at or above the WAN FlexCache delegation object limit.
<b>Corrective Action</b>	Move volumes to a node with a lower utilization of lock manager resources. Lock manager statistics can be displayed from the diagnostic privilege level. Use the "statistics show -raw true -object lmgr_ng" command for displaying all lock manager resource counters. Use the "statistics show -raw true -object lmgr_ng -instance " command for displaying the lock manager statistics for a node's limit pool. Use the "statistics show -raw true -object lmgr_ng -node " command for displaying all lock manager statistics on the specified node.
<b>Syslog Message</b>	The number of WAN FlexCache delegation objects %u has reached the limit %u for the pool %s. The current number/limit of other lock manager objects are: files %u/%u hosts %u/%u locks %u/%u owners %u/%u
<b>Parameters</b>	<b>delegations_total</b> (INT): Number of allocated WAN FlexCache delegation objects in the pool. <b>delegations_limit</b> (INT): Allocated WAN FlexCache delegation objects limit for the pool. <b>pool_name</b> (STRING): Name of the limit pool. <b>files_total</b> (INT): Number of allocated files in the pool. <b>files_limit</b> (INT): Allocated files limit for the pool. <b>hosts_total</b> (INT): Number of allocated hosts in the pool. <b>hosts_limit</b> (INT): Allocated hosts limit for the pool. <b>locks_total</b> (INT): Number of allocated locks in the pool. <b>locks_limit</b> (INT): Allocated locks limit for the pool. <b>owners_total</b> (INT): Number of allocated owners in the pool. <b>owners_limit</b> (INT): Allocated owners limit for the pool.

<b>EMS Identifier</b>	lmgr.files.limit.hit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a lock manager file object cannot be allocated due to reaching the limit for file objects in the associated pool. It is possible that the system is overloaded. Clients will have problems accessing files through NAS protocols while at or above the file object limit.
<b>Corrective Action</b>	Move volumes to a node with a lower utilization of lock manager resources. Lock manager statistics can be displayed from the diagnostic privilege level. Use the "statistics show -raw true -object lmgr_ng" command for displaying all lock manager resource counters. Use the "statistics show -raw true -object lmgr_ng -instance " command for displaying the lock manager statistics for a node's limit pool. Use the "statistics show -raw true -object lmgr_ng -node " command for displaying all lock manager statistics on the specified node.
<b>Syslog Message</b>	The number of file objects %u has reached the limit %u for the pool %s. The current number/limit of other lock manager objects are: hosts %u/%u locks %u/%u owners %u/%u.
<b>Parameters</b>	<b>files_total</b> (INT): Number of allocated files in the pool. <b>files_limit</b> (INT): Allocated files limit for the pool. <b>pool_name</b> (STRING): Name of the limit pool. <b>hosts_total</b> (INT): Number of allocated hosts in the pool. <b>hosts_limit</b> (INT): Allocated hosts limit for the pool. <b>locks_total</b> (INT): Number of allocated locks in the pool. <b>locks_limit</b> (INT): Allocated locks limit for the pool. <b>owners_total</b> (INT): Number of allocated owners in the pool. <b>owners_limit</b> (INT): Allocated owners limit for the pool.

<b>EMS Identifier</b>	lmgr.gb.CA.locks.lost
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when giveback veto is overridden. Locks established through CIFS continuously available (CA) shares on the aggregate being given back are dropped because the giveback occurs before lock sync completion.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dropping partner aggregate locks during lock sync on aggregate %s.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate for which CA locks are lost.

<b>EMS Identifier</b>	lmgr.gb.CA.locks.may.lost
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when giveback veto is overridden. Locks established using CIFS continuously available (CA) shares on the aggregate being given back might be dropped, because giveback commit occurs simultaneously with lock sync completion.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Continuously Available (CA) locks may be lost on aggregate %s due to forced giveback commit occurring simultaneously with lock sync completion.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate for which CA locks might be lost.

<b>EMS Identifier</b>	lmgr.hostfile.cleared
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the volume lock manager hosts file is unusable. In such cases, the hosts files are cleared and reinitialized.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	Clearing lock manager file %s on volume %s due to error: %s.
<b>Parameters</b>	<b>file_name</b> (STRING): Name of the file that is being cleared. <b>vol</b> (STRING): Name of the volume. <b>error</b> (STRING): Error code.

<b>EMS Identifier</b>	lmgr.hostfile.create.abort
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume lock manager fails to create the hosts file.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	Creating lock manager file %s on volume %s failed due to error: %s.
<b>Parameters</b>	<b>aggr</b> (STRING): The name of the volume. <b>file_name</b> (STRING): The name of the file that was being cleared. <b>error</b> (STRING): Error code.

<b>EMS Identifier</b>	lmgr.hostfile.init.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume lock manager hosts file initialization fails.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	Initializing lock manager file %s on volume %s failed due to error: %s.
<b>Parameters</b>	<b>aggr</b> (STRING): The name of the volume. <b>file_name</b> (STRING): The name of the file that is being initialized. <b>error</b> (STRING): Error code.

<b>EMS Identifier</b>	lmgr.hosts.limit.hit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a lock manager host object cannot be allocated due to reaching the limit for host objects in the associated pool. It is possible that the system is overloaded. Clients will have problems accessing files through NAS protocols while at or above the host object limit.
<b>Corrective Action</b>	Move volumes to a node with a lower utilization of lock manager resources. Lock manager statistics can be displayed from the diagnostic privilege level. Use the "statistics show -raw true -object lmgr_ng" command for displaying all lock manager resource counters. Use the "statistics show -raw true -object lmgr_ng -instance " command for displaying the lock manager statistics for a node's limit pool. Use the "statistics show -raw true -object lmgr_ng -node " command for displaying all lock manager statistics on the specified node.
<b>Syslog Message</b>	The number of host objects %u has reached the limit %u for the pool %s. The current number/limit of other lock manager objects are: files %u/%u locks %u/%u owners %u/%u.
<b>Parameters</b>	<b>hosts_total</b> (INT): Number of allocated hosts in the pool. <b>hosts_limit</b> (INT): Allocated hosts limit for the pool. <b>pool_name</b> (STRING): Name of the limit pool. <b>files_total</b> (INT): Number of allocated files in the pool. <b>files_limit</b> (INT): Allocated files limit for the pool. <b>locks_total</b> (INT): Number of allocated locks in the pool. <b>locks_limit</b> (INT): Allocated locks limit for the pool. <b>owners_total</b> (INT): Number of allocated owners in the pool. <b>owners_limit</b> (INT): Allocated owners limit for the pool.

<b>EMS Identifier</b>	lmgr.lock.reclaim.aborted
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system aborts the volume lock reclaim process. A volume attempts to reclaim file locks when you bring the volume online after a reboot or after a takeover or giveback event. This error is usually caused by the volumes going offline during the initialization process.
<b>Corrective Action</b>	None; When the volumes come back online the reclaim process will be restarted.
<b>Syslog Message</b>	Aborting Lock manager grace period initialization on volume %s due to error: %s.
<b>Parameters</b>	<b>aggr</b> (STRING): The name of the aggregate. <b>error</b> (STRING): Error code.

<b>EMS Identifier</b>	lmgr.lock.type.counts
<b>Severity</b>	NOTICE
<b>Description</b>	This message provides additional information about the current count of lock manager objects when a lock manager pool limit is reached. The combination of the counts from a message indicating a limit has been reached and this message provide context for investigating and resolving the limit issues.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The number of lock manager object types in pool %s are: share locks %u byte locks %u waiting locks %u callback waiting %u pfs (clustered Data ONTAP FlexCache delegations) %u cached locks %u WAN FlexCache delegations %u
<b>Parameters</b>	<p><b>pool_name</b> (STRING): Name of the limit pool.</p> <p><b>share</b> (INT): Number of allocated share locks in the pool.</p> <p><b>byte</b> (INT): Number of allocated byte locks in the pool.</p> <p><b>waiting</b> (INT): Number of allocated waiting locks in the pool.</p> <p><b>cb_waiting</b> (INT): Number of allocated cb_waiting locks in the pool.</p> <p><b>pfs</b> (INT): Number of allocated clustered Data ONTAP(R) FlexCache(R) delegations in the pool.</p> <p><b>cached</b> (INT): Number of allocated clustered Data ONTAP FlexCache cached locks in the pool.</p> <p><b>delegations</b> (INT): Number of allocated WAN FlexCache delegations in the pool.</p>

<b>EMS Identifier</b>	lmgr.locks.limit.hit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a lock manager lock object cannot be allocated due to reaching the limit for lock objects in the associated pool. It is possible that the system is overloaded. Clients will have problems accessing files through NAS protocols while at or above the lock object limit.
<b>Corrective Action</b>	Move volumes to a node with a lower utilization of lock manager resources. Lock manager statistics can be displayed from the diagnostic privilege level. Use the "statistics show -raw true -object lmgr_ng" command for displaying all lock manager resource counters. Use the "statistics show -raw true -object lmgr_ng -instance " command for displaying the lock manager statistics for a node's limit pool. Use the "statistics show -raw true -object lmgr_ng -node " command for displaying all lock manager statistics on the specified node.
<b>Syslog Message</b>	The number of lock objects %u has reached the limit %u for the pool %s. The current number/limit of other lock manager objects are: files %u/%u hosts %u/%u owners %u/%u.
<b>Parameters</b>	<p><b>locks_total</b> (INT): Number of allocated locks in the pool.</p> <p><b>locks_limit</b> (INT): Allocated locks limit for the pool.</p> <p><b>pool_name</b> (STRING): Name of the limit pool.</p> <p><b>files_total</b> (INT): Number of allocated files in the pool.</p> <p><b>files_limit</b> (INT): Allocated files limit for the pool.</p> <p><b>hosts_total</b> (INT): Number of allocated hosts in the pool.</p> <p><b>hosts_limit</b> (INT): Allocated hosts limit for the pool.</p> <p><b>owners_total</b> (INT): Number of allocated owners in the pool.</p> <p><b>owners_limit</b> (INT): Allocated owners limit for the pool.</p>

<b>EMS Identifier</b>	Imgr.locks.sync.complete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when synchronization of client file locks ("locks sync") with the partner node completes over the aggregates noted in the previous "Imgr.locks.sync.start" message. Lock sync occurs for locks that were established using CIFS continuously available (CA) shares.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Lock sync completed on %s.
<b>Parameters</b>	<b>aggr</b> (STRING): Lock sync occurs in two cases: 1. Aggregate relocation 2. Giveback In the case of aggregate relocation, the aggregate name is provided. In the case of giveback, "aggr" indicates that lock sync is occurring over all aggregates on the node.

<b>EMS Identifier</b>	Imgr.locks.sync.start
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when synchronization of client file locks ("locks sync") with the partner node starts over one or more aggregates. Lock sync occurs for locks that were established using CIFS continuously available (CA) shares.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Lock sync started on %s.
<b>Parameters</b>	<b>aggr</b> (STRING): Lock sync occurs in two cases: 1. Aggregate relocation 2. Giveback In the case of aggregate relocation, the aggregate name is provided. In the case of giveback, "aggr" indicates that lock sync is occurring over all aggregates on the node.

<b>EMS Identifier</b>	Imgr.lockstate.cleanup.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot clean up the lock state associated with the active file system. The stale lock state can lead to problems accessing files through NAS protocols.
<b>Corrective Action</b>	Contact NetApp technical support for assistance.
<b>Syslog Message</b>	Lock state cleanup failed for '%s' during '%s' on volume '%s%s%s' (DSID %llu) with error %d.
<b>Parameters</b>	<b>lock_type</b> (STRING): Type of locks being cleaned up. <b>cleanup_reason</b> (STRING): Reason to clean up locks. <b>vol</b> (STRING): Name of the volume. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier for the volume. <b>volDsid</b> (LONGINT): Data set identifier (DSID) of the volume. <b>code</b> (INT): Error code returned while trying to clean up lock state.

<b>EMS Identifier</b>	Imgr.mcc.oplock.recall.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system vetoes MetroCluster(TM) switchback or negotiated switchover because CIFS oplock recall fails. Some oplocks could not be recalled because of CPU overload, slow CIFS client response, or a large number of open files.
<b>Corrective Action</b>	Recall oplocks for Vservers participating in negotiated switchover or switchback operations by using the command 'volume qtree oplocks -volume -qtree -vserver -oplock-mode disable' for volumes or qtrees with oplocks enabled. Then retry the MetroCluster operation, and reenable oplocks after the operation is complete. If the error persists, then contact NetApp technical support for assistance.
<b>Syslog Message</b>	Vetoed MetroCluster switchback or negotiated switchover because CIFS oplock recall failed with internal error (%d).
<b>Parameters</b>	<b>error</b> (INT): Error number.

<b>EMS Identifier</b>	Imgr.meta.corrupted
<b>Severity</b>	ERROR
<b>Description</b>	This event occurs when the system detects that the lock manager host metafile is corrupted.
<b>Corrective Action</b>	It is possible that the corruption affected other parts of the file system. Run wafiron on the volume to verify file system consistency.
<b>Syslog Message</b>	Corrupted lock state file in volume %s: reinitializing.
<b>Parameters</b>	<b>path</b> (STRING): Volume name.

<b>EMS Identifier</b>	Imgr.mismatch.file.objects
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the current file object of a lock does not match the file object found through the file handle. This might be caused by a SnapMirror(R) promote operation where the Master Data Set ID (MSID) is remapped.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>volume</b> (STRING): Name of the volume, based on the file handle. <b>lockid</b> (STRING): Lock Universal Unique Identifier (UUID) of the sharelock. <b>caller</b> (STRING): WAFL(R) spinnp operation that encountered this event.

<b>EMS Identifier</b>	Imgr.move.dump.lock.counts
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a volume move operation fails the cutover phase, due to volume quiesce timer expiration, and not all locks were transferred before the failure.
<b>Corrective Action</b>	Run the "vserver locks show -vserver -volume " command to check the locks and the client IP addresses they are associated with. For NFS v4 locks, run instead the "vserver locks nfsv4 show -fields client-name" command in all nodes to get the same information. Reduce locks so that the number of locks remaining in this volume is fewer than the number scanned, and then attempt the volume move cutover again.
<b>Syslog Message</b>	The volume move of volume with DSID %llu did not cut over due to volume quiesce timer expiration. The volume move has scanned %d out of %d locks in the volume.
<b>Parameters</b>	<b>volDsid</b> (LONGINT): Data set identifier (DSID) of the volume. <b>scanned_locks</b> (INT): Number of locks in the volume that were scanned before the failure. <b>total_locks</b> (INT): Total number of locks in the volume.

<b>EMS Identifier</b>	Imgr.notify.host.skip.write
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the volume lock manager cannot write to the notify hosts file due to an error, for example, insufficient space. In such cases, writing to the notify hosts file is skipped.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Skipped writing to notify hosts file %s on volume %s due to error: %s.
<b>Parameters</b>	<b>file_name</b> (STRING): Name of the file that writing was skipped on. <b>vol</b> (STRING): Name of the volume. <b>error</b> (STRING): Error code.

<b>EMS Identifier</b>	lmgr.owners.limit.hit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a lock manager owner object cannot be allocated due to reaching the limit for owner objects in the associated pool. It is possible that the system is overloaded. Clients will have problems accessing files through NAS protocols while at or above the owner object limit.
<b>Corrective Action</b>	Move volumes to a node with a lower utilization of lock manager resources. Lock manager statistics can be displayed from the diagnostic privilege level. Use the "statistics show -raw true -object lmgr_ng" command for displaying all lock manager resource counters. Use the "statistics show -raw true -object lmgr_ng -instance " command for displaying the lock manager statistics for a node's limit pool. Use the "statistics show -raw true -object lmgr_ng -node " command for displaying all lock manager statistics on the specified node.
<b>Syslog Message</b>	The number of owner objects %u has reached the limit %u for the pool %s. The current number/limit of other lock manager objects are: files %u/%u hosts %u/%u, locks %u/%u.
<b>Parameters</b>	<b>owners_total</b> (INT): Number of allocated owners in the pool. <b>owners_limit</b> (INT): Allocated owners limit for the pool. <b>pool_name</b> (STRING): Name of the limit pool. <b>files_total</b> (INT): Number of allocated files in the pool. <b>files_limit</b> (INT): Allocated files limit for the pool. <b>hosts_total</b> (INT): Number of allocated hosts in the pool. <b>hosts_limit</b> (INT): Allocated hosts limit for the pool. <b>locks_total</b> (INT): Number of allocated locks in the pool. <b>locks_limit</b> (INT): Allocated locks limit for the pool.

<b>EMS Identifier</b>	lmgr.partner.locks.outOfSync
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a partner node's mirrored lock state goes out of sync with the actual lock state.
<b>Corrective Action</b>	Under normal conditions, no action is necessary. There is an automatic synchronize process that will attempt to resynchronize the lock state. You can wait for this process to synchronize the lock state, or you can manually resynchronize the lock state by running the 'debug locks mirrored sync' command in diag mode, with the Vserver, volume, and file ID supplied in this message.
<b>Syslog Message</b>	Mirrored lock state is out of sync for %s%s/%s (DSID %08x) for file %d Snapshot copy %d (mirroring status %d communication status %d)
<b>Parameters</b>	<b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Volume identifier to uniquely identify the volume in cases where the volume name alone is insufficient. <b>dsid</b> (LONGINT): Data set identifier. <b>fileid</b> (INT): File identifier. <b>snapid</b> (INT): Snapshot(tm) copy in which the file exists, 0 for the active file system. <b>mirroring_status</b> (INT): Error status from the mirroring operation. <b>csm_status</b> (INT): Communication status from the mirroring operation.

<b>EMS Identifier</b>	Imgr.partner.locks.resynched
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a partner node's mirrored lock state is resynchronized with the actual lock state after having been out of sync previously.
<b>Corrective Action</b>	The mirrored lock state is now synchronized between the partner nodes. You can verify the mirror state of the locks by running the 'debug locks mirrored show' command in diag mode, with the Vserver, volume, and file ID supplied in this message.
<b>Syslog Message</b>	Mirrored lock state is now in sync for %s/%s (DSID %08x) for file %d Snapshot copy %d.
<b>Parameters</b>	<b>vol</b> (STRING): Volume name. <b>volident</b> (STRING): Volume identifier to uniquely identify the volume in cases where the volume name alone is insufficient. <b>dsid</b> (LONGINT): Data set identifier. <b>fileid</b> (INT): File identifier. <b>snapid</b> (INT): Snapshot(tm) copy in which the file exists, 0 for the active file system.

<b>EMS Identifier</b>	Imgr.pruning.delayed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when there is a delay in pruning and removing unused entries in the volume lock manager hosts file. The current hosts file contents remain; unused entries were not removed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Pruning lock manager on volume %s for file %s delayed due to error: %s.
<b>Parameters</b>	<b>volume</b> (STRING): Name of the volume. <b>file_name</b> (STRING): Name of the host file being pruned. <b>error</b> (STRING): Error description.

<b>EMS Identifier</b>	Imgr.recons.CA.lock.dropped
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when locks established through CIFS Continuously Available (CA) shares are dropped after a takeover, giveback, or aggregate relocation. This is because the multi-protocol lock manager finds bad mirrored lock state for CA locks and skips reconstructing them. This causes a client to see a service disruption on the file to which the CA locks belong.
<b>Corrective Action</b>	Reopen the file to reestablish CA locks.
<b>Syslog Message</b>	A Continuously Available (CA) lock for volume %s%s/%s (DSID %08x) file %d snapshot copy %d reconnect key %d is dropped because of %s.
<b>Parameters</b>	<b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Volume identifier to uniquely identify the volume in cases where the volume name alone is insufficient. <b>dsid</b> (LONGINT): Data set identifier. <b>fileid</b> (INT): File identifier. <b>snapid</b> (INT): Snapshot(tm) copy in which the file exists, 0 for the active file system. <b>reconnect_key</b> (INT): Open identifier to uniquely identify a durable or persistent open on a volume <b>reason</b> (STRING): Description of the reason for dropping a CA lock.

<b>EMS Identifier</b>	Imgr.session.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event occurs when a SpinNP session has failed, which causes session-scoped (e.g. CIFS) locks on the D-blade to be dropped. Only affects locks acquired using the failed session. This will cause clients to see a service disruption until they re-connect to the server.
<b>Corrective Action</b>	None -- clients will automatically try to reconnect to the server, re-locking files as necessary.
<b>Syslog Message</b>	Dropped session-scoped locks from session %s:%s:%s due to failed session.
<b>Parameters</b>	<b>initiator</b> (STRING): The blade ID of the initiator. <b>uniquifier</b> (STRING): The session uniquifier. <b>target</b> (STRING): The blade ID of the target.

<b>EMS Identifier</b>	Imgr.sf.up.ready
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the lock manager non-disruption subsystem for CIFS continuously available (CA) shares notifies the high-availability (HA) module that transition into the up state is allowed. After the lock manager has sent this notification, the HA module will allow certain failover options to proceed such as aggregate relocation and giveback.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Lock manager allowed high availability module to transition to the up state for the following reason: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for allowing transition to occur. Valid reasons include: 1. Lock-sync complete 2. Lock-sync timed out 3. CSM Invalid 4. Partner down 5. Mirroring disabled from bootarg 6. SMB3 disabled

<b>EMS Identifier</b>	Imgr.sh.oplock.recall.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system vetoes aggregate giveback or relocation because CIFS oplock recall fails. Some oplocks could not be recalled because of CPU overload, slow CIFS client response, or a large number of open files. Giveback or relocation cannot proceed until all oplocks are recalled successfully or the veto is overridden, in which case cached writes in clients might be lost.
<b>Corrective Action</b>	Recall oplocks for Vservers on aggregates participating in the operation by using the command 'volume qtree oplocks -volume -qtree -vservers -oplock-mode disable' for volumes or qtrees with oplocks enabled. Then retry the operation, and reenables oplocks after the operation is complete. If the error persists, contact NetApp technical support for assistance.
<b>Syslog Message</b>	Aggregate "%s" vetoed giveback or relocation because CIFS oplock recall failed. Internal error: %s.
<b>Parameters</b>	<b>aggrname</b> (STRING): Aggregate name. <b>error</b> (STRING): Error details.

<b>EMS Identifier</b>	Imgr.vol.lock.reclaim.partial
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a volume cannot reclaim certain file locks when the system attempts to bring it online. This can occur after a reboot, a takeover, a giveback or an MCC event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Lock reclaims for volume %s are partial due to the following error: %s.
<b>Parameters</b>	<b>vol</b> (STRING): The name of the volume. <b>error</b> (STRING): Error code.

## "logger" Event Group

<b>EMS Identifier</b>	logger.usr
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when the user runs the 'logger' command. The parameter indicates the message that is sought to be notified and is derived from the string passed in to the logger command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>message</b> (STRING): Message passed by the user to the logger command.

## "login" Event Group

<b>EMS Identifier</b>	login.auth.loginDenied
<b>Severity</b>	NOTICE
<b>Description</b>	This event is issued when a login attempt is refused due to authentication failure.
<b>Corrective Action</b>	Use a valid username/password combination to login.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>message</b> (STRING): Details about the failed login attempt.

## "lun" Event Group

<b>EMS Identifier</b>	LUN.clone.log.full
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when lun clone creation fails because the limit on the maximum number of supported clone log entries (32705) is exceeded.
<b>Corrective Action</b>	Retry upon the completion of the pending clone operations for this volume.
<b>Syslog Message</b>	Logging the LUN clone creation has failed because the limit on the maximum number of supported clone log entries in the volume %s (DSID %llu) has been exceeded.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the LUN clone creation has failed. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which the LUN clone creation has failed.

<b>EMS Identifier</b>	LUN.clone.snapshot.deleted
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the snapshot used to clone a LUN is deleted before the completion of the cloning process. Data may be inaccessible for this LUN, depending on how much of the data was copied before the snapshot was deleted.
<b>Corrective Action</b>	The LUN should be destroyed to prevent I/O errors from occurring.
<b>Syslog Message</b>	A snapshot containing a file or LUN used to create the LUN clone %s (Inode number %d) in volume %s (DSID %llu) was deleted before the completion of the cloning process.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN clone for which the snapshot was deleted. <b>lun_inode_num</b> (INT): Inode number of the LUN clone for which the snapshot was deleted. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.copy.dstPresent
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a LUN appears in the public namespace of the destination volume during a LUN copy operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LUN copy job with UUID %s created destination LUN (%s) successfully.
<b>Parameters</b>	<b>job_uuid</b> (STRING): UUID of the LUN copy job. <b>dst_path</b> (STRING): Destination path of the LUN copy job.

<b>EMS Identifier</b>	LUN.copy.started
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a LUN copy operation is successfully started.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LUN copy started from (DSID:%llu)%s to (DSID:%llu)%s with job-uuid %s.
<b>Parameters</b>	<b>src_vol_dsid</b> (LONGINT): Source volume Data Set ID (DSID). <b>src_lun</b> (STRING): Source LUN. <b>dst_vol_dsid</b> (LONGINT): Destination volume Data Set ID (DSID). <b>dst_lun</b> (STRING): Destination LUN. <b>UUID</b> (STRING): UUID identifying the copy operation.

<b>EMS Identifier</b>	LUN.create.nvfailed.volume
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a LUN is created in a volume that is in the nvfailed state.
<b>Corrective Action</b>	Clear the nvfailed state of the containing volume, take the appropriate nvfail recovery action to recover from the possible data loss, and bring the LUN online. Note that the actual recovery steps vary based on the application and the host.
<b>Syslog Message</b>	LUN %s was created in a volume %s (DSID %llu) that is in the nvfailed state. It is offline and in the nvfailed state.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.create.resized.base
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when creating a LUN from a base file causes a permanent size change to that base file.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The base file of the LUN at path %s in volume %s (DSID %llu) has been resized.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.data.unavailable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when data is unable to be read from a capacity tier.
<b>Corrective Action</b>	Troubleshoot capacity tier connectivity problems.
<b>Syslog Message</b>	Unavailable error was received for the LUN at path %s (fileid:%u) in volume %s (DSID %llu).
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>file_id</b> (INT): Identifying number for the suspect inode. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.destroy
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a LUN is destroyed.
<b>Corrective Action</b>	If the LUN was destroyed by mistake, restore it from backup or from a Snapshot(tm) copy.
<b>Syslog Message</b>	LUN at path %s in volume %s (DSID %llu) was destroyed.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN that was destroyed. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.inaccessible.restore
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a LUN that is inaccessible due to restore is found in a volume. Such a LUN can contain inconsistent data and will not be accessible for I/O or management operations.
<b>Corrective Action</b>	The LUN can be destroyed using the option force-fenced for the command 'lun destroy'. It can also be restored from a snapshot or backup.
<b>Syslog Message</b>	The LUN %s in volume %s (DSID %llu) is inaccessible due to restore.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.inconsistent.blocks
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the block containing a LUN's attributes is found to be inconsistent.
<b>Corrective Action</b>	Recover the LUN from a good backup. If the unrecoverable RAID is in a Snapshot(tm) copy, delete the Snapshot copy. Contact NetApp technical support for more options.
<b>Syslog Message</b>	RAID error was received for the attributes of the LUN at path %s (fileid:%u) in volume %s (DSID %llu).
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>file_id</b> (INT): Identifying number for the suspect inode. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.inconsistent.filesystem
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a LUN is found whose on-disk structure is inconsistent in the WAFL(R) file system. Such a LUN is not accessible for I/O or management operations.
<b>Corrective Action</b>	Run wafiron on the containing aggregate, and then recover the LUN from a backup. Contact NetApp technical support for more options.
<b>Syslog Message</b>	The on-disk structure of the LUN at path %s in volume %s (DSID %llu) is inconsistent in the WAFL file system.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.inplace.dumpRestoreFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an in-place restore of a LUN from a dump fails because the source LUN is of a higher version than this Data ONTAP(R) release supports.
<b>Corrective Action</b>	To recover the source LUN's data from the dump, first restore the LUN to a new path on the destination volume where it will be restored as a regular file with the entire source data intact. Then create a new and unmapped LUN from this file using the 'lun create -f' command. The original destination LUN is inaccessible for I/O or management operations and can be deleted using the 'force-fenced' option for the command 'lun destroy'.
<b>Syslog Message</b>	An in-place restore from dump to an existing destination LUN at path %s in volume %s (DSID %llu) failed.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path of the existing destination LUN for which restore failed. <b>volume_name</b> (STRING): Name of the destination volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the destination volume.

<b>EMS Identifier</b>	LUN.inplace.restore.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an in-place SFSR (Single File SnapRestore(R)) operation fails and might have left the LUN in an inconsistent state.
<b>Corrective Action</b>	To recover the LUN, restore it to a new path. After the LUN is restored it needs to be mapped and hosts need to discover the new device. The LUN in the original path can be deleted.
<b>Syslog Message</b>	An in-place SFSR (Single File SnapRestore(R)) failed at path %s in volume %s (DSID %llu) and might have left the LUN in an inconsistent state.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path of the LUN for which the restore operation failed. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.metadb.version.mismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a version mismatch is detected for the metafile containing LUN metadata.
<b>Corrective Action</b>	Rebuild the LUN metadata metafile for the volume by running the 'lun rescan -build-oovc' command.
<b>Syslog Message</b>	A version mismatch was detected for the metafile containing LUN metadata metafile in volume %s (DSID %llu).
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which a version mismatch of the metafile containing LUN metadata was detected. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which a version mismatch of the metafile containing LUN metadata was detected.

<b>EMS Identifier</b>	lun.metafile.dirCreateFailed
<b>Severity</b>	ERROR
<b>Description</b>	lun metafile directory creation failed
<b>Corrective Action</b>	Check available space on the volume and make sure that the volume is not full or close to full.
<b>Syslog Message</b>	Couldn't create vdisk metafile directory %s.
<b>Parameters</b>	<b>path</b> (STRING): path for the metafile directory that Data ONTAP failed to create

<b>EMS Identifier</b>	lun.metafile.OOVC.corrupt
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when inconsistent blocks are read while reading or writing to the Out Of Volume Container (OOVC) metafile. The OOVC metafile contains certain LUN configuration and metadata for the LUNs in a given volume. SAN management operations might be impaired while the OOVC is in this state.
<b>Corrective Action</b>	Use the 'lun rescan -build-oovc' command to rebuild the OOVC metafiles for the affected volume.
<b>Syslog Message</b>	RAID error inconsistency was received for the OOVC metafile in volume %s (DSID %llu).
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the OOVC metafile was found to be inconsistent. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the volume for which the OOVC metafile was found to be inconsistent.

<b>EMS Identifier</b>	lun.metafile.VTOC.corrupt
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when inconsistent blocks are read while reading or writing to the Vdisk Table of Contents (VTOC) metafile. The VTOC metafile contains the inventory of LUNs in a given volume. SAN management operations might be impaired while the VTOC is in this state.
<b>Corrective Action</b>	Use the 'lun rescan -build-vtoc' command to rebuild the VTOC metafile for the affected volume.
<b>Syslog Message</b>	RAID error inconsistency was received for the VTOC metafile in volume %s (DSID %llu).
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the VTOC metafile was found to be inconsistent. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the volume for which the VTOC metafile was found to be inconsistent.

<b>EMS Identifier</b>	LUN.move.dstPresent
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a LUN appears in the public namespace of the destination volume during a LUN move operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LUN move job with UUID %s created destination LUN (%s) successfully.
<b>Parameters</b>	<b>job_uuid</b> (STRING): UUID of the LUN move job. <b>dst_path</b> (STRING): Destination path of the LUN move job.

<b>EMS Identifier</b>	LUN.move.started
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a LUN move operation is successfully started.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LUN move started from (DSID:%llu)%s to (DSID:%llu)%s with job-uuid %s.
<b>Parameters</b>	<b>src_vol_dsid</b> (LONGINT): Source volume Data Set ID (DSID). <b>src_lun</b> (STRING): Source LUN. <b>dst_vol_dsid</b> (LONGINT): Destination volume Data Set ID (DSID). <b>dst_lun</b> (STRING): Destination LUN. <b>UUID</b> (STRING): UUID identifying the move operation.

<b>EMS Identifier</b>	LUN.no.memory.available
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an operation on LUNs on the node owning the given volume fails due to the unavailability of Data ONTAP(R) memory.
<b>Corrective Action</b>	Retry the operation.
<b>Syslog Message</b>	An operation on LUNs on the node owning the volume %s (DSID %llu) failed due to unavailability of Data ONTAP(R) memory.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the operation has failed. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which the operation has failed.

<b>EMS Identifier</b>	LUN.nvfail.option.on
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the nvfail option for the named volume is turned on. The volume contains LUNs and it is recommended that you keep this option on for such volumes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The nvfail option for the volume %s (DSID %llu) has been turned on. The volume contains LUNs and it is recommended that this option be kept on for such volumes.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the nvfail option was turned on. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which the nvfail option has been turned on.

<b>EMS Identifier</b>	LUN.nvfail.vol.proc.complete
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an inconsistency is detected in the nvlog during boot or takeover, resulting in the initiation of nvfail processing and the LUNs in the volume being brought offline. This behavior is expected and is intended to prevent any FC/iSCSI data access to LUNs in a volume that might have lost the last few updates to the nvlog.
<b>Corrective Action</b>	Verify that the LUN maps are valid. After the LUNs are mapped properly, use the 'lun online' command to bring the LUNs online to make them available to hosts. Host side recovery actions may be required to check the consistency of the data in the LUNs.
<b>Syslog Message</b>	LUNs in volume %s (DSID %llu) have been brought offline because an inconsistency was detected in the nvlog during boot or takeover.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which nvfail processing was completed. <b>volume_dsids</b> (LONGINT): Data Set ID (DSID) of the volume for which nvfail processing was completed.

<b>EMS Identifier</b>	LUN.nvfail.vol.proc.failed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when nvfail processing for LUNs in a volume fails to complete. Some of the LUNs in the volume might not be offline. FC/iSCSI data access to the LUNs in the volume is prevented until the nvfail state of the volume is cleared.
<b>Corrective Action</b>	For any LUNs that are offline, use the 'lun online' command to bring them online and make them available to hosts. Host side recovery actions might be required to check the consistency of the data in the LUNs.
<b>Syslog Message</b>	An inconsistency was detected in the nvlog during boot or takeover, and some or all LUNs in volume %s (DSID %llu) might not have been brought offline.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which LUN nvfail processing failed. <b>volume_dsids</b> (LONGINT): Data Set ID (DSID) of the volume for which LUN nvfail processing failed.

<b>EMS Identifier</b>	LUN.nvfail.vol.proc.started
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an inconsistency is detected in the nvlog during boot or takeover, resulting in the initiation of nvfail processing and the LUNs in the volume being brought offline. This behavior is expected and is intended to prevent any FC/iSCSI data access to LUNs in a volume that might have lost the last few updates to the nvlog.
<b>Corrective Action</b>	Verify that the LUN maps are valid. After the LUNs are mapped properly, use the 'lun online' command to bring the LUNs online to make them available to hosts. Host side recovery actions may be required to check the consistency of the data in the LUNs.
<b>Syslog Message</b>	LUNs in volume %s (DSID %llu) have been brought offline because an inconsistency was detected in the nvlog during boot or takeover.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which nvfail processing was initiated. <b>volume_dsids</b> (LONGINT): Data Set ID (DSID) of the volume for which nvfail processing was initiated.

<b>EMS Identifier</b>	LUN.offline
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a LUN is brought offline manually or when a LUN is brought offline by the SCSI layer because of a write failure due to lack of space.
<b>Corrective Action</b>	If the LUN was brought offline due to lack of space, add space to the volume and bring the LUN online. No action is required if the LUN was brought offline manually.
<b>Syslog Message</b>	LUN at path %s in volume %s (DSID %llu) has been brought offline.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN that was taken offline. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.oovc.rebuild.done
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the rebuilding of the Out Of Volume Container (OOVC) file is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The OOVC has been rebuilt for the volume %s (DSID %llu).
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the OOVC file was rebuilt. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which the OOVC file was rebuilt.

<b>EMS Identifier</b>	LUN.oovc.version.mismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a version mismatch is detected for the Out Of Volume Container (OOVC) metafile.
<b>Corrective Action</b>	Rebuild the OOVC metafile for the volume by running the 'lun rescan -build-oovc' command.
<b>Syslog Message</b>	A version mismatch has been detected for the OOVC metafile in volume %s (DSID %llu).
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which a version mismatch of the OOVC metafile has been detected. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which a version mismatch of the OOVC metafile has been detected.

<b>EMS Identifier</b>	LUN.op.nvfail.offline
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a LUN is restored or a LUN clone is created in a volume that is currently in the nvfailed state. It can also occur if the source LUN for the operation is in the nvfailed state.
<b>Corrective Action</b>	If the containing volume is in the nvfailed state, clear the nvfailed state and bring the LUN online. Host side recovery actions might be required to check the consistency of the data in the LUN before the LUN is brought online. Note that the actual recovery steps vary based on the application and the host.
<b>Syslog Message</b>	LUN %s in volume %s (DSID %llu) is offline and in the nvfailed state.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsids</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.outplace.dumpRestoreFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an out-of-place restore of a LUN from dump fails because the source LUN is of a higher version than this Data ONTAP(R) release supports.
<b>Corrective Action</b>	Restore creates a regular file at the destination path, with the same data as in the source LUN. To recover the source LUN's data from the dump, you can create a new and unmapped LUN from this file using the 'lun create -f' command.
<b>Syslog Message</b>	An out-of-place restore of a LUN from dump for the destination path %s in volume %s (DSID %llu) failed.
<b>Parameters</b>	<b>lun_path</b> (STRING): Destination path for the failed LUN restore. <b>volume_name</b> (STRING): Name of the destination volume. <b>volume_dsids</b> (LONGINT): Data set ID (DSID) of the destination volume.

<b>EMS Identifier</b>	LUN.provisioning.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during the creation of a LUN when the provisioning for its metadata fails due to insufficient space in the aggregate. Attempts to map or bind the LUN will fail until the aggregate has sufficient free space for the LUN's metadata.
<b>Corrective Action</b>	Add more space to the aggregate. Use the command 'lun map' or 'lun bind' to allow provisioning of the LUN's metadata to be completed.
<b>Syslog Message</b>	LUN %s in volume %s (DSID %llu) was created, but provisioning of its metadata failed due to insufficient space in the aggregate.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN for which metadata provisioning failed. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsids</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.restore.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the SFSR (Single File SnapRestore(R)) for a LUN is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LUN was restored at path %s in volume %s (DSID %llu).
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN that was restored. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.SCSI.reservation.removal.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the SCSI reservation for one or more LUNs in the secondary or primary Vserver cannot be deleted during a Vserver disaster recovery(DR) resynchronize operation. This might result in the host accessing stale SCSI reservation entries for the LUN during a subsequent Vserver DR activate operation.
<b>Corrective Action</b>	Use the "lun persistent-reservation clear" command to remove the LUN's SCSI reservation.
<b>Syslog Message</b>	SCSI reservation for LUN %s in volume %s (DSID %llu) could not be deleted.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN whose SCSI reservation could not be removed. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	lun.serial.timeWentBack
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event occurs when the system clock has been set back in time. It prints the current LUN serial number counter.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>counter</b> (LONGINT): Current value of LUN serial number counter.

<b>EMS Identifier</b>	LUN.space.resv.not.honored
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the space reservation settings for the named volume are not honored in its containing aggregate.
<b>Corrective Action</b>	Make sure that the space guarantee settings for the volume are set to 'file' or 'volume'. If the volume guarantee is disabled, make sure that there is enough free space in the aggregate to enable the volume guarantee.
<b>Syslog Message</b>	Space reservations in volume %s (DSID %llu) are not honored, either because the volume space guarantee is set to 'none' or it is disabled due to lack of space in its containing aggregate.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which reservations are not honored. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which reservations are not honored.

<b>EMS Identifier</b>	LUN.transition.fail.no.i2p
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the transition of a 7-Mode LUN to clustered Data ONTAP(R) fails because the i2p database for the destination volume is not fully built.
<b>Corrective Action</b>	Wait a few seconds and then issue the 'lun transition start' command to retry the transition of LUNs in the volume.
<b>Syslog Message</b>	LUNs in volume %s (DSID %llu) could not be transitioned because the i2p database for the volume has not been fully built.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.transition.fail.no.space
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the transition of a 7-Mode LUN to clustered Data ONTAP(R) fails due to lack of space in the destination volume or containing aggregate.
<b>Corrective Action</b>	Set the 'filesystem-size-fixed' option to false for the volume, add 1MB space for each LUN in the volume, and then issue the 'lun transition start' command to retry the transition.
<b>Syslog Message</b>	LUN %s in volume %s (DSID %llu) could not be transitioned due to lack of space in the volume.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN that could not be transitioned. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.transition.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the transition of a LUN to clustered Data ONTAP(R) fails.
<b>Corrective Action</b>	Determine the cause of failure and the specific corrective action by looking at other events issued for LUNs. Use the "lun transition start" command to retry the transition.
<b>Syslog Message</b>	LUN %s in volume %s (DSID %llu) could not be transitioned.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN that could not be transitioned. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsids</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.transition.incons.attrs
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a LUN is found whose 7-Mode on-disk structure is inconsistent in the WAFL(R) file system. This LUN cannot be transitioned and is not accessible for management.
<b>Corrective Action</b>	If the volume was being transitioned, destroy the LUN by using the "lun transition 7-mode delete" advanced-privilege command in clustered Data ONTAP(R). Issue the command "lun transition 7-mode start" to retry transition on the volume.
<b>Syslog Message</b>	The 7-mode on-disk structure of the LUN at path %s in volume %s (DSID %llu) is inconsistent in the WAFL file system.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsids</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.transition.no.type
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Data ONTAP(R) encounters a LUN that is scheduled for transition and for which the multiprotocol type of the LUN cannot be determined. Data ONTAP substitutes a default value of "linux" for the type and calculates geometry values to match.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Multiprotocol type for LUN "%s" in volume "%s" (DSID: %llu) could not be determined. Once transitioned, this LUN will be assigned the default type "linux".
<b>Parameters</b>	<b>lun_path</b> (STRING): Path of the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsids</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.transition.unsupp.clone
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when transition of a LUN to clustered Data ONTAP(R) fails because the LUN is a Snapshot(R) copy-backed LUN clone. This LUN cannot be transitioned and is not accessible for management.
<b>Corrective Action</b>	Destroy the LUN by using the "lun transition 7-mode delete" advanced-privilege command in clustered Data ONTAP. To make your original LUN a supported candidate for transition, split your Snapshot copy-backed LUN clone prior to transition.
<b>Syslog Message</b>	LUN %s in volume %s (DSID %llu) could not be transitioned.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN that cannot be transitioned. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.transition.unsupp.geom
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Data ONTAP(R) encounters a 7-Mode LUN that is scheduled for transition and for which the extent size or cylinder size is absent or unsupported. Data ONTAP substitutes reasonable geometry values upon transition.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LUN "%s" in volume "%s" (DSID: %llu) has a geometry that is not supported in clustered Data ONTAP. Once transitioned, this LUN will be assigned reasonable geometry values.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path of the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.transition.unsupported.type
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Data ONTAP(R) encounters a 7-Mode LUN that is scheduled for transition and for which the multiprotocol type is unsupported in clustered Data ONTAP. Data ONTAP substitutes a default value of "linux" for the type upon transition and calculates geometry values to match.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	LUN "%s" in volume "%s" (DSID: %llu) has a multiprotocol type that is not supported in clustered Data ONTAP. Once transitioned, this LUN will be assigned the default type of "linux".
<b>Parameters</b>	<b>lun_path</b> (STRING): Path of the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.vdisk.cnt.exceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume contains more than the supported limit of LUNs in the volume. Performance degradation in volume management operations may occur as a result and it will not be possible to create more LUNs in this volume.
<b>Corrective Action</b>	It is recommended that LUNs be moved to other volumes.
<b>Syslog Message</b>	Volume %s (DSID %llu) contains more than the supported limit for LUNs (%d).
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume which contains more than the supported limit of LUNs. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume which contains more than the supported limit of LUNs. <b>max_create_limit</b> (INT): The maximum number of LUNs that can be created in a volume.

<b>EMS Identifier</b>	LUN.vdisk.prov.cnt.exceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when provisioning of metadata for some LUNs fails because the limit for provisioning LUNs in the volume has been exceeded.
<b>Corrective Action</b>	It is recommended that LUNs be moved to other volumes and then mapped using the 'lun map' command.
<b>Syslog Message</b>	Provisioning of metadata for some LUNs failed because the limit on the maximum supported LUNs in the volume %s (DSID %llu) has been exceeded. These LUNs cannot be discovered by hosts and will not be accessible for I/O. Metadata cannot be provisioned for more than %d LUNs.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the LUN provisioning failed. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which the LUN provisioning failed. <b>max_prov_limit</b> (INT): Maximum number of LUNs for which metadata can be provisioned in a volume.

<b>EMS Identifier</b>	LUN.vol.no.space
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an operation on a LUN fails due to insufficient space in the volume.
<b>Corrective Action</b>	Add space to the volume and retry the operation.
<b>Syslog Message</b>	An operation on LUN %s in volume %s (DSID %llu) failed due to lack of space in the volume.
<b>Parameters</b>	<b>lun_path</b> (STRING): Path for the LUN. <b>volume_name</b> (STRING): Name of the containing volume. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the containing volume.

<b>EMS Identifier</b>	LUN.vol.proc.fail.no.space
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the processing for LUNs in the volume has failed due to lack of space in the volume or containing aggregate.
<b>Corrective Action</b>	Check accompanying event messages to determine whether the volume or containing aggregate lacks space. Add space to the volume or aggregate containing the volume as necessary before retrying the operation. If the volume was being transitioned, issue the command 'lun transition start' to retry; otherwise issue the command 'lun rescan -sync' to complete processing of LUNs in the volume.
<b>Syslog Message</b>	Processing for LUNs in volume %s (DSID %llu) failed due to lack of space.
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the processing failed. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which the processing failed.

<b>EMS Identifier</b>	LUN.vtoc.rebuild.done
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the rebuilding of the Vdisk Table of Contents (VTOC) file is complete.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The VTOC has been rebuilt for the volume %s (DSID %llu).
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which the VTOC file was rebuilt. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which the VTOC file was rebuilt.

<b>EMS Identifier</b>	LUN.vtoc.version.mismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a version mismatch is detected for the Vdisk Table of Contents (VTOC) metafile.
<b>Corrective Action</b>	Rebuild the VTOC metafile for the volume by running the 'lun rescan -build-vtoc' command.
<b>Syslog Message</b>	A version mismatch has been detected for the VTOC metafile in volume %s (DSID %llu).
<b>Parameters</b>	<b>volume_name</b> (STRING): Name of the volume for which a version mismatch of the VTOC metafile has been detected. <b>volume_dsid</b> (LONGINT): Data Set ID (DSID) of the volume for which a version mismatch of the VTOC metafile has been detected.

## "malloc" Event Group

<b>EMS Identifier</b>	malloc.failure
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated if malloc is called unsafely.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s %s %s %s %s %s %s %s %s %s
<b>Parameters</b>	<b>f2</b> (STRING): Third frame of backtrace. <b>f3</b> (STRING): Fourth frame of backtrace. <b>f4</b> (STRING): Fifth frame of backtrace. <b>f5</b> (STRING): Sixth frame of backtrace. <b>f6</b> (STRING): Seventh frame of backtrace. <b>f7</b> (STRING): Eighth frame of backtrace. <b>f8</b> (STRING): Ninth frame of backtrace. <b>f9</b> (STRING): Tenth frame of backtrace. <b>f10</b> (STRING): Eleventh frame of backtrace. <b>f11</b> (STRING): Twelfth frame of backtrace. <b>f12</b> (STRING): Thirteenth frame of backtrace.

<b>EMS Identifier</b>	malloc.failure.detail
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated if malloc is called unsafely.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s
<b>Parameters</b>	<b>description</b> (STRING): Description of failure. <b>buffers</b> (STRING): Details of buffers that were predirtied.

## "maxcid" Event Group

<b>EMS Identifier</b>	maxCID.limit.exceeded
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when system exceeds the maximum number of open network data connections on the node.
<b>Corrective Action</b>	Balance the network load across all nodes within the cluster in order to avoid disruptions in service. Contact NetApp technical support.
<b>Syslog Message</b>	Number of active data connections is %d and system limit is %d.
<b>Parameters</b>	<b>activeCID</b> (INT): Number of open data connections on the node. <b>maxCID</b> (INT): Maximum allowed limit of data connections per node.

<b>EMS Identifier</b>	maxCID.threshold.exceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system is approaching the maximum number of open data connections supported on the node.
<b>Corrective Action</b>	Balance the network load across all nodes within the cluster.
<b>Syslog Message</b>	Number of active data connections is %d and maximum supported threshold is %d.
<b>Parameters</b>	<b>activeCID</b> (INT): Number of open data connections on the node. <b>maxCIDThreshold</b> (INT): Maximum threshold of data connections supported per node.

## "mc" Event Group

<b>EMS Identifier</b>	mc.channel.create.failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs on failure in new channel creation in Mirror Cache.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Failure in Mirror Cache on new channel -- Name: %s
<b>Parameters</b>	<b>channel</b> (STRING): Channel name

<b>EMS Identifier</b>	mc.post.replay.stats
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs post replay and conveys information regarding bdatas inserted, rejected, duplicate, hits and misses.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Mirror Cache post replay stats -- Name: %s Inserted: %llu Rejected: %llu Duplicate: %llu Hits: %llu Misses: %llu.
<b>Parameters</b>	<b>name</b> (STRING): Aggr name <b>inserted</b> (LONGINT): Bdatas inserted <b>rejected</b> (LONGINT): Bdatas rejected <b>duplicate</b> (LONGINT): Duplicate bdatas <b>hits</b> (LONGINT): Bdata hits <b>misses</b> (LONGINT): Bdatas misses

## "mcc" Event Group

<b>EMS Identifier</b>	mcc.auso.trigFailed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a trigger for automatic unplanned switchover fails to issue the operation.
<b>Corrective Action</b>	Verify the health of each node and that automatic unplanned switchover is enabled on both by using the "metrocluster node show" command. Use the "metrocluster switchover -forced-on-disaster true" command to switch over the DR-site storage manually.
<b>Syslog Message</b>	A trigger for Automatic Unplanned Switchover failed to issue the operation. Reason: %s.
<b>Parameters</b>	<b>probableCauseDescription</b> (STRING): Further description of the probable cause. <b>alertId</b> (STRING): Identifier for this condition. <b>alertingResource</b> (STRING): Unique name of the resource responsible for this condition. <b>alertingResourceName</b> (STRING): Name of the resource responsible for this condition. <b>possibleEffect</b> (STRING): Possible effect of the failure. <b>probableCause</b> (STRING): Probable cause of the failure. <b>additionalInfo</b> (STRING): Additional information about this failure.

<b>EMS Identifier</b>	mcc.auso.triggered
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the node triggers an automatic unplanned switchover on detection of a failure of the DR partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The node has triggered an Automatic Unplanned Switchover of the DR partner. Reason: %s. If Automatic Unplanned Switchover was triggered because of heartbeat loss, any ongoing dump on the partner may be aborted.
<b>Parameters</b>	<b>cause</b> (STRING): Cause for triggering automatic unplanned switchover.

<b>EMS Identifier</b>	mcc.check.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the MetroCluster (tm) check job has failed to complete all checks for the system.
<b>Corrective Action</b>	Run "metrocluster operation history show" command to check the reason for this failure. Make sure that all nodes in each of the clusters are healthy, and both clusters are in normal mode using the "metrocluster node show" and "metrocluster show" commands. Then retry the operation using the command "metrocluster check run". If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	The MetroCluster (tm) check job has failed to complete all checks for the system in cluster %s.
<b>Parameters</b>	<b>Cluster</b> (STRING): Cluster where the check was running.

<b>EMS Identifier</b>	mcc.config.assignConfigFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the MetroCluster(tm) local node configuration assignment to persistent storage failed.
<b>Corrective Action</b>	Contact NetApp technical support for assistance.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>error</b> (STRING): Description of assign config error. <b>nodeID</b> (STRING): Node UUID. <b>dbladeID</b> (STRING): Dblade UUID.

<b>EMS Identifier</b>	mcc.config.auso.enableIgnore
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an attempt to enable automatic unplanned switchover fails because the capability has been manually disabled by the user or disabled because of a failed switchover or switchback operation.
<b>Corrective Action</b>	If you want to keep automatic switchover enabled, enable it using the advanced mode command "metrocluster modify -automatic-switchover-onfailure true".
<b>Syslog Message</b>	Failed to enable Automatic Unplanned Switchover because the capability has been manually disabled by the user or disabled because of a failed Switchover or Switchback operation.
<b>Parameters</b>	

<b>EMS Identifier</b>	mcc.config.auso.stDisabled
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when automatic unplanned switchover capability is disabled.
<b>Corrective Action</b>	Run the "metrocluster modify -node-name -automatic-switchover-onfailure true" command for each node in the cluster to enable automatic switchover.
<b>Syslog Message</b>	The state of Automatic Unplanned Switchover capability has been disabled.
<b>Parameters</b>	<b>alertId</b> (STRING): Identifier for this condition. <b>alertingResource</b> (STRING): Unique name of the resource responsible for this condition. <b>alertingResourceName</b> (STRING): Display name of the resource responsible for this condition. <b>possibleEffect</b> (STRING): Possible effect of the event. <b>probableCause</b> (STRING): Probable cause of the event. <b>probableCauseDescription</b> (STRING): Further description of the probable cause. <b>additionalInfo</b> (STRING): Additional information about this event.

<b>EMS Identifier</b>	mcc.config.auso.stEnabled
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when automatic unplanned switchover capability is enabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The state of Automatic Unplanned Switchover capability has been enabled.
<b>Parameters</b>	<b>alertId</b> (STRING): Identifier for this condition. <b>alertingResource</b> (STRING): Unique name of the resource responsible for this condition.

<b>EMS Identifier</b>	mcc.config.bootConfigNotRead
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the MetroCluster(tm) configuration cannot be read from persistent storage. This could be because the partner has active reservations on the disk, the root aggregate is not assimilated, or the configuration has not been performed on the system yet. The system will try to retrieve or set the configuration try to retrieve or set the configuration automatically later during boot.
<b>Corrective Action</b>	If the problem persists, contact NetApp technical support for assistance in resolving this issue.
<b>Syslog Message</b>	Configuration could not be read from persistent storage due to internal error %s. The system will try to retrieve or set the configuration automatically later, during boot.
<b>Parameters</b>	<b>error</b> (STRING): Actual error that caused configuration read to fail.

<b>EMS Identifier</b>	mcc.config.checkPartnerError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an error is found during a MetroCluster(tm) configuration check. The checks include partner operational status and valid disaster recovery (DR) group configurations.
<b>Corrective Action</b>	Make sure that all of the nodes are online and healthy by running the "cluster show" command and verifying that the "Health" and "Eligibility" fields displayed as true. Check the switch and controller configuration and make sure that all of the controllers in the DR group and HA/DR Interconnect ports are properly connected for DR group communication.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>partner_names</b> (STRING): List of disaster recovery partner names. <b>error</b> (STRING): Description of the error that occurred.

<b>EMS Identifier</b>	mcc.config.disableDrMirror
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when NVlog mirroring to the disaster recovery(DR) partners gets disabled persistently in a MetroCluster(tm) configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>reason</b> (STRING): Reason the disaster recovery (DR) NVlog mirroring is disabled persistently.

<b>EMS Identifier</b>	mcc.config.disableMirrorMem
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when NVlog mirroring to the disaster recovery(DR) partners gets disabled in a MetroCluster(tm) configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>reason</b> (STRING): Reason the DR NVlog mirroring is disabled in memory.

<b>EMS Identifier</b>	mcc.config.drPartner.mbxFail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node in a 2-node MetroCluster(tm) configuration fails to access it's DR partner's mailbox. This may impact automatic unplanned switchover.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Read of DR partner's mailbox failed with error (%d).
<b>Parameters</b>	<b>err</b> (INT): Error returned from mailbox access.

<b>EMS Identifier</b>	mcc.config.drPartner.mbxRead
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a node in 2-node MetroCluster(tm) configuration is successfully able to access it's DR partner's mailbox.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Read of DR partner's mailbox successful.
<b>Parameters</b>	

<b>EMS Identifier</b>	mcc.config.enableDrMirror
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when NVlog mirroring to the disaster recovery(DR) partners gets persistently enabled in a MetroCluster(tm) configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mcc.config.enableMirrorMem
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when NVlog mirroring to the disaster recovery(DR) partners gets enabled in a MetroCluster(tm) configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mcc.config.headswapComplete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when headswap update completes successfully on a node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mcc.config.headswapMsgSent
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a headswap HA message is successfully sent to a partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>role</b> (INT): Role of the node.

<b>EMS Identifier</b>	mcc.config.headswapNoNotify
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the MetroCluster(tm) node cannot communicate with one or more of its partners after a headswap. In a MetroCluster configuration, partners need to be informed of the old and new system ID of the local node through an HA message, so that they use the correct partner system ID during disaster recovery(DR) operations. Data ONTAP(R) takes appropriate recovery actions.
<b>Corrective Action</b>	Other than making sure that all of the partners are online, there is no explicit user intervention required; the node automatically retries the operation at regularly scheduled intervals (every 30 seconds).
<b>Syslog Message</b>	Local node system ID changed from %d to %d. Local node could not inform its HA or DR partner node of this change due to error %s.
<b>Parameters</b>	<b>old_system_id</b> (INT): Old system ID of the node. <b>new_system_id</b> (INT): New system ID of the node. <b>error</b> (STRING): Internal error description identifying the reason for the failure.

<b>EMS Identifier</b>	mcc.config.headswapPartnerEr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the partner returns a failure during a MetroCluster(tm) headswap configuration update. This can be due to configuration mismatches on the remote partner, disk ownership reassignment failure, or persistent storage write failure.
<b>Corrective Action</b>	This could potentially be because the partner that failed was not fully functional or was operating in a degraded state. Make sure that the partner is online by issuing the "metrocluster show" command. The partner configuration update will be retried at regular intervals automatically. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Partner %s failed to update configuration due to error %s.
<b>Parameters</b>	<b>partner</b> (STRING): Name of the partner node. <b>error</b> (STRING): Error description returned by the partner.

<b>EMS Identifier</b>	mcc.config.headswapRevert
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the receiver of a headswap HA message detects that the old head was brought back in before headswap processing completed. The receiver will undo any nvram id update it had processed earlier.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>old_sys_id</b> (INT): Old system id received from the HA message <b>new_sys_id</b> (INT): New system id received from the HA message

<b>EMS Identifier</b>	mcc.config.locHeadswapDetect
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a headswap is detected on the local node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>old_system_id</b> (INT): Old system ID of the node. <b>new_system_id</b> (INT): New system ID of the node.

<b>EMS Identifier</b>	mcc.config.restoreFailure
<b>Severity</b>	NOTICE
<b>Description</b>	Error returned while recovering the Configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	MetroCluster configuration was not restored from persistent source because of reason :%d.
<b>Parameters</b>	<b>err</b> (INT): Error returned while recovering the mailbox.

<b>EMS Identifier</b>	mcc.config.restoreSuccessful
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the MetroCluster(tm) configuration is successfully restored from an alternate persistent configuration source.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	MetroCluster configuration was successfully restored from persistent source %s.
<b>Parameters</b>	<b>source</b> (STRING): Source from which the MetroCluster configuration was retrieved.

<b>EMS Identifier</b>	mcc.config.selfNodeInvalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the local node UUID and the node UUID returned by the Connectivity, Liveness, Availability Monitor (CLAM) do not match. This is a configuration error and can result in failures during disaster recovery operations.
<b>Corrective Action</b>	Contact NetApp technical support for assistance.
<b>Syslog Message</b>	Configuration error: Local node UUID and the node UUID reported by CLAM do not match.
<b>Parameters</b>	<b>local_node_uuid</b> (STRING): Local node UUID. <b>clam_node_uuid</b> (STRING): Node UUID returned by the CLAM.

<b>EMS Identifier</b>	mcc.config.sysidNoNotify
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the local node is unable to notify its HA or DR partners of its system ID after a reboot.
<b>Corrective Action</b>	Verify that the HA or DR partner node is healthy and can be reached over the intercluster network.
<b>Syslog Message</b>	The node could not notify its nvram system id to partner %s. Error: %s.
<b>Parameters</b>	<b>partner</b> (STRING): Name of the partner node. <b>error</b> (STRING): Error description.

<b>EMS Identifier</b>	mcc.config.teardown
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message is generated whenever CTRL connections to MetroCluster(tm) partners are torn down.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>reason</b> (STRING): Reason for tearing down the CTRL connections.

<b>EMS Identifier</b>	mcc.config.update.role
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message is generated whenever the roles of CTRL connections to MetroCluster(tm) partners are updated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>reason</b> (STRING): Reason for updating the role of the CTRL connections.

<b>EMS Identifier</b>	mcc.ctlbe.IODelayed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	SCSI IO for RSM is delayed significantly in the iSCSI stack.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>lunId</b> (INT): The LUN ID. <b>cdb</b> (STRING): A string containing the opcode byte of the CDB. <b>delay</b> (INT): The delay in milliseconds experienced by this IO in the software iSCSI stack.

<b>EMS Identifier</b>	mcc.ctlbe.IOResponseDelayed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	SCSI IO for RSM is delayed significantly in the storage stack.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>lunId</b> (INT): The LUN ID. <b>cdb</b> (STRING): A string containing the opcode byte of the CDB. <b>delay</b> (INT): The delay in milliseconds experienced by this IO in the D-blade storage stack.

<b>EMS Identifier</b>	mcc.drdom.diskOwnerChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when disk ownership changes are made by the disaster recovery disk ownership manager (DRDOM).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(%d) disks belonging to DR partner (%ld) underwent ownership change due to (%s).
<b>Parameters</b>	<b>disk_count</b> (INT): Number of disks that underwent ownership change. <b>dr_partner_system_id</b> (LONGINT): System ID of the DR partner whose disks underwent ownership change. <b>reason</b> (STRING): Reason for the disk ownership change.

<b>EMS Identifier</b>	mcc.drdom.diskReserveFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when one or more disks fails a disk reservation request from the disaster recovery disk ownership manager (DRDOM).
<b>Corrective Action</b>	Make sure that none of the available DR partner disks are not in a failed or inconsistent state. Contact NetApp technical support if failed or misbehaving disks cannot be identified.
<b>Syslog Message</b>	%d/%d DR disks failed disk reservation request from DRDOM, %d local disks.
<b>Parameters</b>	<b>error_count</b> (INT): Number of disks that failed disk reservation. <b>disk_num</b> (INT): Number of disks that have DR ownership. <b>local_disks</b> (INT): Number of disks that have local ownership.

<b>EMS Identifier</b>	mcc.drdom.disksAssignFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disaster recovery disk ownership manager (DRDOM) fails to assign the ownership of one or more disks in the disk list enrolled in this operation to be reassigned.
<b>Corrective Action</b>	Contact NetApp technical support for assistance.
<b>Syslog Message</b>	DRDOM failed to assign the ownership of one or more disks in the disk list involved in disk ownership reassign request message during %s.
<b>Parameters</b>	<b>operation</b> (STRING): The MetroCluster(tm) DR operation that issued the "assign disks" request. <b>disks_in_request</b> (INT): Total number of disks for which the disk ownership change is requested. <b>disks_failed_request</b> (INT): Total number of disks for which the disk ownership change request failed. <b>error_code</b> (INT): Internal error code for the failure.

<b>EMS Identifier</b>	mcc.drdom.hsAssignFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the node fails to change disk ownership for disaster recovery (DR) partner disks after a headswap. This can occur if the node is in switchover or it has disks that are left behind from previous DR operations.
<b>Corrective Action</b>	Make sure that the DR partner disks with current-owner as local node are online and not in failed state or inconsistent state. Contact NetApp technical support if the failed or misbehaving disks cannot be identified.
<b>Syslog Message</b>	Node failed to change disk ownership for DR partner disks after a headswap.
<b>Parameters</b>	<b>disks_in_request</b> (INT): Total number of disks for which the disk ownership change is requested. <b>disks_failed_request</b> (INT): Total number of disks for which the disk ownership change request failed. <b>error_code</b> (INT): Internal error code for the failure.

<b>EMS Identifier</b>	mcc.drgroup.fetch.failed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when MCC DR group information cannot be retrieved from RDB tables.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Unable to fetch DR-group information from RDB, error: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason why RDB operation failed to fetch DR-group information.

<b>EMS Identifier</b>	mcc.drmsg.received
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a DR message is successfully received from a DR partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>version</b> (INT): Version of the DR message. <b>type</b> (STRING): Type of message sent. <b>request</b> (STRING): Type of request being sent. <b>seq_num</b> (LONGINT): Sequence number of the message. <b>recv_sysid</b> (LONGINT): System ID of receiving Node <b>sysid</b> (LONGINT): System ID of sending node. <b>recv_time</b> (LONGINT): Time when message was sent. <b>send_time</b> (LONGINT): Time when message was sent. <b>status</b> (STRING): Status of the DR message. <b>fsm_state</b> (STRING): FSM state of the responding node. <b>sb_reason</b> (STRING): SB reason if any specified. <b>dr_op_state</b> (INT): DR operation state of the responding node. <b>ha_fw_state</b> (STRING): HA firmware state of the responding node.

<b>EMS Identifier</b>	mcc.drmsg.sent
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a DR message is successfully sent to a partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>version</b> (INT): Version of the DR message. <b>type</b> (STRING): Type of message sent. <b>request</b> (STRING): Type of request being sent. <b>seq_num</b> (LONGINT): Sequence number of the message. <b>sysid</b> (LONGINT): System ID of sending Node. <b>send_time</b> (LONGINT): Time when message was sent.

<b>EMS Identifier</b>	mcc.drsom.disk.filter.fail
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when it cannot be determined whether a disk belongs to a root aggregate.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>op</b> (STRING): Operation during which this check failed. <b>status</b> (INT): Status of the check that failed.

<b>EMS Identifier</b>	mcc.drsom.disk.skipped
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when disaster recovery switchover manager determines that a disk needs to be skipped from an assign request.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>op</b> (STRING): Operation during which this check failed. <b>reason</b> (STRING): Reason why the disk was skipped.

<b>EMS Identifier</b>	mcc.drsom.fsm.execute
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the disaster recovery Switchover Monitor(DRSOM) FSM (Finite State Machine) starts processing an event.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	DRSOM FSM state is (%s) and it will process the event (%s). Whether this event will be processed for the DR auxiliary partner: (%s)
<b>Parameters</b>	<b>fsm_state</b> (STRING): Current state of the DRSOM FSM. <b>fsm_event</b> (STRING): Event to be processed by the DRSOM FSM. <b>DR_aux</b> (STRING): Indication of whether the event will be processed for the DR auxiliary partner.

<b>EMS Identifier</b>	mcc.drsom.fsm.invalid.state
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disaster recovery Switchover Monitor(DRSOM) FSM (Finite State Machine) reaches an invalid state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>prev_st</b> (STRING): Previous DRSOM FSM state. <b>st</b> (STRING): Current DRSOM FSM state.

<b>EMS Identifier</b>	mcc.drsom.fsm.invalidState
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unexpected disaster recovery Switchover Monitor(DRSOM) FSM (Finite State Machine) event is generated.
<b>Corrective Action</b>	This can happen in cases where a new DR operation was issued before the previous one could finish and it might require a forced-recovery operation. Contact NetApp technical support for assistance in resolving this issue.
<b>Syslog Message</b>	DRSOM FSM event (%s) generated in state (%s) will cause an invalid FSM state transition.
<b>Parameters</b>	<b>fsm_event</b> (STRING): DRSOM FSM event. <b>fsm_state</b> (STRING): DRSOM FSM state in which the event is generated.

<b>EMS Identifier</b>	mcc.drsom.fsm.sb.rec.pending
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the disaster recovery switchover monitor (DRSOM) transitions to a switchback recovery pending state.
<b>Corrective Action</b>	If this node is booting up for the first time after a disaster, no action is required. If not, please check the states of all the nodes and contact NetApp technical support if they are incorrect.
<b>Syslog Message</b>	This node has entered the Switchback Recovery Pending State.
<b>Parameters</b>	

<b>EMS Identifier</b>	mcc.drsom.fsmState.EarlySb
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the disaster recovery switchover monitor (DRSOM) recovers from unexpected error conditions by transitioning to perform an early switchback. An early switchback is performed in the following three cases: a node panics while processing a switchover; a node panics or reboots while retrying a switchover operation; or a node either encounters a subsystem failure, panics, or reboots while aborting a switchover operation. The switchover was reverted and the DRSOM state on all nodes is 'normal'.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mcc.drsom.mbxRecovery
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the disaster recover Switchover Monitor(DRSOM) FSM (Finite State Machine) state stored persistently in the mailbox is inconsistent with the DRC (DR Coordinator) and has been recovered.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	DRSOM FSM state stored in the mailbox is inconsistent with the DRC. It has been recovered and intialized to %s.
<b>Parameters</b>	<b>next_fsm_state</b> (STRING): State to which the DRSOM FSM will be initialized.

<b>EMS Identifier</b>	mcc.drsom.process.op.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the disaster recover Switchover Monitor(DRSOM) cannot perform the DR operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>op</b> (STRING): DR operation issued. <b>st</b> (STRING): Current FSM(Finite State Machine) state.

<b>EMS Identifier</b>	mcc.drsom.sbRecSt.change
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is a change in the disaster recovery Switchover Monitor(DRSOM) switchback recovery state.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Switchback recovery state changed from (%d) to (%d) due to (%s).
<b>Parameters</b>	<b>old_state</b> (INT): Previous switchback recovery state. <b>new_state</b> (INT): New switchback recovery state. <b>reason</b> (STRING): Reason for change of state.

<b>EMS Identifier</b>	mcc.drsom.sstbl.configErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during switchback processing, when the disaster recovery(DR) partner cannot be contacted to confirm that it is in a valid MetroCluster(tm) configuration state.
<b>Corrective Action</b>	Make sure that the DR partner is online and accessible by this node.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>partner</b> (STRING): Name of the failed partner.

<b>EMS Identifier</b>	mcc.drsom.sstbl.sanownCompEr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during switchback processing, when the disaster recover(DR) partner cannot be contacted to enable or suspend a sanown completion event.
<b>Corrective Action</b>	Make sure that the DR partner is online and accessible by this node.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>operation</b> (STRING): Disable or enable completion event. <b>partner</b> (STRING): Name of the failed partner.

<b>EMS Identifier</b>	mcc.drsom.sstblRunFailure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a particular subsystem cannot proceed with the disaster recovery (DR) operation.
<b>Corrective Action</b>	Refer to the subsystem-specific error that would have been logged before this message.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>dr_operation</b> (STRING): DR operation. <b>sub_system</b> (STRING): Name of the subsystem that encountered the failure.

<b>EMS Identifier</b>	mcc.hwassist.trap.AUSO
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a HW assist trap is received from the Service Processor of the DR-partner and is used to trigger an Automatic SwitchOver.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	HW assist trap of type=%s, severity=%s received for event=%s from sysid=%s.
<b>Parameters</b>	<b>type</b> (STRING): Type of event, such as system_down. <b>severity</b> (STRING): Severity of the event, such as alert. <b>event</b> (STRING): Specific event, such as power_loss. <b>sysid</b> (STRING): System-id of the node generating the event.

<b>EMS Identifier</b>	mcc.ic.process.node.adv
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the MetroCluster(tm) config module receives a node advertisement from any of its partners.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>sys_id</b> (LONGINT): System id of the node sending the advertisements. <b>is_local_node_assigned</b> (INT): Boolean specifying whether the local node has joined the cluster. <b>is_partner_assigned</b> (INT): Boolean specifying whether the node sending advertisements has joined the cluster.

<b>EMS Identifier</b>	mcc.kill.received
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the node is halting because it received a "kill" message from the disaster recovery (DR) partner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Node is halting because a kill message with reason %s has been received from the DR partner with system ID %ld.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for halting the node. <b>sender_sysid</b> (LONGINT): System ID of the sender.

<b>EMS Identifier</b>	mcc.lunmgr.lunid_alloc_failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when failing to allocate a CTL Target LUN ID to a target disk
<b>Corrective Action</b>	This indicates an internal error during the discovery of Target LUN devices.
<b>Syslog Message</b>	Device S/N %s - Failed to allocate a LUN ID
<b>Parameters</b>	<b>device_serial_number</b> (STRING): Device serial number

<b>EMS Identifier</b>	mcc.nso.abort.dump
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when dump/restore is aborted during a MetroCluster switch-over operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dump/restore operations were aborted because %s is in progress.
<b>Parameters</b>	<b>nso</b> (STRING): Describes whether a MetroCluster switch-over operation is progress.

<b>EMS Identifier</b>	mcc.nso.veto.repl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an MetroCluster(tm) switch-over is vetoed by a critical replication transfer (for example, volume move in the cutover phase).
<b>Corrective Action</b>	Either abort the replication transfer that is preventing the MetroCluster switch-over from being completed, retry the MetroCluster switch-over operation with the '-override-vetoes true' option, or wait for the transfer to finish.
<b>Syslog Message</b>	Could not complete switch-over because a replication transfer with UUID %s is in progress.
<b>Parameters</b>	<b>transferId</b> (STRING): UUID of the SnapMirror(R) replication transfer that vetoed MetroCluster switch-over.

<b>EMS Identifier</b>	mcc.sb.abort.dump
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when dump/restore is aborted during a MetroCluster switchback operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dump/restore operations were aborted because %s is in progress.
<b>Parameters</b>	<b>sb</b> (STRING): Describes whether a MetroCluster switchback operation is progress.

<b>EMS Identifier</b>	mcc.sb.veto.repl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an MetroCluster(tm) switchback is vetoed by a critical replication transfer (for example, volume move in the cutover phase).
<b>Corrective Action</b>	Either abort the replication transfer that is preventing the MetroCluster switchback from being completed, retry the MetroCluster switchback operation with the '-override-vetoes true' option, or wait for the transfer to finish.
<b>Syslog Message</b>	Could not complete switchback because a replication transfer with UUID %s is in progress.
<b>Parameters</b>	<b>transferId</b> (STRING): UUID of the SnapMirror(R) replication transfer that vetoed the MetroCluster switchback.

<b>EMS Identifier</b>	mcc.sbca.mdvNotAvailable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a MetroCluster (tm) system metadata volume that provides storage for the configuration replication services is not available.
<b>Corrective Action</b>	Contact technical support for assistance.
<b>Syslog Message</b>	A MetroCluster (tm) system metadata volume is not available in cluster %s.
<b>Parameters</b>	<b>Cluster</b> (STRING): Cluster attempting to use the volume.

<b>EMS Identifier</b>	mcc.so.nodeObjectLmt.chkFail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a MetroCluster(tm) switchover operation cannot be performed on this node because it is in the takeover state and one of the nodes in its disaster recovery(DR) group has the "node-object-limit" MetroCluster configuration option set to off.
<b>Corrective Action</b>	Use the "storage failover giveback" command to take this node out of takeover state.
<b>Syslog Message</b>	Switchover operation cannot be performed on this node because it is in the takeover state and one of the nodes in its DR group has the "node-object-limit" MetroCluster configuration option set to off.
<b>Parameters</b>	

<b>EMS Identifier</b>	mcc.switchover.mdvInNvfailedState
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a MetroCluster switchover operation finds a system metadata volume, used by config replication applications, in the nvfailed state.
<b>Corrective Action</b>	Verify the configuration.
<b>Syslog Message</b>	The 'in-nvfailed-state' was cleared on MetroCluster system metadata volume '%s'. The system will attempt to replicate all recent configuration updates (if any) to the local cluster. After the process completes, verify the configuration.
<b>Parameters</b>	<b>Volume</b> (STRING): Volume

<b>EMS Identifier</b>	mcc.toomany.vols.per.aggr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a volume is added to an aggregate in which the recommended maximum number of volumes for an aggregate in a MetroCluster setup is exceeded. An excessive number of volumes in a MetroCluster aggregate can result in high failover times, which may disrupt data availability from the affected node.
<b>Corrective Action</b>	Re-distribute the volumes among the aggregates to comply with the volume limit per aggregate in a MetroCluster setup. The number of volumes in an aggregate can be found by using the "aggregate show -fields volcount" command. Volumes can be moved between aggregates by using the "volume move start -vserver -volume -destination-aggregate " command.
<b>Syslog Message</b>	MetroCluster protected aggregate %s has volume count %d, which exceeds the recommended maximum %d.
<b>Parameters</b>	<b>aggregate</b> (STRING): Name of the aggregate. <b>current_volume</b> (INT): Current number of volumes on the aggregate. <b>volume_limit</b> (INT): Recommended maximum number of volumes per aggregate.

## "mct" Event Group

<b>EMS Identifier</b>	mct.channel.destroy
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Mirror Cache Transport layer destroys a communication channel between two nodes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Mirror Cache transport destroyed channel '%s'.
<b>Parameters</b>	<b>channel</b> (STRING): Name of the data channel.

## "mes\_dimm" Event Group

<b>EMS Identifier</b>	mes_dimm.error
<b>Severity</b>	ALERT
<b>Description</b>	This message appears when an error is encountered by MES (Memory Error Statistics).
<b>Corrective Action</b>	DIMM error reported. Please contact NetApp technical support for further assistance.
<b>Syslog Message</b>	DIMM error - %s.
<b>Parameters</b>	<b>error</b> (STRING): Error message from Data ONTAP.

## "mgmt" Event Group

<b>EMS Identifier</b>	mgmt.abi.abortCloneParent
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Auto Balance Aggregate initiates a move of a volume that was then changed to a FlexClone(R) parent.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The Auto Balance Aggregate initiated move of volume %s from aggregate %s to aggregate %s was aborted when the move job detected that the volume was now a FlexClone parent.
<b>Parameters</b>	<b>volume</b> (STRING): Name of the volume. <b>srcAggregate</b> (STRING): Name of the source aggregate. <b>dstAggregate</b> (STRING): Name of the destination aggregate.

<b>EMS Identifier</b>	mgmt.abi.abortMirrorMove
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Auto Balance Aggregate initiates a move of a volume that was then changed to be part of a SnapMirror(R) relationship".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The Auto Balance Aggregate initiated move of volume %s from aggregate %s to aggregate %s was aborted when the move job detected that the volume was now part of a SnapMirror relationship.
<b>Parameters</b>	<b>volume</b> (STRING): Name of the volume. <b>srcAggregate</b> (STRING): Name of the source aggregate. <b>dstAggregate</b> (STRING): Name of the destination aggregate.

<b>EMS Identifier</b>	mgmt.abi.move.unbalanced
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Auto Balance Aggregate is running in auto mode and identifies an aggregate in which the used space has exceeded the high-water mark. Auto Balance Aggregate attempts to trigger moves to lower the aggregate's usage below the threshold.
<b>Corrective Action</b>	Use the "volume move show" command to monitor active moves.
<b>Syslog Message</b>	Auto Balance Aggregate has detected that aggregate %s has exceeded the threshold of %jd. The aggregate currently shows a usage of %jd.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate. <b>usedSpace</b> (LONGINT): Aggregate's used space. <b>threshold</b> (LONGINT): Configured high-water mark.

<b>EMS Identifier</b>	mgmt.aba.moveVolume
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Auto Balance Aggregate identifies a volume that can be moved to alleviate a low-space condition with an aggregate. The move will be initiated by Auto Balance Aggregate and can be monitored by using the "volume move show" command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Auto Balance Aggregate is moving volume %s in Vserver %s from aggregate %s to aggregate %s. Upon completion of the move, the source aggregate is projected to be %d percent full and the destination aggregate is projected to be %d percent full.
<b>Parameters</b>	<b>volume</b> (STRING): Volume that will be moved. <b>vserver</b> (STRING): Vserver hosting the volume. <b>srcAggr</b> (STRING): Aggregate the volume will be moved from. <b>dstAggr</b> (STRING): Aggregate the volume will be moved to. <b>afterSourceSpace</b> (INT): Projected percentage of used space in the source aggregate after the move is performed. <b>afterDestSpace</b> (INT): Projected percentage of used space in the destination aggregate after the move is performed.

<b>EMS Identifier</b>	mgmt.aba.noMovableVols
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Auto Balance Aggregate identifies an aggregate that is unbalanced but cannot identify a volume to move from that aggregate. Some of the more common reasons this can occur for an aggregate are that its volumes are being heavily accessed, its volumes have been recently moved, or Auto Balance Aggregate cannot identify an aggregate to move to.
<b>Corrective Action</b>	Manually inspect the aggregate to determine whether any volumes can be moved.
<b>Syslog Message</b>	Auto Balance Aggregate could not find any volumes to move from aggregate %s. The aggregate's calculated space is %jd and the threshold is %jd.
<b>Parameters</b>	<b>aggregate</b> (STRING): Name of the aggregate. <b>usedSize</b> (LONGINT): Recorded used size. <b>threshold</b> (LONGINT): Configured threshold.

<b>EMS Identifier</b>	mgmt.aba.rcmd.unbalanced
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Auto Balance Aggregate is running in recommend mode and identifies an aggregate in which the used space has exceeded the high-water mark.
<b>Corrective Action</b>	Use the "volume move recommend show" command to see the list of recommended actions.
<b>Syslog Message</b>	Auto Balance Aggregate has detected that aggregate %s has exceeded the threshold of %jd. The aggregate currently shows a usage of %jd.
<b>Parameters</b>	<b>aggr</b> (STRING): Name of the aggregate. <b>usedSpace</b> (LONGINT): Aggregate's used space. <b>threshold</b> (LONGINT): Configured high-water mark.

<b>EMS Identifier</b>	mgmt.aba.recommendMove
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Auto Balance Aggregate identifies a volume that can be moved to alleviate a low-space condition with an aggregate. The move will not be initiated, but will be listed with other recommendations listed by running the "volume move recommend show" command.
<b>Corrective Action</b>	If desired, initiate the recommended move by using the "volume move start" command.
<b>Syslog Message</b>	Auto Balance Aggregate is recommending that volume %s in Vserver %s be moved from aggregate %s to aggregate %s. Upon completion of the move, the source aggregate is projected to be %d percent full and the destination aggregate is projected to be %d percent full.
<b>Parameters</b>	<b>volume</b> (STRING): Volume identified as a candidate to move. <b>vserver</b> (STRING): Vserver hosting the volume. <b>srcAggr</b> (STRING): Aggregate the volume should be moved from. <b>dstAggr</b> (STRING): Aggregate the volume should be moved to. <b>afterSourceSpace</b> (INT): Projected percentage of used space in the source aggregate if the move is performed. <b>afterDestSpace</b> (INT): Projected percentage of used space in the destination aggregate if the move is performed.

<b>EMS Identifier</b>	mgmt.abv.service.filling
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the percentage of data used on one or more data constituents in a storage service of a managed Infinite Volume exceeds the full watermark. Constituents that have exceeded the full watermark will receive no new content.
<b>Corrective Action</b>	Either increase the size of this Infinite Volume by entering the "volume modify -size" command, or enter the "autobalance volume start" command to equalize the percentage of data used across all data constituents within this storage service.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver that hosts the constituent. <b>storageService</b> (STRING): Storage service that holds the constituents. <b>fullCount</b> (INT): Number of constituents that are full. <b>totalCount</b> (INT): Total number of constituents within this storage service.

<b>EMS Identifier</b>	mgmt.abv.service.full
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the percentage of data used for all of the data constituents within an Infinite Volume's storage service have exceeded the Infinite Volume's full watermark. As a result, users cannot write any more data to this Infinite Volume that would be stored in this storage service by the create-time policy, and the post-ingest policy cannot move files to this storage service while all of its data constituents are in excess of the full watermark.
<b>Corrective Action</b>	This storage service requires more capacity. Either increase the size of one or more of its data constituents, or add one or more new data constituents to it. After adding more capacity, it is strongly recommended that you enter the "autobalance volume start" command to equalize the percentage of data used across all data constituents in this storage service.
<b>Syslog Message</b>	The percentage of data used for all of the data constituents within an Infinite Volume's storage service has exceeded the Infinite Volume's full watermark. Vserver: %s, storage service: %s.
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver that hosts these constituents. <b>storageService</b> (STRING): Storage service that holds the constituents.

<b>EMS Identifier</b>	mgmt.abv.volume.filling
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the percentage of data used on one or more data constituents in this Infinite Volume exceeds the full watermark. Constituents that have exceeded the full watermark will receive no new content.
<b>Corrective Action</b>	Either increase the size of this Infinite Volume by entering the "volume modify -size" command, or enter the "autobalance volume start" command to equalize the percentage of data used across all data constituents.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver that hosts the constituent. <b>fullCount</b> (INT): Number of full data constituents within this Infinite Volume. <b>totalCount</b> (INT): Total number of data constituents within this Infinite Volume.

<b>EMS Identifier</b>	mgmt.abv.volume.full
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when all of the data constituents within an Infinite Volume have exceeded the Infinite Volume's full watermark. Users cannot write any more data to this Infinite Volume.
<b>Corrective Action</b>	Expand this Infinite Volume by entering the "volume modify -size" command. After expanding the Infinite Volume, it is strongly recommended that you enter the "autobalance volume start" command to equalize the percentage of data used across all data constituents.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vserver</b> (STRING): Vserver that hosts the constituents.

<b>EMS Identifier</b>	mgmt.cifsserver.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a CIFS server fails to be configured and, therefore, CIFS access might not be available.
<b>Corrective Action</b>	Check the reason for the error and take action accordingly. For further assistance, contact technical support.
<b>Syslog Message</b>	Failed to configure CIFS server. Error: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the failure. <b>vservername</b> (STRING): Name of the vserver. <b>cifsservername</b> (STRING): Name of the cifs server.

<b>EMS Identifier</b>	mgmt.cifsserver.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a CIFS server is successfully configured after a failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vservername</b> (STRING): Name of the vserver. <b>cifsservername</b> (STRING): Name of the cifs server.

<b>EMS Identifier</b>	mgmt.cifsshare.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when configuration of a CIFS share fails; CIFS access to the share might not be available.
<b>Corrective Action</b>	Check the reason for the error and take action accordingly.
<b>Syslog Message</b>	Failed to configure CIFS share. Error: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the failure. <b>vservername</b> (STRING): Name of the vserver. <b>cifsservername</b> (STRING): Name of the cifs server. <b>cifssharename</b> (STRING): Name of the cifs share.

<b>EMS Identifier</b>	mgmt.cifsshare.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a CIFS share is successfully configured after a failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vservername</b> (STRING): Name of the vserver. <b>cifssharename</b> (STRING): Name of the cifs share.

<b>EMS Identifier</b>	mgmt.cifssuperuser.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when configuration of a CIFS super-user fails; CIFS access through this account may not grant full super-user privileges.
<b>Corrective Action</b>	Check the reason for the error and take action accordingly.
<b>Syslog Message</b>	Failed to configure CIFS superuser. Error: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the failure. <b>vservername</b> (STRING): Name of the vserver. <b>cifsservername</b> (STRING): Name of the cifs server. <b>cifsdomainname</b> (STRING): Name of the cifs domain. <b>accountname</b> (STRING): Name of the superuser account.

<b>EMS Identifier</b>	mgmt.cifssuperuser.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a CIFS super-user is successfully configured after a failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vservername</b> (STRING): Name of the vserver. <b>cifsservername</b> (STRING): Name of the cifs server. <b>cifsdomainname</b> (STRING): Name of the cifs domain. <b>accountname</b> (STRING): Name of the superuser account.

<b>EMS Identifier</b>	mgmt.cifssymlink.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when configuration of a CIFS symbolic link fails; the symbolic link might not be available through CIFS.
<b>Corrective Action</b>	Check the reason for the error and take action accordingly.
<b>Syslog Message</b>	Failed to configure CIFS symlink. Error: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the failure. <b>vservername</b> (STRING): Name of the vserver. <b>unix_path</b> (STRING): The UNIX path.

<b>EMS Identifier</b>	mgmt.cifssymlink.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a CIFS symbolic link is successfully configured after a failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vservername</b> (STRING): Name of the vserver. <b>unix_path</b> (STRING): The UNIX path.

<b>EMS Identifier</b>	mgmt.cr.constituent.added
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a constituent volume is added to the Infinite Volume.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Constituent volume "%s" has been added to Infinite Volume "%s" in Vserver "%s". Its size is %ld bytes.
<b>Parameters</b>	<b>constituentName</b> (STRING): Name of the added volume. <b>repositoryName</b> (STRING): Name of the Infinite Volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>size</b> (LONGINT): Size of the added volume.

<b>EMS Identifier</b>	mgmt.cr.constituent.deleted
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a constituent volume is deleted from the Infinite Volume.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Constituent volume "%s" has been deleted from the Infinite Volume "%s" in Vserver "%s".
<b>Parameters</b>	<b>constituentName</b> (STRING): Name of the deleted volume. <b>repositoryName</b> (STRING): Name of the Infinite Volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.cr.constituent.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an Infinite Volume operation that operates on the constituent volumes succeeds, but fails on an individual constituent.
<b>Corrective Action</b>	Fix the cause of the failure listed in the error, and then run the command again.
<b>Syslog Message</b>	Repository job "%s" run on Infinite Volume "%s" in Vserver "%s" failed for constituent volume "%s": %s
<b>Parameters</b>	<b>jobName</b> (STRING): Name of the repository job. <b>repositoryName</b> (STRING): Name of the Infinite Volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>constituentName</b> (STRING): Name of the constituent volume. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	mgmt.cr.constituent.resized
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an Infinite Volume constituent volume is resized.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Constituent volume "%s" of Infinite Volume "%s" in Vserver "%s" has been resized to %ld bytes.
<b>Parameters</b>	<b>constituentName</b> (STRING): Name of the resized volume. <b>repositoryName</b> (STRING): Name of the Infinite Volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>size</b> (LONGINT): New size of the volume.

<b>EMS Identifier</b>	mgmt.cr.job.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a repository job fails.
<b>Corrective Action</b>	Fix the cause of the failure, listed in the error, and run the command again.
<b>Syslog Message</b>	Repository job "%s" has failed for Infinite Volume "%s" in Vserver "%s": %s
<b>Parameters</b>	<b>jobName</b> (STRING): Name of the repository job. <b>repositoryName</b> (STRING): Name of the Infinite Volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	mgmt.cr.job.succeeded
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a repository job is completed successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Repository job "%s" has succeeded for Infinite Volume "%s" in Vserver "%s": %s
<b>Parameters</b>	<b>jobName</b> (STRING): Name of the repository job. <b>repositoryName</b> (STRING): Name of the Infinite Volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>reason</b> (STRING): Success message of the job.

<b>EMS Identifier</b>	mgmt.cr.missing.footprint
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) is attempting to create or expand an Infinite Volume and cannot retrieve volume footprint information about a volume. The footprint information for all volumes on aggregates used by an Infinite Volume, even those in other Vservers, must be known to safely create or expand an Infinite Volume.
<b>Corrective Action</b>	Ensure that the volume is healthy and online, and then retry the operation.
<b>Syslog Message</b>	Unable to get footprint information about volume "%s" in Vserver "%s".;
<b>Parameters</b>	<b>constituentName</b> (STRING): Name of the volume for which footprint information could not be retrieved. <b>vserverName</b> (STRING): Name of the Vserver the volume belongs to.

<b>EMS Identifier</b>	mgmt.exovol.transfer.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the replication engine fails to transfer exo-volume data.
<b>Corrective Action</b>	If problem persists, Contact NetApp technical support.
<b>Syslog Message</b>	The replication for volume dsid %jd, transfer-id %s failed to transfer %s exo-volume data, error: %d, failure reason: %s, extended failure reason: %s.
<b>Parameters</b>	<b>volDsid</b> (LONGINT): Data set identifier of the volume. <b>transferId</b> (STRING): Replication transfer id. <b>streamType</b> (STRING): Type of data being transferred. <b>error</b> (INT): Transfer failure error code. <b>failureReason</b> (STRING): Basic reason for the failure. <b>extendendFailureReason</b> (STRING): Detailed reason for the failure.

<b>EMS Identifier</b>	mgmt.exovol.xfer.dest.no.space
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is no free space left on the destination aggregate.
<b>Corrective Action</b>	Please increase the amount of free space available on the destination aggregate.
<b>Syslog Message</b>	The replication for volume dsid %jd, transfer-id %s failed to transfer %s exo-volume data because there is no free space left on the destination aggregate.
<b>Parameters</b>	<b>volDsid</b> (LONGINT): Data set identifier of the volume. <b>transferId</b> (STRING): Replication transfer id. <b>streamType</b> (STRING): Type of data being transferred.

<b>EMS Identifier</b>	mgmt.fpolicy.policy.disabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a Vserver administrator disables an FPolicy(R) policy. No subsequent client requests will be processed and no notifications will be sent to FPolicy servers attached with this policy.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FPolicy policy %s is disabled on Vserver %s.
<b>Parameters</b>	<b>polycyname</b> (STRING): Name of the policy. <b>vservername</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.fpolicy.policy.enabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a Vserver administrator enables an FPolicy(R) policy. Based on the event configuration, subsequent client requests will be processed, notifications will be generated, and notifications might be sent (based on the policy configuration) to FPolicy servers attached with this policy.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	FPolicy policy %s is enabled on Vserver %s.
<b>Parameters</b>	<b>polycyname</b> (STRING): Name of the policy. <b>vservername</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.fpolicy.priv.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the creation of privileged share ONTAP_ADMIN\$ fails. Attempted connections to ONTAP_ADMIN\$ share by the FPolicy servers will fail.
<b>Corrective Action</b>	Check the reason for failure and take action accordingly. If the problem persists, contact NetApp technical support for assistance.
<b>Syslog Message</b>	Failed to create privileged share ONTAP_ADMIN\$ for Vserver "%s". Reason: "%s".
<b>Parameters</b>	<b>vserverName</b> (STRING): Name of the Vserver. <b>reason</b> (STRING): Reason for failure.

<b>EMS Identifier</b>	mgmt.fpolicy.replay.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an FPolicy(R) configuration replication mechanism fails after a maximum number of retries.
<b>Corrective Action</b>	Restart the node or contact NetApp technical support for assistance.
<b>Syslog Message</b>	FPolicy configuration replication process failed.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmt.fsecurity.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when applying configuration of fsecurity fails.
<b>Corrective Action</b>	Wait for a while and reapply using the "vserver security file-directory apply" command. See the "vserver security file-directory" man pages for information, or if the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Failed to apply file security policy. Error: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the failure. <b>vservername</b> (STRING): Name of the vserver.

<b>EMS Identifier</b>	mgmt.fsecurity.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a file security policy was applied successfully after a previous failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vservername</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.keymgr.keyid.noDelete
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot delete the key ID associated with the encrypted aggregate from the key management server.
<b>Corrective Action</b>	Manually delete the key ID associated with the encrypted aggregate from the key management server.
<b>Syslog Message</b>	Encrypted aggregate "%s" with UUID "%s" has been deleted. The key ID "%s" was associated with this aggregate and must be manually deleted from the key management server.
<b>Parameters</b>	<b>name</b> (STRING): Aggregate name. <b>uuid</b> (STRING): Unique identifier of the aggregate when the aggregate name by itself is insufficient. <b>key_id</b> (STRING): Unique key ID used by the encrypted aggregate.

<b>EMS Identifier</b>	mgmt.mcc.fsecurity.config.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when MetroCluster(tm) switchback or switchover happens while applying a file security (fsecurity) policy on the MetroCluster partner. The policy was not applied to the partner.
<b>Corrective Action</b>	Reapply the policy by using the "vserver security file-directory apply" command. See the "vserver security file-directory" man pages for information. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Failed to apply file security policy "%s" on Vserver "%s".
<b>Parameters</b>	<b>policy</b> (STRING): Fsecurity policy name. <b>vservername</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.nfslisteners.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the listener for the NFS service is not configured. If the problem persists, NFS access is not available.
<b>Corrective Action</b>	This problem might be resolved by subsequent automatic retries of the NFS request. If NFS service is not available, check the NFS configuration of the service and the external services it uses. To verify NFS configuration of the service, use the "nfs server show -vserver [-fields ]" command. If the problem persists after you check the NFS configuration, delete the NFS Vserver, and then re-create it. See the NFS man page guide for information about deleting and re-creating the NFS Vserver, or contact NetApp technical support.
<b>Syslog Message</b>	Failed to configure NFS listener. Error: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Message provided by the NFS service when a listener configuration does not succeed.

<b>EMS Identifier</b>	mgmt.nfslisteners.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the listener for the NFS service is configured after a failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmt.nfsserver.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a NFS server fails to be configured and, therefore, NFS access might not be available.
<b>Corrective Action</b>	Check the reason for the error and take action accordingly. For further assistance, contact technical support.
<b>Syslog Message</b>	Failed to configure NFS server. Error: %s.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the failure. <b>vservername</b> (STRING): Name of the vserver.

<b>EMS Identifier</b>	mgmt.nfsserver.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a NFS server is successfully configured after a failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vservername</b> (STRING): Name of the nfs server.

<b>EMS Identifier</b>	mgmt.rst.fail.dst.compressed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SnapMirror(R) 'restore' command fails because compression is enabled on the destination volume.
<b>Corrective Action</b>	Force a cleanup of the failed operation by reissuing the 'restore' command with the parameter 'clean-up-failure', disable compression on the destination volume, create a Snapshot(tm) copy, and then reissue the 'restore' command.
<b>Syslog Message</b>	SnapMirror restore from source volume '%s' to destination volume '%s' failed with error: %s.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume for restore. <b>dstpath</b> (STRING): Path name of the destination volume for restore. <b>error</b> (STRING): Error message.

<b>EMS Identifier</b>	mgmt.sm.cant.clear.autolnit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation fails because the source volume is already protected with a SnapMirror relationship in the specified destination Vserver with the same policy, schedule, relationship type, destination volume prefix, and destination volume suffix and auto-initialize parameter set to true. The auto-initialize parameter cannot be cleared on a SnapMirror relationship once it is set to true.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Job ID %lld failed to disable auto-initialize for SnapMirror relationship on volume %s, destination vservers %s. This operation is not permitted.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID. <b>srcpath</b> (STRING): Path name of the source volume to be protected. <b>dstvserver</b> (STRING): Destination Vserver name.

<b>EMS Identifier</b>	mgmt.sm.cg.force.delete
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a sync granular consistency group relationship is being deleted with the force option. Consistency Group relationship will be deleted, however the items of the Consistency Group might not be made read-write or deletable after the operation.
<b>Corrective Action</b>	Perform a volume offline and online on the destination volume to trigger the cleanup of any remaining relationship information on the volume.
<b>Syslog Message</b>	Sync granular consistency group relationship with source path %s and destination path %s has been force deleted and items of the consistency group on the destination volume might not be read-write or deletable.
<b>Parameters</b>	<b>src_path</b> (STRING): Source path of the sync granular consistency group relationship that was force deleted. <b>dst_path</b> (STRING): Destination path of the sync granular consistency group relationship that was force deleted.

<b>EMS Identifier</b>	mgmt.sm.keymgr.not.setup
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation on an encrypted source volume fails because the Key Manager is not set up on the destination node. A SnapMirror relationship with the destination in the specified destination Vserver to protect the source volume will not be created until this condition is corrected.
<b>Corrective Action</b>	Set up the Key Manager by using the "security key-manager setup" command on the destination.
<b>Syslog Message</b>	SnapMirror protect of source volume "%s" failed to destination Vserver "%s" because the Key Manager was not set up on the destination cluster. Job ID: %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume to be protected. <b>dstvserver</b> (STRING): Destination Vserver name. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.sm.license.not.found
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation of a source volume fails because a required license on the destination cluster is missing. The error message contains the information about the missing license. A SnapMirror relationship with the destination in the specified destination Vserver to protect the source volume will not be created until this condition is corrected.
<b>Corrective Action</b>	Install the license that is missing on the destination cluster. The error message contains information about the missing license.
<b>Syslog Message</b>	SnapMirror protect of source volume "%s" failed to destination Vserver "%s" because there was a license missing on the destination cluster. Error: %s, Job ID: %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume to be protected. <b>dstvserver</b> (STRING): Destination Vserver name. <b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.sm.protect.internal.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation fails because of an unexpected internal error.
<b>Corrective Action</b>	Retry the command after some time. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	SnapMirror protect failed because of an unexpected internal error. Error: %s, Job ID: %llu.
<b>Parameters</b>	<b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.sm.rel.exists
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation fails because the source volume is already protected with a SnapMirror relationship in the specified destination Vserver with the same policy, schedule, relationship type, destination volume prefix, and destination volume suffix.
<b>Corrective Action</b>	If you want to protect the volume again, 1. Use a different destination volume suffix or destination volume prefix. 2. Use a different schedule or policy. 3. Use the "volume create" command to create a destination volume with a user defined name and then the "snapmirror create" command to create another SnapMirror relationship for the same source volume.
<b>Syslog Message</b>	SnapMirror protect operation of source volume "%s" failed to destination Vserver "%s" because the source volume is already protected with a SnapMirror relationship in the specified destination Vserver with the same policy, schedule, relationship type, destination volume prefix, and destination volume suffix. Error: %s, Job ID: %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume to be protected. <b>dstvserver</b> (STRING): Destination Vserver name. <b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.sm.restore.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SnapMirror(R) 'restore' command fails.
<b>Corrective Action</b>	To retry the restore, reissue the command. Alternatively, force a cleanup of the failed operation without starting another restore by including the parameter 'clean-up-failure' when reissuing the 'restore' command.
<b>Syslog Message</b>	SnapMirror restore from source volume '%s' to destination volume '%s' failed with error: %s.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume for restore. <b>dstpath</b> (STRING): Path name of the destination volume for restore. <b>error</b> (STRING): Error message.

<b>EMS Identifier</b>	mgmt.sm.schd.unavailable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a schedule is not available on the secondary site for configuration replication of a SnapMirror(R) relationship of -type Load Sharing (LS) in a MetroCluster(tm) configuration.
<b>Corrective Action</b>	Create a job schedule on the secondary site that is identical to that on the primary site by using the 'job schedule cron create' command.
<b>Syslog Message</b>	Configuration replication of SnapMirror relationship of -type Load Sharing for destination path "%s" has failed because the schedule "%s" is not available.
<b>Parameters</b>	<b>dstpath</b> (STRING): Destination path name of the SnapMirror relationship. <b>schd_name</b> (STRING): Name of the schedule that is unavailable on the secondary site.

<b>EMS Identifier</b>	mgmt.sm.src.vol.not.found
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation fails because the source volume was not found.
<b>Corrective Action</b>	Check whether the source path is correct, and then retry the operation with the correct path.
<b>Syslog Message</b>	SnapMirror protect of source volume "%s" failed to destination Vserver "%s" because the source volume was not found. Job ID: %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume to be protected. <b>dstvserver</b> (STRING): Destination Vserver name. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.sm.v2.upgrade.chk
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs after booting, when there is a Data Protection relationship created in a Data ONTAP(R) release prior to 8.2.
<b>Corrective Action</b>	Establish Vserver peering so that the system can convert the pre-8.2 relationships to 8.2 and later relationships. Vserver peering can only be established if both endpoints are running Data ONTAP 8.2 or later on all nodes in the cluster. To check whether the source cluster supports Data ONTAP 8.2 SnapMirror(R) relationships, run the "capability show -node * -capability volume.snapmirror_v2" command. If the capability is "true" on all nodes, create a Vserver peer relationship between the source and destination endpoint Vservers by issuing the "vserver peer create" command. If the capability is "false" on any node in the source cluster, upgrade and configure the source cluster by following instructions in the Upgrade and Revert/Downgrade Guide.
<b>Syslog Message</b>	SnapMirror relationships from a pre-8.2 installation are present on this cluster but no Vserver peer relationships were found between the source and destination Vservers.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmt.sm.vol.place.create.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation fails to find an aggregate with sufficient free space for a destination volume or fails to create the volume. A SnapMirror relationship with the destination in the specified destination Vserver to protect the source volume will not be created until this condition is corrected.
<b>Corrective Action</b>	Use the "vserver show -vserver -fields aggr-list" command to check whether there is a list of aggregates assigned to the destination Vserver. If there are aggregates listed, check the status of and the space left in the storage aggregates belonging to that Vserver. If there are no aggregates listed, then check the status of and the space left in all of the non-root, non-taken-over and non-SnapLock aggregates. To check whether storage aggregates are non-root, non-taken-over and non-SnapLock, run the "storage aggregate show -fields root, is-home, snaplock-type" command. To check the status of and the space left in a storage aggregate, run the "storage aggregate show -aggregate " command for a particular aggregate or "storage aggregate show" for all storage aggregates on the cluster. If storage aggregates are offline, use "storage aggregate online -aggregate " command to bring the storage aggregates online. If there is no space in the storage aggregates: 1) Use the "vserver add-aggregates -vserver -aggregates " command to add more storage aggregates to the destination Vserver. 2) If needed, use the "storage aggregate create -aggregate -diskcount -node " command to create new storage aggregates on available nodes. 3) Use the "storage aggregate add-disks -aggregate -diskcount " command to add space to the storage aggregate. Even if there is free space on storage aggregates, it is possible that the maximum number of volumes already exist on a node. If so, additional volumes cannot be created on that node. If this is the case, add more aggregate space on other nodes. You can determine the number of volumes on a node by using the "volume show -node " command. Note the entry count at the end of the show output. To check the overall status of the SnapMirror protect operation, use the "job show -instance" or "job history show -id -instance" commands. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	SnapMirror protect of source volume "%s" failed on destination Vserver "%s". Error: %s, Job ID: %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume to be protected. <b>dstvserver</b> (STRING): Destination Vserver name. <b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.sm.vol.style.unsupp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation fails because the source volume style is not supported. The SnapMirror protect command only supports FlexVol(R) volumes. FlexGroups, FlexGroup constituents, Infinite Volumes, and Infinite Volume constituents are not supported. Temporary volumes are also not supported.
<b>Corrective Action</b>	If you want to protect Infinite Volumes or FlexGroups, you must use the individual commands: 1. "volume create" of the destination volume 2. "snapmirror create" of the relationship 3. "snapmirror initialize" of the relationship Creating individual SnapMirror relationships on FlexGroup constituents or Infinite Volume constituents is not supported.
<b>Syslog Message</b>	SnapMirror protect of source volume "%s" failed because the volume is not a FlexVol volume. Job ID: %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume to be protected. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.sm.vsrs.not.peered
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) protect operation fails because either the source or destination Vservers do not exist or the source and destination Vservers are not peered. A SnapMirror relationship with the specified destination Vserver will not be created, and the source volume will not be protected, until this condition is corrected.
<b>Corrective Action</b>	Use the 'vserver show' and 'vserver peer' commands to verify that the source and destination Vservers exist and are named uniquely. Also make sure that the 'snapmirror protect' operation targets the intended Vservers. See the man pages of these commands for further information.
<b>Syslog Message</b>	SnapMirror protect operation of source volume "%s" failed because destination Vserver "%s" and source Vserver %s are not peered. Job ID: %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume to be protected. <b>srcvserver</b> (STRING): Source Vserver name. <b>dstvserver</b> (STRING): Destination Vserver name. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.snapmir.dst.invalidType
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the destination volume of a SnapMirror(R) relationship is not of -type Data Protection (DP) or Load Sharing (LS), and a 'snapmirror initialize' operation is attempted. A volume must be of -type DP or LS to accept a 'snapmirror initialize' operation.
<b>Corrective Action</b>	Use a different volume of -type DP or LS, or use the 'volume create' command to create a new volume of -type DP or LS to use as a destination of the SnapMirror relationship. You cannot modify the type of a volume using the 'volume modify' command.
<b>Syslog Message</b>	Destination volume '%s' of a SnapMirror relationship is not of -type DP or LS. Job ID %llu.
<b>Parameters</b>	<b>dstpath</b> (STRING): Path name of the destination volume of the SnapMirror relationship. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.snapmir.init.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror(R) 'initialize' or 'initialize-ls-set' command fails and no more retries will be attempted.
<b>Corrective Action</b>	Check the reason for the error, take action accordingly, and issue the command again.
<b>Syslog Message</b>	Initialize from source volume '%s' to destination volume(s) '%s' failed with error '%s'. Job ID %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume of the SnapMirror relationship. <b>dstpaths</b> (STRING): Path names of the destination volumes to which the initialize failed. <b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.snapmir.ls.catchup.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a catch-up update for a lagging member in a load-sharing set fails.
<b>Corrective Action</b>	Check the reason for the error and take action accordingly.
<b>Syslog Message</b>	Load-share catch-up update transfer from source volume '%s' to destination volume '%s' failed with error '%s'. Job ID %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume of the SnapMirror(R) relationship. <b>dstpath</b> (STRING): Path name of the destination volume to which the catch-up update transfer failed. <b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.snapmir.resync.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a SnapMirror(R) 'resync' command fails and no more retries will be attempted.
<b>Corrective Action</b>	Check the reason for the error, take action accordingly, and issue the command again.
<b>Syslog Message</b>	Resync from source volume '%s' to destination volume '%s' failed with error '%s'. Job ID %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume of the SnapMirror relationship. <b>dstpath</b> (STRING): Path name of the destination volume to which the resync failed. <b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.snapmir.schd.trans.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a scheduled SnapMirror(R) transfer fails and no automatic retry will be attempted until the next scheduled transfer.
<b>Corrective Action</b>	Check the reason for the error and take action accordingly.
<b>Syslog Message</b>	Scheduled transfer from source volume '%s' to destination volume(s) '%s' failed with error '%s'. Job ID %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume of the SnapMirror relationship. <b>dstpaths</b> (STRING): Path names of the destination volumes to which the scheduled transfer failed. <b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.snapmir.schd.trans.overrun
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a scheduled SnapMirror(R) transfer overruns the schedule window.
<b>Corrective Action</b>	Check the reason for the schedule overrun and take action accordingly.
<b>Syslog Message</b>	Scheduled transfer from source volume '%s' to destination volume(s) '%s' is taking longer than the schedule window. Job ID %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume of the SnapMirror relationship. <b>dstpaths</b> (STRING): Path names of the destination volumes of the scheduled transfer. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.snapmir.unexpected.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a SnapMirror operation encounters an unexpected error. JobID might be zero if the job ID could not be determined at the time the error was generated.
<b>Corrective Action</b>	If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	SnapMirror unexpected error '%s'. Job ID %llu.
<b>Parameters</b>	<b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.snapmir.update.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a SnapMirror(R) 'update' or 'update-ls-set' command fails and no more retries will be attempted.
<b>Corrective Action</b>	Check the reason for the error, take action accordingly, and issue the command again.
<b>Syslog Message</b>	Update from source volume '%s' to destination volume(s) '%s' failed with error '%s'. Job ID %llu.
<b>Parameters</b>	<b>srcpath</b> (STRING): Path name of the source volume of the SnapMirror relationship. <b>dstpaths</b> (STRING): Path names of the destination volumes to which the update failed. <b>error</b> (STRING): Error message. <b>jobID</b> (LONGINT): Job ID.

<b>EMS Identifier</b>	mgmt.vdr.fsecurity.cfg.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a "snapmirror break" operation is executed while a file security job is running and the previous "snapmirror update" operation only partially transfers the changes made to the file system by the file security job. This results in the policy being applied only partially to the partner; that is, ACLs on the files are applied partially.
<b>Corrective Action</b>	Verify that the file security job has been successfully applied on the Vserver DR partner by using the "job show" command on the source; it should display the "complete" status. Then resync the SnapMirror(R) relationship by using the "snapmirror resync -source-vserver -destination-vserver " command. Alternatively, you can break the SnapMirror relationship, and then reapply the job on the destination by using the "vserver security file-directory apply -vserver -policy-name " command. See the "vserver security file-directory" man pages for more information. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Failed to apply file security policy "%s" on Vserver "%s".
<b>Parameters</b>	<b>policy</b> (STRING): Fsecurity policy name. <b>vservername</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.cleanup.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system encounters an error trying to clean up after a failed 'volume move' operation.
<b>Corrective Action</b>	Contact NetApp technical support..
<b>Syslog Message</b>	'volume move' cleanup operation with job ID '%jd' failed in step (%s) with the error (%s) for volume '%s' in Vserver '%s'.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation. <b>step</b> (STRING): Phase during cleanup where the error occurred. <b>error</b> (STRING): Error recorded during the cleanup phase. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.del.staleLunMaps
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume delete' operation cannot delete LUN initiator group maps for the LUNs in the volume, resulting in stale LUN initiator group maps. Any attempt to delete these initiator groups that are mapped to nonexistent LUNs (provided that they are not mapped to any other LUNs) fails. 'lun mapped show -igroup ' does not list any maps, but 'igroup delete -igroup ' fails with an error, suggesting that the initiator group cannot be deleted because it is mapped to LUNs.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Could not delete LUN initiator group maps for the volume with MSID '%llu' on Vserver '%s'. Error: %s.
<b>Parameters</b>	<b>voidMsid</b> (LONGINT): Master data set ID of the volume being deleted. <b>vserver</b> (STRING): Vserver hosting the volume. <b>error</b> (STRING): Internal software error.

<b>EMS Identifier</b>	mgmt.vopl.fail.restart.nosvol
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a 'volume move' operation fails in the restart phase because the source volume is not found. The system repeatedly attempts the phase until the restart can be completed. In the time between the first failure and when the restart can be completed, there might be disruption to client traffic for the volume being moved.
<b>Corrective Action</b>	Verify that the job restart is completed by running the "volume move show -vserver -volume <volName>" command. If the restart phase continues to fail, contact NetApp technical support.
<b>Syslog Message</b>	'volume move' operation with job ID '%jd' for volume '%s' in Vserver '%s' failed in the restart phase when attempting to retrieve the source volume.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.fail.status.entry
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a 'volume move' operation fails to make an entry in the VLDB table for the 'volume move show' command. The system repeatedly attempts this operation until it exhausts the number of retries. Until an entry is made, the 'volume move show' command might return stale entries use 'job show -id' to show the status of the current volume move operation.
<b>Corrective Action</b>	Use the 'job show -id' command to show the status of the current 'volume move' operation. Retry the 'volume move' operation. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	The 'volume move' operation with ID '%jd' for volume name '%s' in Vserver '%s' failed while attempting to make an entry in the VLDB table for the 'volume move show' command. Use 'job show -id' command to show the current status of the job.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.fail.status.modify
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a 'volume move' operation fails to modify the VLDB table for the 'volume move show' command. The system repeatedly attempts this phase. Until the modification succeeds, the 'volume move show' command might return stale information about the current 'volume move' operation.
<b>Corrective Action</b>	If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	The 'volume move' operation for volume '%s' with job ID '%jd' in Vserver '%s' cannot modify an entry in the VLDB table.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the source volume. <b>jobId</b> (LONGINT): Job ID of the 'volume move' operation. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.made.status.entry
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'volume move' operation makes an entry for the 'volume move show' command because the entry did not exist in the VLDB table.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Use the 'volume move show -vserver %s -volume %s' command to show the status of this 'volume move' operation.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.badDstVol
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation cannot access the specified destination volume.
<b>Corrective Action</b>	Verify that the destination volume exists and is online.
<b>Syslog Message</b>	The move operation could not access the specified destination volume '%s'.
<b>Parameters</b>	<b>dstVol</b> (STRING): Name of the temporary destination volume for move operation.

<b>EMS Identifier</b>	mgmt.vopl.move.badSourceVol
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation cannot access the specified source volume.
<b>Corrective Action</b>	Verify that the source volume exists and is online.
<b>Syslog Message</b>	The move operation could not access the specified source volume '%s' in Vserver '%s' for job ID '%jd'.
<b>Parameters</b>	<b>srcVol</b> (STRING): Name of the volume to be moved. <b>vserverName</b> (STRING): Name of the Vserver. <b>jobID</b> (LONGINT): Job ID of the volume move operation.

<b>EMS Identifier</b>	mgmt.vopl.move.bytesLeft
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'volume move' operation is in data copy phase and we want to know the bytes left.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The 'volume move' operation for volume '%s' in Vserver '%s' and job ID '%jd' is in data copy phase. We want to know the number of bytes left to transfer.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job. <b>vserverName</b> (STRING): Name of the source Vserver. <b>jobID</b> (LONGINT): Job ID of the 'volume move' operation.

<b>EMS Identifier</b>	mgmt.vopl.move.cantCrtDstVol
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because the destination volume cannot be created.
<b>Corrective Action</b>	Check for space on the destination aggregate. Execute the "volume move" command with the "-perform-validation-only" parameter. If it succeeds, contact NetApp technical support. If it does not succeed, increase space on the destination aggregate, then try the "volume move" command again.
<b>Syslog Message</b>	Volume move job failed because destination volume "%s" could not be created.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the destination volume of the move.

<b>EMS Identifier</b>	mgmt.vopl.move.cantCrtSrcSnp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because creation of a Snapshot(tm) copy on the source volume failed.
<b>Corrective Action</b>	Use the "volume show" to check if the volume has enough space for the Snapshot copy. Use the "snapshot show" command to check if the number of Snapshot copies have reached the maximum count. If the issue persists, contact Contact NetApp technical support..
<b>Syslog Message</b>	Volume move job failed because creation of a Snapshot copy on source volume "%s" failed.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.cantDstCncl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the 'volume move' job cannot conclude a transfer on the destination volume.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	'volume move' job could not conclude a transfer on the destination volume '%s'.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the destination volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.cantReadCfg
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the 'volume move' job cannot read the configuration information.
<b>Corrective Action</b>	Check whether the replicated database is online.
<b>Syslog Message</b>	The job configuration information for 'volume move' operation with job ID '%jd' could not be read.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation.

<b>EMS Identifier</b>	mgmt.vopl.move.cantSaveToRdb
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the 'volume move' job cannot save information to the replicated database. The 'volume move' job attempts to retry the operation.
<b>Corrective Action</b>	The "volume move" job is retried automatically. Check the status of database with "cluster ring show" advanced command. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	The volume move job '%jd' for volume '%s' in Vserver '%s' could not save the information to the replicated database.
<b>Parameters</b>	<b>jobID</b> (LONGINT): ID of the 'volume move' job. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.cantSrcCncld
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the 'volume move' job cannot conclude a transfer on the source volume.
<b>Corrective Action</b>	Verify that the source volume exists, is readable, and is not currently locked exclusively by another process. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	'volume move' job could not conclude the transfer on the source volume '%s'.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.ClnupFldDIVol
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a cleanup operation cannot delete the destination volume after a 'volume move' job fails.
<b>Corrective Action</b>	Delete the destination volume by using the 'volume delete' command.
<b>Syslog Message</b>	Could not delete destination volume '%s' following a failed 'volume move'.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the destination volume that could not be deleted.

<b>EMS Identifier</b>	mgmt.vopl.move.cntRdDstDAttr
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the 'volume move' job cannot read the attributes of the destination volume from disk. The 'volume move' job attempts to retry the operation.
<b>Corrective Action</b>	Use the 'volume move show' command to get the status of the current move operation. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	The 'volume move' job could not fetch attributes of destination volume '%s' from the disk.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the destination volume involved in the move operation.

<b>EMS Identifier</b>	mgmt.vopl.move.cntRdPostCutoverSrcDAttr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation cannot access the specified source volume after cutover to propagate final volume attributes. The attributes were set to values that were either obtained immediately before the cutover occurred, or were set to default values.
<b>Corrective Action</b>	Verify that the attributes on the destination volume are correct. Specifically, check the value for the attribute "filesys-size-fixed".
<b>Syslog Message</b>	The move operation could not read post-cutover attributes from the specified temporary source volume '%s' in Vserver '%s' for job ID '%jd'.
<b>Parameters</b>	<b>dstVol</b> (STRING): Name of the temporary source volume for the move operation. <b>vserverName</b> (STRING): Name of the Vserver. <b>jobID</b> (LONGINT): Job ID of the volume move operation.

<b>EMS Identifier</b>	mgmt.vopl.move.cntRdSrcDAttr
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the volume move operation cannot read the attributes of the source volume from disk. The volume move operation will attempt to retry the operation.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The volume move operation could not fetch the attributes of source volume '%s' from the disk.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume involved in the move operation.

<b>EMS Identifier</b>	mgmt.vopl.move.cut.entryFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move operation cannot enter the cutover phase. The original source volume is functional. After a short delay, the volume move operation will reattempt cutover entry.
<b>Corrective Action</b>	If the problem persists, reduce client traffic on the volume being moved and reduce the general load on the destination node.
<b>Syslog Message</b>	The volume move operation of volume '%s' in Vserver '%s' to destination aggregate '%s' did not enter the cutover phase. The system provided the additional explanation: '%s'. After a short delay, the volume move operation will reattempt cutover entry. The job ID for the volume move job is '%jd'.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>aggrName</b> (STRING): Name of the destination aggregate. <b>reasonforFailure</b> (STRING): Reason for the failure. <b>jobID</b> (LONGINT): Job ID of the volume move operation.

<b>EMS Identifier</b>	mgmt.vopl.move.cutover.deferred
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the volume move job cannot be completed because the cutover phase has been deferred.
<b>Corrective Action</b>	Address the reason for the cutover deferral, and then use the 'volume move trigger-cutover' command to reattempt the cutover phase for this volume move operation.
<b>Syslog Message</b>	Cutover phase has been deferred for the volume move operation with ID '%jd' on volume '%s' on Vserver '%s' to destination aggregate '%s', because of '%s'. Space savings from efficiency could be lost.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the volume move operation. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>aggrName</b> (STRING): Name of the destination aggregate. <b>reasonforDefer</b> (STRING): Reason for deferred cutover.

<b>EMS Identifier</b>	mgmt.vopl.move.cutover.deferred.wait
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the volume move job cannot be completed because the cutover phase has been deferred due to the user specifying the cutover action as 'wait'.
<b>Corrective Action</b>	Use the 'volume move trigger-cutover' command to attempt the cutover phase for this volume move operation.
<b>Syslog Message</b>	Cutover phase has been deferred for the volume move operation with ID '%jd' on volume '%s' on Vserver '%s' to destination aggregate '%s', because of '%s'. Space savings from efficiency could be lost.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the volume move operation. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>aggrName</b> (STRING): Name of the destination aggregate. <b>reasonforDefer</b> (STRING): Reason for the deferred cutover.

<b>EMS Identifier</b>	mgmt.vopl.move.cutover.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job attempts to cut over and is unsuccessful. The system continues to retry the operation until it exhausts the number of cutover attempts allowed.
<b>Corrective Action</b>	Reduce client traffic on the volume, that is scheduled to be moved.
<b>Syslog Message</b>	The volume move operation with ID '%jd' on volume '%s' on Vserver '%s' to destination aggregate '%s' did not cut over because: '%s'. The volume move operation has tried to cut over '%d' out of '%d' times, %d forced.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the volume move operation. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>aggrName</b> (STRING): Name of the aggregate. <b>reasonforFailure</b> (STRING): Reason for cutover failure. <b>actualcutoverAttempt</b> (INT): Number of actual cutover attempts made. <b>cutoverAttempt</b> (INT): Number of cutover attempts. <b>forcedCutoverAttempt</b> (INT): Number of forced cutover attempts.

<b>EMS Identifier</b>	mgmt.vopl.move.cutoverMod
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'volume move' operation is in cutover and one of the modifiable parameters used by the 'move' job has been modified with the 'volume move modify' command. These modified values will be used for next cutover attempt.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The 'volume move' operation with job ID '%jd' for volume '%s' in Vserver '%s' is performing a cutover. Values modified with the 'volume move modify' command will not be used until the next cutover attempt.
<b>Parameters</b>	<b>jobId</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.done
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the volume move job succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The volume move job with ID '%jd' on volume '%s' on Vserver '%s' to destination aggregate '%s' succeeded.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the volume move operation. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>aggrName</b> (STRING): Name of the destination aggregate.

<b>EMS Identifier</b>	mgmt.vopl.move.dstPrepareFId
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because the destination volume cannot be prepared for a transfer.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because the destination volume '%s' could not be prepared for a transfer.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the destination volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.findSnpDltFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because the call to calculate the delta between a Snapshot(tm) copy and the active file system failed.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because the call to calculate the delta between a Snapshot copy and the active file system on the source volume '%s' failed.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.getNextSnapFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the 'volume move' job cannot look up the Snapshot(tm) copy next in age to the currently referenced Snapshot copy. The 'volume move' job attempts to retry the operation.
<b>Corrective Action</b>	Use the 'volume move show' command to get the status of the current move operation. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	The 'volume move' job could not to look up the Snapshot copy next in age to the currently referenced Snapshot copy on the source volume '%s'.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume involved in the move operation.

<b>EMS Identifier</b>	mgmt.vopl.move.gtDstSSLstFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because a Snapshot(tm) copy list cannot be obtained from the destination volume.
<b>Corrective Action</b>	Check whether the destination volume is online. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because a Snapshot copy list could not be obtained from the destination volume '%s'.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the destination volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.gtSnpTgSrcFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because a Snapshot(tm) copy tag cannot be read from the source volume.
<b>Corrective Action</b>	Check whether the source volume is online. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because a Snapshot copy tag could not be read from the source volume '%s'.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.gtSrcSSLstFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because a Snapshot(tm) copy list cannot be obtained from the source volume.
<b>Corrective Action</b>	Check whether the source volume is online. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because a Snapshot copy list could not be obtained from the source volume '%s'.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.gtSSTgsDstFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because the Snapshot(tm) copy tags on the destination volume cannot be read.
<b>Corrective Action</b>	Retry the volume move job. If the problem persists, this indicates a system level problem. Contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because Snapshot copy tags on the destination volume '%s' in vserver '%s' for the volume move of source volume '%s' in vserver '%s' could not be read.
<b>Parameters</b>	<b>dstVol</b> (STRING): Name of the destination volume of the move job. <b>srcVol</b> (STRING): Name of the source volume of the move job. <b>dstVserverName</b> (STRING): Name of destination vserver. <b>srcVserverName</b> (STRING): Name of source vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.has.clones
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation finishes moving the volume to the destination aggregate but cannot delete the original volume instance on the source aggregate. This is because the original volume instance has volume clones.
<b>Corrective Action</b>	The system usually reaps these types of volume after all clones have been deleted or split automatically. If space occupied by source needs to be freed immediately, then delete the original volume instance using the 'volume delete' command after all the volume clones have been deleted or split.
<b>Syslog Message</b>	The 'volume move' operation with ID '%jd' could not delete the original volume %s in Vserver %s on %s aggregate following a successful volume move because the original volume instance has volume clones.
<b>Parameters</b>	<b>jobId</b> (LONGINT): Job ID of the volume move operation. <b>volName</b> (STRING): Name of the volume instance that could not be deleted. <b>vserverName</b> (STRING): Name of the volume's Vserver. <b>aggrName</b> (STRING): Name of the source aggregate.

<b>EMS Identifier</b>	mgmt.vopl.move.invlDXfrState
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because a transfer is in an invalid state.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Volume move job with job ID '%jd' for volume '%s' in Vserver '%s' failed because a transfer was in an invalid state.
<b>Parameters</b>	<b>jobID</b> (LONGINT): ID of the 'volume move' job. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.jobIgnoreQuit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume move job fails to stop when you issue a 'volume move abort' or 'job stop' command. If the command is not repeated, the volume move job might continue to run to completion.
<b>Corrective Action</b>	Retry the 'volume move abort' or 'job stop' command before the volume move job is complete.
<b>Syslog Message</b>	Volume move job '%jd' for volume '%s' in Vserver '%s' could not be stopped at this time. Retry the 'volume move abort' or 'job stop' command.
<b>Parameters</b>	<b>jobID</b> (LONGINT): ID of the volume move job. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.jobQuit
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a 'volume move' job is not completed because a 'volume move abort' or 'job stop' command was issued.
<b>Corrective Action</b>	Verify the status of the move job through the 'volume move show' command.
<b>Syslog Message</b>	'volume move' job with ID '%jd' for volume '%s' in Vserver '%s' was not completed because a 'volume move abort' or 'job stop' command was issued.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.last.upd.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation fails to update attributes on the destination volume after the cutover has been completed.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	'volume move' operation with job ID '%jd' for volume '%s' in Vserver '%s' failed to update the attributes on the destination volume after the cutover has been completed.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.mark.source.reapable.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation finishes moving the volume to the destination aggregate but cannot mark the original volume instance on the source aggregate for deletion. The original volume instance cannot be deleted immediately because it has volume clones.
<b>Corrective Action</b>	Delete the original volume instance using the 'volume delete' command after all the volume clones have been deleted or split.
<b>Syslog Message</b>	The 'volume move' operation with ID '%jd' could not mark the Volume %s containing volume clones in Vserver %s on %s aggregate for later deletion after a successful volume move.
<b>Parameters</b>	<b>jobId</b> (LONGINT): Job ID of the volume move operation. <b>volName</b> (STRING): Name of the volume instance that could not be marked for later deletion. <b>vserverName</b> (STRING): Name of the volume's Vserver. <b>aggrName</b> (STRING): Name of the destination aggregate.

<b>EMS Identifier</b>	mgmt.vopl.move.memAllocFId
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the 'volume move' job cannot allocate memory. The 'volume move' job attempts to retry the operation.
<b>Corrective Action</b>	Use the 'volume move show' command to get the status of the current move operation. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	The 'volume move' job ID '%jd' for volume '%s' in Vserver '%s' could not allocate memory.
<b>Parameters</b>	<b>jobId</b> (LONGINT): ID of the 'volume move' job. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.moveModlgr
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when modifiable parameters of the 'move' job have been modified by 'volume move modify' command, but the 'volume move' operation finished with older values and did not use the newly modified values.
<b>Corrective Action</b>	Use 'volume move show' command to verify the parameters used during cutover phase and the final state of the volume move operation.
<b>Syslog Message</b>	The 'volume move' operation with job ID '%jd' for volume '%s' in Vserver '%s' has completed. Parameters modified during last cutover attempt through 'volume move modify' command have been ignored or 'volume move' operation failed on job restart before refreshing parameters from the VLDB.
<b>Parameters</b>	<b>jobId</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.nosnapspace
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation fails to create a Snapshot(tm) copy on source volume because the number of Snapshot copies in the volume exceeds the maximum limit or there is insufficient disk space in the volume.
<b>Corrective Action</b>	Make sure that the Snapshot copy limit is not reached for the volume. The current Data ONTAP version allows a maximum of 255 Snapshot copies per volume. If required, delete old Snapshot copies of the volumes on the aggregate by running the 'volume snapshot delete' command.
<b>Syslog Message</b>	The 'volume move' operation with job ID '%jd' for volume '%s' present on Vserver '%s' cannot proceed (Reason: Cannot create a Snapshot copy on the volume).
<b>Parameters</b>	<b>jobId</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.nospace
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is not enough space on the volume or aggregate for a 'volume move' operation to proceed. It could be on the source or the destination node.
<b>Corrective Action</b>	Reduce the amount of used space on the volume or aggregate, or increase the size of the volume or aggregate. To increase the size of the volume, run the 'volume modify' command. To create space on an aggregate, take one of the following actions: a. To free up more space on a volume, delete old Snapshot(tm) copies of the volumes on the aggregate by running the 'volume snapshot delete' command. b. To increase the size of a volume or an aggregate, add disks to the aggregate by running the 'storage aggregate add-disks' command.
<b>Syslog Message</b>	The 'volume move' operation with ID '%jd' for volume '%s' present on Vserver '%s' cannot proceed (Reason: Not enough space in the volume or aggregate).
<b>Parameters</b>	<b>jobId</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.parent.online
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a "volume move" operation fails to take offline the quiesced volume remaining after moving a clone parent, because wafiron is running.
<b>Corrective Action</b>	No action is required, because the system removes the quiesced clone parent automatically. To free some of the resources used by the volume, you can manually take it offline by using the "volume offline" command after the wafiron operation has completed.
<b>Syslog Message</b>	The "volume move" operation for the volume %s on vserver %s with job-id %jd could not offline the quiesced clone parent volume left behind.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>jobId</b> (LONGINT): Job ID of the "volume move" operation.

<b>EMS Identifier</b>	mgmt.vopl.move.queryDstFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because a query of the destination for transfer status failed.
<b>Corrective Action</b>	Its a system level problem. Contact Contact NetApp technical support. for further investigation.
<b>Syslog Message</b>	Volume move job failed because a query for transfer status of the destination volume '%s' in vserver '%s' failed.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the destination volume of the move job. <b>vserverName</b> (STRING): Name of destination vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.querySrcFld
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the 'volume move' job cannot be completed because a query of the source for transfer status failed. The 'volume move' job attempts to retry the operation.
<b>Corrective Action</b>	Use the 'volume move show' command to get the status of the move operation. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	The 'volume move' job could not query the source '%s' for transfer status.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume involved in the move operation.

<b>EMS Identifier</b>	mgmt.vopl.move.refVldbFld
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a 'volume move' operation fails to refresh modifiable parameters used by the 'move' job from the Volume Location Database (VLDB). Volume move operation will use current parameters until a refresh attempt succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The 'volume move' operation with job ID '%jd' for volume '%s' in Vserver '%s' could not refresh the modifiable parameters used by the 'move' job from the VLDB. Volume move operation will use current parameters until a refresh attempt succeeds.
<b>Parameters</b>	<b>jobId</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.restart.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume move job encounters conditions that prevent it from restarting; for example, required Snapshot(tm) copies have been deleted. This might result in loss of client access to the volume, stale temporary volumes and stale metadata.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Volume move job ID '%jd' could not restart correctly and might have left a stale temporary volume and stale persistent volume move data. Client access to the data stored on the source volume might be blocked. Reason: %s, error %d. Move job was started for volume '%s' in Vserver '%s'.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the volume move job. <b>reason</b> (STRING): Reason for restart failure. <b>error</b> (INT): Error code for the restart failure. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.snpNtDeletd
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation cannot delete a reference Snapshot(tm) copy created by the move job.
<b>Corrective Action</b>	Use the 'snapshot show' command to verify that the Snapshot copy exists and is not locked by another process. Use the 'snapshot delete' command to delete the Snapshot copy manually.
<b>Syslog Message</b>	Snapshot copy for 'volume move' job ID %jd could not be deleted: name: %s; Vserver ID: %d; volume name: %s.
<b>Parameters</b>	<b>jobId</b> (LONGINT): ID of the volume move job. <b>snapName</b> (STRING): Name of the Snapshot copy. <b>vserverId</b> (INT): Destination Vserver ID. <b>volName</b> (STRING): Name of the parent volume of the Snapshot copy.

<b>EMS Identifier</b>	mgmt.vopl.move.source.cleanup.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation finishes moving the volume to the destination aggregate but cannot delete the original volume instance on the source aggregate.
<b>Corrective Action</b>	Delete the original volume instance using the 'volume delete' command after offlining the volume.
<b>Syslog Message</b>	The 'volume move' operation with ID '%jd' could not delete the Volume %s in Vserver %s on %s aggregate after a successful volume move.
<b>Parameters</b>	<b>jobId</b> (LONGINT): Job ID of the volume move operation. <b>volName</b> (STRING): Name of the volume instance that could not be deleted <b>vserverName</b> (STRING): Name of the volume's Vserver. <b>aggrName</b> (STRING): Name of the destination aggregate.

<b>EMS Identifier</b>	mgmt.vopl.move.srcVAttrGtFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because the Volume Location Database (VLDB) attributes for the source volume cannot be read.
<b>Corrective Action</b>	To check whether the VLDB process is up and running, run the (privilege: advanced) "cluster ring show -unitname vldb" command. Contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because the VLDB attributes for source volume "%s" could not be read.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.srcVolInconst
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because the source volume is inconsistent.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because the source volume '%s' is inconsistent.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.srcVolOffln
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because the source volume is offline.
<b>Corrective Action</b>	Bring the source volume online and retry the move job.
<b>Syslog Message</b>	Volume move job failed because the source volume '%s' is offline.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move.

<b>EMS Identifier</b>	mgmt.vopl.move.srcVolRstrctd
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because the source volume is restricted.
<b>Corrective Action</b>	If the source volume is of type DP and a "snapmirror initialize" operation is running on it, wait for the operation to finish, then retry "volume move" operation. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because the source volume "%s" is restricted.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the source volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.srcVolTemp
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a 'volume move' operation cannot start because the source volume is marked as temporary.
<b>Corrective Action</b>	Verify that the source volume exists.
<b>Syslog Message</b>	'volume move' operation with job ID '%jd' for source volume name '%s' and Vserver name '%s' failed because the source volume is marked as temporary.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.stSnptgDstFld
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because a Snapshot(tm) copy tag cannot be written to the destination volume.
<b>Corrective Action</b>	Check whether the destination volume is online. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Volume move job failed because a Snapshot copy tag could not be written to the destination volume '%s'.
<b>Parameters</b>	<b>volpath</b> (STRING): Name of the destination volume of the move job.

<b>EMS Identifier</b>	mgmt.vopl.move.voplIntrnlErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the volume move job cannot be completed because of an internal error in the Volume Operations Library used by the job management code.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Volume move job ID '%jd' for volume '%s' in Vserver '%s' failed because of an internal error in Volume Operations Library used by the job management code.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.move.XferNotFound
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the 'volume move' job cannot find the specified transfer.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Transfer not found for 'volume move' job with '%jd' for volume '%s' in Vserver '%s'.
<b>Parameters</b>	<b>jobID</b> (LONGINT): ID of the 'volume move' job. <b>volName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmt.vopl.rehost.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume rehost job attempts to rehost a volume from one Vserver to another and is unsuccessful. This might happen if the target volume is being accessed by some other Data ONTAP(R) operations (for example, volume move); if the target volume is in a relationship, such as a SnapMirror DP relationship; or if the aggregate hosting the volume is undergoing a wafiron process. The system makes its best effort to revert the rehost procedure and make the volume available under the source Vserver. Subsequent attempts to rehost this volume might be successful; if the volume rehost revert procedure still fails, use the command "debug vreport" to fix volume discrepancies.
<b>Corrective Action</b>	Follow the instructions provided as part of the volume rehost error and retry the operation after some time. If the volume rehost revert procedure fails and there are volume discrepancies, use command "debug vreport" in diagnostic mode to fix volume discrepancies.
<b>Syslog Message</b>	The volume rehost operation on volume '%s [%s]' on Vserver '%s' to destination Vserver '%s' by administrator '%s' failed with reason: '%s'. The volume rehost operation can be retried after sometime.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the target volume. <b>volUuid</b> (STRING): Target volume UUID. <b>vserverName</b> (STRING): Name of the source Vserver. <b>destinationVserverName</b> (STRING): Name of the destination Vserver. <b>adminName</b> (STRING): Name of the administrator attempting the volume rehost operation. <b>reasonforFailure</b> (STRING): Reason for volume rehost failure.

<b>EMS Identifier</b>	mgmt.vopl.rehost.succeeded
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a volume rehost job is successful in rehosting a volume from one Vserver to another.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The volume rehost operation on volume '%s [%s]' on Vserver '%s' to destination Vserver '%s' by administrator '%s' is successful.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the target volume. <b>volUuid</b> (STRING): Target volume UUID. <b>vserverName</b> (STRING): Name of the source Vserver. <b>destinationVserverName</b> (STRING): Name of the destination Vserver. <b>adminName</b> (STRING): Name of the administrator attempting the volume rehost operation.

<b>EMS Identifier</b>	mgmt.vopl.rstart.fail.jstate
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a volume move operation encounters an error during the restart phase because it cannot retrieve the state information from the job manager. The system repeatedly attempts the restart process until it can be completed.
<b>Corrective Action</b>	Verify that the restart phase is completed by running the "volume move show -vserver -volume <volName>" command. If the restart phase continues to fail, contact NetApp technical support.
<b>Syslog Message</b>	volume move operation with job ID '%jd' for volume '%s' in Vserver '%s' encountered an error in the restart phase when attempting to retrieve the job state information.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the volume move operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.rstart.retry.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an attempt to restart an interrupted 'volume move' operation repeatedly encounters an error and cannot proceed any further. The 'volume move' job will transition to a failed state without cleanup being attempted.
<b>Corrective Action</b>	Check the job status for the ID listed in the event message, and look for errors involving the source and destination nodes and aggregates, and then contact NetApp technical support.
<b>Syslog Message</b>	The attempt to restart the 'volume move' operation with job ID '%jd' for volume '%s' in Vserver '%s' failed.
<b>Parameters</b>	<b>jobID</b> (LONGINT): Job ID of the 'volume move' operation. <b>volName</b> (STRING): Name of the source volume. <b>vserverName</b> (STRING): Name of the source Vserver.

<b>EMS Identifier</b>	mgmt.vopl.vmsi.fail.no.entry
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a "volume move" operation cannot update the VLDB table, because the system cannot find any record of the operation within the table. This failure prevents the operation from being displayed in by the "volume move show" command.
<b>Corrective Action</b>	Use the "job show -id" command to display the current status of the "volume move" operation.
<b>Syslog Message</b>	The "volume move" operation for the volume %s with job-id %jd could not modify the entry in the VLDB table for the "volume move show" command. Use the "job show -id" command to track the status of this move operation.
<b>Parameters</b>	<b>volName</b> (STRING): Name of the volume. <b>jobId</b> (LONGINT): Job ID of the "volume move" operation.

## "mgmtgwd" Event Group

<b>EMS Identifier</b>	mgmtgwd.certificate.expired
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a digital certificate for a Vserver expires. Client-server communication is not secure.
<b>Corrective Action</b>	Install a new digital certificate on the system using the 'security certificate create' or 'security certificate install' command.
<b>Syslog Message</b>	A digital certificate with Fully Qualified Domain Name (FQDN) %s, Serial Number %s, Certificate Authority '%s' and type %s for Vserver %s has expired.
<b>Parameters</b>	<b>common_name</b> (STRING): Name of the Fully Qualified Domain Name(FQDN) whose digital certificate expired. <b>serial_number</b> (STRING): Serial Number of the digital certificate. <b>certificate_authority</b> (STRING): Name of the Certificate Authority. <b>type</b> (STRING): Type of the digital certificate. <b>vserver</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmtgwd.certificate.expiring
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a digital certificate for a Vserver is about to expire. Client-server communication will not be secure if the certificate expires.
<b>Corrective Action</b>	Install a new digital certificate on the system using the 'security certificate create' or 'security certificate install' command.
<b>Syslog Message</b>	A digital certificate with Fully Qualified Domain Name (FQDN) %s, Serial Number %s, Certificate Authority '%s' and type %s for Vserver %s will expire in the next %d day(s).
<b>Parameters</b>	<b>common_name</b> (STRING): Name of the Fully Qualified Domain Name(FQDN) whose digital certificate is about to expire. <b>serial_number</b> (STRING): Serial Number of the digital certificate. <b>certificate_authority</b> (STRING): Name of the Certificate Authority whose digital certificate is about to expire. <b>type</b> (STRING): Type of the digital certificate. <b>vserver</b> (STRING): Name of the Vserver. <b>days</b> (LONGINT): Number of days remaining until the certificate expires.

<b>EMS Identifier</b>	mgmtgwd.configbr.backupCompleted
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a scheduled configuration backup is successfully created.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Scheduled configuration backup %s was created successfully.
<b>Parameters</b>	<b>backup</b> (STRING): Backup file.

<b>EMS Identifier</b>	mgmtgwd.configbr.backupFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when when the configuration backup cannot be created.
<b>Corrective Action</b>	If the reason is about the root volume file system, ensure that it is available and has enough space to create a backup. If the reason is that a scheduled backup file could not be created, create the backup file manually and upload it to the remote URL.
<b>Syslog Message</b>	The %s configuration backup %s cannot be created. Error: '%s'.
<b>Parameters</b>	<b>type</b> (STRING): Type of backup, either cluster or local. <b>backup</b> (STRING): Backup file. <b>reason</b> (STRING): Reason for the error.

<b>EMS Identifier</b>	mgmtgwd.configbr.deleteFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an old configuration backup cannot be deleted.
<b>Corrective Action</b>	Ensure that the node is accessible and healthy. If necessary, delete the backup manually.
<b>Syslog Message</b>	The %s configuration backup %s on node %s cannot be deleted. Error: '%s'.
<b>Parameters</b>	<b>type</b> (STRING): Type of backup, either cluster or local. <b>backup</b> (STRING): Backup file. <b>node</b> (STRING): Node on which the backup file exists. <b>reason</b> (STRING): Reason for the error.

<b>EMS Identifier</b>	mgmtgwd.configbr.distributeFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a configuration backup cannot be distributed to another node in the cluster.
<b>Corrective Action</b>	Ensure that the destination node is accessible and healthy. If necessary, upload the backup file to the remote URL to increase the availability of the backup file.
<b>Syslog Message</b>	Configuration backup %s cannot be distributed to node %s. Error: '%s'.
<b>Parameters</b>	<b>backup</b> (STRING): Backup file. <b>destination_node</b> (STRING): Destination node to which the backup file failed to be distributed. <b>reason</b> (STRING): Reason for the error.

<b>EMS Identifier</b>	mgmtgwd.configbr.initFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the configuration backup and restore feature cannot initialize the necessary software components.
<b>Corrective Action</b>	If the reason is about the backup directory under the root volume, ensure that the root volume is available and has enough free space. If the reason is about populating replicated database entries, wait 5 minutes and then use the advanced mode of the command-line interface to access the "Backup Settings" menu to ensure that backup schedules are listed. If the reason is about creating backup jobs, wait 5 minutes and then run the 'job show' command to ensure that backup jobs are displayed for each schedule.
<b>Syslog Message</b>	Configuration backup and restore feature could not be initialized. Error: '%s'.
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the initialization failure.

<b>EMS Identifier</b>	mgmtgwd.configbr.intError
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt to create a configuration backup file encountered an internal software error.
<b>Corrective Action</b>	Create the configuration backup file manually by using the "system configuration backup create" command.
<b>Syslog Message</b>	Configuration backup and restore detected an internal software error. Error: '%s'.
<b>Parameters</b>	<b>error</b> (STRING): Internal software error.

<b>EMS Identifier</b>	mgmtgwd.configbr.noSNCBBackup
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the cluster backup is saved on only one node and no offsite configuration backup destination URL is configured.
<b>Corrective Action</b>	Configure an offsite configuration backup destination URL as soon as possible, using the command "system configuration backup settings modify -destination -username " and the command "system configuration backup settings set-password". See the "system configuration backup settings" man pages for more information.
<b>Syslog Message</b>	Cluster backup is saved on only one node and no offsite configuration backup destination URL is configured.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.configbr.snapshotDeleteFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Snapshot(tm) copy on the root volume cannot be deleted. The Snapshot copy was created during a configuration backup.
<b>Corrective Action</b>	Ensure that the root volume file system is available.
<b>Syslog Message</b>	Snapshot copy %s on the root volume cannot be deleted on node %s. Error: '%s'.
<b>Parameters</b>	<b>name</b> (STRING): Name of the Snapshot copy. <b>node</b> (STRING): Node on which the Snapshot copy was created. <b>reason</b> (STRING): Reason for the error.

<b>EMS Identifier</b>	mgmtgwd.configbr.unpubFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the configuration backup and restore feature fails to unpublish a package by using the file replication service. The configuration backup process creates file packages and registers them with the file replication service, which stores the package in the root file system. When the configuration backup process is complete, it cleans up these files by unpublishing the package by using the file replication service. When unpublishing fails, these files are not be cleaned up and remain in the root file system. This message does not indicate a failure in the configuration backup process, which continues despite the event. You can monitor the status of an ongoing configuration backup process by using the "job show" command. The completed configuration backup files are visible when you run the "system configuration backup show" command.
<b>Corrective Action</b>	Obtain diagnostic privilege and view the file replication packages by using the "system services replication show" command. Unpublish the file replication packages by issuing the "system services replication unpublish" command, for which you also need diagnostic privilege. Check the "cluster ring show" command to ensure that the node is in quorum; management quorum is required for the unpublish command to succeed. Do not take these actions while an active configuration backup process is running.
<b>Syslog Message</b>	Configuration backup and restore failed to unpublish package %s; Error: '%s'.
<b>Parameters</b>	<b>package_name</b> (STRING): Name of the package. <b>reason</b> (STRING): Reason for the unpublishing failure.

<b>EMS Identifier</b>	mgmtgwd.configbr.uploadFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the configuration backup cannot be uploaded to the destination URL.
<b>Corrective Action</b>	Ensure that the destination URL is reachable, the protocol in the URL is supported, and the user credentials are valid.
<b>Syslog Message</b>	Configuration backup file %s cannot be uploaded to the destination URL %s. Error: '%s'.
<b>Parameters</b>	<b>backup</b> (STRING): Backup file. <b>destination</b> (STRING): Destination URL. <b>reason</b> (STRING): Reason for the upload failure.

<b>EMS Identifier</b>	mgmtgwd.fg.32bit.nfs3ids
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the user creates a FlexGroup on a Vserver that has NFSv3 enabled, but uses 32-bit identifiers, which could cause file ID collisions.
<b>Corrective Action</b>	To prevent file ID collisions within the FlexGroup, enable 64-bit FSIDs and file IDs on the Vserver. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	FlexGroup %s was created on Vserver %s which uses 32-bit NFSv3 FSIDs and File IDs. File ID collisions may occur.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmtgwd.fg.modify.constituent.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when modification of a FlexGroup constituent's state fails during the operation to modify the state of the FlexGroup. The FlexGroup will be in the 'mixed' state and constituents that are still online will be able to serve data. Constituents that are offline will not be able to serve data. All management operations will be unavailable on the FlexGroup until it is brought completely online.
<b>Corrective Action</b>	Correct the problem based on the reason specified. If the error persists, contact NetApp technical support.
<b>Syslog Message</b>	Failed to modify the state of FlexGroup constituent %s in Vserver %s. Reason: %s.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of the constituent. <b>vserverName</b> (STRING): Name of the Vserver. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	mgmtgwd.fg.modify.rlbk.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs after a series of failures. First, the FlexGroup resize fails. To recover, we try to rollback the FlexGroup constituents to their original sizes. If we fail to rollback any of these constituents, this message will occur.
<b>Corrective Action</b>	Correct the problem based on the reason specified. If the error persists, contact NetApp technical support.
<b>Syslog Message</b>	Failed to rollback the size of FlexGroup constituent %s in Vserver %s Reason: %s.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of the constituent. <b>vserverName</b> (STRING): Name of the Vserver. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	mgmtgwd.fg.sis.op.constituent.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the execution of the efficiency operation on a FlexGroup constituent fails.
<b>Corrective Action</b>	Correct the problem based on the reason specified. If the error persists, contact Netapp technical support for further assistance.
<b>Syslog Message</b>	Failed to execute the efficiency operation on FlexGroup constituent %s in Vserver %s. Operation: %s. Reason: %s.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of the constituent. <b>vserverName</b> (STRING): Name of the Vserver. <b>operationType</b> (STRING): Type of the efficiency operation. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	mgmtgwd.filereplication.failverify
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the startup scan of the file replication publishing root directory fails to verify packages. This might be due to file corruption or a mixed-version issue.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	The startup scan of the file replication publishing directory failed to verify one or more packages.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.filereplication.forbidden
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the file replication service receives a request on an unsecure network interface.
<b>Corrective Action</b>	Use the "network interface show" command to verify that the source IP address of the request is from an internal, authorized source. This could be a security breach attempt. File replication never attempts to communicate over nonclustered interfaces.
<b>Syslog Message</b>	The file replication service denied an incoming request that came from '%s' through the virtual interface address '%s'.
<b>Parameters</b>	<b>client_ip</b> (STRING): IP address of the client. <b>server_ip</b> (STRING): IP address of the server interface.

<b>EMS Identifier</b>	mgmtgwd.filereplication.nopubroot
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the file replication service cannot find or initialize the publishing root directory.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	The publishing root directory at '%s' could not be initialized. Error: '%s'.
<b>Parameters</b>	<b>dir</b> (STRING): Location of the publishing root directory. <b>reason</b> (STRING): Reason the directory cannot be used.

<b>EMS Identifier</b>	mgmtgwd.filereplication.noserver
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the file replication module cannot initialize the local server process.
<b>Corrective Action</b>	Ensure that the local replication network port is not in use ("network port show" and "network port broadcast-domain show") and that system resources are not limited.
<b>Syslog Message</b>	The file replication service could not initialize its server process. Error: '%s'.
<b>Parameters</b>	<b>description</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	mgmtgwd.filereplication.nostart
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the file replication service cannot be started.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	The file replication service could not be started.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.fips.post.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unrecoverable error prevents initialization of the cryptographic subsystem into FIPS mode. No SSL communication will be possible with the storage system in this state. Other ONTAP features may also be affected by the lack of cryptographic operations.
<b>Corrective Action</b>	To operate in non FIPS cryptographic mode, turn off FIPS mode for the SSL interface using command "security config modify -interface SSL -is-fips-enabled false" and restart the system. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	SSL interface disabled due to failure of FIPS mode cryptographic services.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.jobmgr.fetcherr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot locate the configuration for a specific Vserver.
<b>Corrective Action</b>	Disable and reenble the auditing function of the affected Vserver using the 'vserver audit disable' and 'vserver audit enable' commands to attempt to retrieve the missing configuration information. If the audit enable command fails, contact the system administrator for assistance.
<b>Syslog Message</b>	Job '%s' [jobid %d, name "%s", UUID %s] failed on Vserver '%s'.
<b>Parameters</b>	<b>name</b> (STRING): Name of the job. <b>jobid</b> (INT): ID of the job. <b>description</b> (STRING): Description of the job. <b>jobuuid</b> (STRING): UUID of the job. <b>vservename</b> (STRING): Vserver name linked with the job.

<b>EMS Identifier</b>	mgmtgwd.jobmgr.init.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Job manager cannot load a private job.
<b>Corrective Action</b>	Look into the private job history by using the job_id. If necessary, restart the activity by using the applicable command. Example Command: job private show-completed -node node-01 -id 10
<b>Syslog Message</b>	"Unable to load private job. Job UUID = %s and ID= %ul. Reason: %s"
<b>Parameters</b>	<b>job_uuid</b> (STRING): UUID of the private job. <b>job_id</b> (LONGINT): Human-readable ID of the private job. <b>failure_reason</b> (STRING): Reason for failure to load.

<b>EMS Identifier</b>	mgmtgwd.jobmgr.jobcomplete.failure
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Job Manager completes a job unsuccessfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Job "%s" [id %d] (%s) completed unsuccessfully: %s (%llu).
<b>Parameters</b>	<b>name</b> (STRING): Name of the job. <b>jobid</b> (INT): ID of the job. <b>description</b> (STRING): Description of the job. <b>completion</b> (STRING): Completion string for the job. <b>code</b> (LONGINT): Completion code for the job. <b>jobuuid</b> (STRING): UUID of the job.

<b>EMS Identifier</b>	mgmtgwd.jobmgr.jobrestart
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Job Manager restarts a job.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Restarted job "%s" [id %d]: %s.
<b>Parameters</b>	<b>name</b> (STRING): Name of the job. <b>jobid</b> (INT): ID of the job. <b>description</b> (STRING): Description of the job. <b>jobuuid</b> (STRING): UUID of the job.

<b>EMS Identifier</b>	mgmtgwd.jobmgr.private.jobcomplete.failure
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Job Manager completes a private job unsuccessfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Private job "%s" [id %d] (%s) completed unsuccessfully: %s (%llu).
<b>Parameters</b>	<b>name</b> (STRING): Name of the job. <b>jobid</b> (INT): ID of the job. <b>description</b> (STRING): Description of the job. <b>completion</b> (STRING): Completion string for the job. <b>code</b> (LONGINT): Completion code for the job. <b>jobuuid</b> (STRING): UUID of the job.

<b>EMS Identifier</b>	mgmtgwd.jobmgr.sched.peer.update
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a job schedule is updated on the peer cluster and might need to be updated on this cluster.
<b>Corrective Action</b>	Update the schedule on this cluster to match the peer cluster.
<b>Syslog Message</b>	"Schedule "%s" was %s on peer cluster and must also be updated on this cluster. Command on peer cluster: %s."
<b>Parameters</b>	<b>schedule</b> (STRING): Schedule name. <b>operation</b> (STRING): Operation performed on schedule: "created," "modified," or "deleted." <b>command</b> (STRING): Job schedule command that was executed on the peer cluster.

<b>EMS Identifier</b>	mgmtgwd.jobmgr.sched.type
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a job schedule is created with the same name as a schedule from the MetroCluster(tm) partner cluster, but with a different schedule type.
<b>Corrective Action</b>	Create a replacement schedule with a different name, and then delete one of the same-named schedules.
<b>Syslog Message</b>	Schedule "%s" was created with the same name as an existing schedule, but with a different schedule type.
<b>Parameters</b>	<b>schedule</b> (STRING): Schedule name.

<b>EMS Identifier</b>	mgmtgwd.jobmgr.sched.update
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a job schedule is updated on this cluster and might need to be updated on the peer cluster.
<b>Corrective Action</b>	On the peer cluster, update the schedule to match this cluster.
<b>Syslog Message</b>	"Schedule "%s" was %s and must also be updated on the peer cluster. Command: %s."
<b>Parameters</b>	<b>schedule</b> (STRING): Schedule name. <b>operation</b> (STRING): Operation performed on schedule: "created," "modified," or "deleted." <b>command</b> (STRING): Job schedule command that was executed.

<b>EMS Identifier</b>	mgmtgwd.mixed.version
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when not all nodes are running the same version of ONTAP. Not all features of a software version are available to the cluster unless all nodes are at the same version. This message can occur when upgrade or revert is in progress or has not completed successfully.
<b>Corrective Action</b>	Use "version" to check the current cluster version and use "version -node *" to check the version on individual nodes.
<b>Syslog Message</b>	Not all nodes are at the same ONTAP version. Cluster is operating in version %s. One or more nodes are at %s.
<b>Parameters</b>	<b>ClusterVersion</b> (STRING): Current cluster version. <b>HighestVersion</b> (STRING): Highest version in the cluster.

<b>EMS Identifier</b>	mgmtgwd.replace.node.mgmt.lif
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the temporary node management LIF, which is normally deleted automatically, has not been replaced. It should be replaced to free the DHCP address.
<b>Corrective Action</b>	Create a new node management LIF by using the 'network interface create' command, and then delete the temporary node management LIF by using the 'network interface delete' command.
<b>Syslog Message</b>	Temporary node management LIF '%s' should be replaced with a new node management LIF.
<b>Parameters</b>	<b>lif</b> (STRING): Temporary node management LIF.

<b>EMS Identifier</b>	mgmtgwd.repos.conflictingOps
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an Infinite Volume operation cannot be started because another Infinite Volume operation is already in progress.
<b>Corrective Action</b>	Check whether another Infinite Volume operation is currently in progress by running the 'job show' command. After the current operation is complete, try the new operation again. If the error persists, contact NetApp technical support.
<b>Syslog Message</b>	Infinite Volume operation '%s' could not be started on volume '%s' on Vserver '%s', because operation '%s' is already in progress.
<b>Parameters</b>	<b>attemptedOperation</b> (STRING): Name of the Infinite Volume operation that could not be started. <b>volumeName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>existingOperation</b> (STRING): Name of the Infinite Volume operation already running.

<b>EMS Identifier</b>	mgmtgwd.revertTo.forceErrors
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a revert to process is being initiated with the "force" flag, and configuration errors have been detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Forcing revert in spite of detected configuration errors.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.rootvol.recovery.changed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system detects that a root volume might have changed, causing the local management databases to be out of sync with the replicated databases. The node is not fully operational. Data lifs might have failed over within the cluster, so NFS and CIFS access is limited on this node. There also might have been a loss of stored data. Administrative capability is limited to local recovery procedures for this node.
<b>Corrective Action</b>	Contact technical support to obtain the root volume recovery procedures.
<b>Syslog Message</b>	The contents of the root volume might have changed and the local management databases might be out of sync with the replicated databases. This node is not fully operational. Contact technical support to obtain the root volume recovery procedures.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.rootvol.recovery.different
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system detects a different root volume than it has used previously. The node is not fully operational. Data lifs might have failed over within the cluster, so NFS and CIFS access is limited on this node. Administrative capability is limited to local recovery procedures for this node.
<b>Corrective Action</b>	Contact technical support to obtain the root volume recovery procedures.
<b>Syslog Message</b>	The root volume is different than the one previously used by this node. This node is not fully operational. Contact technical support to obtain the root volume recovery procedures.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.rootvol.recovery.new
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system detects a new root volume. The node is not fully operational. Data lifs might have failed over within the cluster, so NFS and CIFS access is limited on this node. There also might be a loss of stored data. Administrative capability is limited to local recovery procedures for this node.
<b>Corrective Action</b>	Contact technical support to obtain the root volume recovery procedures.
<b>Syslog Message</b>	A new root volume was detected. This node is not fully operational. Contact technical support to obtain the root volume recovery procedures.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.rootvol.recovery.takeover.changed
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system detects that a root volume might have changed, causing the local management databases to be out of sync with the replicated databases. This occurred due to corruption of the Non-Volatile RAM log (NVLOG) during takeover. The node is not fully operational. Data logical interfaces (LIFs) might have failed over within the cluster, so NFS and CIFS access is limited on this node. There also might have been a loss of stored data. Administrative capability is limited to local recovery procedures for this node.
<b>Corrective Action</b>	Contact technical support to obtain the root volume recovery procedures.
<b>Syslog Message</b>	The contents of the root volume might have changed and the local management databases might be out of sync with the replicated databases due to corruption of NVLOG data during takeover. This node is not fully operational. Contact technical support to obtain the root volume recovery procedures.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.rootvolrec.low.space
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system detects that the root volume is dangerously low on space. The node is not fully operational. Data logical interfaces (LIFs) might have failed over within the cluster, so NFS and CIFS access is limited on this node. Administrative capability is limited to local recovery procedures for this node to make space available on the root volume.
<b>Corrective Action</b>	Make space available on the root volume by deleting old Snapshot(R) copies, deleting unneeded files from /mroot, or expanding the root volume capacity. After space is available, reboot the controller. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	The root volume on node "%s" is dangerously low on space. Less than %d MB of free space remaining.
<b>Parameters</b>	<b>node</b> (STRING): Node on which the root volume is low on space. <b>threshold_in_mb</b> (INT): Threshold, in MB, that is being used to compare against the root volume's available space.

<b>EMS Identifier</b>	mgmtgwd.schedSnap.createFail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system fails to create a Snapshot(tm) copy for the given volume.
<b>Corrective Action</b>	Correct the problem based on the reason specified. If the error persists, contact NetApp technical support.
<b>Syslog Message</b>	Skipping creation of scheduled Snapshot copy '%s' on volume '%s' on vserver '%s' for schedule '%s' prefix '%s' (reason: %s)
<b>Parameters</b>	<b>snapshotName</b> (STRING): Name of the Snapshot copy. <b>volumeName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the virtual server. <b>scheduleName</b> (STRING): Name of the Snapshot policy schedule. <b>prefixName</b> (STRING): Name of the prefix associated with the Snapshot policy schedule. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	mgmtgwd.schedSnap.createSkip
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a scheduled Snapshot(tm) copy for a volume is skipped because there is a conflicting operation being performed on the volume.
<b>Corrective Action</b>	Correct the problem based on the reason specified. If the error persists, contact NetApp technical support.
<b>Syslog Message</b>	Skipping creation of scheduled Snapshot copy for volume "%s" on Vserver "%s" using policy "%s". Reason: %s.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>snapshotPolicy</b> (STRING): Name of the Snapshot policy. <b>reason</b> (STRING): Reason that the scheduled Snapshot copy was skipped.

<b>EMS Identifier</b>	mgmtgwd.sign.cert.expired
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a digital certificate for a Vserver expires. Client-server communication is not secure.
<b>Corrective Action</b>	Sign a new digital certificate on the system using the 'security certificate sign' command.
<b>Syslog Message</b>	A digital certificate with Fully Qualified Domain Name (FQDN) %s, Serial Number %s, Certificate Authority '%s' and Certificate Authority Serial Number %s for Vserver %s has expired.
<b>Parameters</b>	<b>common_name</b> (STRING): Name of the Fully Qualified Domain Name(FQDN) whose digital certificate expired. <b>serial_number</b> (STRING): Serial Number of the digital certificate. <b>certificate_authority</b> (STRING): Name of the Certificate Authority. <b>ca_serial_number</b> (STRING): Serial Number of the Certificate Authority(CA) that signed the digital certificate. <b>vserver</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmtgwd.sign.cert.expiring
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a digital certificate for a Vserver is about to expire. Client-server communication will not be secure if the certificate expires.
<b>Corrective Action</b>	Sign a new digital certificate on the system using the 'security certificate sign' command.
<b>Syslog Message</b>	A digital certificate with Fully Qualified Domain Name (FQDN) %s, Serial Number %s, Certificate Authority '%s' and Certificate Authority Serial Number %s for Vserver %s will expire in %d day(s).
<b>Parameters</b>	<b>common_name</b> (STRING): Name of the Fully Qualified Domain Name(FQDN) whose digital certificate is about to expire. <b>serial_number</b> (STRING): Serial Number of the digital certificate. <b>certificate_authority</b> (STRING): Name of the Certificate Authority whose digital certificate that is about to expire. <b>ca_serial_number</b> (STRING): Serial Number of Certificate Authority(CA) that signed the digital certificate. <b>vserver</b> (STRING): Name of the Vserver. <b>days</b> (INT): Number of days remaining until the certificate expires.

<b>EMS Identifier</b>	mgmtgwd.snapshot.deleteWarn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a Snapshot(tm) copy cannot be deleted from an Infinite Volume.
<b>Corrective Action</b>	Delete one or more older Snapshot copies associated with this schedule by using the "volume snapshot delete" command.
<b>Syslog Message</b>	Skipping deletion of scheduled Snapshot copy "%s" on volume "%s" on Vserver "%s" for schedule "%s" prefix "%s" (reason: %s).
<b>Parameters</b>	<b>snapshotName</b> (STRING): Name of the Snapshot copy. <b>volumeName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>scheduleName</b> (STRING): Name of the Snapshot policy schedule. <b>prefixName</b> (STRING): Name of the prefix associated with the Snapshot policy schedule. <b>reason</b> (STRING): Reason for the failure.

<b>EMS Identifier</b>	mgmtgwd.snapshot.frcRestore
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a Snapshot(tm) copy is restored on an Infinite Volume using the 'force' option.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Volume '%s' on Vserver '%s' was restored to Snapshot copy '%s' using the 'force' option.
<b>Parameters</b>	<b>volumeName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>snapshotName</b> (STRING): Name of the Snapshot copy.

<b>EMS Identifier</b>	mgmtgwd.snapshot.partCreate
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Snapshot(tm) copy is partially created on an Infinite Volume. Residual Snapshot copies might remain on one or more Infinite Volume constituent volumes. These Snapshot copies might consume the Snapshot reserve on the constituent volumes.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Scheduled Snapshot copy '%s' of volume '%s' on Vserver '%s' for schedule '%s' prefix '%s' was partially created and cleanup failed on one or more constituent volumes.
<b>Parameters</b>	<b>snapshotName</b> (STRING): Name of the Snapshot copy. <b>volumeName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver. <b>scheduleName</b> (STRING): Name of the Snapshot policy schedule. <b>prefixName</b> (STRING): Name of the prefix associated with the Snapshot policy schedule. <b>constituentMsidList</b> (STRING): List of master data set IDs (MSIDs) of Infinite Volume constituent volumes that might have residual Snapshot copies.

<b>EMS Identifier</b>	mgmtgwd.snapshot.tooManySnap
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Snapshot(tm) copy cannot be created on an Infinite Volume because too many Snapshot copies exist for the associated schedule.
<b>Corrective Action</b>	Delete an older Snapshot copy associated with this schedule using the 'volume snapshot delete' command.
<b>Syslog Message</b>	Scheduled Snapshot copy '%s' of volume '%s' on Vserver '%s' could not be created because too many Snapshot copies exist for the associated schedule.
<b>Parameters</b>	<b>snapshotName</b> (STRING): Name of the Snapshot copy. <b>volumeName</b> (STRING): Name of the volume. <b>vserverName</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	mgmtgwd.upgrade.aborted
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an upgrade task is aborted. The node will not be fully operational.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.upgrade.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when one or more upgrade tasks fails. The node will not be fully operational.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.upgrade.started
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an upgrade is started.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.upgrade.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when an upgrade is completed successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.var.recovery
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system detects a missing or corrupted /var root directory. The node is not fully operational. Data LIFs might have failed over within the cluster, so NFS and CIFS access is limited on this node. There also might be a loss of stored data. Administrative capability is limited to local recovery procedures for this node.
<b>Corrective Action</b>	Contact NetApp technical support to obtain the recovery procedures.
<b>Syslog Message</b>	Part of the /var boot directory is missing. This node is not fully operational. Contact technical support to obtain the recovery procedures.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgmtgwd.volcreatedrestricted
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a volume is created in the restricted state. This message is used to update the status of the health dashboard.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vserver</b> (STRING): The vserver that owns the volume. <b>volume</b> (STRING): The name of the volume.

<b>EMS Identifier</b>	mgmtgwd.vreport.nodesUnreachable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the 'debug vreport' command found that some nodes were unreachable. Such nodes may contain WAFL-VLDB discrepancies which will not get reported.
<b>Corrective Action</b>	The file mgwd.log logs the list of unavailable nodes. Ensure all these nodes are reachable from the node where the 'debug vreport' is run.
<b>Syslog Message</b>	Vreport encountered some unreachable nodes. The report may be incomplete.
<b>Parameters</b>	

## "mgr" Event Group

<b>EMS Identifier</b>	mgr.avail.stat.reset
<b>Severity</b>	NOTICE
<b>Description</b>	This message is emitted when statistics is reset
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Availability statistics reset
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.boot.disk_done
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message is sent when a system completes disk boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s boot complete. Last disk update written at %s
<b>Parameters</b>	<b>ver</b> (STRING): (long) version of the OS which just booted <b>last_write_time</b> (STRING): time at which the previous OS last wrote to disk

<b>EMS Identifier</b>	mgr.boot.floppy_25_7
<b>Severity</b>	NOTICE
<b>Description</b>	This message is sent when a system completes a 25/7 boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s floppy boot complete (after 25/7).
<b>Parameters</b>	<b>ver</b> (STRING): (long) version of the OS which just booted

<b>EMS Identifier</b>	mgr.boot.floppy_done
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message is sent when a system completes a plain old floppy boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s floppy boot complete.
<b>Parameters</b>	<b>ver</b> (STRING): (long) version of the OS which just booted

<b>EMS Identifier</b>	mgr.boot.floppy_media
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message is sent when a system completes a bypass_media boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s floppy boot complete (with disk media errors bypassed).
<b>Parameters</b>	<b>ver</b> (STRING): (long) version of the OS which just booted

<b>EMS Identifier</b>	mgr.boot.floppy_prev_cp
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message is sent when a system completes a prev_cp boot.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s floppy boot complete (after prev_cp).
<b>Parameters</b>	<b>ver</b> (STRING): (long) version of the OS which just booted

<b>EMS Identifier</b>	mgr.boot.mroot.done
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event marks the end of populating the mroot during the boot sequence; this event is generated immediately after the process of populating the mroot has completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.boot.mroot.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event marks the start of populating the mroot during the boot sequence; this event is generated immediately before the process of populating the mroot begins.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.boot.new_OS2
<b>Severity</b>	NOTICE
<b>Description</b>	This message is sent when a system boots with a different OS version from before, and the previous version is known.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	This system is running a new version of %s (was %s, now %s)
<b>Parameters</b>	<b>osName</b> (STRING): The flavor of operating system (Data ONTAP or NetCache) <b>oldOsVersion</b> (STRING): The previous OS version <b>newOsVersion</b> (STRING): The new OS version

<b>EMS Identifier</b>	mgr.boot.node.unstable
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node does not reach a stable state within 5 minutes after system boot. The system will continue booting while waiting for a stable state. Under a takeover scenario, the node has to be stable for giveback to be completed.
<b>Corrective Action</b>	Run the "storage failover show" command for takeover status. If the issue persists, contact NetApp technical support for assistance.
<b>Syslog Message</b>	The node has not reached a stable state within 5 minutes after system boot. Retries are in progress.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.boot.oldOFW
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system firmware is determined to be too old.
<b>Corrective Action</b>	For more information about upgrading your system firmware, check your support provider's web site or knowledgebase.
<b>Syslog Message</b>	The current system firmware version %s is too old. Upgrade to the minimum version %s or later.
<b>Parameters</b>	<b>currentFW</b> (STRING): Current system firmware version. <b>newFW</b> (STRING): Desired system firmware version.

<b>EMS Identifier</b>	mgr.boot.pmroot.done
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event marks the end of populating the pmroot during the boot sequence; this event is generated immediately after the process of populating the pmroot has completed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.boot.pmroot.start
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event marks the start of populating the pmroot during the boot sequence; this event is generated immediately before the process of populating the pmroot begins.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.boot.process.hung <b>Deprecated:</b> Deprecated as of ONTAP 9.1. Last used in 9.0x.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a system detects an un-responsive process during system boot. The system will continue booting while waiting for the process to respond.
<b>Corrective Action</b>	Contact NetApp technical support to diagnose the issue further.
<b>Syslog Message</b>	The %s process is not responding. Error: %s
<b>Parameters</b>	<b>process</b> (STRING): The process that is hung. <b>error</b> (STRING): An error message about the problem.

<b>EMS Identifier</b>	mgr.boot.reason_abnormal
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message is sent when a system boots for abnormal reasons (panic, watchdog, etc). The message contains the reboot reason.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>reboot_reason</b> (STRING): reboot reason

<b>EMS Identifier</b>	mgr.boot.reason_ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message is sent when a system boots for normal reasons (halt/reboot command, etc). The message contains the reboot reason.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>reboot_reason</b> (STRING): reboot reason

<b>EMS Identifier</b>	mgr.boot.unequalDist
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during system initialization when the local system finds that the number of disks that it can use to create a partitioned root aggregate is different than on the partner node.
<b>Corrective Action</b>	To create a system with an equal number of automatically partitioned disks on the local and partner systems: 1. Make sure that any failed disks in the internal shelf are replaced. 2. Remove ownership from all disks. The system automatically assigns one half of the disks to the local system and the other half to the partner node. To remove disk ownership, boot into maintenance mode and manually remove ownership by using the "disk remove_ownership" command.
<b>Syslog Message</b>	Warning: Unequal number of disks will be used for auto-partitioning of the root aggregate on the local system and HA partner. The local system will use %d disks but the HA partner will use %d disks. To correct this situation, boot both controllers into maintenance mode and remove the ownership of all disks.
<b>Parameters</b>	<b>n_local</b> (INT): Number of partitionable disks that are used by the local system. <b>n_partner</b> (INT): Number of partitionable disks that are used by the partner system.

<b>EMS Identifier</b>	mgr.module.address
<b>Severity</b>	NOTICE
<b>Description</b>	This occurs to inform you of where kernel modules were loaded in memory. This information helps NetApp technical support interpret the data in any mgr.stack.frameaddr events.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Module %s loaded from 0x%llx - 0x%llx.
<b>Parameters</b>	<b>module_name</b> (STRING): Name of the module. <b>module_start</b> (PTR): Starting address of the module. <b>module_end</b> (PTR): Ending address of the module.

<b>EMS Identifier</b>	mgr.partner.stack.saved
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated after a successful cluster takeover caused by a partner panic, and indicates partner stack trace information was collected from the time of the panic. Partner stack trace information is saved in the node status area of the cluster mailbox disk
<b>Corrective Action</b>	Generally when a panic occurs, if autosupport is configured a NetApp case is automatically created, case E-mail notifications are sent, and a point of contact at your site is contacted by NetApp technical support. If autosupport is not configured or if you are not sure a case was automatically created, contact NetApp technical support.
<b>Syslog Message</b>	Cluster takeover has saved partner panic stack trace information for logging.
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.stack.at
<b>Severity</b>	NOTICE
<b>Description</b>	This message contains the panic string.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Panic occurred at: %s
<b>Parameters</b>	<b>time</b> (STRING): The time string

<b>EMS Identifier</b>	mgr.stack.checkpoint
<b>Severity</b>	NOTICE
<b>Description</b>	Logs the last checkpoint dumpcore crossed before failing.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Dumpcore failure: At checkpoint %d
<b>Parameters</b>	<b>checkpoint</b> (INT): (None).

<b>EMS Identifier</b>	mgr.stack.frame
<b>Severity</b>	NOTICE
<b>Description</b>	The stack frame: frame number, functionname, base, offset.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Stack frame %2d: %s(0x%llx) + 0x%x
<b>Parameters</b>	<b>frame</b> (INT): The frame number <b>sym</b> (STRING): The symbolic name <b>base</b> (PTR): The base address <b>offset</b> (INTHEX): The offset

<b>EMS Identifier</b>	mgr.stack.frameaddr
<b>Severity</b>	NOTICE
<b>Description</b>	The stack frame: frame number, (no function name), base, offset.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Stack frame %2d: 0x%llx + 0x%x
<b>Parameters</b>	<b>frame</b> (INT): The frame number <b>base</b> (PTR): The base address <b>offset</b> (INTHEX): The offset

<b>EMS Identifier</b>	mgr.stack.framebase
<b>Severity</b>	NOTICE
<b>Description</b>	The stack frame: frame number, base address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Stack frame %2d: 0x%llx
<b>Parameters</b>	<b>frame</b> (INT): The frame number <b>base</b> (PTR): The base address

<b>EMS Identifier</b>	mgr.stack.longrun.proc
<b>Severity</b>	NOTICE
<b>Description</b>	The name of the process that hogged the cpu too long.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Long running process: %s
<b>Parameters</b>	<b>name</b> (STRING): The name of the process

<b>EMS Identifier</b>	mgr.stack.noFrames
<b>Severity</b>	NOTICE
<b>Description</b>	This message is emitted when no stack frames are available. This is normal on platforms which do not support stack tracing, or when the prior release did not support stack trace.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	No stack frames available
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.stack.proc
<b>Severity</b>	NOTICE
<b>Description</b>	The name of the process that we took the panic in.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Panic in process: %s
<b>Parameters</b>	<b>name</b> (STRING): The name of the process

<b>EMS Identifier</b>	mgr.stack.saved
<b>Severity</b>	NOTICE
<b>Description</b>	This message indicates that we've saved panic information in the NV RAM.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Reboot with saved panic information in log file
<b>Parameters</b>	

<b>EMS Identifier</b>	mgr.stack.string
<b>Severity</b>	NOTICE
<b>Description</b>	This message contains the panic string.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Panic string: %s
<b>Parameters</b>	<b>string</b> (STRING): The panic string

## "mgwd" Event Group

<b>EMS Identifier</b>	mgwd.notify.halt.result
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message reports the result of the Management Gateway process notification attempt to the Connectivity, Liveliness, Availability Monitor (CLAM) instance on its high-availability (HA) partner node that this node is undergoing a planned shutdown.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	MGWD %s to notify CLAM on its HA partner node that this node is undergoing a planned shutdown (reason: %s). Error: %s
<b>Parameters</b>	<b>result</b> (STRING): Result of the notify attempt. <b>reason</b> (STRING): Reason for the partner beginning the halt process. <b>error</b> (STRING): Error encountered in the notify attempt (if any).

## "migrate" Event Group

<b>EMS Identifier</b>	migrate.root.completed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the migration of a root aggregate has completed successfully.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Root aggregate migration completed successfully on node %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node that completed the migration.

<b>EMS Identifier</b>	migrate.root.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the migration of a root aggregate has failed.
<b>Corrective Action</b>	Run the "system node run -node nodename -command aggr status" command to determine if the target aggregate named "new_root" has been created. If not, address the error condition and attempt the "system node migrate-root" command again. If the new aggregate exists, contact technical support to complete the operation.
<b>Syslog Message</b>	Root aggregate migration failed on node %s. Reason: %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node that failed to complete the migration. <b>reason</b> (STRING): Reason that the migrate operation failed.

<b>EMS Identifier</b>	migrate.root.started
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the user initiates an attempt to move the root aggregate to a different set of disks on a node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Root aggregate migration started on node %s.
<b>Parameters</b>	<b>node</b> (STRING): Name of the node.

## "misconfig" Event Group

<b>EMS Identifier</b>	misconfig.lif.info.lost
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the record for the incorrectly placed LIF is lost during MetroCluster(TM) switchover or switchback. As a result, the "metrocluster check lif show" command will not be able to fetch the incorrectly placed LIF on the surviving cluster after executing "metrocluster switchover" and on the disaster cluster after executing "metrocluster switchback". Also, the incorrectly placed LIF cannot be placed correctly with the "metrocluster check lif repair-placement" command.
<b>Corrective Action</b>	The LIF is incorrectly placed and needs to be manually corrected. For an incorrectly placed LIF on HA partners, correct the "home-node" by using the "network interface modify -vserver -lif -home-node " command. For a LIF with a wrong port assignment, correct the "home-port" by using the "network interface modify -vserver -lif -home-port " command. For a SAN LIF, use the "network interface modify -vserver -lif -status-admin down" command to bring down status-admin of the LIF, before modifying the "home-node" or the "home-port" of the LIF.
<b>Syslog Message</b>	LIF "%s" in Vserver "%s" incorrectly placed needs manual recovery. Reason: "%s".
<b>Parameters</b>	<b>lif</b> (STRING): LIF name. <b>vserver_name</b> (STRING): Vserver name. <b>error</b> (STRING): Reason for misconfigured LIF.

## "mlm" Event Group

<b>EMS Identifier</b>	mlm.array.aluaSupported
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an array LUN from an unsupported array. Defines whether the array supports ALUA(asymmetric logical unit access) or not.
<b>Corrective Action</b>	Detach the unsupported array. See the NetApp Support Site Interoperability Matrix Tool for further information about supported arrays.
<b>Syslog Message</b>	Unsupported array: [Vendor '%s' Product '%s'] ALUA Support for array %s.
<b>Parameters</b>	<b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN. <b>alua</b> (STRING): Whether the array supports ALUA or not.

<b>EMS Identifier</b>	mlm.array.apf.cancel
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when any one of the path to an Array comes back online when the last path failure to an Array is extended.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Delay on last path to Array '%s' is cancelled as target port: WWNN: %s, WWPN: %s seen from initiator '%s' is up.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the Array. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter accessing the array target port.

<b>EMS Identifier</b>	mlm.array.apf.enter
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the all-path-fail-delay option for an Array is set to a non-zero value and when last path to an Array goes down. This allows Data ONTAP to suspend I/O operations for a longer period of time before declaring a data access disruption, allowing for I/O operations to resume if any path comes back online within the specified duration.
<b>Corrective Action</b>	In such cases, you should evaluate the specified device for possible replacement. Sometimes the problem results from the partial failure of a component involved in the Fibre Channel. Common things to check include properly secured cable connections, and crimped or otherwise damaged cables. If the adapter is in use check cabling.
<b>Syslog Message</b>	Last path to Array '%s' target port: WWNN: %s, WWPN: %s seen from initiator '%s' is down. Failing this path will be extended for %d seconds.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the Array. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter accessing the array target port. <b>delay</b> (INT): All Path Fail delay in seconds.

<b>EMS Identifier</b>	mlm.array.apf.exit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when all path to an Array goes down and the Array remains inaccessible even after the extended duration is set by all-path-fail-delay option.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	No path to Array '%s' came back online when last path failure is extended to %d seconds.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the Array. <b>delay</b> (INT): All Path Fail delay in seconds.

<b>EMS Identifier</b>	mlm.array.discovery
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system discovers a new array.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A new array (%s) was connected to this node.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array.

<b>EMS Identifier</b>	mlm.array.inquiryPage80
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an array LUN from an unsupported array.
<b>Corrective Action</b>	Detach the unsupported array. See the NetApp Support Site Interoperability Matrix Tool for further information about supported arrays.
<b>Syslog Message</b>	Array LUN %s [S/N '%s' vendor '%s' product '%s'] Inquiry page 80: devtype '%d' page_code '%d' reserved '%d' page_len '%d' data '%s' hex_dump '%s'
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialNo</b> (STRING): Serial number of the array LUN. <b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN. <b>dev_type</b> (INT): Device type of the array LUN. <b>page_code</b> (INT): Page code of the array LUN. <b>reserved</b> (INT): Reserved fields in inquiry page 80. <b>page_len</b> (INT): Inquiry page 80 length. <b>data</b> (STRING): Serial number from inquiry page 80. <b>P_80_hex</b> (STRING): Inquiry page 80 hexadecimal dump.

<b>EMS Identifier</b>	mlm.array.inquiryPage83
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an array LUN from an unsupported array.
<b>Corrective Action</b>	Detach the unsupported array. See the NetApp Support Site Interoperability Matrix Tool for further information about supported arrays.
<b>Syslog Message</b>	[Vendor '%s' Product '%s'] Inquiry page 83: devtype '%d' page_code '%d' reserved '%d' page_len '%d' code_set '%d' association_id '%d' reserved_msb '%d' id_len '%d' hex_dump '%s'.
<b>Parameters</b>	<b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN. <b>dev_type</b> (INT): Device type of the array LUN. <b>page_code</b> (INT): Page code of the array LUN. <b>reserved</b> (INT): Reserved fields in inquiry page 83. <b>page_len</b> (INT): Inquiry page 83 length. <b>code_set</b> (INT): Inquiry page 83 code set. <b>association_id</b> (INT): Inquiry page 83 association ID. <b>reserved_msb</b> (INT): Most significant byte of page_len in SPC3 spec. <b>id_len</b> (INT): Inquiry page 83 ID length. <b>P_83_hex</b> (STRING): Inquiry page 83 hexadecimal dump.

<b>EMS Identifier</b>	mlm.array.inquiryStd
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an array LUN from an unsupported array.
<b>Corrective Action</b>	Detach the unsupported array. See the NetApp Support Site Interoperability Matrix Tool for further information about supported arrays.
<b>Syslog Message</b>	[S/N '%s' vendor '%s' product '%s'] STD inquiry : devtype '%d' dev_modifier '%d' support_level '%d' dev_mode '%d' revision '%s' hex_dump '%s'
<b>Parameters</b>	<b>serialno</b> (STRING): Serial number of the array LUN. <b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN. <b>dev_type</b> (INT): Device type of the array LUN. <b>dev_modifier</b> (INT): Device modifier of the array LUN. <b>support_level</b> (INT): Support level. <b>dev_mode</b> (INT): Development mode. <b>revision</b> (STRING): Product revision level(product firmware release number). <b>inquiry_hex</b> (STRING): Inquiry hexadecimal dump.

<b>EMS Identifier</b>	mlm.array.lun.discovery
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system discovers a new array LUN.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	New array LUN %s (S/N: %s) was discovered on initiator port %s at array target port WWNN: %s, WWPN: %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialno</b> (STRING): Serial number of the array LUN. <b>adapter</b> (STRING): Name of the initiator port discovering the array LUN. <b>wwnn</b> (STRING): World Wide Node Name of the array target port exporting the new array LUN. <b>wwpn</b> (STRING): World Wide Port Name of the array target port exporting the new array LUN.

<b>EMS Identifier</b>	mlm.array.lun.forceResume
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system is forced to resume I/O to a previously quiesced array LUN path when no other viable non-quiesced paths remain. For arrays with asymmetric logical unit access a forced resume will also happen when there are no other viable non-quiesced paths on the current target port group.
<b>Corrective Action</b>	Verify the configuration and check why array lun is usable through only one path.
<b>Syslog Message</b>	Array LUN '%s' (%s) has had I/O resumed on the path from initiator %s to %s's target port: WWNN: %s, WWPN: %s to ensure LUN access through atleast one path. User settings are preempted.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialno</b> (STRING): Serial number of the array LUN. <b>adapterName</b> (STRING): Name of the initiator port used to access the array LUN. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port.

<b>EMS Identifier</b>	mlm.array.lun.hiddenDMXVCMDB
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system determines that a Symmetrix LUN is write protected.
<b>Corrective Action</b>	Either write enable the LUN or, if this is the Symmetrix VCMDB control device, consider unmapping the LUN to Data ONTAP.
<b>Syslog Message</b>	Symmetrix LUN (%s, %s) is write protected and will be ignored. This logical unit may be the VCMDB control device.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the LUN. <b>serialno</b> (STRING): Serial number of the LUN.

<b>EMS Identifier</b>	mlm.array.lun.multipleIDs
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a logical device (LDEV) on an array has more than one LUN ID.
<b>Corrective Action</b>	Verify the LUN configuration and make sure that the LUN ID is the same on all array target ports.
<b>Syslog Message</b>	Array LUN '%s' (%s): Multiple LUN IDs are associated with the same LDEV on array %s. An LDEV can only have one LUN ID associated with it across all array target ports.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialNo</b> (STRING): Serial number of the array LUN. <b>arrayName</b> (STRING): Name of the array.

<b>EMS Identifier</b>	mlm.array.lun.OnePath
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an array LUN has only one path.
<b>Corrective Action</b>	Verify the configuration and make sure that there are at least two paths to this array LUN.
<b>Syslog Message</b>	Array LUN '%s' is connected using only one path. To avoid the potential for data loss caused by the remaining path's failure, all array LUNs should have at least two paths.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN.

<b>EMS Identifier</b>	mlm.array.lun.PathAdded
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a new path is added for an array LUN.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array LUN '%s' (%s) is now connected on initiator port %s through %s's target port: WWNN: %s, WWPN: %s at LUN ID: %d.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN <b>serialNo</b> (STRING): Serial number of the array LUN. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter used to access the array LUN. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port. <b>LUNID</b> (INT): LUN ID to which a path was added.

<b>EMS Identifier</b>	mlm.array.lun.PathFO
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an array LUN path becomes inaccessible and after a user-configurable delay, a path failover begins if the path remains inaccessible. The delay time can be modified using the "storage array modify -name array_name -path-failover-time delay_time" command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Path via adapter %s and device "%s" to array "%s" is currently offline, but path failover is delayed for %d seconds. After this delay, if the path is back online, I/O will resume on this same path. Otherwise, I/O will fail over to an alternate path.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the adapter involved in the path offline operation. <b>deviceName</b> (STRING): Name of the Fibre Channel device. <b>arrayName</b> (STRING): Name of the array. <b>delay</b> (INT): Path failover delay, in seconds.

<b>EMS Identifier</b>	mlm.array.lun.PathRemoved
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a path to this array LUN is removed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array LUN '%s' (%s) is no longer available on initiator port %s through %s's target port: WWNN: %s, WWPN: %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialNo</b> (STRING): Serial number of the array LUN. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter used to access the array LUN. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port.

<b>EMS Identifier</b>	mlm.array.lun.quiesced
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when I/O is quiesced on an array LUN.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array LUN '%s' (%s) has had I/O quiesced on the path from initiator %s to %s's target port: WWNN: %s, WWPN: %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialNo</b> (STRING): Serial number of the array LUN. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter used to access the array LUN. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port.

<b>EMS Identifier</b>	mlm.array.lun.removed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the last path to an array LUN is removed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array LUN '%s' (%s) is no longer being presented to this node.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialNo</b> (STRING): Serial number of the array LUN.

<b>EMS Identifier</b>	mlm.array.lun.resumed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when I/O is resumed on an array LUN that was quiesced.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array LUN '%s' (%s) has had I/O resumed on the path from initiator %s to %s's target port: WWNN: %s, WWPN: %s.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialNo</b> (STRING): Serial number of the array LUN. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter used to access the array LUN. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port.

<b>EMS Identifier</b>	mlm.array.lun.type.control
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the array LUN is a control LUN on the array. A control LUN cannot be used as a data LUN.
<b>Corrective Action</b>	Disable or mask off control LUNs.
<b>Syslog Message</b>	Array LUN '%s' is a control LUN and is not usable for data storage. Disable it or mask it off.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN.

<b>EMS Identifier</b>	mlm.array.mixedFailoverMode
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) determines that the set of paths to a storage device is configured with more than one failover mode policy.
<b>Corrective Action</b>	Reconfigure the storage array so that each target port reports the same failover mode policy. When the reconfiguration is complete, reboot the system node that detected the error.
<b>Syslog Message</b>	Fibre Channel host bus adapter %s detects that storage array %s reports a failover mode policy (%s) on target port WWNN: %s, WWPN: %s that doesn't match the policy (%s) currently in effect. The failover mode policy must be consistent on each path presented.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the Fibre Channel adapter detecting the failover mode conflict. <b>arrayName</b> (STRING): Name of the array. <b>policy1</b> (STRING): Inconsistent failover mode policy detected. <b>wwnn</b> (STRING): World Wide Node Name of the array target port reporting the inconsistent failover mode policy. <b>wwpn</b> (STRING): World Wide Port Name of the array target port reporting the inconsistent failover mode policy. <b>policy2</b> (STRING): Failover mode policy currently in effect.

<b>EMS Identifier</b>	mlm.array.ndu.complete
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when you set the is-upgrade-pending flag status for the array to "false".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array '%s' has the is-upgrade-pending flag status set to "false".
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array.

<b>EMS Identifier</b>	mlm.array.ndu.doneTgtPort
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when you set the is-upgrade-pending flag status for the array to "false". This message is logged for every array target port seen by the initiators from this node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array '%s' has the is-upgrade-pending flag status set to "false" for the path from initiator '%s' to the target port: WWNN: %s, WWPN: %s.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter accessing the array target port. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port.

<b>EMS Identifier</b>	mlm.array.ndu.pending
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when you set the is-upgrade-pending flag status to "true" for a specific array, to indicate that the array will undergo a firmware upgrade in the near future. After the upgrade is complete, you must manually set the is-upgrade-pending flag status back to "false" to maintain optimal path failover detection.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array '%s' has its is-upgrade-pending flag status set to "true". Path failover performance will be degraded during the array firmware upgrade. After the upgrade is complete, set the is-upgrade-pending flag status for this array to "false".
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array.

<b>EMS Identifier</b>	mlm.array.ndu.pendingTgtPort
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when you set the is-upgrade-pending flag status for the array to "true". This message is logged for every array target port seen by the initiators from this node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array '%s' has the is-upgrade-pending flag status set to "true" for the path from initiator %s to the target port: WWNN: %s, WWPN: %s.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter accessing the array target port. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port.

<b>EMS Identifier</b>	mlm.array.ndu.portsDown
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the array target port does not come back online after 80 seconds. This message is logged for every array target port seen by the initiators of this node that does not come back online after the array firmware upgrade.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array '%s' target port: WWNN: %s, WWPN: %s seen from initiator '%s' is down.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port. <b>adapterName</b> (STRING): Name of the Fibre Channel adapter accessing the array target port.

<b>EMS Identifier</b>	mlm.array.ndu.portsOffline
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when all array ports for a specific array go offline while the array has its is-upgrade-pending flag status set to "true".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array '%s' has target ports changed to offline state while its is-upgrade-pending status flag is set to "true".
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array.

<b>EMS Identifier</b>	mlm.array.ndu.portsOnline
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the first array target port is detected back online after a firmware upgrade where the array is marked with the is-upgrade-pending flag status set to "true".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array '%s' has target ports changed to online state during a firmware upgrade.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array.

<b>EMS Identifier</b>	mlm.array.ndu.stillPending
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs once every 60 minutes while the is-upgrade-pending flag status is set to "true" on an array. You should set the is-upgrade-pending flag status to "false" after the array firmware upgrade is complete to avoid path failover performance issues.
<b>Corrective Action</b>	After the array firmware upgrade is complete, set the is-upgrade-pending flag status for the array to "false".
<b>Syslog Message</b>	Array '%s' has the is-upgrade-pending flag status set to "true". After the array's firmware update is complete, set the is-upgrade-pending flag status for this array to "false".
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array.

<b>EMS Identifier</b>	mlm.array.path.autoQuiesced
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the path to the array is quiesced,auto path quiesce happens when the number of path failures reached path_failure count in the given duration(in mins).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Path from initiator %s to array %s target_port:WWNN:%s,WWPN:%s has quiesced as path-failure has reached %d in %d mins duration.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the Fibre Channel adapter used to access the path. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port. <b>path_failure</b> (INT): Number of failures occurred in the specified path. <b>duration</b> (INT): Duration in minutes to monitor the path failures.

<b>EMS Identifier</b>	mlm.array.path.discovery
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system discovers a new path to an array.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A new path was discovered: initiator port %s is now connected to array %s's target port: WWNN: %s, WWPN: %s. There are %d array LUNs visible on this target port.
<b>Parameters</b>	<b>adapter</b> (STRING): Initiator port on which a new path to the array was discovered. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's newly discovered target port. <b>wwpn</b> (STRING): World Wide Port Name of the array's newly discovered target port. <b>count</b> (INT): Number of array LUNs visible on this target port.

<b>EMS Identifier</b>	mlm.array.path.forceResume
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the path to the array is resumed forcefully when no other path except the quiesced path available for I/O in the node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Path from initiator %s to array %s target_port:WWNN:%s,WWPN:%s has resumed forcefully as it is the last available path for the I/O. User settings are preempted.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the Fibre Channel adapter used to access the path. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port.

<b>EMS Identifier</b>	mlm.array.path.quiesced
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the path to the array is quiesced when user request the particular path to be quiesced.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Path from initiator %s to array %s target_port:WWNN:%s,WWPN:%s has quiesced.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the Fibre Channel adapter used to access the path. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port.

<b>EMS Identifier</b>	mlm.array.path.resumed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the path to the array is resumed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Path from initiator %s to array %s target_port:WWNN:%s,WWPN:%s has resumed.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the Fibre Channel adapter used to access the path. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port.

<b>EMS Identifier</b>	mlm.array.port.discovery
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system discovers a new target port for an array.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A new array target port was discovered on array %s: WWNN: %s, WWPN: %s.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the new array target port. <b>wwpn</b> (STRING): World Wide Port Name of the new array target port.

<b>EMS Identifier</b>	mlm.array.portDuplicateID
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when more than one logical device (LDEV) has the same LUN ID on the same array. The error is set on these logical devices and these devices will not function until the error is resolved.
<b>Corrective Action</b>	Ensure that each LDEV has a different LUN ID.
<b>Syslog Message</b>	%s: %d appears more than once on %s's target port: WWNN: %s, WWPN: %s. LUN ID reuse on an array target port is not supported, even in different host groups.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>lunid</b> (INT): LUN ID that represents more than one LDEV. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port that is presenting this LUN ID. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port that is presenting this LUN ID.

<b>EMS Identifier</b>	mlm.array.portEmpty.direct
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a host group on an array is empty.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel host bus adapter %s reports no LUNs presented by storage array %s, target port WWNN: %s WWPN: %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the initiator port detecting the empty host group. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port.

<b>EMS Identifier</b>	mlm.array.portEmpty.switch
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a host group on an array is empty.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fibre Channel host bus adapter %s reports no LUNs presented by storage array %s, target port WWNN: %s WWPN: %s, switch:port %s.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the initiator port detecting the empty host group. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port. <b>switchPort</b> (STRING): Name of the switch and port connected to the storage array.

<b>EMS Identifier</b>	mlm.array.portMixedAddress
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a back-end array is set to Volume Set Addressing mode on one port but not on another. This results in LUN IDs that do not match in value or format. The error is set on these logical devices and these devices will not function until the error is resolved.
<b>Corrective Action</b>	Consult the back-end array documentation to disable Volume Set Addressing mode on all ports.
<b>Syslog Message</b>	Array %s is using inconsistent LUN addressing schemes. Check LUN addressing settings on port WWNN: %s, WWPN %s.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array's target port that is reporting Volume Set Addressing Enabled. <b>wwpn</b> (STRING): World Wide Port Name of the array's target port that is reporting Volume Set Addressing Enabled.

<b>EMS Identifier</b>	mlm.array.portOneController
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when all paths for an array LUN are connected to the same controller on the array. This configuration results in a single point of failure at the array.
<b>Corrective Action</b>	Reconfigure your back-end SAN so that array LUNs are presented from controllers in different fault domains on the target array.
<b>Syslog Message</b>	All paths for array LUN %s are connected to the same controller on array %s. This configuration is a single point of failure. Ensure that array LUNs are accessible through controllers in different fault domains.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>arrayName</b> (STRING): Name of the array.

<b>EMS Identifier</b>	mlm.array.prCapabilities
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an array LUN from an unsupported array.
<b>Corrective Action</b>	Detach the unsupported array. See the NetApp Support Site Interoperability Matrix Tool for further information about supported arrays.
<b>Syslog Message</b>	[Vendor '%s' Product '%s'] PR_CAP : sip_c : %x, atp_c : %x, res_c : %x, ptpl_c : %x.
<b>Parameters</b>	<b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN. <b>sip_c</b> (INTHEX): Specify initiator ports capable bit. <b>atp_c</b> (INTHEX): All target ports capable bit. <b>res_c</b> (INTHEX): Reserved bit. <b>ptpl_c</b> (INTHEX): Persist through power loss capable bit.

<b>EMS Identifier</b>	mlm.array.prReadReservation
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an array LUN from an unsupported array.
<b>Corrective Action</b>	Detach the unsupported array. See the NetApp Support Site Interoperability Matrix Tool for further information about supported arrays.
<b>Syslog Message</b>	[Vendor '%s' Product '%s'] Data_key : '0x%llx' Reservation : generation '%u' length '%u' resv_key '0x%llx' scope_address '%u' scope_type '0x%x' extent_len '%d' hex_dump '%s'.
<b>Parameters</b>	<b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN. <b>resv_key</b> (LONGINTEX): SCSI persistent reservation key. <b>generation</b> (INT): SCSI persistent reserve data generation value. <b>len</b> (INT): SCSI persistent reserve data header generation length. <b>read_in_resv_key</b> (LONGINTEX): SCSI persistent reserve data reservation key. <b>scope_address</b> (INT): SCSI persistent reserve data scope address. <b>scope_type</b> (INTEX): SCSI persistent reserve data scope. <b>extent_length</b> (INT): SCSI persistent reserve data extent length. <b>pr_reservation_hex</b> (STRING): SCSI persistent reservation hexadecimal dump.

<b>EMS Identifier</b>	mlm.array.reportluns
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an array LUN from an unsupported array.
<b>Corrective Action</b>	Detach the unsupported array. See the NetApp Support Site Interoperability Matrix Tool for further information about supported arrays.
<b>Syslog Message</b>	Unsupported array: [Vendor '%s' Product '%s'] Report LUNs: lun_count '%d' reserved field '%d'.
<b>Parameters</b>	<b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN. <b>lun_count</b> (INT): Total number of LUNs visible. <b>reserved</b> (INT): Report luns reserved field.

<b>EMS Identifier</b>	mlm.array.rptpgs
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an array LUN from an unsupported array.
<b>Corrective Action</b>	Detach the unsupported array. See the NetApp Support Site Interoperability Matrix Tool for further information about supported arrays.
<b>Syslog Message</b>	Unsupported array: [Vendor '%s' Product '%s'] ASS : %d , Access flag : %d.
<b>Parameters</b>	<b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN. <b>aas</b> (INT): Asymmetric Access State. <b>flags</b> (INT): Access state flags.

<b>EMS Identifier</b>	mlm.array.setPortTPQD
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when you set the target port queue depth for a specific target port of an array.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array '%s' target port: WWNN: %s, WWPN: %s has a target port queue depth value set to %d.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name of the array target port. <b>wwpn</b> (STRING): World Wide Port Name of the array target port. <b>tpqd</b> (INT): Target port queue depth value set for the specified target port of an array.

<b>EMS Identifier</b>	mlm.array.setTPQD
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when you set the target port queue depth for an array.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Target ports on the array '%s' have a target port queue depth value set to %d.
<b>Parameters</b>	<b>arrayName</b> (STRING): Name of the array. <b>tpqd</b> (INT): Target port queue depth value set for the target ports of the array.

<b>EMS Identifier</b>	mlm.array.unknown
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an array LUN is detected from an unknown array that is not supported in this version of Data ONTAP(R).
<b>Corrective Action</b>	Remove the array from the system.
<b>Syslog Message</b>	Array LUN %s [S/N '%s' vendor '%s' product '%s'] is unknown and is not supported in this version of Data ONTAP.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialno</b> (STRING): Serial number of the array LUN. <b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN.

<b>EMS Identifier</b>	mlm.array.unsupported
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an array LUN is detected from an unsupported array.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Array LUN %s [S/N '%s' vendor '%s' product '%s'] is not supported in this version of Data ONTAP.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the array LUN. <b>serialno</b> (STRING): Serial number of the array LUN. <b>vendor</b> (STRING): Vendor ID of the array LUN. <b>product</b> (STRING): Product ID of the array LUN.

<b>EMS Identifier</b>	mlm.arrayLUN.limit.exceeded
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) cannot install one or more discovered array LUNs since the disk device count is at full capacity.
<b>Corrective Action</b>	If possible, remove an existing disk or array LUN so that array LUN installation can proceed. If the failure persists, contact NetApp technical support.
<b>Syslog Message</b>	Unable to install one or more array LUNs [ vendor '%s' product '%s' ] discovered on initiator port %s, array target port WWNN: %s, WWPN: %s. The disk device limit (%d) has been reached.
<b>Parameters</b>	<b>vendor</b> (STRING): Vendor ID of the storage array. <b>product</b> (STRING): Product ID of the storage array. <b>adapter</b> (STRING): Name of the initiator port discovering the array LUN(s). <b>wwnn</b> (STRING): World Wide Node Name of the array target port exporting the array LUN(s). <b>wwpn</b> (STRING): World Wide Port Name of the array target port exporting the array LUN(s). <b>limit</b> (INT): Disk device maximum count.

<b>EMS Identifier</b>	mlm.bad.topology.data
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a device reports invalid data for "REPORT LUNS" command. The invalid data may include one or more instances of duplicate LUN IDs and/or the "list length value" from the "REPORT LUNS" command may not match the amount of data received.
<b>Corrective Action</b>	Repair or replace the faulty hardware associated with the wwnn and wwpn
<b>Syslog Message</b>	The device with wwnn %s and wwpn %s is reporting inconsistent "REPORT LUNS" data.
<b>Parameters</b>	<b>wwnn</b> (STRING): World Wide Node Name(wwnn) of the Device. <b>wwpn</b> (STRING): World Wide Port Name(wwpn) of the Device.

<b>EMS Identifier</b>	mlm.excessive.TPlatency
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when ONTAP(R) detects that the average SCSI I/O command latency on the target port of the array exceeds the set threshold. This message indicates a degradation of I/O throughput for the target port of the array.
<b>Corrective Action</b>	Reduce the I/O load on the device, increase the number of array target ports available for I/O, and/or alleviate the cause for the excessive latency on the device.
<b>Syslog Message</b>	Average latency of %dus on target port %s, has exceeded %dus
<b>Parameters</b>	<b>avg_latency</b> (INT): Current average latency of commands for the array target port in microseconds. <b>wwpn</b> (STRING): World Wide Port Name of the array target port on which the excessive latency was detected. <b>threshold</b> (INT): Threshold value for excessive average latency in microseconds.

<b>EMS Identifier</b>	mlm.non.optimized.TPusage
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) detects non-optimized usage of an array's target port. This message indicates degradation of I/O throughput for the indicated array's target port and the cause should be corrected.
<b>Corrective Action</b>	Increase the target port queue depth for the array's target port and/or increase the number of array target ports available for I/O to alleviate the SCSI I/O command load for the array's target port. For example, to increase the maximum allowed I/O commands for an array's target port, the following command can be run: storage array port modify -name ARRAY_NAME_1 -wwnn 50014380025d1500 -wwpn 50014380025d1508 -max-queue-depth 750
<b>Syslog Message</b>	Detected non-optimized usage of a array's target port. WWPN: %s, average service time: %dus, average latency: %dus
<b>Parameters</b>	<b>wwpn</b> (STRING): World Wide Port Name of the array's target port which the non-optimized usage was detected on. <b>avg_service</b> (INT): Current average service time of I/O commands for the array's target port in microseconds. <b>avg_latency</b> (INT): Current average latency of I/O commands for the array's target port in microseconds.

<b>EMS Identifier</b>	mlm.PRregistration.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the registration of a SCSI persistent reservation key fails. A number of conditions can cause this SCSI command to fail and most are transitory in nature. If there is not a subsequent EMS_mlm_PRregistration_succeeded message, it is indicative of a persistent hardware fault.
<b>Corrective Action</b>	A SCSI persistent registration failure normally indicates an error at the device during execution of the requested command. Such cases are often the result of an intermittent device hardware that is automatically handled by the Data ONTAP(R) drivers through retries. In cases of repeated events, the specified device should be evaluated for proper operation and possible repair or replacement.
<b>Syslog Message</b>	A SCSI persistent registration command failed on device %s on initiator port %s, target port World Wide Node Name %s, target port World Wide Port Name %s with a ha status of 0x%x, target status of 0x%x, sense key of 0x%x, additional sense code of 0x%x, additional sense code qualifier of 0x%x.
<b>Parameters</b>	<b>device_name</b> (STRING): Electrical path name of the device on which the error occurred. <b>ha_name</b> (STRING): Name of the initiator port. <b>wwnn</b> (STRING): World Wide Node Name of the target port. <b>wwpn</b> (STRING): World Wide Port Name of the target port. <b>ha_status</b> (INTHEX): Integer value of the hardware adapter status for the failed command. <b>target_status</b> (INTHEX): Integer value of the target status for the failed command. <b>sense_key</b> (INTHEX): Integer value of the sense key for the failed command. <b>asc</b> (INTHEX): Integer value of the additional sense code for the failed command. <b>asq</b> (INTHEX): Integer value of the additional sense code qualifier for the failed command.

<b>EMS Identifier</b>	mlm.PRregistration.succeeded
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a successful registration of a SCSI persistent reservation key occurs that had previously failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A SCSI persistent reservation command succeeded on device %s on initiator port %s, target port World Wide Node Name %s, target port World Wide Port Name %s where it had previously failed.
<b>Parameters</b>	<b>device_name</b> (STRING): Electrical path name of the device on which the registration succeeded. <b>ha_name</b> (STRING): Name of the initiator port. <b>wwnn</b> (STRING): World Wide Node Name of the target port. <b>wwpn</b> (STRING): World Wide Port Name of the target port.

<b>EMS Identifier</b>	mlm.SCSI.supportLvl.bad
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an array target port contains SCSI INQUIRY data with an incorrect support level. To prevent a possible data corruption scenario, the target port is not used.
<b>Corrective Action</b>	Verify that the SPC-2 bit in the array's host group is set.
<b>Syslog Message</b>	The target port containing SCSI INQUIRY DATA %s:%s with a (WWPN) of %s, has an incorrect SCSI support level; it will not be available.
<b>Parameters</b>	<b>vendorId</b> (STRING): Vendor ID from the SCSI INQUIRY data. <b>productId</b> (STRING): Product ID from the SCSI INQUIRY data. <b>wwpn</b> (STRING): World Wide Port Name (WWPN) of the target port that has the incorrect SCSI support level.

<b>EMS Identifier</b>	mlm.SCSI.supportLvl.good
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an array target port that previously contained SCSI INQUIRY data with an incorrect support level has been corrected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The target port containing SCSI INQUIRY DATA %s:%s with a (WWPN) of %s, now has a correct SCSI support level.
<b>Parameters</b>	<b>vendorId</b> (STRING): Vendor ID from the SCSI INQUIRY data. <b>productId</b> (STRING): Product ID from the SCSI INQUIRY data. <b>wwpn</b> (STRING): World Wide Port Name (WWPN) of the target port that now has the correct SCSI support level.

<b>EMS Identifier</b>	mlm.tapemc.lun.discovery
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system discovers a new tape or media changer logical unit (Tape/MC LUN) reported by a tape library.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	New %s LUN %s (S/N: %s) was discovered on initiator port %s at tape library target port WWNN: %s, WWPN: %s.
<b>Parameters</b>	<b>deviceType</b> (STRING): Type of LUN device. <b>deviceName</b> (STRING): Name of the Tape/MC LUN. <b>serialNo</b> (STRING): Serial number of the LUN. <b>adapterName</b> (STRING): Name of the initiator port discovering the LUN. <b>wwnn</b> (STRING): World Wide Node Name(WWNN) of the library target port exporting the new LUN. <b>wwpn</b> (STRING): World Wide Port Name(WWPN) of the library target port exporting the new LUN.

<b>EMS Identifier</b>	mlm.tapemc.lun.noInit
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the initialization sequence for a tape or media changer logical unit (LUN) fails.
<b>Corrective Action</b>	An expected LUN might be missing from the configuration. Information about the path to the LUN might be unknown but the product information in the log may help identify the missing LUN. Check the device LUN configuration settings.
<b>Syslog Message</b>	%s device %sL%d failed LUN initialization sequence at phase %s.
<b>Parameters</b>	<b>deviceType</b> (STRING): Type of LUN device. <b>deviceName</b> (STRING): Name of the device on which the LUN initialization fails. <b>lunId</b> (INT): LUN ID of the device on which LUN initialization fails. <b>lunInitPhase</b> (STRING): Failing LUN initialization phase.

<b>EMS Identifier</b>	mlm.tapemc.lun.PathAdded
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a new path is added for a tape or media changer logical unit (Tape/MC LUN).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s LUN '%s' (S/N: %s) is now connected on initiator port %s through %s's target port: WWNN: %s, WWPn: %s at LUN ID: %d.
<b>Parameters</b>	<b>deviceType</b> (STRING): Type of LUN device. <b>deviceName</b> (STRING): Name of the Tape/MC LUN. <b>serialNo</b> (STRING): Serial number of the LUN. <b>adapterName</b> (STRING): Name of the adapter used to access the LUN. <b>libraryName</b> (STRING): Name of the library. <b>wwnn</b> (STRING): World Wide Node Name(WWNN) of the library target port. <b>wwpn</b> (STRING): World Wide Port Name(WWPN) of the library target port. <b>LUNID</b> (INT): LUN ID to which a path was added.

<b>EMS Identifier</b>	mlm.tapemc.lun.PathRemoved
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a path to this tape or media changer logical unit (Tape/MC LUN) is removed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The %s LUN '%s' (S/N: %s) is no longer available on initiator port %s through %s's target port: WWNN: %s, WWPn: %s.
<b>Parameters</b>	<b>deviceType</b> (STRING): Type of LUN device. <b>deviceName</b> (STRING): Name of the Tape/MC LUN. <b>serialNo</b> (STRING): Serial number of the LUN. <b>adapterName</b> (STRING): Name of the adapter used to access the LUN. <b>libraryName</b> (STRING): Name of the library. <b>wwnn</b> (STRING): World Wide Node Name(WWNN) of the library target port. <b>wwpn</b> (STRING): World Wide Port Name(WWPN) of the library target port.

<b>EMS Identifier</b>	mlm.tapemc.lun.removed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the last path to a tape or media changer logical unit (Tape/MC LUN) is removed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The %s LUN '%s' (S/N: %s) is no longer visible to this node.
<b>Parameters</b>	<b>deviceType</b> (STRING): Type of LUN device. <b>deviceName</b> (STRING): Name of the Tape/MC LUN. <b>serialNo</b> (STRING): Serial number of the LUN.

<b>EMS Identifier</b>	mlm.tapemc.path.discovery
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system discovers a new tape or media changer logical unit (Tape/MC LUN) path.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A new Tape/MC path was discovered: initiator port %s is now connected to tape library %s's target port: WWNN: %s, WWPn: %s. There are %d LUNs visible on this target port.
<b>Parameters</b>	<b>adapterName</b> (STRING): Name of the initiator port discovering the Tape/MC LUN. <b>libraryName</b> (STRING): Name of the tape library. <b>wwnn</b> (STRING): World Wide Node Name(WWNN) of the library target port exporting the new LUN. <b>wwpn</b> (STRING): World Wide Port Name(WWPN) of the library target port exporting the new LUN. <b>count</b> (INT): Number of LUNs visible on this port.

<b>EMS Identifier</b>	mlm.TPQD.TPutilization
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) has lowered the number of I/O commands that are allowed to be active by at least 25 percent for an array's target port. This message indicates degradation of I/O throughput for the indicated array's target port and the cause should be corrected.
<b>Corrective Action</b>	Analyze the EMS logs for EMS_fci_device_timeout, EMS_scsi_cmd_adapterResources or EMS_scsi_cmd_targetStatus indicating of "Busy" or "Queue Full" events associated to the array's target port and correct any hardware faults. Reduce the shared load on the device and/or reduce the maximum allowed I/O commands for the array's target port. For example, to reduce the maximum allowed I/O commands for an array's target port, the following command can be run: storage array port modify -name ARRAY_NAME_1 -wwnn 50014380025d1500 -wwpn 50014380025d1508 -max-queue-depth 256
<b>Syslog Message</b>	Array target port of %s has had its dynamic target port queue depth lowered to %d which is 25%% or lower of its maximum allowed value of %d.
<b>Parameters</b>	<b>wwpn</b> (STRING): World Wide Port Name of the array's target port which has its queue depth decreased by 25% or more. <b>current_qdepth</b> (INT): Current number of allowed active I/O commands for the array's target port. <b>max_qdepth</b> (INT): Maximum allowed value of the array's target port queue depth.

<b>EMS Identifier</b>	mlm.vmdisk.discovery
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system discovers a new virtual disk in a virtual machine (VM).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A new virtual disk with virtual device ID %d was discovered on initiator port %s on array %s with target port WWNN %s and WWPN: %s.
<b>Parameters</b>	<b>VirtualDeviceID</b> (INT): Virtual device ID of the virtual disk. <b>adapterName</b> (STRING): Name of the initiator port discovering the virtual disk. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name (WWNN) of the array target port exporting the new virtual disk. <b>wwpn</b> (STRING): World Wide Port Name (WWPN) of the array target port exporting the new virtual disk.

<b>EMS Identifier</b>	mlm.vmdisk.PathAdded
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a new path is added for a virtual disk in a virtual machine (VM).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Virtual disk '%s' (%s) is now connected on initiator port %s through %s's target port: WWNN: %s, WWPN: %s at virtual device ID: %d.
<b>Parameters</b>	<b>diskName</b> (STRING): Name of the virtual disk <b>serialno</b> (STRING): Serial number of the virtual disk. <b>adapterName</b> (STRING): Name of the initiator port discovering the virtual disk path. <b>arrayName</b> (STRING): Name of the array. <b>wwnn</b> (STRING): World Wide Node Name (WWNN) of the array target port. <b>wwpn</b> (STRING): World Wide Port Name (WWPN) of the array target port. <b>VirtualDeviceID</b> (INT): Virtual device ID of the virtual disk.

## "monitor" Event Group

<b>EMS Identifier</b>	monitor.brokenDisk.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node is in a degraded state because of a broken disk. The timeout values indicate how long the system will run after each boot before shutting down because of this condition. Shutdown is to encourage you to replace broken disks. * The timeout[123] values are duplicated as a convenience for the Syslog message, which prints out the value three times.
<b>Corrective Action</b>	Consult other logged messages to determine the identity of broken disks, or use the "storage disk show -broken" command. Replace any broken disks. The %d hour timeout can be increased by altering the "raid.timeout" value using the "storage raid-options modify" command.
<b>Syslog Message</b>	%s, the system shuts down automatically every %d hours to encourage you to replace the disk. If you reboot the system, it will run for another %d hours before shutting down.
<b>Parameters</b>	<b>type</b> (STRING): Type of degradation. <b>timeout1</b> (INT): Timeout value. <b>timeout2</b> (INT): Timeout value. <b>timeout3</b> (INT): Timeout value.

<b>EMS Identifier</b>	monitor.chassisFan.degraded
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a chassis fan is degraded.
<b>Corrective Action</b>	Replace the fan unit.
<b>Syslog Message</b>	Chassis fan is degraded: %s
<b>Parameters</b>	<b>fan_name</b> (STRING): Name of the fan.

<b>EMS Identifier</b>	monitor.chassisFan.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the chassis fans are OK.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Chassis fan %s is ok.
<b>Parameters</b>	<b>fru_name</b> (STRING): Name of the field-replaceable unit (FRU) containing the fan.

<b>EMS Identifier</b>	monitor.chassisFan.removed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a chassis fan is removed This is a warning message.
<b>Corrective Action</b>	Reinsert the FRU.
<b>Syslog Message</b>	Chassis fan %s is removed
<b>Parameters</b>	<b>fan_name</b> (STRING): Name of the field-replaceable unit (FRU) containing the fan.

<b>EMS Identifier</b>	monitor.chassisFan.stop
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a chassis fan is stopped. This is a warning message.
<b>Corrective Action</b>	Reseat the FRU. If the FRU is an I/O module, schedule unit downtime and power off the unit before reseating the FRU. If the error persists, replace the FRU.
<b>Syslog Message</b>	Chassis fan contains at least one stopped fan: %s
<b>Parameters</b>	<b>fru_name</b> (STRING): Name of the field-replaceable unit (FRU) containing the fan.

<b>EMS Identifier</b>	monitor.chassisFan.warning
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a chassis fan is spinning either too slowly or too fast. This is a warning message.
<b>Corrective Action</b>	Replace the FRU.
<b>Syslog Message</b>	Chassis fan is in warning state: %s
<b>Parameters</b>	<b>fru_name</b> (STRING): Name of the field-replaceable unit (FRU) containing the fan.

<b>EMS Identifier</b>	monitor.chassisFanFail.xMinShutdown
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when multiple chassis fans have failed, and the system will shut down in a few minutes unless corrected.
<b>Corrective Action</b>	Reseat the chassis fans. If they do not restart, replace them.
<b>Syslog Message</b>	Multiple Chassis Fan failure: System will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system will shut down.

<b>EMS Identifier</b>	monitor.chassisPower.degraded
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a power supply is degraded.
<b>Corrective Action</b>	Degraded power might be caused by bad power supplies, bad wall power, or bad components on the motherboard. If spare power supplies are available, try exchanging them to see if that alleviates the problem. Otherwise contact NetApp technical support for further direction.
<b>Syslog Message</b>	Chassis power is degraded: %s
<b>Parameters</b>	<b>reasonText</b> (STRING): Description of the degradation.

<b>EMS Identifier</b>	monitor.chassisPower.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the motherboard power is OK.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Chassis power is OK.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.chassisPowerSupplies.ok
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when all power supplies are OK.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Chassis power supplies OK.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.chassisPowerSupply.degraded
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a power supply is degraded.
<b>Corrective Action</b>	A replacement power supply might be required. Contact NetApp technical support for further direction.
<b>Syslog Message</b>	Chassis power supply %d is degraded: %s
<b>Parameters</b>	<b>ps_number</b> (INT): Power supply number. <b>reasonText</b> (STRING): Description of the degradation.

<b>EMS Identifier</b>	monitor.chassisPowerSupply.notPresent
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an expected a power supply is not present.
<b>Corrective Action</b>	Add a power supply to the controller chassis.
<b>Syslog Message</b>	Chassis power supply %d is not present.
<b>Parameters</b>	<b>ps_number</b> (INT): Power supply number.

<b>EMS Identifier</b>	monitor.chassisPowerSupply.off
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a power supply is off.
<b>Corrective Action</b>	Turn on the power supply.
<b>Syslog Message</b>	Chassis power supply %d off.
<b>Parameters</b>	<b>ps_number</b> (INT): Power supply number.

<b>EMS Identifier</b>	monitor.chassisPowerSupply.ok
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the power supply is OK.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Chassis power supply %d is OK.
<b>Parameters</b>	<b>ps_number</b> (INT): Power supply number.

<b>EMS Identifier</b>	monitor.chassisTemperature.cool
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the chassis temperature is too cool. This is a warning message.
<b>Corrective Action</b>	The appliance cannot function in an environment that is too cold; find ways to warm the appliance.
<b>Syslog Message</b>	Chassis temperature is too cool: %s
<b>Parameters</b>	<b>describe_toocool</b> (STRING): Description of the condition.

<b>EMS Identifier</b>	monitor.chassisTemperature.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the chassis temperature is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Chassis temperature is ok.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.chassisTemperature.state.unknown
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system cannot read multiple chassis temperature sensors. The condition can be caused by software, firmware, or hardware problems.
<b>Corrective Action</b>	Arrange to AC power-cycle the unit to address possible software and firmware issues. If the condition persists, contact NetApp technical support for assistance with Processor Control Module (PCM) replacement.
<b>Syslog Message</b>	Chassis temperature state is unknown: %s.
<b>Parameters</b>	<b>reasonText</b> (STRING): Description of the temperature sensor issue.

<b>EMS Identifier</b>	monitor.chassisTemperature.warm
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the chassis temperature is too warm. This is a warning message. If the condition persists, the system will shut down automatically.
<b>Corrective Action</b>	Ensure that sufficient cooling air is being supplied to the chassis and that the air inlets and outlets of the unit are not blocked. If you cannot resolve the situation, shut down all clients that are attached to the storage appliance, and then shut down the system.
<b>Syslog Message</b>	Chassis temperature is too warm: %s
<b>Parameters</b>	<b>describe_toowarm</b> (STRING): Description of the condition.

<b>EMS Identifier</b>	monitor.completed.iron
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when wafliron in the optional commit mode has finished on the aggregate but changes have not been committed or rejected. Either commit or reject the changes.
<b>Corrective Action</b>	Run the "aggr wafliron commit VOL" command to commit the changes or the "aggr wafliron reject VOL" command to reject the changes.
<b>Syslog Message</b>	Wafiron in the optional commit mode has completed on aggregate '%s' but the changes have not been committed or rejected. Either commit or reject the changes.
<b>Parameters</b>	<b>volname</b> (STRING): Volume name

<b>EMS Identifier</b>	monitor.cpu.ok
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the CPU busy situation is corrected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>report</b> (STRING): Description of the current CPU usage.

<b>EMS Identifier</b>	monitor.cpu.tooBusy
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the CPU is too busy.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Warning: %s
<b>Parameters</b>	<b>report</b> (STRING): Description of the problem.

<b>EMS Identifier</b>	monitor.diskLabelCheckFailed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system detects that a file system disk has an invalid or a missing RAID label. The system corrects the situation during the next label update.
<b>Corrective Action</b>	No user action is required.
<b>Syslog Message</b>	Periodic check of RAID %s has failed. The system will correct the problem.
<b>Parameters</b>	<b>disk_info</b> (STRING): Formatted information of the disk object. <b>label_block_num</b> (INT): Label block number code. <b>label_state</b> (INT): Label state code. <b>label_read_error</b> (INT): Label read error code. <b>shelf</b> (STRING): Disk shelf identifier where the disk is located. <b>bay</b> (STRING): Disk bay within the disk shelf where the disk is located. <b>vendor</b> (STRING): Name of the vendor of the disk. <b>model</b> (STRING): Model string of the disk. <b>firmware_revision</b> (STRING): Firmware revision number of the disk. <b>serialno</b> (STRING): Serial number of the disk. <b>disk_type</b> (INT): Type of disk. <b>disk_rpm</b> (STRING): Rotational speed of the disk in RPM.

<b>EMS Identifier</b>	monitor.downRevDisks
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when ONTAP(R) detects that downrev disks are still present in the system.
<b>Corrective Action</b>	Download the latest disk firmware on each node and ensure that automatic background firmware update is enabled. If necessary, use the (advanced privilege) "storage disk firmware update" command to manually update disk firmware. Consult the man page for cautions.
<b>Syslog Message</b>	Downrev disks still present!!
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.extCache.failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the monitor detects the WAFL(R) external cache subsystem (FlexScale) has failed and is no longer available for use.
<b>Corrective Action</b>	Consult the system logs to determine the original cause of the error.
<b>Syslog Message</b>	FlexScale WAFL external cache is unavailable due to an earlier fatal error.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.fan.critical
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when one or more main unit fans have failed. The system cannot continue to operate.
<b>Corrective Action</b>	Replace the failed fans.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>report</b> (STRING): Report indicating the critical state.

<b>EMS Identifier</b>	monitor.fan.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when one or more main unit fans have failed. The system remains operational. If the condition persists too long, an automatic shutdown for overtemperature might occur.
<b>Corrective Action</b>	Reseat the failed fans. If the error persists, replace them.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>report</b> (STRING): Report indicating the failed fans.

<b>EMS Identifier</b>	monitor.fan.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a previously failed main unit fan has been restarted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>report</b> (STRING): Report indicating that the failed fans have restarted.

<b>EMS Identifier</b>	monitor.fan.warning
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when one or more fans are in a warning state.
<b>Corrective Action</b>	Replace the indicated fans to avoid overheating.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>report</b> (STRING): Report indicating the warning level.

<b>EMS Identifier</b>	monitor.fru.info.readable
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the inventory information about a field-replaceable unit (FRU) that was previously unreadable becomes readable.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The inventory information of FRU %s is readable.
<b>Parameters</b>	<b>fru_name</b> (STRING): FRU name.

<b>EMS Identifier</b>	monitor.fru.info.unreadable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the inventory information of a field-replaceable unit (FRU) is not readable.
<b>Corrective Action</b>	See the system hardware guide for the replacement of the FRU. At the earliest convenient time, remove and reinsert the FRU to reseal it, and then resume normal system operation. If the error persists, replace the FRU according to the hardware guide directions.
<b>Syslog Message</b>	The inventory information of FRU %s is not readable.
<b>Parameters</b>	<b>fru_name</b> (STRING): FRU name.

<b>EMS Identifier</b>	monitor.globalStatus.critical
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system's global health is critical; for example, if a fan failed.
<b>Corrective Action</b>	Check the event log for other conditions that can cause this global status message. Follow the corrective actions in those messages.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>problem</b> (STRING): System problem description.

<b>EMS Identifier</b>	monitor.globalStatus.nonCritical
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system's global health is degraded; for example, if a file system is nearly full.
<b>Corrective Action</b>	Check the event log for other conditions that can cause this global status message. Follow the corrective actions in those messages.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>problem</b> (STRING): System problem description.

<b>EMS Identifier</b>	monitor.globalStatus.nonRecoverable
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system's global health is non-recoverable, and the system is shutting down. There are currently no examples of this failure.
<b>Corrective Action</b>	Check the event log for other conditions that can cause this global status message. Follow the corrective actions in those messages.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>problem</b> (STRING): System problem description.

<b>EMS Identifier</b>	monitor.globalStatus.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system's global health returns to normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>problem</b> (STRING): Description of the system's normal condition.

<b>EMS Identifier</b>	monitor.ioCard.degraded
<b>Severity</b>	ALERT
<b>Description</b>	This message indicates that an I/O card is degraded.
<b>Corrective Action</b>	Exchange or replace the card with a known good card in the same I/O slot. If the problem persists, contact NetApp technical support for replacement assistance.
<b>Syslog Message</b>	IO card is degraded: %s
<b>Parameters</b>	<b>reasonText</b> (STRING): Slot number of the card and the reason the card is degraded.

<b>EMS Identifier</b>	monitor.ioCard.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message indicates that an I/O card is operating properly.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	IO card on slot %d is OK
<b>Parameters</b>	<b>slot_number</b> (INT): Slot number of the card.

<b>EMS Identifier</b>	monitor.ioexpansionPower.degraded
<b>Severity</b>	NOTICE
<b>Description</b>	This message indicates that power on the I/O expansion module is degraded.
<b>Corrective Action</b>	Degraded power might be caused by bad power supplies, bad wall power, or bad components on the motherboard. If spare power supplies are available, try exchanging them to see whether the problem is resolved. Otherwise, contact NetApp technical support.
<b>Syslog Message</b>	Power on I/O expansion module is degraded: %s
<b>Parameters</b>	<b>reasonText</b> (STRING): Reading and state of voltage sensors on the I/O expansion module.

<b>EMS Identifier</b>	monitor.ioexpansionPower.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This messages indicates that power on the I/O expansion module is OK.
<b>Corrective Action</b>	No corrective action is needed.
<b>Syslog Message</b>	Power on the I/O expansion module is OK.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.ioexpansionTemperature.cool
<b>Severity</b>	EMERGENCY
<b>Description</b>	This warning message occurs when the I/O expansion module is too cold.
<b>Corrective Action</b>	The system cannot function in an environment that is too cold; find ways to warm the system.
<b>Syslog Message</b>	I/O expansion module is too cold: %s
<b>Parameters</b>	<b>describe_toocool</b> (STRING): Reading and state of the temperature sensors on the I/O expansion module.

<b>EMS Identifier</b>	monitor.ioexpansionTemperature.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the temperature of the I/O expansion module is normal. It can occur for the following two cases: 1) LOG_NOTICE to show that a bad condition has reverted to normal. 2) LOG_INFO for hourly to indicate that the temperature is OK.
<b>Corrective Action</b>	No corrective action is needed.
<b>Syslog Message</b>	Temperature of the I/O expansion module is OK.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.ioexpansionTemperature.warm <b>Deprecated:</b> Deprecated as of version 9.2.0 to address the EMS ID length violation.
<b>Severity</b>	ALERT
<b>Description</b>	This warning message occurs when the I/O expansion module is too warm.
<b>Corrective Action</b>	Evaluate the environment in which the system is functioning: are air conditioning units needed or is the current air conditioning not functioning properly?
<b>Syslog Message</b>	I/O expansion module is too warm: %s
<b>Parameters</b>	<b>describe_toowarm</b> (STRING): Reading and state of the temperature sensors on the I/O expansion module.

<b>EMS Identifier</b>	monitor.ioxmTemp.warm
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the I/O module is above the recommended operating temperature.
<b>Corrective Action</b>	Evaluate the environment in which the system is functioning for proper air flow and temperature control.
<b>Syslog Message</b>	I/O expansion module is too warm: %s
<b>Parameters</b>	<b>describe_toowarm</b> (STRING): Reading and state of the temperature sensors on the I/O expansion module.

<b>EMS Identifier</b>	monitor.mismatch.hourly
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the version of ONTAP(R) is not supported on this hardware. You cannot run a version of ONTAP produced by one vendor on hardware supplied by another. The system will shut down if you do not install a correctly branded version of ONTAP.
<b>Corrective Action</b>	Install a correctly branded version of ONTAP before the timer expires.
<b>Syslog Message</b>	ONTAP detected a branding mismatch. The hardware is branded by %s and ONTAP is branded by %s. There are %d hour(s) left before shutdown. Install a version of ONTAP branded by your hardware vendor.
<b>Parameters</b>	<b>hardware</b> (STRING): Vendor brand associated with the hardware. <b>software</b> (STRING): Vendor brand associated with the version of ONTAP. <b>hours</b> (INT): Number of hours before shutdown.

<b>EMS Identifier</b>	monitor.mismatch.shutdown
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system shuts down because the hardware brand does not match the ONTAP(R) version brand.
<b>Corrective Action</b>	Install a correctly branded version of ONTAP to prevent subsequent shutdowns for brand mismatch. Monitor the EMS_monitor_mismatch_hourly message to determine when the next shutdown will occur because of the brand mismatch.
<b>Syslog Message</b>	Shutting down because of a software branding mismatch. The hardware is branded by %s and ONTAP is branded by %s.
<b>Parameters</b>	<b>hardware</b> (STRING): Vendor brand associated with the hardware. <b>software</b> (STRING): Vendor brand associated with the version. of ONTAP.

<b>EMS Identifier</b>	monitor.nvmembattery.warninglow
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the nonvolatile memory (NVMEM) battery charge is low.
<b>Corrective Action</b>	Replace the NVMEM battery as soon as possible.
<b>Syslog Message</b>	NVMEM battery is low on power and should be replaced as soon as possible.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.nvramLowBatteries
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM batteries are at a dangerously low power level.
<b>Corrective Action</b>	Replace the NVRAM batteries.
<b>Syslog Message</b>	NVRAM batteries are dangerously low.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.nvramLowBatteries.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a low batteries situation exists. The timeout[123] values are duplicated as a convenience for the Syslog message, which prints out the value three times.
<b>Corrective Action</b>	Replace the NVRAM batteries.
<b>Syslog Message</b>	If the NVRAM batteries are dangerously low, the system shuts down automatically every %d hours to encourage you to replace them. If you reboot the system it will run for another %d hours before shutting down.
<b>Parameters</b>	<b>timeout1</b> (INT): Timeout value. <b>timeout2</b> (INT): Timeout value. <b>timeout3</b> (INT): Timeout value.

<b>EMS Identifier</b>	monitor.nvramLowBattery
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery is at a dangerously low power level.
<b>Corrective Action</b>	Replace the NVRAM battery.
<b>Syslog Message</b>	NVRAM battery is dangerously low.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.nvramLowBattery.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a low battery situation exists. The timeout[123] values are duplicated as a convenience for the Syslog message, which prints out the value three times.
<b>Corrective Action</b>	Replace the NVRAM battery.
<b>Syslog Message</b>	If the NVRAM battery is dangerously low, the system shuts down automatically every %d hours to encourage you to replace it. If you reboot the system it will run for another %d hours before shutting down.
<b>Parameters</b>	<b>timeout1</b> (INT): Timeout value. <b>timeout2</b> (INT): Timeout value. <b>timeout3</b> (INT): Timeout value.

<b>EMS Identifier</b>	monitor.partnerController.notPresent
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when both controllers are configured as an HA (high-availability) pair, but the partner controller is not present. The system fan will run at a higher speed to prevent overheating due to the non-optimum air flow with only one controller in place.
<b>Corrective Action</b>	Put the partner controller back into the HA configuration; otherwise, the system fan will run at a higher speed to prevent overheating due to the non-optimum air flow with only one controller in place.
<b>Syslog Message</b>	Both controllers are configured as an HA (high-availability) pair, but the partner controller is not present. The system fan will run at a higher speed to prevent possible overheating.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.power.degraded <b>Deprecated:</b> Deprecated as of version 9.2. Last used in 7.3.6 on Tin and Dell one-PSU systems. It is the last user of snmp trap 43.
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the main unit power supply is in a degraded mode.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	Power supply is in degraded mode: %s
<b>Parameters</b>	<b>report</b> (STRING): Description of the problem.

<b>EMS Identifier</b>	monitor.power.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the system has sufficient power (220V) to power up both controllers.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The power provided to the system is sufficient.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.power.not.sufficient
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a storage system in a low-line (110V) power configuration does not have sufficient power to support both controllers. The built-in hardware logic prevents the controller in the bottom slot from powering up.
<b>Corrective Action</b>	A high-line (220V) power configuration is needed to power up both controllers. Power off the system, connect the power supply unit (PSU) with 220V power, and then power up the system.
<b>Syslog Message</b>	The bottom controller is not powered up due to insufficient power.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.power.unreadable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a power sensor in the controller module is not readable.
<b>Corrective Action</b>	Shut down the system and power-cycle the controller module. If the sensor is still not readable, replace the controller module.
<b>Syslog Message</b>	A power sensor %s in the controller module is not readable.
<b>Parameters</b>	<b>sensor_name</b> (STRING): Sensor name.

<b>EMS Identifier</b>	monitor.raid.brokenDisk
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the monitor detects a broken disk.
<b>Corrective Action</b>	Replace the disk.
<b>Syslog Message</b>	%s in RAID group "%s" %s broken.
<b>Parameters</b>	<b>type</b> (STRING): Type of disk. <b>rgname</b> (STRING): Name of the RAID group. <b>verb</b> (STRING): Description of the broken state.

<b>EMS Identifier</b>	monitor.raid.reconstruct
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a RAID reconstruct is initiated.
<b>Corrective Action</b>	No user action is required for the reconstruct operation to succeed. Refrain from removing disks from the affected RAID group until reconstruction is completed.
<b>Syslog Message</b>	Reconstructing broken %s in RAID group "%s".
<b>Parameters</b>	<b>type</b> (STRING): Type of disk. <b>rgname</b> (STRING): RAID group name.

<b>EMS Identifier</b>	monitor.raid.reconstruct.susp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a RAID reconstruction needs to be performed on a RAID group, but reconstruction is suspended or disabled.
<b>Corrective Action</b>	Contact NetApp technical support for assistance with reenabling RAID reconstruction.
<b>Syslog Message</b>	Reconstruction needs to be performed on RAID group "%s", but RAID reconstruction is suspended or disabled.
<b>Parameters</b>	<b>rgname</b> (STRING): RAID group name.

<b>EMS Identifier</b>	monitor.raiddp.vol.singleDegraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs as part of an hourly system check when a double parity volume is in single degraded mode. This happens when there is a disk failure in the double parity volume and the RAID subsystem cannot find a suitable replacement disk to start reconstruction.
<b>Corrective Action</b>	Add a spare disk suitable to reconstruction.
<b>Syslog Message</b>	%s in RAID group "%s" is broken.
<b>Parameters</b>	<b>type</b> (STRING): Type of disk: data, parity or dparity disk. <b>rgname</b> (STRING): RAID group name.

<b>EMS Identifier</b>	monitor.raidtec.dblDegraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs as part of an hourly system check, when a RAID-TEC aggregate is in double degraded mode. This happens when there are two disk failures in any RAID group in the RAID-TEC aggregate and the RAID subsystem cannot find suitable replacement disks to start reconstruction. One more disk failure in the same RAID group leads to the aggregate being in its worst degraded state.
<b>Corrective Action</b>	Replace the failed disks, which are identifiable by lighted fault LED lights, to start reconstruction. After reconstruction is complete, the output of the "aggr show" command shows that the aggregate is back to normal state.
<b>Syslog Message</b>	%s in RAID group "%s" are broken.
<b>Parameters</b>	<b>type</b> (STRING): Type of disks: data, parity, dparity, or tparity disk. <b>rgname</b> (STRING): RAID group name.

<b>EMS Identifier</b>	monitor.rtcLowPower
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Real Time Clock (RTC) battery is at a dangerously low power level.
<b>Corrective Action</b>	Replace the RTC battery.
<b>Syslog Message</b>	RTC battery is dangerously low. Replace it at the next available maintenance window.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.shelf.accessError
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the monitor detects that a disk shelf access error has occurred. The message is also an hourly reminder that the error has not been corrected. Enclosure Services is unable to monitor or control one or more disk shelves on a particular Fibre Channel loop or Serial SCSI Attach (SAS) domain because it cannot communicate with the enclosure services processes in those shelves.
<b>Corrective Action</b>	Check the corrective actions of enclosure services error messages that might precede this error in the log. Ensure that all loop or domain connections are latched and secured properly. Correct any error conditions indicated by LEDs on any of the shelves or shelf I/O modules. This might require power-cycling of shelves or replacement of modules, as is appropriate to the particular shelf type.
<b>Syslog Message</b>	Enclosure services has detected an error in access to shelves on channel %s.
<b>Parameters</b>	<b>channel</b> (STRING): Adapter slot or switch port that has detected the fault; for example, "7a" or "myswitch:5".

<b>EMS Identifier</b>	monitor.shelf.accessError.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the monitor detects that a previously detected shelf access error has been corrected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Enclosure services-detected shelf access error has been corrected on channel %s.
<b>Parameters</b>	<b>channel</b> (STRING): Adapter slot or switch port where the error was corrected.

<b>EMS Identifier</b>	monitor.shelf.configError
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the Enclosure Services process notifies the monitor of a disk shelf configuration error. The message is also an hourly reminder that the error has not been corrected. Configuration errors might cause Enclosure Services to be unable to monitor a disk shelf, or might indicate shelf configuration or interconnect problems; for example, too few power supplies in a disk shelf, or improper mixing of modules in a shelf or on a loop.
<b>Corrective Action</b>	See the EMS message concerning disk shelf configuration errors that preceded the first instance of this message, and follow the corrective actions therein.
<b>Syslog Message</b>	Enclosure services has detected an error in access to shelves or shelf configuration on channel %s.
<b>Parameters</b>	<b>channel</b> (STRING): Adapter slot or switch port that has detected the fault; for example, "7a" or "myswitch:5".

<b>EMS Identifier</b>	monitor.shelf.configError.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the monitor detects that a previously detected shelf configuration error has been corrected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Enclosure services-detected configuration error has been corrected on channel %s.
<b>Parameters</b>	<b>channel</b> (STRING): Adapter slot or switch port where the fault existed.

<b>EMS Identifier</b>	monitor.shelf.fault
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system detects a critical disk shelf fault. It is also an hourly reminder that the condition has not been corrected.
<b>Corrective Action</b>	Check the event log for more specific shelf error messages, and follow the corrective actions there. Use the "storage shelf show" and "storage shelf show -errors" commands to display the current shelf status.
<b>Syslog Message</b>	Critical fault reported on disk storage shelf attached to channel %s. Check fans, power supplies, disks, and temperature sensors.
<b>Parameters</b>	<b>channel</b> (STRING): Adapter slot or switch port that has detected the fault; for example, "7a" or "myswitch:5".

<b>EMS Identifier</b>	monitor.shelf.fault.ok
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the monitor detects that a previously detected shelf fault has been corrected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Fault previously reported on disk storage shelf attached to channel %s has been corrected.
<b>Parameters</b>	<b>channel</b> (STRING): Adapter slot or switch port where the error has been corrected; for example, "7a" or "myswitch:5".

<b>EMS Identifier</b>	monitor.shelf.warning
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects a disk shelf warning. It is also an hourly reminder that the condition has not been corrected.
<b>Corrective Action</b>	Check the messages log for more specific shelf error messages, and follow the corrective actions there.
<b>Syslog Message</b>	Fault reported on disk storage shelf attached to channel %s. Check fans, power supplies, disks, and temperature sensors.
<b>Parameters</b>	<b>channel</b> (STRING): Adapter slot or switch port that has detected the fault; for example, "7a" or "myswitch:5".

<b>EMS Identifier</b>	monitor.shutdown.brokenDisk
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an automatic shutdown sequence has been initiated due to a degraded RAID group that cannot be reconstructed because there are not enough appropriate spare disks. The timeout period is specified by the "raid.timeout" option, which defaults to 24 hours.
<b>Corrective Action</b>	To recover from the shutdown, boot the system. Ensure that there are sufficient spare disks of the appropriate type so that the degraded RAID group can be reconstructed.
<b>Syslog Message</b>	%s in RAID group "%s" %s broken. Halting system now.
<b>Parameters</b>	<b>type</b> (STRING): Type of disk. <b>rgname</b> (STRING): RAID group name. <b>verb</b> (STRING): Description of the broken state.

<b>EMS Identifier</b>	monitor.shutdown.brokenDisk.pending
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an automatic shutdown sequence has been postponed due to RAID reconstruction.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s in RAID group "%s" %s broken. Halting system in %d hour%s.
<b>Parameters</b>	<b>type</b> (STRING): Type of disk. <b>rgname</b> (STRING): RAID group name. <b>verb</b> (STRING): Description of the broken state. <b>countdown</b> (INT): Number of hours remaining to shutdown. <b>plural</b> (STRING): Plural character.

<b>EMS Identifier</b>	monitor.shutdown.cancel
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an automatic shutdown sequence is canceled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Automatic shutdown sequence canceled.
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.shutdown.cancel.brokenDisk
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an automatic shutdown sequence has been postponed due to RAID reconstruction
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s in RAID group "%s" %s broken. Halt delayed until %s finishes.
<b>Parameters</b>	<b>type</b> (STRING): Type of disk. <b>rgname</b> (STRING): RAID group name. <b>verb</b> (STRING): Description of the broken state. <b>reason</b> (STRING): Reason that the shutdown was postponed. Possible reasons are "RAID reconstruction" and "parity recomputation".

<b>EMS Identifier</b>	monitor.shutdown.cancel.nvramLowBatteries
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an automatic shutdown sequence has been postponed due to RAID reconstruction.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVRAM batteries are dangerously low. Halt delayed until %s finishes.
<b>Parameters</b>	<b>reason</b> (STRING): Reason that the shutdown was postponed. Possible reasons are "RAID reconstruct" and "parity recomputation".

<b>EMS Identifier</b>	monitor.shutdown.cancel.nvramLowBattery
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an automatic shutdown sequence has been postponed due to RAID reconstruction
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVRAM battery is dangerously low. Halt delayed until %s finishes.
<b>Parameters</b>	<b>reason</b> (STRING): Reason that the shutdown was postponed. Possible reasons are "RAID reconstruct" and "parity recomputation".

<b>EMS Identifier</b>	monitor.shutdown.chassisOverTemp
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the chassis temperature is too hot. This is sent just before shutdown.
<b>Corrective Action</b>	Ensure that sufficient cooling air is being supplied to the chassis and that the air inlets and outlets of the unit are not blocked.
<b>Syslog Message</b>	Chassis temperature is too hot: %s
<b>Parameters</b>	<b>describe_toohot</b> (STRING): Description of the condition.

<b>EMS Identifier</b>	monitor.shutdown.chassisUnderTemp
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system is shutting down because chassis temperature is too cold.
<b>Corrective Action</b>	The appliance is in an environment that is too cold. Find a way to warm the environment around the appliance.
<b>Syslog Message</b>	Chassis temperature is too cold: %s
<b>Parameters</b>	<b>describe_toocold</b> (STRING): Description of the condition.

<b>EMS Identifier</b>	monitor.shutdown.emergency
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when ONTAP(R) initiates an emergency shutdown.
<b>Corrective Action</b>	Correct the condition noted in the reason field.
<b>Syslog Message</b>	Emergency shutdown: %s
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the shutdown.

<b>EMS Identifier</b>	monitor.shutdown.ioexpansionOverTemp
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the I/O expansion module is too hot. This message is sent just before shutdown.
<b>Corrective Action</b>	The system environment is too hot; cool the environment.
<b>Syslog Message</b>	I/O expansion module is too hot: %s
<b>Parameters</b>	<b>describe_toohot</b> (STRING): Reading and state of the temperature sensors on the I/O expansion module.

<b>EMS Identifier</b>	monitor.shutdown.ioexpansionUnderTemp
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the I/O expansion module is too cold. This message is sent just before shutdown.
<b>Corrective Action</b>	The system environment is too cold; warm the environment.
<b>Syslog Message</b>	I/O expansion module is too cold: %s
<b>Parameters</b>	<b>describe_toocold</b> (STRING): Reading and state of the temperature sensors on the I/O expansion module.

<b>EMS Identifier</b>	monitor.shutdown.nvramLowBatteries
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM power in a controller with multiple NVRAM batteries is dangerously low, and ONTAP(R) initiates a shutdown to protect user data.
<b>Corrective Action</b>	Replace the controller NVRAM batteries.
<b>Syslog Message</b>	Emergency shutdown: NVRAM batteries dangerously low in degraded mode. Replace the batteries immediately!
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.shutdown.nvramLowBatteries.pending
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an automatic shutdown sequence is pending because of low NVRAM batteries voltage.
<b>Corrective Action</b>	Replace the controller NVRAM batteries.
<b>Syslog Message</b>	NVRAM batteries are dangerously low. Halting system in %d hour%s. Replace the batteries immediately!
<b>Parameters</b>	<b>countdown</b> (INT): Hours remaining until shutdown. <b>plural</b> (STRING): Grammatical number.

<b>EMS Identifier</b>	monitor.shutdown.nvramLowBattery
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the controller NVRAM voltage is dangerously low, and ONTAP(R) initiates a shutdown to protect user data.
<b>Corrective Action</b>	Replace the controller NVRAM battery.
<b>Syslog Message</b>	Emergency shutdown: NVRAM battery dangerously low in degraded mode. Replace the battery immediately!
<b>Parameters</b>	

<b>EMS Identifier</b>	monitor.shutdown.nvramLowBattery.pending
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an automatic shutdown sequence is pending because of low NVRAM battery voltage.
<b>Corrective Action</b>	Replace the controller NVRAM battery.
<b>Syslog Message</b>	NVRAM battery is dangerously low. Halting system in %d hour%s. Replace the battery immediately!
<b>Parameters</b>	<b>countdown</b> (INT): Hours remaining until shutdown. <b>plural</b> (STRING): Grammatical number.

<b>EMS Identifier</b>	monitor.spareLabelCheckFailed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system detects that a hot spare disk has an invalid or a missing label. The system corrects the situation by rewriting the label.
<b>Corrective Action</b>	No user action is required.
<b>Syslog Message</b>	Periodic check of hot spare %s has failed. The system will correct the problem.
<b>Parameters</b>	<b>disk_info</b> (STRING): Formatted information of the disk object. <b>label_block_num</b> (INT): Label block number code. <b>label_state</b> (INT): Label state code. <b>label_read_error</b> (INT): Label read error code. <b>shelf</b> (STRING): Disk shelf identifier where the disk is located. <b>bay</b> (STRING): Disk bay within the disk shelf where the disk is located. <b>vendor</b> (STRING): Name of the vendor of the disk. <b>model</b> (STRING): Model string of the disk. <b>firmware_revision</b> (STRING): Firmware revision number of the disk. <b>serialno</b> (STRING): Serial number of the disk. <b>disk_type</b> (INT): Type of disk. <b>disk_rpm</b> (STRING): Rotational speed of the disk in RPM.

<b>EMS Identifier</b>	monitor.temp.unreadable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the controller module temperature is not readable. In this condition, the system does not automatically shut down if it becomes too hot for reliable operation.
<b>Corrective Action</b>	Shut down the system and power-cycle the controller module. If the temperature is still not readable, replace the controller module.
<b>Syslog Message</b>	The controller temperature (%s) is not readable.
<b>Parameters</b>	<b>sensor_name</b> (STRING): Sensor name.

<b>EMS Identifier</b>	monitor.unknown.message
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the status monitor receives an unexpected message type. This is an internal error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Internal error: status monitor received message type %d, expected type %d
<b>Parameters</b>	<b>msgType</b> (INT): (None). <b>expectedType</b> (INT): (None).

<b>EMS Identifier</b>	monitor.volume.nearlyFull
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when one or more file systems are nearly full, typically indicating at least 95% full. This event is accompanied by global health monitoring messages for the customer. The space usage is computed based on the active file system size and is computed by subtracting the value of the "Snapshot Reserve" field from the value of the "Used" field of the "volume show-space" command.
<b>Corrective Action</b>	Create space by increasing the volume or aggregate sizes, or by deleting data or deleting Snapshot(R) copies. To increase a volume's size, use the "volume size" command. To delete a volume's Snapshot(R) copies, use the "volume snapshot delete" command. To increase an aggregate's size, add disks by using the "storage aggregate add-disks" command. Aggregate Snapshot(R) copies are deleted automatically when the aggregate is full.
<b>Syslog Message</b>	%s %s%s%s is nearly full (using or reserving %s%% of space and %s%% of inodes).
<b>Parameters</b>	<b>object_type</b> (STRING): Identifier for the type of object to which this event applies (aggregate or volume). <b>name</b> (STRING): Name of this object. <b>app</b> (STRING): Application UUID. <b>vserver_uuid</b> (STRING): Universal Unique ID (UUID) of the object's Vserver, if the object is a volume. Otherwise, this string is empty. <b>percent_full_blocks</b> (STRING): Used capacity of the space of the object, as a percent. <b>percent_full_inodes</b> (STRING): Used capacity of inodes of the object, as a percent.

<b>EMS Identifier</b>	monitor.weeklyStatsASUP.off
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when weekly performance AutoSupport(tm) is disabled.
<b>Corrective Action</b>	Enable the weekly performance AutoSupport by entering the "options stats.autosupport.weekly.enable on" command. You must have the correct privilege to run this command.
<b>Syslog Message</b>	Weekly performance AutoSupport has been disabled.
<b>Parameters</b>	

## "moveagent" Event Group

<b>EMS Identifier</b>	moveagent.abort.cutover
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is issued during volume move when cutover is aborted because the volume took too long to replicate. The volume is unquiesced.
<b>Corrective Action</b>	The move job can be in process of retry. User can try '-force-cutover true' to force cutover.
<b>Syslog Message</b>	Cutover abort due to volume quiesce timer expiration: volume dsid %llu.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): The source volume data set identifier (dsid)

<b>EMS Identifier</b>	moveagent.cleanup.dest
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume move operation running on the partner cluster is interrupted by a disaster recovery event (such as switchover or switchback) in the MetroCluster(tm) configuration before the operation reaches the cutover phase. This leaves the temporary destination volume created on this cluster in an incomplete state. The temporary destination volume must be deleted.
<b>Corrective Action</b>	If necessary, identify which temporary destination volume must be deleted by running the "volume show -fields volume,vserver -dsid" command, and then take that volume offline by running the "volume offline" command. Delete the volume by running the "volume delete" command while it is offline.
<b>Syslog Message</b>	MetroCluster disaster recovery event requires deletion of the temporary destination volume (DSID: %llu) created by a recent volume move operation running on the partner cluster. Failure to delete the temporary destination volume might cause future switchback operations to fail.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Destination volume data set ID (DSID).

<b>EMS Identifier</b>	moveagent.cleanup.src
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume move operation is interrupted by a disaster recovery event (such as switchover or switchback) in the MetroCluster(tm) configuration after the cutover phase has started but before the source volume is deleted. The source volume must be deleted.
<b>Corrective Action</b>	If necessary, identify which source volume must be deleted by running the "volume show -fields volume, vserver -dsid" command, and then take the volume offline by running the "volume offline" command. Delete the volume by running the "volume delete" command while it is offline.
<b>Syslog Message</b>	A MetroCluster disaster recovery event interrupted the volume move operation before the source volume was deleted. Delete the source volume (DSID: %llu). Failure to delete the source volume might cause future switchback operations to fail.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Source volume data set ID (DSID).

<b>EMS Identifier</b>	moveagent.commitdst.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a 'volume move' operation finishes moving the volume to the destination but fails to update the appropriate information on the destination. The system continues to retry the operation until it is successful. In the time between the failure and a successful retry, there might be disruption to client traffic associated with the volume being moved.
<b>Corrective Action</b>	Monitor the volume move job. If the problem persists, contact NetApp technical support
<b>Syslog Message</b>	Unable to finish the volume move operation for DSID %llu. Failed to commit the destination volume.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Destination volume Data Set ID (DSID).

<b>EMS Identifier</b>	moveagent.commitsrc.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an active volume move operation cannot commit the source volume. The system continues to retry the operation until it is successful. In the time between the failure and a successful retry, there might be disruption to client traffic associated with the volume being moved.
<b>Corrective Action</b>	Monitor the volume move job. If the problem persists, contact NetApp technical support
<b>Syslog Message</b>	Unable to finish the volume move operation for DSID %llu. Failed to commit the source volume.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Source volume Data Set ID (DSID).

<b>EMS Identifier</b>	moveagent.cutovercomp.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a 'volume move' operation cannot complete cutover. The system continues to retry the operation until it is successful.
<b>Corrective Action</b>	Monitor the volume move job. If the problem persists, contact NetApp technical support
<b>Syslog Message</b>	Unable to finish the volume move operation for DSID %llu. Failed to complete cutover.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Destination volume Data Set ID (DSID).

<b>EMS Identifier</b>	moveagent.detected.on.MCC.SO <b>Deprecated:</b> This EMS is no longer needed as the issue that caused the volume inconsistency after an MCC switchback operation is fixed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a volume move operation is interrupted by a disaster after the critical cutover phase has started but before the source volume is deleted. It might lead to volume inconsistencies and data access disruption on the disaster site when a MetroCluster(R) switchback operation is performed.
<b>Corrective Action</b>	To avoid data access disruption after MetroCluster switchback, some additional cleanup steps might need to be taken on the disaster site. Please run the commands 'debug vreport show' and 'debug vreport fix' on the disaster site to perform the cleanup. Contact NetApp technical support for further assistance if needed.
<b>Syslog Message</b>	A disaster event interrupted the volume move operation in the critical cutover phase before the source volume %s was deleted.
<b>Parameters</b>	<b>volname</b> (STRING): Source volume name.

<b>EMS Identifier</b>	moveagent.dst.partial.commit
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the move agent detects that the attributes of the destination volume are partially updated during the commit destination phase. In such scenarios, the volume move operation may not be able to complete successfully and the client access will be blocked during this whole period.
<b>Corrective Action</b>	Monitor the volume move job using the 'volume move show' command. If the problem persists, please contact NetApp technical support for recovery procedures.
<b>Syslog Message</b>	Unable to finish the volume move operation as the destination volume with dsid:%llu and uuid:%s is partially committed.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): The destination volume data set identifier (dsid) <b>volume_uuid</b> (STRING): The destination volume uuid.

<b>EMS Identifier</b>	moveagent.exceed.window
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the time window for a volume move operation exceeds the specified limit.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cutover window was exceeded for volume with source DSID %llu in Vserver with ID %llu Total elapsed cutover time elapsed is %llums; cutover window is %llums. Time spent in committing the source volume is %llums and for destination cutover operations is %llums.
<b>Parameters</b>	<b>volume</b> (LONGINT): Volume data set ID(DSID). <b>vserver</b> (LONGINT): Vserver ID where the move takes place. <b>total_cutover_time</b> (LONGINT): Total cutover time elapsed. <b>cutover_window</b> (LONGINT): Predetermined cutover window. <b>source_commit_time</b> (LONGINT): Time for the source volume to be committed on disk. <b>destination_operation_latency</b> (LONGINT): Time for commit destination and swap VLDB.

<b>EMS Identifier</b>	moveagent.outofmemory
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the move agent fails to allocate memory for the move object. The system continues to retry the operation until it is successful.
<b>Corrective Action</b>	If the problem persists, it indicates a system-level problem. Contact NetApp technical support.
<b>Syslog Message</b>	Unable to finish the volume move operation for DSID %llu. Failed to allocate sufficient memory.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Source or destination volume data set ID (DSID).

<b>EMS Identifier</b>	moveagent.phase.queryerr
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an active volume move operation cannot access the volume move phase information.
<b>Corrective Action</b>	Monitor the currently running volume move job using the 'volume move show' clustered Data ONTAP command. If the volume move completes successfully, no further action is necessary. If the volume move fails, you can retry the volume move or contact NetApp technical support for assistance.
<b>Syslog Message</b>	Cannot determine the vol move phase information for volume with DSID %llu.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Destination volume data set identifier(DSID).

<b>EMS Identifier</b>	moveagent.swapvlb.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a 'volume move' operation finishes moving the volume to the destination but fails to update the volume location database (VLDB). Failing to update the VLDB causes continued attempts to access the original location instead of the new location. The system continues to retry the operation until it is successful. In the time between the failure and a successful retry, there might be disruption to data access on the volume being moved.
<b>Corrective Action</b>	Monitor the volume move job for 30 minutes by running the "volume move show -vserver -volume <volName>," command. If the cutover phase continues to fail while trying to swap VLDB records, contact NetApp technical support.
<b>Syslog Message</b>	Unable to finish the volume move operation for DSID %llu. Failed to complete the swap VLDB operation successfully.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Destination volume data set ID (DSID).

<b>EMS Identifier</b>	moveagent.swapvldb.sync.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a 'volume move' operation finishes moving the volume to the destination but fails to replicate swapping of volume location database (VLDB) to the MetroCluster(tm) sync destination.
<b>Corrective Action</b>	Monitor the volume move job. If the problem persists, contact NetApp technical support
<b>Syslog Message</b>	Unable to finish replicating swap VLDB operation to MetroCluster(tm) destination for the volume move operation for DSID %llu.
<b>Parameters</b>	<b>volume_dsid</b> (LONGINT): Destination volume Data Set ID (DSID).

<b>EMS Identifier</b>	moveagent.switchback.veto
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the volume move operation vetoes a MetroCluster(tm) switchback because the operations are mutually exclusive.
<b>Corrective Action</b>	Reissue the "metrocluster switchback" command to initiate the MetroCluster switchback after the volume move operation is complete. Or use the "volume move abort" command to abort the volume move operation. Monitor the currently running volume move operation by using the "volume move show" command.
<b>Syslog Message</b>	The volume move operation in progress prevents MetroCluster switchback. Monitor the currently running volume move operation by using the "volume move show" command.
<b>Parameters</b>	

<b>EMS Identifier</b>	moveagent.switchover.veto
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the volume move operation vetoes a MetroCluster(tm) switchover because the operations are mutually exclusive.
<b>Corrective Action</b>	Reissue the "metrocluster switchover" command to initiate the MetroCluster switchover after the volume move operation is complete. Or use the "-override-vetoes true" option to abort the volume move. Administrators can also abort running volume move operations by using the "volume move abort" command. Monitor the currently running volume move operation by using the "volume move show" command.
<b>Syslog Message</b>	The volume move operation in progress prevents MetroCluster switchover. Monitor the currently running volume move operation by using the "volume move show" command.
<b>Parameters</b>	

## "msata" Event Group

<b>EMS Identifier</b>	msata.boot.device.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) module that is responsible for monitoring the health of the mSATA device determines that the associated boot device is reporting a failure condition.
<b>Corrective Action</b>	Replace the device.
<b>Syslog Message</b>	Boot device %s has become read-only.
<b>Parameters</b>	<b>device</b> (STRING): Name of the device.

<b>EMS Identifier</b>	msata.boot.device.pfa
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) determines that failure is forthcoming for the associated mSATA boot device.
<b>Corrective Action</b>	Replace the device.
<b>Syslog Message</b>	Failure predicted for boot device %s.
<b>Parameters</b>	<b>device</b> (STRING): Name of the device.

<b>EMS Identifier</b>	msata.unable.to.monitor
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) module that is responsible for monitoring the health of the mSATA device cannot extract health information from the associated device.
<b>Corrective Action</b>	Replace the device. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Data ONTAP could not monitor device %s.
<b>Parameters</b>	<b>device</b> (STRING): Name of the device.

## "mw" Event Group

<b>EMS Identifier</b>	mw.HiR.maxref.notify
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when extent reference has reached a pre-determined threshold value. This is a temporary notification till we support OVERFLOW file - where we can support infinite reference.
<b>Corrective Action</b>	Limit the # of clone/snapshot operation.
<b>Syslog Message</b>	This message occurs when extent reference has reached a pre-determined threshold value. Limit the # of clone/snapshot operation till we support OVERFLOW file in metawafl. Aggr: %s%s%s EID: 0x%llx
<b>Parameters</b>	<b>name</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Uniquely identifies the volume in cases where the volume name itself is insufficient. <b>eid</b> (LONGINT): EID on which maxref is reached.

<b>EMS Identifier</b>	mw.iron.mount.idlog.purge
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message is used to notify idlog purge at mount after 7 consecutive unsuccessful iron runs.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Volume[%s] : Wafiron mount performance may be significantly impacted, because idlog purge is triggered after[%d] unsuccessful iron runs.
<b>Parameters</b>	<b>vol</b> (STRING): Name of the volume. <b>generation</b> (INT): Iron generation number.

## "nameserv" Event Group

<b>EMS Identifier</b>	nameserv.conf.limit.reached
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a UNIX user or group name exceeds 64 characters. This check is performed on the last node upgrade from Data ONTAP(R) 8.2 to 8.3. The names that exceed this limit will not get resolved in Data ONTAP 8.3.
<b>Corrective Action</b>	Replace the name with a name that is no longer than 64 characters.
<b>Syslog Message</b>	%s exceeds 64 characters for Vserver %s and configuration %s.
<b>Parameters</b>	<b>name</b> (STRING): Name of the user or group that exceeded 64 characters. <b>vserver_name</b> (STRING): Name of the Vserver. <b>ns_config_name</b> (STRING): Name of the name service configuration (unix-user or unix-group).

<b>EMS Identifier</b>	nameserv.config.write.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a file write for name service configuration fails.
<b>Corrective Action</b>	Autocorrection is triggered for failing Vserver, configuration and node. Ensure that the root volume File System(FS) is available and has enough space and check the status using "vserver services name-service file-version show". Contact technical support if the problem persists.
<b>Syslog Message</b>	%s configuration failed for Vserver %s on node %s.
<b>Parameters</b>	<b>vserver_name</b> (STRING): Name of the Vserver. <b>ns_config_name</b> (STRING): Name of the name service configuration. <b>node_name</b> (STRING): Name of the node.

<b>EMS Identifier</b>	nameserv.ddns.bulk.delete
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a request to delete the fully qualified domain name (FQDN) of all or some of the logical interfaces of a Vserver from the DNS server fails, resulting in stale records on the DNS server. This can lead to DNS lookup failures, resulting in mount problems.
<b>Corrective Action</b>	Use the (privilege: advanced) "vserver services name-service dns dynamic-update record delete" command to attempt a manual update of the record for the LIF. If this fails, check documentation for dynamic DNS updates to correct the failure or update the record directly on the DNS server.
<b>Syslog Message</b>	DDNS delete operation has failed for all or some of the logical interfaces having FQDN "%s" for Vserver "%s".
<b>Parameters</b>	<b>FQDN</b> (STRING): FQDN for which the operation failed. <b>vserver_name</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	nameserv.ddns.bulk.failure
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a dynamic request to update the fully qualified domain name (FQDN) of all or some of the logical interfaces of a Vserver in the DNS server fails after repeated retries, resulting in stale records on the DNS server. This can lead to DNS lookup failures, resulting in mount problems.
<b>Corrective Action</b>	Use the (privilege: advanced) "vserver services name-service dns dynamic-update record" command to attempt a manual update of the record for the LIF. If this fails, check documentation for dynamic DNS updates to correct the failure or update the record directly on the DNS server.
<b>Syslog Message</b>	DDNS %s operation has failed for all or some of the logical interfaces having FQDN "%s" for Vserver "%s".
<b>Parameters</b>	<b>Operation</b> (STRING): Type of operation. <b>FQDN</b> (STRING): FQDN for which the operation failed. <b>vserver_name</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	nameserv.ddns.bulk.warning
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a dynamic request to update the fully qualified domain name (FQDN) of all or some of the logical interfaces of a Vserver on the DNS server fails, resulting in stale records on the DNS server. This can lead to DNS lookup failures, resulting in mount problems.
<b>Corrective Action</b>	Data ONTAP(R) retries the failed dynamic DNS update operation. Check the DNS record to ensure that it is up to date. Use the (privilege: advanced) "vserver services name-service dns dynamic-update record" command to attempt a manual update of the record for the LIF. If this fails, check documentation for dynamic DNS updates to correct the failure or update the record directly on the DNS server.
<b>Syslog Message</b>	DDNS %s operation has failed for all or some of the logical interfaces having FQDN "%s" for Vserver "%s".
<b>Parameters</b>	<b>Operation</b> (STRING): Type of operation. <b>FQDN</b> (STRING): FQDN for which the operation failed. <b>vserver_name</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	nameserv.ddns.lif.delete
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an attempt to delete a fully qualified domain name (FQDN) from the DNS server fails, resulting in a stale record on the server. The FQDN belongs to the logical interface (LIF) of the given Vserver. Retaining the stale record can lead to DNS lookup failures, resulting in mount problems.
<b>Corrective Action</b>	Use the (privilege: advanced) "vserver services name-service dns dynamic-update record delete" command to attempt a manual update of the record for the LIF. If this fails, check documentation for dynamic DNS updates to correct the failure or update the record directly on the DNS server.
<b>Syslog Message</b>	DDNS delete operation of FQDN "%s" failed for LIF with IP %s on Vserver "%s".
<b>Parameters</b>	<b>FQDN</b> (STRING): FQDN for which the operation failed. <b>IP</b> (STRING): IP address for which the operation failed. <b>vserver_name</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	nameserv.ddns.lif.failure
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an attempt to update a fully qualified domain name (FQDN) on the DNS server fails after repeated retries, resulting in a stale record on the server. The FQDN belongs to the logical interface (LIF) of the given Vserver. Retaining the stale record can lead to DNS lookup failures, resulting in mount problems.
<b>Corrective Action</b>	Use the (privilege: advanced) "vserver services name-service dns dynamic-update record" command to attempt a manual update of the record for the LIF. If this fails, check documentation for dynamic DNS updates to correct the failure or update the record directly on the DNS server.
<b>Syslog Message</b>	DDNS %s operation of FQDN "%s" failed for LIF with IP %s on Vserver "%s".
<b>Parameters</b>	<b>Operation</b> (STRING): Type of operation. <b>FQDN</b> (STRING): FQDN for which the operation failed. <b>IP</b> (STRING): IP address for which the operation failed. <b>vserver_name</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	nameserv.ddns.lif.warning
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt to update a fully qualified domain name (FQDN) on the DNS server fails, resulting in a stale record on the server. The FQDN belongs to the logical interface (LIF) of the given Vserver. Retaining the stale record can lead to DNS lookup failures, resulting in mount problems.
<b>Corrective Action</b>	Data ONTAP(R) retries the failed dynamic DNS update operation. Check the DNS record to ensure that it is up to date. Use the (privilege: advanced) "vserver services name-service dns dynamic-update record" command to attempt a manual update of the record for the LIF. If this fails, check documentation for dynamic DNS updates to correct the failure or update the record directly on the DNS server.
<b>Syslog Message</b>	DDNS %s operation of FQDN "%s" failed for LIF with IP %s on Vserver "%s".
<b>Parameters</b>	<b>Operation</b> (STRING): Type of operation. <b>FQDN</b> (STRING): FQDN for which the operation failed. <b>IP</b> (STRING): IP address for which the operation failed. <b>vserver_name</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	nameserv.netgrpbyhost.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when netgroup is configured but the netgroup byhost database is not generated during an upgrade operation. Absence of the netgroup byhost database might impact performance or access during subsequent netgroup-related data access attempts.
<b>Corrective Action</b>	Use the "vserver services name-service netgroup load" command to reload the netgroup configuration file. Use the (privilege: advanced) "vserver services name-service netgroup status" command to verify that the netgroup file was successfully loaded and the netgroup byhost database successfully generated. If there are any syntax errors after the load operation, fix them and reload the netgroup file.
<b>Syslog Message</b>	Netgroup byhost database failed to generate for Vserver %s on node %s with error %s.
<b>Parameters</b>	<b>vserver_name</b> (STRING): Name of the Vserver. <b>node_name</b> (STRING): Name of the node. <b>error_string</b> (STRING): Error encountered during creation of netgroup byhost.

## "nand" Event Group

<b>EMS Identifier</b>	nand.predict.fail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) determines that failure is forthcoming for the associated flash device on the NVRAM module.
<b>Corrective Action</b>	Replace the device to prevent future failures. Contact technical support for assistance.
<b>Syslog Message</b>	NVRAM destage Failure predicted for device: %s.
<b>Parameters</b>	<b>device</b> (STRING): Name of the device.

<b>EMS Identifier</b>	nand.unable.to.monitor
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) module that is responsible for monitoring the health of the NVRAM device cannot extract health information. This failure might indicate the NVRAM device is not operating properly.
<b>Corrective Action</b>	Use the "system environment sensors show" command to verify the device's status. If the failure still exists, contact technical support for assistance.
<b>Syslog Message</b>	Unable to monitor NVRAM device: %s.
<b>Parameters</b>	<b>device</b> (STRING): Name of the device.

## "nblade" Event Group

<b>EMS Identifier</b>	Nblade.CallbackTimedOut
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Nblade is unable to successfully complete a PORTMAP/SM call to the client within 1 seconds. The PORTMAP/SM calls are done as part of the per-aggregate lock reclaim process after a Dblade reboot. If a large number of such calls fail for a particular aggregate, then it delays the completion of the lock reclaim process for that aggregate. That delay prevents the aggregate from granting new locks to NFS clients.
<b>Corrective Action</b>	Check if the RPC program number displayed above with the correct program version is running on the client and if not start it. You can use "rpcinfo -p" on the client to check that. It is also possible that the client is unreachable due to firewall/network connectivity issues.
<b>Syslog Message</b>	SM NOTIFY: Vserver %d, Vif %d: %s program (Program number:%d Program version:%d) on client %s is not responding.
<b>Parameters</b>	<b>virtualServer</b> (INT): Identifier for the Vserver associated with this operation. <b>lifId</b> (INT): Identifier for the logical interface associated with this operation. <b>program</b> (STRING): Client program not responding. <b>programNum</b> (INT): RPC Program Number. <b>programVersion</b> (INT): RPC Program Version. <b>remotelpAddress</b> (STRING): IP address of the client machine.

<b>EMS Identifier</b>	Nblade.cifs.logon.audit.fail
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a CIFS logon fails when guaranteed audit is enabled and audit log generation fails due to no space remaining in either destination volumes or staging volumes.
<b>Corrective Action</b>	Use the command "event log show -messagename adt.service.block" to check for destination volume space unavailability. If the message entry exists, use the command "event log show -messagename adt.service.block -fields action" and follow the corrective action. If the message entry does not exist, then staging volumes are full and no corrective action is necessary. The audit process self-heals and normal auditing continues in 10 seconds after audit logging cleanup occurs.
<b>Syslog Message</b>	CIFS logon failed due to audit log generation failure for the vserver %u.
<b>Parameters</b>	<b>vsId</b> (INT): Id of the vserver, on which this event occurred.

<b>EMS Identifier</b>	Nblade.cifsEncSessAccessDenied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a client not capable of SMB encryption tries to establish a CIFS session that requires SMB encryption.
<b>Corrective Action</b>	Either ensure that the client is capable of SMB encryption or disable SMB encryption on the Vserver.
<b>Syslog Message</b>	Client (IP: %s, Vserver: %d) could not establish a CIFS session because SMB encryption is required.
<b>Parameters</b>	<b>IpAddress</b> (STRING): IP address of the client attempting to establish a CIFS session. <b>vserverId</b> (INT): Identifier of the Vserver associated with this operation.

<b>EMS Identifier</b>	Nblade.cifsEncShrAccessDenied
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a client not capable of SMB encryption tries to connect to a CIFS share that requires SMB encryption.
<b>Corrective Action</b>	Either ensure that the client is capable of SMB encryption or disable SMB encryption on the CIFS share.
<b>Syslog Message</b>	Client (IP: %s, Vserver: %d) could not connect to CIFS share "%s" because SMB encryption is required.
<b>Parameters</b>	<b>IpAddress</b> (STRING): IP address of the client from which Share Connect requests are being attempted. <b>vserverId</b> (INT): Identifier of the Vserver associated with this operation. <b>shareName</b> (STRING): Name of the share to which the client is connecting.

<b>EMS Identifier</b>	Nblade.CifsLongRunPattMatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a CIFS query directory command that includes wildcard characters exceeds the reporting time threshold for completion. Pattern-matching searches on strings including wildcard characters consume excessive CPU resources.
<b>Corrective Action</b>	Check the Windows client that is requesting searches containing wildcard characters. For assistance, contact NetApp technical support.
<b>Syslog Message</b>	Detected a long running CIFS pattern matching operation. SMB dialect: %s Allowed pattern matching threshold (ms): %llu Total pattern matching time taken(ms): %llu Client IP address: %s Target Vserver ID: %d Wildcard Pattern: %s Share name: %s Directory Path: %s
<b>Parameters</b>	<b>dialect</b> (STRING): Negotiated SMB dialect. <b>allowedThresholdInMs</b> (LONGINT): Pattern-matching threshold value. <b>totalTimeTakenInMs</b> (LONGINT): Total time taken for pattern matching. <b>clientIpAddress</b> (STRING): IP address of the client machine. <b>vserverId</b> (INT): Identifier for the Vserver associated with this operation. <b>pattern</b> (STRING): Wildcard pattern sent. <b>shareName</b> (STRING): Target share name. <b>dirPath</b> (STRING): Target directory path.

<b>EMS Identifier</b>	Nblade.cifsManyAuths
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when many authentication negotiations occur simultaneously. There are 256 new session requests from this client, none of which has completed yet.
<b>Corrective Action</b>	Investigate why the client is making so many connections. It may be necessary to contact the vendor of the client or of the application which is making the connections.
<b>Syslog Message</b>	Many simultaneous new CIFS connections are occurring on vserver ID %u from IP address %s.
<b>Parameters</b>	<b>vsId</b> (INT): Id of the vserver on which this event occurred. <b>remoteIpAddress</b> (STRING): IP address of the client machine.

<b>EMS Identifier</b>	Nblade.cifsMaxOpenSameFile
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the number of times a user tries to open a file over a TCP connection is exceeded. This request and any further requests to open the same file by the user are denied until some open instances of the file are closed. This typically indicates abnormal application behavior.
<b>Corrective Action</b>	Inspect the application running on the client using this TCP connection. The client might be operating incorrectly due to the application running on it. Rebooting the client might also be helpful. In some cases, clients are operating as expected but require a higher threshold, which you can set using the (privilege: advanced) "cifs option modify -max-opens-same-file-per-tree" command.
<b>Syslog Message</b>	Received too many open file requests for the same file by one user on a connection: clientIP:port %s:%d, file "%s" on share "%s".
<b>Parameters</b>	<b>IpAddress</b> (STRING): IP address of the client from which open requests are denied. <b>port</b> (INT): Port number of the client from which the connection has been established. <b>filePath</b> (STRING): Path of the file that cannot be opened. <b>shareName</b> (STRING): Name of the share that holds the file.

<b>EMS Identifier</b>	Nblade.cifsMaxOpenSameFileNotice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the number of open instances of a particular file under a CIFS tree nears the configuration limit. Upon reaching this limit, any further requests to open the same file by the user are denied until some open instances of the file are closed. This typically indicates abnormal application behavior.
<b>Corrective Action</b>	Inspect the application running on the client using this TCP connection. The client might be operating incorrectly due to the application running on it. Rebooting the client might also be helpful. In some cases, clients are operating as expected but require a higher threshold, which you can set by using the (privilege: advanced) "cifs option modify -max-opens-same-file-per-tree" command.
<b>Syslog Message</b>	Received %d open file requests, nearing the configured limit of %d, for the same file by one user on a connection: clientIP:port %s:%d, file: "%s" on share: "%s".
<b>Parameters</b>	<b>currentCount</b> (INT): Current count of the open instances on the file. <b>maxValue</b> (INT): Maximum allowed open instances on a file. <b>IpAddress</b> (STRING): IP address of the client requesting the file open. <b>port</b> (INT): Port number of the client from which the connection has been established. <b>filePath</b> (STRING): Path of the file being opened. <b>shareName</b> (STRING): Name of the share that holds the file.

<b>EMS Identifier</b>	Nblade.cifsMaxSessPerUsrConn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the number of sessions allowed per user over a TCP connection is exceeded. This request and any further session establishment requests are denied until some sessions are released. This is typically caused by a faulty client or application.
<b>Corrective Action</b>	Inspect all applications running on the client, and terminate any that are not operating properly. Rebooting the client might also be helpful. In some cases, clients are operating as expected but require a higher threshold, which you can set using the (privilege: advanced) "cifs option modify -max-same-user-sessions-per-connection" command.
<b>Syslog Message</b>	Received too many session requests from the same user on one TCP connection: clientIP:port %s:%d, user "%s".
<b>Parameters</b>	<b>IpAddress</b> (STRING): IP address of the client requesting a session. <b>port</b> (INT): Port number of the client from which the TCP connection has been established. <b>userName</b> (STRING): User that has exceeded session requests.

<b>EMS Identifier</b>	Nblade.cifsMaxSessPerUsrConnNotice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the number of sessions allowed per user over a TCP connection nears the configured limit. Upon reaching this limit, any further session establishment requests are denied until some sessions are released. This is typically caused by a faulty client or application.
<b>Corrective Action</b>	Inspect all applications running on the client, and terminate any that are not operating properly. Rebooting the client might also be helpful. In some cases, clients are operating as expected but require a higher threshold, which you can set by using the (privilege: advanced) "cifs option modify -max-same-user-sessions-per-connection" command.
<b>Syslog Message</b>	Received %d session requests, nearing the configured limit of %d, from the same user on one TCP connection: clientIP:port %s:%d, user: "%s".
<b>Parameters</b>	<b>currentCount</b> (INT): Current count of the sessions. <b>maxValue</b> (INT): Maximum allowed sessions per user over a TCP connection. <b>IpAddress</b> (STRING): IP address of the client requesting a session. <b>port</b> (INT): Port number of the client from which the TCP connection has been established. <b>userName</b> (STRING): User that is nearing the session requests limit.

<b>EMS Identifier</b>	Nblade.cifsMaxWatchesPerTree
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the total number of directory watch (Change Notify) requests exceed the per-tree limit. This request and any further directory watch requests are denied. This typically indicates abnormal client behavior.
<b>Corrective Action</b>	Inspect the application using the connection and also monitor the other applications on the client. The client might be operating incorrectly due to a faulty application running on it. Rebooting the client might also be helpful. In some cases, clients are operating as expected but require a higher threshold, which can be set using the (privilege: advanced) "cifs option modify -max-watches-set-per-tree" command.
<b>Syslog Message</b>	Received too many Change Notify requests on one tree: clientIP:port %s:%d, directory "%s" on share "%s".
<b>Parameters</b>	<b>IpAddress</b> (STRING): IP address of the client requesting Change Notify functionality. <b>port</b> (INT): Port number of the client from which the TCP connection has been established. <b>dirPath</b> (STRING): Path of the directory on which Change Notify is requested. <b>shareName</b> (STRING): Name of the share that holds the directory.

<b>EMS Identifier</b>	Nblade.cifsMaxWatchesPerTreeNotice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the total number of directory watch (Change Notify) requests nears the configured limit. Upon reaching this limit, any further directory watch requests are denied. This typically indicates abnormal client behavior.
<b>Corrective Action</b>	Inspect the application using the connection, and also monitor the other applications on the client. The client might be operating incorrectly due to a faulty application running on it. Rebooting the client might also be helpful. In some cases, clients are operating as expected but require a higher threshold, which can be set by using the (privilege: advanced) "cifs option modify -max-watches-set-per-tree" command.
<b>Syslog Message</b>	Received %d Change Notify requests, nearing the configured limit of %d, on one tree: clientIP:port %s:%d, directory: "%s" on share: "%s".
<b>Parameters</b>	<b>currentCount</b> (INT): Current count of the Change Notify on the tree. <b>maxValue</b> (INT): Maximum allowed Change Notify on the tree. <b>IpAddress</b> (STRING): IP address of the client requesting Change Notify functionality. <b>port</b> (INT): Port number of the client from which the TCP connection has been established. <b>dirPath</b> (STRING): Path of the directory on which Change Notify is requested. <b>shareName</b> (STRING): Name of the share that holds the directory.

<b>EMS Identifier</b>	Nblade.cifsMemExceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the CIFS subsystem, which operates all the CIFS servers exposed through a given node, has requested more memory than it is allowed in this node. The subsystem is restricted to a percentage of total memory in the node, so the node itself need not be low on memory for this to occur. CIFS memory is not allocated in advance and so CIFS memory requests compete with other system processes. This message might not appear if a memory request from CIFS cannot be honored because the node is already low on memory. This might result in CIFS client operation failures.
<b>Corrective Action</b>	Compare the number of memory allocation failures with the previous occurrence of this event to understand the load on the system. Further analyze the memory allocated to the CIFS subsystem on this node by viewing the nblade_cifs object instance for this node through the "statistics show" interface. Based on that data, consider distributing CIFS load by moving data LIFs, adding data LIFs, and redirecting workloads, or by shutting down non-essential workloads to alleviate the memory pressure.
<b>Syslog Message</b>	The CIFS subsystem on this node has exceeded its allotment of %llu bytes of node memory with currently %llu memory allocation failures since boot time. This might result in unexpected CIFS application failures.
<b>Parameters</b>	<b>availableMemoryInBytes</b> (LONGINT): Amount of memory available to the CIFS subsystem. <b>memAllocFailures</b> (LONGINT): Number of memory allocation failures in the CIFS subsystem since boot time.

<b>EMS Identifier</b>	Nblade.cifsNbNameConflict
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NetBIOS Name Service receives a negative response from a remote machine for a name registration request. This is typically caused by a conflict in the NetBIOS name or an alias. As a result, clients might not be able to access data or connect to the right data-serving node in the cluster.
<b>Corrective Action</b>	1. If applicable, delete the duplicate NetBIOS alias by using the "vserver cifs delete -aliases alias -vserver vserver" command. Alternatively, rename a NetBIOS alias by deleting the duplicate name and adding an alias with a new name by using the "vserver cifs create -aliases alias -vserver vserver" command. 2. If there are no aliases configured and there is a conflict in the NetBIOS name, then rename the CIFS server by using the "vserver cifs delete -vserver vserver" and "vserver cifs create -cifs-server netbiosname" commands. Note that deleting a CIFS server can cause data to be inaccessible. 3. Remove or rename the NetBIOS name on the remote machine.
<b>Syslog Message</b>	The NetBIOS Name Service received a negative name registration response. The name %s is owned by a remote machine. The IP address being registered is %s.
<b>Parameters</b>	<b>nbName</b> (STRING): NetBIOS name or alias being registered by the NetBIOS Name Service. <b>IpAddress</b> (STRING): IP address being registered by the NetBIOS Name Service.

<b>EMS Identifier</b>	Nblade.cifsNonUnicodeRequest
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a client attempts to send a non-unicode request to a Vserver. The request is rejected.
<b>Corrective Action</b>	Check the client to verify that it supports unicode characters and negotiates unicode support with the Vserver.
<b>Syslog Message</b>	Vserver ID %u rejected non-unicode request from client IP: %s.
<b>Parameters</b>	<b>vserverId</b> (INT): Identifier for the Vserver that received the non-unicode request. <b>clientIp</b> (STRING): IP address of the client sending the non-unicode request.

<b>EMS Identifier</b>	Nblade.cifsNoPrivShare
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a client attempts to connect to a nonexistent ONTAP_ADMIN\$ share.
<b>Corrective Action</b>	Ensure that the vscan is enabled for the mentioned Vserver ID. Enabling vscan on a Vserver causes the ONTAP_ADMIN\$ share to be created for the Vserver automatically.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vserverId</b> (INT): Identifier for the Vserver associated with this operation. <b>userName</b> (STRING): User name of the client attempting to access the nonexistent ONTAP_ADMIN\$ share. <b>clientIp</b> (STRING): IP address of the client attempting to access the nonexistent ONTAP_ADMIN\$ share.

<b>EMS Identifier</b>	Nblade.CifsOperationTimedOut
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a CIFS operation times out because it could not be processed completely within 40 seconds.
<b>Corrective Action</b>	Check the QoS policy configuration for the target volume. If there are no QoS policies set, check the load on the target volume and check IP connectivity over the cluster interfaces between the two nodes. For further assistance, contact NetApp technical support and indicate that you need assistance with a potential internal cluster performance problem.
<b>Syslog Message</b>	Detected a timed out CIFS operation. SMB command for this operation: %s, Number of times this command was suspended: %llu, Number of times this command was restarted: %llu, Last CSM error during this operation: %s, Remote blade UUID: %s, Is QoS enabled: %s, Last SpinNp error during this operation: %s, Client IP address: %s, Local IP address: %s, Target Vserver ID: %d, Target disk's DSID: %d
<b>Parameters</b>	<b>commandName</b> (STRING): CIFS command for this operation. <b>suspensionCnt</b> (LONGINT): Number of times this command has been suspended. <b>cmdRestartCnt</b> (LONGINT): Number of times this command has been restarted. <b>lastCsmError</b> (STRING): Last CSM error. <b>remoteBladeID</b> (STRING): Remote blade ID for this CSM session. <b>isQosEnabled</b> (STRING): Whether QoS is enabled. <b>lastSpinNpError</b> (STRING): Last SpinNp error. <b>clientIpAddress</b> (STRING): IP address of the client machine. <b>localIpAddress</b> (STRING): IP address of the local interface serving the protocol operation. <b>vserverId</b> (INT): Identifier for the Vserver associated with this operation. <b>dsId</b> (INT): Data set ID (DSID) of the target volume.

<b>EMS Identifier</b>	Nblade.cifsSameTreePerSess
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the number of connections to the same share allowed per session is exceeded. This request and any further requests to establish another connection to that share are denied until some connections to the share are released. This typically indicates abnormal client behavior.
<b>Corrective Action</b>	Inspect the application using the connection and also monitor the other applications on the client. The client might be operating incorrectly due to a faulty application running on it. Rebooting the client might also be helpful. In some cases, clients are operating as expected but require a higher threshold, which you can set using (privilege: advanced) "cifs option modify -max-same-tree-connect-per-session" command.
<b>Syslog Message</b>	Received too many connection requests to the same share from one session: clientIP:port %s:%d, share "%s", user "%s".
<b>Parameters</b>	<b>IpAddress</b> (STRING): IP address of the client from which multiple share connections have been attempted. <b>port</b> (INT): Port number of the client from which the TCP connection has been established. <b>shareName</b> (STRING): Name of the share to which the client is attempting connection. <b>userName</b> (STRING): User that is attempting to connect to the share.

<b>EMS Identifier</b>	Nblade.cifsSameTreePerSessNotice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the number of connections to the same share allowed per session nears the configured limit. Upon reaching this limit, any further requests to establish another connection to that share are denied until some connections to the share are released. This typically indicates abnormal client behavior.
<b>Corrective Action</b>	Inspect the application using the connection, and also monitor the other applications on the client. The client might be operating incorrectly due to a faulty application running on it. Rebooting the client might also be helpful. In some cases, clients are operating as expected but require a higher threshold, which you can set by using the (privilege: advanced) "cifs option modify -max-same-tree-connect-per-session" command.
<b>Syslog Message</b>	Received %d connection requests to the same share, nearing the configured limit of %d, from one session: clientIP:port %s:%d, share: "%s", user: "%s".
<b>Parameters</b>	<b>currentCount</b> (INT): Current count of the connections on the session. <b>maxValue</b> (INT): Maximum allowed connections on the session. <b>IpAddress</b> (STRING): IP address of the client from which multiple share connections have been attempted. <b>port</b> (INT): Port number of the client from which the TCP connection has been established. <b>shareName</b> (STRING): Name of the share to which the client is attempting connection. <b>userName</b> (STRING): User that is attempting to connect to the share.

<b>EMS Identifier</b>	Nblade.cifsShrConnectFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the network blade cannot connect to the path specified in the CIFS share.
<b>Corrective Action</b>	Ensure that the CIFS share path is valid and that the volume it belongs to is accessible.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vserverName</b> (STRING): Name for the vserver associated with this operation. <b>vserverId</b> (INT): Identifier for the vserver associated with this operation. <b>errorDescription</b> (STRING): Description of the error for the CIFS share connection failure. <b>errorCode</b> (INT): Error code that describes the reason for the CIFS share connection failure. <b>shareName</b> (STRING): Name of the share to which the connection attempt failed. <b>serverIp</b> (STRING): Ip address of the server. <b>clientIp</b> (STRING): Ip address of the client.

<b>EMS Identifier</b>	Nblade.cifsWitnessFONotify
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Witness system has requested its CIFS clients to move their Continuously Available connections to the local node, due to a failure of the partner node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The Witness service received a failure notification for the partner node. Notification of %d CIFS clients to move their Continuously Available connections to this node took %d milliseconds to complete.
<b>Parameters</b>	<b>numNotificationsSent</b> (INT): Number of clients notified. <b>timeTakenInMsecs</b> (INT): Number of milliseconds taken to notify the clients.

<b>EMS Identifier</b>	Nblade.dBladeNoResponse
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a network data protocol (NFS or CIFS) operation times out because the node cannot communicate with the node where the data is located to complete the file operation. If this condition persists, there is likely a problem with the communication between the node that generated the event and the node where the data is located in the cluster.
<b>Corrective Action</b>	Identify the node where the data is located invoking "node show" command under diagnostics privilege level and verify its network connectivity. Verify network connectivity between the node that generated the event and the node where the data is located. Network connectivity between nodes or external IP addresses can be verified by invoking "cluster ping-cluster" and "network ping" command.
<b>Syslog Message</b>	Gave up retrying a file operation due to no response from the specified node. UUID of the node where data is located is %s; the protocol for the operation is %s.
<b>Parameters</b>	<b>DBladeUuid</b> (STRING): Universally Unique Identifier (UUID) of the node where this operation is trying to access. <b>protocol</b> (STRING): Network data protocol that timed out while attempting the file operation.

<b>EMS Identifier</b>	Nblade.DidNotInitialize
<b>Severity</b>	EMERGENCY
<b>Description</b>	The appliance's network process failed during initialization due to an internal error (likely there is not enough system memory available to start the necessary kernel threads). Because the network process is not running, file access to volumes on local aggregates is not currently available, and cluster and management virtual interfaces for this appliance are also not currently available.
<b>Corrective Action</b>	Initiate a storage failover (takeover) of any aggregates on this appliance, and perform a "sendhome" operation on these aggregates after this appliance is operational again. Also, verify that data virtual interfaces have properly migrated to another appliance. It is possible that a reboot or a reversion to a known compatible software version could also correct this problem.
<b>Syslog Message</b>	The Network Blade kernel module has failed during initialization.
<b>Parameters</b>	

<b>EMS Identifier</b>	Nblade.exportAccessChkFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the network blade denies access to an exported share when a connection attempt violates an export policy.
<b>Corrective Action</b>	Ensure that the export policy rule for this vserver is defined properly.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>vserverId</b> (INT): Identifier for the vserver associated with this operation. <b>errorCode</b> (INT): Error code that describes the export access check failure. <b>shareName</b> (STRING): Name of the share that the user attempted to access.

<b>EMS Identifier</b>	Nblade.exportAccessIndeterm
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when client access cannot be evaluated because of an error while matching the client against export rules. Client access might be disrupted due to unresponsive or misconfigured external servers, problems with external server configuration on Data ONTAP(R), or internal errors while processing the rules.
<b>Corrective Action</b>	Verify that external name services (such as DNS, NIS, LDAP, Kerberos, or AD) are responsive to queries from Data ONTAP(R). Use the "vserver show -fields id" command to get the Vserver name corresponding to Vserver ID, and use the "vol show -fields msid" command to get the volume name corresponding to the volume MSID. Use the "vserver export-policy check-access" command to troubleshoot it further, or contact NetApp technical support for further assistance in reviewing the name services logs.
<b>Syslog Message</b>	Access to volume with MSID %llu in Vserver %u could not be evaluated for client "%s" as per export ruleset %llu.
<b>Parameters</b>	<b>msid</b> (LONGINT): MSID of the volume on which access was attempted. <b>vserverId</b> (INT): Identifier for the Vserver associated with this access. <b>clientAddr</b> (STRING): IP address of the client attempting access. <b>rulesetID</b> (LONGINT): Export rule set ID.

<b>EMS Identifier</b>	Nblade.flexgroupStatefulProtocolAccess
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a client tries to access a FlexGroup through a stateful protocol, like NFSv4 or SMB1. Currently only NFSv3 and SMB2+ clients are supported by FlexGroups.
<b>Corrective Action</b>	Make sure a FlexGroup supported protocol is specified for all client mount operations through which a FlexGroup can be accessed. If using NFSv3, consider specifying 'nfsvers=3' as an option for the 'mount' command on all clients accessing a FlexGroup.
<b>Syslog Message</b>	Attempt to access FlexGroup with MSID %u with %s denied.
<b>Parameters</b>	<b>msid</b> (INT): MSID of the FlexGroup being accessed. <b>protocol</b> (STRING): Client protocol.

<b>EMS Identifier</b>	Nblade.fpolPassthruConnect
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a pass-through read channel is established between the node and the FPolicy server.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Pass-through read channel with the FPolicy server was established. Vserver ID [%d], FPolicy server IP address [%s].
<b>Parameters</b>	<b>vserverId</b> (INT): Identifier for the Vserver associated with this operation. <b>fpserverIp</b> (STRING): IP address of the FPolicy server.

<b>EMS Identifier</b>	Nblade.fpolPassthruDisconn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the pass-through read channel between the node and the FPolicy server is disconnected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Pass-through read channel with the FPolicy server is disconnected. Vserver ID [%d], FPolicy server IP address [%s], Disconnect reason [%s].
<b>Parameters</b>	<b>vserverId</b> (INT): Identifier for the Vserver associated with this operation. <b>fpserverIp</b> (STRING): IP address of the FPolicy server. <b>disconnReason</b> (STRING): Reason for disconnection.

<b>EMS Identifier</b>	Nblade.fpolPassthruOnSMB1
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during a client attempt to establish an FPolicy pass-through read channel over SMB1, which is not supported.
<b>Corrective Action</b>	Verify that both the client and Data ONTAP(R) support and are configured for SMB2 or later.
<b>Syslog Message</b>	For Vserver "%s", the FPolicy pass-through read channel request coming from the client "%s" is rejected because it is not supported for SMB1.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>fpserverIp</b> (STRING): IP address of the client.

<b>EMS Identifier</b>	Nblade.httpMaxConnTimeOuts
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the HTTP subsystem, which monitors connection timeouts due to an unresponsive client or data not received from the client within a specified time, especially a PUT request or an HTTP Request containing Request Body. If the number of timeouts allowed in a given period of time is being exceeded, it could be due to network failures or DoS(Denial of Service) attacks. This might result in HTTP client connection failures, because most connections are using resources and waiting for data.
<b>Corrective Action</b>	Inspect the clients that are experiencing a long delay in packet trace tools. Inspecting the client network might be helpful as well.
<b>Syslog Message</b>	The HTTP subsystem on this node on vserver %u has exceeded its connection timeout limit of %llu times, currently %llu connection timeout failures observed since boot time. This might result in unexpected HTTP connection failures.
<b>Parameters</b>	<b>vsId</b> (INT): Id of the vserver, on which this event occurred. <b>currentNumConnTimeouts</b> (LONGINT): Total number of connection timeouts that occurred in the HTTP subsystem. <b>totalNumConnTimeouts</b> (LONGINT): Maximum number of connection timeouts allowed in the HTTP subsystem.

<b>EMS Identifier</b>	Nblade.httpMemExceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the HTTP subsystem, which operates all the HTTP servers exposed through a given node, has requested more memory than it is allowed in this node. The subsystem is restricted to a percentage of total memory in the node, so the node itself need not be low on memory for this to occur. HTTP memory is not allocated in advance and so HTTP memory requests compete with other system processes. This message might not appear if a memory request from HTTP cannot be honored because the node is already low on memory. This might result in HTTP client connection failures.
<b>Corrective Action</b>	Compare the number of memory allocation failures with the previous occurrence of this event to understand the load on the system. Further analyze the memory allocated to the HTTP subsystem on this node by viewing the nblade_http object instance for this node through the "statistics show" interface. Based on that data, consider distributing HTTP load by moving data LIFs, adding data LIFs, and redirecting workloads, or by shutting down non-essential workloads to alleviate the memory pressure.
<b>Syslog Message</b>	The HTTP subsystem on this node has exceeded its allotment of %llu bytes of node memory with currently %llu memory allocation failures since boot time. This might result in unexpected HTTP connection failures.
<b>Parameters</b>	<b>availableMemoryInBytes</b> (LONGINT): Amount of memory available to the HTTP subsystem. <b>memAllocFailures</b> (LONGINT): Number of memory allocation failures in the HTTP subsystem since boot time.

<b>EMS Identifier</b>	Nblade.invTcpRecordMarker
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a TCP connection is reset due to an invalid TCP record marker in an Open Network Computing/Remote Procedure Call request.
<b>Corrective Action</b>	1. Use the IP address from the log to identify the client machine that sent the invalid TCP record marker. 2. Use the TCP port number to determine which service was being requested by the client. 3. Contact the OS vendor for the client machine for a software patch.
<b>Syslog Message</b>	Invalid TCP record marker received from remote IP address %s on local port %d. Vserver ID associated with this operation is %d. Invalid reason is %s, invalid record marker is %d.
<b>Parameters</b>	<b>remotelpAddress</b> (STRING): IP address of the client machine. <b>localPort</b> (INT): Local TCP port number that received the data. <b>VirtualServer</b> (INT): Identifier for the Vserver associated with this operation. <b>reason</b> (STRING): Reason the record marker was invalid: - "TCP_FRAGMENT" indicates that RPC TCP fragments that are not supported at this time. - "TCP_DATA_OVERFLOW" indicates an oversized record marker; that is, the record marker value was greater than the maximum supported size, currently 70K. <b>recordMarker</b> (INT): Actual 32-bit record marker that was received and marked as invalid.

<b>EMS Identifier</b>	Nblade.JunctionRootLookup2
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot obtain the root file handle of the volume mounted on a junction path. The cause of the problem might be that the target node is down or the target volume or aggregate is offline. The typical client operation that triggers a junction root lookup is a directory list operation where one of the directory entries is a junction. As long as the root of the volume at the junction cannot be looked up, the NFS client that is listing the directory appears to hang.
<b>Corrective Action</b>	Check whether the volume or aggregate or node that matches the given MSID is offline. If it is, bring it online if possible.
<b>Syslog Message</b>	Junction root lookup of a volume in Vserver %llu with MSID %llu has failed for reason "%s".
<b>Parameters</b>	<b>vserverId</b> (LONGINT): Vserver for this Master Data Set ID (MSID). <b>msid</b> (LONGINT): MSID of the volume mounted at the junction being looked up. <b>reason</b> (STRING): Additional information about why the operation failed.

<b>EMS Identifier</b>	Nblade.NbnsTooManyLifs
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NetBIOS Name Service receives more than 25 IP addresses for a name registration request. This is typically caused because of an upgrade from a previous release that had more than 25 IP addresses configured for a Vserver and WINS was configured. In such a scenario, clients might not be able to access data because some of the IP addresses might not have registered with WINS.
<b>Corrective Action</b>	If there are more than 25 IP addresses configured for a Vserver, modify the "nbns-enabled-lifs" CIFS option to no more than a maximum of 25 LIFs by using the 'vserver cifs options modify -vserver -nbns-enabled-lifs' command in advanced privilege mode when the effective cluster version is Data ONTAP 9.0 or later. In a mixed-mode cluster with a node running Data ONTAP 8.3, do not configure more than 25 LIFs per Vserver because of the following WINS server limitation: <a href="https://www.microsoft.com/resources/documentation/windowsnt/4/server/reskit/en-us/net/sur_wins.msp">https://www.microsoft.com/resources/documentation/windowsnt/4/server/reskit/en-us/net/sur_wins.msp</a>
<b>Syslog Message</b>	The NetBIOS Name Service received more than 25 IP addresses for name registration for Vserver %u.
<b>Parameters</b>	<b>vserverId</b> (INT): Identifier for the Vserver associated with this operation.

<b>EMS Identifier</b>	Nblade.Nfs4IllegalDirentName
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a user attempts to list a directory over NFSv4 that contains an entry name with non UTF-8 characters. The problematic directory entry name was most likely created over NFSv2 or NFSv3 and could not be translated to Unicode using the translation table determined by the virtual server's language setting. A possible reason for this could be a client or server language misconfiguration issue.
<b>Corrective Action</b>	Use the "vol show -fields msid" command to find the volume name corresponding to the volume MSID. Use the "volume file show-inode" command with the file ID and volume name information to find the file path. Access the parent directory from an NFSv3 client, and then rename the entry using Unicode characters.
<b>Syslog Message</b>	Directory entry with file ID '%u' on the volume with MSID '%llu' cannot be listed. Directory entry name is illegal for NFSv4.
<b>Parameters</b>	<b>fileid</b> (INT): File ID of the directory entry. <b>msid</b> (LONGINT): MSID of the volume, where the directory entry resides.

<b>EMS Identifier</b>	Nblade.Nfs4OpNotSupported
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a NFSv4 client presents an unsupported operation to the server.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NFSv4 operation '%d' is not supported.
<b>Parameters</b>	<b>opcode</b> (INT): ID of unsupported operation.

<b>EMS Identifier</b>	Nblade.nfsConnResetAndClose
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the server aborts the connection with the client by sending one or more RST segments, immediately resulting in the connection state being discarded.
<b>Corrective Action</b>	If this message occurs more than three times for a particular client in 30-60 minutes, make note of the IP address of the affected client. Verify that the network between the client and the storage appliance is functioning normally. After verifying the health of the network, verify that there are no issues related to networking on the client side. Check IP connectivity over the cluster interfaces between the two nodes. If the problem persists after addressing issues on the network or the client, contact NetApp technical support. A network trace and possibly a core dump might be required for further analysis.
<b>Syslog Message</b>	Shutting down connection with the client. Vserver ID is %d; network data protocol is %s, Rpc Xid 0x%x; client IP address:port is %s:%d. local IP address is %s; reason is %s.
<b>Parameters</b>	<b>vserverId</b> (INT): Identifier for the vserver associated with this operation. <b>serviceProtocol</b> (STRING): Network data protocol used in the connection. <b>rpcXid</b> (INT): Remote procedure call XID. <b>remoteAddr</b> (STRING): IP address of the client machine. <b>remotePort</b> (INT): Remote port number that sent the data. <b>localAddr</b> (STRING): IP address of the local interface serving the protocol operation. <b>reason</b> (STRING): Reason for the disconnection.

<b>EMS Identifier</b>	Nblade.nfsCredCacheFlushed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the administrator modifies the "extended-groups-limit" option or "auth-sys-extended-groups" option using the "vserver nfs modify" command. This results in the flushing of the entire credential cache, thereby making the subsequent operations slower for a short while until the credential cache is repopulated.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	When the administrator modifies the "extended-groups-limit" option or "auth-sys-extended-groups" option using the "vserver nfs modify" command, the entire credential cache is flushed that holds credentials on connections that use mixed-mode security style volumes or RPCSEC_GSS authentication or extended groups over AUTH_SYS. This makes subsequent operations on such connections slower for a short while, until the credential cache is repopulated. The value of "auth-sys-extended-groups" option is %d (1:enabled, 0:disabled). The value of "extended-groups-limit" option is %d.
<b>Parameters</b>	<b>isExtGroupsEnabled</b> (INT): Flag to indicate if "auth-sys-extended-groups" option is enabled or not. <b>extendedGroupsLimit</b> (INT): This indicates the number of auxiliary groups supported over RPC security flavors AUTH_SYS or RPCSEC_GSS. The range is 32 to 1024.

<b>EMS Identifier</b>	Nblade.nfsRCChecksumMismatch
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the server detects a retransmitted request from the client with a modified payload. Modified requests from the client could cause corruption and pose a security threat to the server. Please use the information in the event to identify and monitor the bad client connection.
<b>Corrective Action</b>	1. Use the IP address from the log to identify the client machine and connection that retransmitted the invalid modified request. 2. Monitor the client connection and if invalid modified requests are persistent, take steps to ensure the security of the connection has not been compromised. 3. If there are no security concerns with the client connection, then the application driving traffic on that connection and the client OS NFS implementation should be examined to identify potential software defects.
<b>Syslog Message</b>	Replay cache checksum mismatch detected in retransmitted NFS request from client. Vserver ID is %d; service protocol:version is %s:%d, Rpc Xid 0x%x; client IP address:port is %s:%d. local IP address is %s; NFS procedure number is %d.
<b>Parameters</b>	<b>vserverId</b> (INT): Identifier for the vserver associated with this operation. <b>serviceProtocol</b> (STRING): Network data protocol used in the connection. <b>programVersion</b> (INT): RPC Program Version. <b>rpcXid</b> (INT): Remote procedure call XID. <b>remoteAddr</b> (STRING): IP address of the client machine. <b>remotePort</b> (INT): Remote port number that sent the data. <b>localAddr</b> (STRING): IP address of the local interface serving the protocol operation. <b>procedureNum</b> (INT): RPC Procedure Number for the requested operation.

<b>EMS Identifier</b>	Nblade.Nfsv3WriteTooLarge
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a client attempts to write over NFSv3 with an amount of data that is greater than the configured TCP or UDP transfer size. This is an invalid request from the client and the data is not written.
<b>Corrective Action</b>	Try the operation again with the number of bytes of data that is less than or equal to the TCP or UDP transfer size configured in the server. You can set the write size option in the 'mount' command to the TCP or UDP transfer size.
<b>Syslog Message</b>	%d bytes of data to be written is greater than the TCP or UDP transfer size, which is %d. Data is not written.
<b>Parameters</b>	<b>opaqueLen</b> (INT): Number of bytes of data that were to be written. <b>xferSize</b> (INT): TCP/UDP transfer size configured in the server.

<b>EMS Identifier</b>	Nblade.Nfsv4NsdbDomainMismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an NFSv4 client queries or updates the user or group attribute of a file object but the requested value does not match the '-v4-id-domain' option value of a virtual server's NFS service. In NFSv4, users and groups are represented as names of the form string@domain. The domain string must match on the client and server to ensure correct operation. The NFSv4 client request, on whose behalf this event message is issued, is rejected with an NFS4ERR_BADOWNER error.
<b>Corrective Action</b>	Update the client or server NFSv4 domain string to ensure that they match. If a single client experiences the issue, you typically just need to modify that client. See the client vendor's documentation to change the NFSv4 domain name configuration. If multiple clients experience the issue, you typically need to update the value of the '-v4-id-domain' option in the NFS server configuration.
<b>Syslog Message</b>	NFSv4 server %s received domain string %s from client %s, which does not match the '-v4-id-domain' value %s.
<b>Parameters</b>	<b>serverIp</b> (STRING): IP address of the server processing the NFSv4 request. <b>clientDomain</b> (STRING): NFSv4 domain string received from the client <b>clientIp</b> (STRING): IP address of the client. <b>serverDomain</b> (STRING): Domain string that the NFSv4 server expected.

<b>EMS Identifier</b>	Nblade.nfsV4PoolExhaust
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when one of the NFSv4 store pools is exhausted.
<b>Corrective Action</b>	If the NFS server is unresponsive for more than 10 minutes after this error occurs, contact NetApp technical support.
<b>Syslog Message</b>	NFS Store Pool for %s exhausted.
<b>Parameters</b>	<b>poolname</b> (STRING): NFSv4 store pool type where the exhaustion happened.

<b>EMS Identifier</b>	Nblade.nfsV4PoolThreshold
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when one of the NFSv4 store pools is nearing exhaustion (80% of max size). If the condition is allowed to continue, the store pool limits will be reached leading certain NFSv4 request failures.
<b>Corrective Action</b>	Reduce NFSv4 workload like active opens, users and client connections which consume store pool objects to ensure their counts remain under pre-defined limits.
<b>Syslog Message</b>	NFS Store Pool for %s is nearing exhaustion (%s of pool currently in use).
<b>Parameters</b>	<b>poolname</b> (STRING): NFSv4 store pool type where the maximum limits are nearing. <b>percent</b> (STRING): Percentage of store pool objects of type currently in use.

<b>EMS Identifier</b>	Nblade.Nfsv4WriteTooLarge
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a client attempts to write over NFSv4 with an amount of data that is greater than the configured TCP transfer size. This is an invalid request from the client and the data is not written.
<b>Corrective Action</b>	Try the operation again with the number of bytes of data that is less than or equal to the TCP transfer size configured in the server. You can set the write size option in the 'mount' command to the TCP transfer size.
<b>Syslog Message</b>	%d bytes of data to be written is greater than the TCP transfer size, which is %d. Data is not written.
<b>Parameters</b>	<b>opaqueLen</b> (INT): Number of bytes of data that were to be written. <b>xferSize</b> (INT): TCP transfer size configured in the server.

<b>EMS Identifier</b>	Nblade.noCsmSession
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the local node could not acquire a Connection Session Manager (CSM) session. CSM sessions are used to communicate file operations between nodes in the cluster. This might be a transient condition. If this condition persists, volumes on the destination node remain unavailable from this node. The destination node can be either local or remote.
<b>Corrective Action</b>	Check IP connectivity over the cluster interfaces between the two nodes. If further assistance is needed, contact NetApp technical support.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>bladeld</b> (STRING): UUID of the node that could not be reached.

<b>EMS Identifier</b>	Nblade.noSmbVerNegotiated
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) does not support any of the SMB protocol versions sent by the client for negotiation.
<b>Corrective Action</b>	Ensure that the client supports at least one of the enabled SMB versions. You can determine whether an SMB version is enabled by running the "vserver cifs options show" command in advanced mode.
<b>Syslog Message</b>	For Vserver "%s", Data ONTAP(R) could not negotiate with the client "%s" because it does not support any of the SMB protocol versions that the client sent in the list "%s".
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>clientIp</b> (STRING): IP address of the client attempting to negotiate. <b>clientVersionList</b> (STRING): List of the SMB protocol versions sent by the client.

<b>EMS Identifier</b>	Nblade.pcp.linkThrashing
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a network port undergoes multiple link state transitions within a short period of time. The event might be triggered in response to a rapid sequence of switch events or there might be a bad link.
<b>Corrective Action</b>	If this problem persists, check the physical connections between the affected port and its network switch. You can identify the faulty port by reviewing the event log for link state transitions reported by the NIC. One or more ports should have reported multiple linkUp and linkDown events prior to the linkThrashing message. ::> event log show -node -messagename netif.link* If checking physical connections does not identify the problem, consider replacing the corresponding NIC.
<b>Syslog Message</b>	Link thrashing detected on port %u.
<b>Parameters</b>	<b>port</b> (INT): Port ID.

<b>EMS Identifier</b>	Nblade.smb1OnlyClientFound
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when ONTAP(R) detects a client that supports only the SMB1 protocol. This message can help in identifying such clients and preparing for their upgrade to SMB2 or later before ONTAP deprecates the SMB1 version of the protocol.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	For Vserver "%s", Data ONTAP(R) detected a client "%s" that supports only the SMB1 version of the protocol.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>clientIp</b> (STRING): IP address of the client.

<b>EMS Identifier</b>	Nblade.smbSignatureMismatch
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the SMB signature sent by client does not match the SMB signature generated by the CIFS server.
<b>Corrective Action</b>	Ensure that the SMB client is authenticated in order to access the files. Alternatively, disable SMB signing.
<b>Syslog Message</b>	Client (protocol dialect: %s, IP: %s) sent an SMB signature that does not match the signature generated by the CIFS server: %s (Vserver: %s).
<b>Parameters</b>	<b>SmbDialect</b> (STRING): SMB protocol dialect negotiated by the client. <b>IpAddress</b> (STRING): IP address of the client. <b>CifsServerName</b> (STRING): Cifs server name of the client. <b>VserverName</b> (STRING): Vserver name.

<b>EMS Identifier</b>	Nblade.TestEvent
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This is a test EMS event generated by the Network Blade for functional verification only. No action is required.
<b>Corrective Action</b>	No corrective action is required. If this message is appearing without being intentionally triggered by the customer or by support activity, please contact support.
<b>Syslog Message</b>	The Network Blade kernel module has generated a test EMS event.
<b>Parameters</b>	

<b>EMS Identifier</b>	Nblade.vifdel.ipRemoveFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure removing the IP address of a LIF that is being deleted. While this condition persists, most networking configuration or status operations can not be performed.
<b>Corrective Action</b>	A system reboot may be required if the operation did not complete successfully after it was retried. For HA configurations, operational disruption can be minimized by initiating a partner takeover followed by a reboot of this partner. After the reboot is complete, issue a "giveback" command to return services to this partner.
<b>Syslog Message</b>	Error deleting IP address from LIF %d, error %d.
<b>Parameters</b>	<b>lif</b> (INT): LIF Id. <b>error</b> (INT): Operation error code.

<b>EMS Identifier</b>	Nblade.vifdel.longRunning
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an excessive delay in removing connections before LIF deletion can be completed. While this condition persists, most networking configuration or status operations can not be performed.
<b>Corrective Action</b>	A system reboot may be required if this message has occurred multiple times for the same LIF and the number of connections remaining has not decreased across these messages. In addition, network configuration and status commands are still not working. For HA configurations, operational disruption can be minimized by initiating a partner takeover followed by a reboot of this partner. Prior to reboot or takeover, a full autosupport must be generated for the affected node. This is done via the "autosupport invoke -type full" command. If possible, a sync core of the affected node should be provided to help find the root cause. A sync core can be generated via the "reboot -dump true" command for the affected node. After the reboot is complete, issue a "giveback" command to return services to this partner for HA configurations.
<b>Syslog Message</b>	Excessive delay while deleting connections on LIF %d, %d connections remaining.
<b>Parameters</b>	<b>lif</b> (INT): LIF Id. <b>remainingConns</b> (INT): Number of connections still remaining on this LIF.

<b>EMS Identifier</b>	Nblade.vldb.LeakedBladeList
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a protocol requests a list of blades, the current blade list is too old, and a new list needs to be generated. However, one or more references given to the previous requests has not yet been released.
<b>Corrective Action</b>	To restore proper operation of the affected protocol, a reboot of the node will be required. Rebooting the node with the "system node reboot -dump true" command saves a core dump that allows diagnosis of this issue by NetApp technical support. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	%s operation issued by %s on cached VLDB blade list with references pending beyond expiry time.
<b>Parameters</b>	<b>operation</b> (STRING): Type of operation the caller is attempting. <b>caller</b> (STRING): Caller that is trying to perform the operation.

<b>EMS Identifier</b>	Nblade.vldb.Timeout
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a request from the network module to the volume location database (VLDB) times out. The VLDB is used to identify the node that currently controls a volume. This might be a transient condition. If the condition persists, some volumes might be inaccessible.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Request from the network module to the volume location database (VLDB) timed out.
<b>Parameters</b>	

<b>EMS Identifier</b>	Nblade.vscanBadIPPrivAccess
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during a client attempt to connect to the privileged ONTAP_ADMIN\$ share, when the IP address of that client is not found in the list of allowed IP addresses.
<b>Corrective Action</b>	Ensure that the mentioned IP address is configured in one of the active vscan scanner pools. Use the "vserver vscan scanner pool show-active" command to view the currently active scanner pool configuration.
<b>Syslog Message</b>	For Vserver "%s", the attempt to connect to the privileged ONTAP_ADMIN\$ share by the client "%s" is rejected because its IP or hostname is not configured in any of the Vserver active scanner pools.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>scannerIp</b> (STRING): IP address of the client.

<b>EMS Identifier</b>	Nblade.vscanBadProtoMagicNum
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an incorrectly formatted message is received from the AV Connector. This might result in delay or failure in AV scanning.
<b>Corrective Action</b>	Ensure that the compatible version of AV Connector is running on the AV server, and that no other user or software is attempting to connect to the "\\PIPE\vscan" resource on the Vserver.
<b>Syslog Message</b>	Data ONTAP(R) received incorrectly formatted message for Vserver "%s" from AV Connector running on the AV server "%s".
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>scannerIp</b> (STRING): IP address of the AV server.

<b>EMS Identifier</b>	Nblade.vscanBadUserPrivAccess
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during a client attempt to connect to the privileged ONTAP_ADMIN\$ share, when the logged-in user of that client is not found in the list of allowed users.
<b>Corrective Action</b>	Ensure that the mentioned user name and IP address is configured in one of the active vscan scanner pools. Use the "vserver vscan scanner pool show-active" command to view the currently active scanner pool configuration.
<b>Syslog Message</b>	For Vserver "%s", the attempt to connect to the privileged ONTAP_ADMIN\$ share by the client "%s" is rejected because its logged-in user "%s" is not configured in any of the Vserver active scanner pools.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>scannerIp</b> (STRING): IP address of the client. <b>userName</b> (STRING): Logged-in user of the client.

<b>EMS Identifier</b>	Nblade.vscanConnBackPressure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an AV server is too busy to accept new scan requests.
<b>Corrective Action</b>	If this message occurs frequently, ensure that there are enough AV servers to handle the virus-scanning load being generated by the mentioned Vserver.
<b>Syslog Message</b>	For Vserver "%s", AV server "%s" is too busy to accept new scan requests.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>scannerIp</b> (STRING): IP address of the AV server.

<b>EMS Identifier</b>	Nblade.vscanConnInactive
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Data ONTAP(R) detects a nonresponsive antivirus (AV) server and forcibly closes its vscan connection.
<b>Corrective Action</b>	Ensure that the AV Connector, installed on the AV server, can connect to the Vserver and receive the scan requests.
<b>Syslog Message</b>	For Vserver "%s", Data ONTAP(R) forcibly closed the vscan connection originated from the nonresponsive AV server "%s".
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>scannerIp</b> (STRING): IP address of the AV server.

<b>EMS Identifier</b>	Nblade.vscanConnInvalidUser
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during a client attempt to establish a vscan connection, when the logged-in user of that client is not found in the list of allowed users.
<b>Corrective Action</b>	Ensure that the mentioned user name is configured in one of the active vscan scanner pools. Use the "vserver vscan scanner pool show-active" command to view the currently active scanner pool configuration.
<b>Syslog Message</b>	For Vserver "%s", the vscan connection request coming from client "%s" is rejected because the logged-in user "%s" is not configured in any of the Vserver active scanner pools.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>scannerIp</b> (STRING): IP address of the client attempting to establish a vscan connection. <b>userName</b> (STRING): User name of the client attempting to establish a vscan connection.

<b>EMS Identifier</b>	Nblade.vscanConnReqOnSMB1
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during a client attempt to establish a vscan connection over SMB1, which is not supported.
<b>Corrective Action</b>	Verify that both the client and Data ONTAP(R) support and are configured for SMB2 or later.
<b>Syslog Message</b>	For Vserver "%s", the vscan connection request coming from the client "%s" is rejected because it is not supported for SMB1.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>scannerIp</b> (STRING): IP address of the client.

<b>EMS Identifier</b>	Nblade.vscanNoDispatcher
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the vscan-dispatcher component cannot be created. This might be due to internal errors on the system, such as nonavailability of memory. This might cause data unavailability if the scan-mandatory option is enabled.
<b>Corrective Action</b>	Disable Vscan and enable it again by using the "vserver vscan disable/enable" command. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Vscan dispatcher component for Vserver "%s" could not be created. Error: %d.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>errorCode</b> (INT): Error code that describes the reason for the failure.

<b>EMS Identifier</b>	Nblade.vscanNoPolicyEnabled
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a file access is not considered for virus scanning because none of the configured On-Access policies are enabled for the Vserver.
<b>Corrective Action</b>	Enable one of the configured On-Access policies for the Vserver.
<b>Syslog Message</b>	For Vserver "%s", the file access was not considered for virus scanning because none of the configured On-Access policies are enabled.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation.

<b>EMS Identifier</b>	Nblade.vscanNoRegdScanner
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when AV Connector notifies Data ONTAP(R) that it does not have a registered scan-engine. This could happen if the scan-engine never registered or unregistered because of some reason like it is misconfigured or shutdown. This might cause data unavailability if the scan-mandatory option is enabled.
<b>Corrective Action</b>	Ensure that the scan-engine software installed on the AV server is compatible with Clustered Data ONTAP(R). Also ensure that it is running and is configed to connect to the AV Connector over local loopback.
<b>Syslog Message</b>	For Vserver "%s", AV Connector running on the AV server "%s" does not have a registered scan-engine to it.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation. <b>scannerIp</b> (STRING): IP address of the AV server.

<b>EMS Identifier</b>	Nblade.vscanNoScannerConn
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when Data ONTAP(R) has no vscan connection for servicing virus scan-requests. This might cause data unavailability if the scan-mandatory option is enabled.
<b>Corrective Action</b>	Ensure that the scanner pool is properly configured and the AV servers are active and connected to Data ONTAP.
<b>Syslog Message</b>	Vserver "%s" has no virus scanner connection.
<b>Parameters</b>	<b>vserverName</b> (STRING): Vserver associated with this operation.

<b>EMS Identifier</b>	Nblade.vscanVirusDetected
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a vscan server reports an error to the storage system. Normally this indicates that a virus has been found by the vscan server; however, other error conditions on the vscan server can result in this event. Client access to the file is denied. The vscan server might, depending on its settings and configuration, clean the file, quarantine it, or delete it.
<b>Corrective Action</b>	Check the log of the vscan (antivirus) server reported in the syslog message to see if it was able to successfully quarantine or delete the infected file. If it was not able to do so, a system administrator might want to manually delete the file.
<b>Syslog Message</b>	Possible virus detected. Vserver: %s, vscan server IP: %s, file path: %s, client IP: %s, SID: %s, vscan engine status: %u, vscan engine result string: %s.
<b>Parameters</b>	<b>vserverName</b> (STRING): Name of the Vserver associated with this operation. <b>vscanServerIp</b> (STRING): IP address of the vscan server. <b>filePath</b> (STRING): Path of the file that was found to be infected. <b>clientIp</b> (STRING): IP address of the client. <b>SID</b> (STRING): SID of the client. <b>vscanEngineStatus</b> (INT): Status code returned by the vscan server. <b>vscanEngineResultString</b> (STRING): Result string returned by the vscan server.

## "ndmp" Event Group

<b>EMS Identifier</b>	ndmp.fail.log
<b>Severity</b>	ERROR
<b>Description</b>	This event is generated when there is an error in NDMP
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Error message: %s
<b>Parameters</b>	<b>Error_message</b> (STRING): The error is hinted

<b>EMS Identifier</b>	ndmp.max.warning
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the maximum number of NDMP sessions has been reached.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Cannot accept new requests because the NDMP connection limit has been reached.
<b>Parameters</b>	

<b>EMS Identifier</b>	ndmp.password.warning
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs on NDMP service startup, when the password for the NDMP user account is still the default password.
<b>Corrective Action</b>	Use the 'ndmpd password' command to change the default password.
<b>Syslog Message</b>	The NDMP user account has the default password set. Use the 'ndmp password' command to change the default password.
<b>Parameters</b>	

## "net" Event Group

<b>EMS Identifier</b>	net.fib.createfailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a Vserver resource allocation fails. This leaves the system with an unusable Vserver, and additional Vservers cannot be created. This might also lead to system performance degradation.
<b>Corrective Action</b>	Delete the Vserver created by using the "vserver delete" command. Use the diagnostic privilege "debug smdb table vserver_by_name show" command to determine the Vserver name corresponding to the ID. You must delete the other associated entities, such as LIFs and volumes, before deleting a Vserver.
<b>Syslog Message</b>	Resource allocation for Vserver (ID: %d) failed.
<b>Parameters</b>	<b>vsid</b> (INT): Vserver ID.

<b>EMS Identifier</b>	net.fib.nearinglimit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Vserver resources have reached 90% and will soon be exhausted. When the resources are exhausted, additional Vservers cannot be created. The system will function normally with respect to other Vservers.
<b>Corrective Action</b>	Check for configured Vservers by using the "vserver show" command, and delete unused Vservers by using the "vserver delete" command. You must delete the the other associated entities, such as LIFs and volumes, before deleting a Vserver.
<b>Syslog Message</b>	Vserver resource allocation is nearing the limit.
<b>Parameters</b>	

<b>EMS Identifier</b>	net.gif.nest.limit
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when gif_output is called more than MAX_GIF_NEST times to prevent the infinite looping.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	gif_output: Recursively called too many times (%d).
<b>Parameters</b>	<b>noOfCalls</b> (INT): Number of times the gif_output function is called.

<b>EMS Identifier</b>	net.if.filterDrop
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during the daily network configuration check, when the count of packets dropped by the protocol filter has increased during the preceding 24 hours.
<b>Corrective Action</b>	For every such message, do the following: 1. Look for clients that are attempting to run the named protocol to an IP address configured on an interface with the filter enabled ('options interface.blocked' shows the status of the filter). 2. Correct the problem. This might include updating DNS to avoid mapping the hostname to the IP address that is experiencing the blocked traffic. Dedicated management ports should be on a dedicated management subnet and should not be used for data traffic (and such traffic is blocked if 'options interface.blocked.mgmt_data_traffic' is set to 'on'). 3. If it is not possible to move a management port to a dedicated management subnet and the management port must carry data traffic, disable the management port protocol filter with the command 'options interface.blocked.mgmt_data_traffic off'.
<b>Syslog Message</b>	Protocol Filter: '%s' '%s' packets were dropped by the per-interface protocol filter during the last 24 hours.
<b>Parameters</b>	<b>dropcount</b> (STRING): Number of packets dropped. <b>protocol</b> (STRING): Protocol that saw dropped packets.

<b>EMS Identifier</b>	net.if.vfdestroy.noRtRetarg <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during a vFiler(tm) 'destroy' operation when a static IPv4 or IPv6 route could not be retargeted to another vFiler unit in the same ipspace. This can happen if there is no other vFiler unit in the same ipspace, with an IP address in the same subnet as the source IP address in use by this route. A message of this type is generated for every such route that is unusable and the route is then deleted from the routing table.
<b>Corrective Action</b>	For every such message, do the following: 1. Look for any 'route add' or 'route delete' commands in '/etc/rc' to the printed destination 'dstaddr', using the printed gateway 'gwaddr' and being executed in 'srcvfp' vFiler context. 2. Reevaluate whether these routes would be required by any other existing vFiler unit in the same ipspace, after 'srcvfp' is destroyed. 3. If these 'route' commands are required, modify them appropriately so that they can be used by other vFiler units in the same ipspace. How to modify these 'route' commands is left to your discretion because it depends on the particular network configuration.
<b>Syslog Message</b>	route_ifa_flush: Failed to retarget route with destination '%s' and gateway '%s' belonging to '%s'. This route will be deleted from the routing table.
<b>Parameters</b>	<b>dstaddr</b> (STRING): IP address of the route's destination. <b>gwaddr</b> (STRING): IP address of the route's gateway. <b>srcvfp</b> (STRING): Name of the vFiler unit being destroyed.

<b>EMS Identifier</b>	net.if.vfdestroy.RtRetarg <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during a vFiler(tm) 'destroy' operation, when a static IPv4 or IPv6 route is successfully retargeted to a different vFiler unit in the same ipspace. When a vFiler unit is destroyed, any of its associated static routes, which are in use by one or more vFiler units within the same ipspace, must be retargeted to another vFiler unit, so as not to be deleted from the routing table. This message is generated for every such route that can be successfully retargeted.
<b>Corrective Action</b>	For every such message, do the following: 1. Look for any 'route add' or 'route delete' commands in '/etc/rc' to the printed destination 'dstaddr', using the printed gateway 'gwaddr' and being executed in 'srcvfp' vFiler context. 2. Change these commands so that they are executed in 'dstvfp' vFiler context.
<b>Syslog Message</b>	route_ifa_flush: Successfully retargeted route with destination '%s' and gateway '%s' from '%s' to '%s'. The route's interface address was changed from '%s' to '%s'. Modify '/etc/rc' so that any 'route' commands to destination '%s' and being executed in '%s' context, are now executed in '%s' context.
<b>Parameters</b>	<b>dstaddr1</b> (STRING): IP address of the route's destination. <b>gwaddr</b> (STRING): IP address of the route's gateway. <b>srcvfp1</b> (STRING): Name of the vFiler unit being destroyed. This is also the source vFiler unit from which the route will be retargeted out. <b>dstvfp1</b> (STRING): Name of the destination vFiler unit to which this route will be retargeted. This belongs to the same ipspace as the source vFiler unit. <b>oldifa</b> (STRING): Source IP address to which the route pointed prior to the vFiler 'destroy' operation. <b>newifa</b> (STRING): Source IP address to which the route now points, after it was successfully retargeted. <b>dstaddr2</b> (STRING): IP address of the route's destination. It is the same as dstaddr1. <b>srcvfp2</b> (STRING): Name of the vFiler unit being destroyed. This is also the source vFiler unit from which the route will be retargeted out. It is the same as srcvfp1. <b>dstvfp2</b> (STRING): Name of the destination vFiler unit to which this route will be retargeted. This belongs to the same ipspace as the source vFiler unit. It is the same as dstvfp1.

<b>EMS Identifier</b>	net.if_linkup.allocMemFail <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a memory allocation fails in the process of scheduling a re-synchronization of all interface states and routes after a link is brought administratively up.
<b>Corrective Action</b>	Use the port name (or base port of a vlan) and the node name of the node on which the port exists to bring the port administratively down, then administratively up. This requires advanced privilege level. Specifically: 1. "::*> network port modify -node -port -up-admin false" THEN 2. "::*> network port modify -node -port < port name> -up-admin true".
<b>Syslog Message</b>	State and route updates failed for port %s due to a memory allocation failure.
<b>Parameters</b>	<b>ifname</b> (STRING): Name of interface in process when the memory allocation failed.

<b>EMS Identifier</b>	net.ifconfig.addLimitExceed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the limit for adding logical virtual local area network (VLAN) and interface group (ifgrp) interfaces is exceeded. The latest attempt to add an interface did not succeed.
<b>Corrective Action</b>	Delete any existing unused VLAN or ifgrp interface and retry adding the new logical interface.
<b>Syslog Message</b>	The limit for adding logical virtual local area network (VLAN) and interface group (ifgrp) interfaces is exceeded. The maximum limit per host is %d.
<b>Parameters</b>	<b>maxlimitperhost</b> (INT): Maximum interfaces per host.

<b>EMS Identifier</b>	net.ifconfig.ioctlError
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when the ifconfig command encounters an error while attempting to perform an ioctl.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ioctl error encountered while configuring interface '%s' using ioctl '%s' (error string='%s', error code=%d).
<b>Parameters</b>	<b>ifname</b> (STRING): The name of the interface <b>ioctl</b> (STRING): The name of the ioctl <b>errorString</b> (STRING): The error string <b>error</b> (INT): The internal error code

<b>EMS Identifier</b>	net.ifconfig.mediatype <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is no longer supported.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the mediatype specified for a network interface in the /etc/rc file is not valid for the interface.
<b>Corrective Action</b>	See the Network Management Guide or the ifconfig man page for valid mediatypes, and then change the /etc/rc file.
<b>Syslog Message</b>	The mediatype specified for %s in the /etc/rc file is not valid for this interface and will be ignored.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface.

<b>EMS Identifier</b>	net.ifgrp.addLimitExceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system fails to create a new interface group because the number of such groups already present on the node exceed either the number of physical ports on the node or the upper bound on number of interface groups supported.
<b>Corrective Action</b>	Delete any existing unused interface groups and retry adding the new interface group. Use the "network port ifgrp delete" and "network port ifgrp create" commands, respectively, to do so.
<b>Syslog Message</b>	ifgrp %s could not be created because the limit for logical interface groups on this node has been reached. The limit per node is equal to the number of physical ports present on the node with an upper bound of %d.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group that could not be created. <b>maxIfgrp</b> (INT): Upper bound on number of interface groups supported.

<b>EMS Identifier</b>	net.ifgrp.lacp.link.active
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a link in an Link Aggregation Control Protocol (LACP) aggregate becomes active.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ifgrp %s, port %s has transitioned to the active state.
<b>Parameters</b>	<b>aggregateName</b> (STRING): Name of the interface group. <b>portName</b> (STRING): Name of the member port.

<b>EMS Identifier</b>	net.ifgrp.lacp.link.inactive
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a link is operationally up, but becomes inactive in the Link Aggregation Control Protocol (LACP) aggregate with which it has been associated. This can occur due to a configuration, software, or link error, or a hardware failure.
<b>Corrective Action</b>	Search kb.netapp.com for "How to troubleshoot LACP port channel groups".
<b>Syslog Message</b>	ifgrp %s, port %s has transitioned to an inactive state. The interface group is in a degraded state.
<b>Parameters</b>	<b>aggregateName</b> (STRING): Name of the interface group. <b>portName</b> (STRING): Name of the member port.

<b>EMS Identifier</b>	net.ipsconfig.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when creation of an IPspace fails. This failure leaves the system with an unusable IPspace.
<b>Corrective Action</b>	Delete the IPspace reporting the failure by using the "ipspace delete" command. Use the (privilege: diag) "debug smdb table ipspaces_byname show" command to find the mapping from the ID reported in the event to the IPspace name required to delete this IPspace.
<b>Syslog Message</b>	IPspace (%d) needs to be deleted because configuration (%s) failed with error (%s).
<b>Parameters</b>	<b>ipsid</b> (INT): IPspace ID. <b>configuration</b> (STRING): Configuration attempted. <b>error</b> (STRING): Error returned.

<b>EMS Identifier</b>	net.pip.interface.badEntry <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the storage system includes the options command interface.blocked.proto (where proto is one of cifs, ftpd, iscsi, nfs, snapmirror, and possibly additional protocols) to block traffic for the specified protocol on a listed interface that does not actually exist. Non-existing interface names are ignored.
<b>Corrective Action</b>	Correct the option that names a non-existent interface or leave it as-is if the named interface will be created or restored to the storage system later.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>errorDescription</b> (STRING): Problem with the bad entry. <b>errorEntry</b> (STRING): Content of the bad entry.

<b>EMS Identifier</b>	net.pip.registry.noEntry <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the storage system includes the options command interface.blocked.proto (where proto is one of cifs, ftpd, iscsi, nfs, snapmirror, and possibly additional protocols) to block traffic for the specified protocol on every interface listed, but a registry_get for this option is unsuccessful. This is normal if the protocol filter has never been initialized (for example, if this is the first boot of a release that supports this feature)
<b>Corrective Action</b>	Examine the error message and take corrective action, unless this message occurs during the first boot of a release that supports this feature.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>errorDescription</b> (STRING): Problem with the bad entry.

<b>EMS Identifier</b>	net.route.failDelv6Rt <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a static IPv6 route cannot be deleted because the IPv6 option is turned off. When 'options.ipv6.enable' is set to off, all static IPv6 routes must be flushed from the routing tables. This includes any static IPv6 routes in partner context routing tables, if the controller is in takeover mode. Static IPv6 routes in default as well as non-default ipspaces must be flushed when this option is turned off.
<b>Corrective Action</b>	Check for any leftover static IPv6 route entries in default and non-default ipspaces. If the controller was in takeover mode, also check for any such leftover entries in the partner context. Each such entry will have the 'S' flag set in the 'Flags' column of the 'route -s' output. To delete these entries, first enable IPv6 using 'options ip.v6.enable on'. Then delete all such routing entries using the 'route' command. You can turn off IPv6 after that; this error message should not reappear.
<b>Syslog Message</b>	route_staticIPv6Delete: could not delete static IPv6 route for addr='%s', mask='%s', gateway='%s': '%s'
<b>Parameters</b>	<b>addr</b> (STRING): Host address or network address whose corresponding static routing entry could not be deleted from the IPv6 routing table. <b>mask</b> (STRING): Netmask of the static IPv6 route that could not be deleted from the IPv6 routing table. <b>gate</b> (STRING): Gateway of the static IPv6 route that could not be deleted from the IPv6 routing table. <b>errStr</b> (STRING): Reason this static IPv6 route could not be deleted.

<b>EMS Identifier</b>	net.route.nonStaticGateway <b>Deprecated:</b> Deprecated as of version 9.3 since this feature is no longer supported.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a static IPv6 route is created without first configuring a static IPv6 address in the same subnet as the gateway.
<b>Corrective Action</b>	Configure at least one static IPv6 address on the same subnet as the gateway on some interface that is in the same IP Space as the route.
<b>Syslog Message</b>	new_route: IPv6 static routes should not depend on autoconfigured addresses for reachability, or they will fail to install during boot. dest='%s', gateway='%s', auto-configured addr='%s'.
<b>Parameters</b>	<b>addr</b> (STRING): Auto-configured address used to reach gateway. <b>dest</b> (STRING): Route Destination. <b>gate</b> (STRING): Gateway of the static IPv6 route that depends on autoconfigured addresses for reachability.

<b>EMS Identifier</b>	net.static.hostroute.replaced
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when user configured static host route entry being replaced with a dynamic entry by route redirect message.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	rtredirect_fib: User static route to destination(%s) through gateway(%s) being redirected to new gateway(%s)
<b>Parameters</b>	<b>Dest</b> (STRING): IP address of the destination. <b>OldGW</b> (STRING): IP address of the old gateway. <b>NewGW</b> (STRING): IP address of the new gateway.

<b>EMS Identifier</b>	net.vServerUpdateFailure
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node cannot be updated with Vserver configuration. This can result in that node not being able to host LIFs.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Unable to update node %s with current Vservers.
<b>Parameters</b>	<b>remote_node</b> (STRING): Node being updated.

<b>EMS Identifier</b>	net.vServerUpdateSuccess
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the Vserver configuration on a node is successfully updated after a previous failure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Vserver configuration is successfully updated on node %s.
<b>Parameters</b>	<b>remote_node</b> (STRING): Node that was updated.

## "netgroup" Event Group

<b>EMS Identifier</b>	netgroup.files.missing
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a netgroup lookup request finds that files is specified as a ns-switch source, but a netgroup file cannot be found.
<b>Corrective Action</b>	Check that the local netgroup file is present and load it if necessary. The commands to perform this are "vserver services netgroup load" and "vserver services netgroup status".
<b>Syslog Message</b>	Netgroup file missing for Vserver "%s" during lookup for netgroup "%s".
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver on which the problem is occurring. <b>netgroup</b> (STRING): Name of the netgroup for the lookup request.

<b>EMS Identifier</b>	netgroup.ldap.byhost.missing
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when netgroup.byhost is disabled in the Lightweight Directory Access Protocol (LDAP) client configuration on the storage system, and LDAP is configured as an ns-switch source for the Vserver. Enabling netgroup.byhost enables mount operations to succeed faster when the netgroup size is large.
<b>Corrective Action</b>	Consider configuring the netgroup.byhost database on the LDAP server and enabling netgroup.byhost on the LDAP client configuration on the storage system by using the "ldap client modify" command.
<b>Syslog Message</b>	LDAP client config has netgroup.byhost disabled for Vserver "%s" during lookup for netgroup "%s".
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver on which the problem is occurring. <b>netgroup</b> (STRING): Name of the netgroup for the lookup request.

<b>EMS Identifier</b>	netgroup.ldap.config
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a netgroup lookup request finds that Lightweight Directory Access Protocol (LDAP) is specified as a ns-switch source, but LDAP is not configured for the Vserver. Netgroup lookups using LDAP will not function.
<b>Corrective Action</b>	Check the ns-switch sources configured for the netgroup database using "vserver services name-service ns-switch show" and the LDAP configuration for the Vserver using "ldap show" and "ldap client show". Either remove LDAP as a ns-switch source, or configure LDAP.
<b>Syslog Message</b>	LDAP configuration issues found for Vserver "%s" during lookup for netgroup "%s".
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver on which the problem is occurring. <b>netgroup</b> (STRING): Name of the netgroup for the lookup request.

<b>EMS Identifier</b>	netgroup.nis.byhost.decode
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the netgroup.byhost remote procedure call to the Network Information Service (NIS) server returns a response that cannot be decoded.
<b>Corrective Action</b>	Check the netgroup byhost database on the NIS server for lines that have more than 1024 characters.
<b>Syslog Message</b>	NIS server returned an undecodable response for Vserver "%s" during lookup for netgroup "%s".
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver on which the problem is occurring. <b>netgroup</b> (STRING): Name of the netgroup for the lookup request.

<b>EMS Identifier</b>	netgroup.nis.byhost.missing
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the netgroup.byhost map is not configured on the Network Information Service (NIS) server and NIS is configured as a ns-switch source for the Vserver. Enabling netgroup.byhost enables mount operations to succeed faster when the netgroup size is large.
<b>Corrective Action</b>	Consider configuring the netgroup.byhost map on the NIS server to gain better performance with netgroups.
<b>Syslog Message</b>	NIS server missing netgroup.byhost map for Vserver "%s" during lookup for netgroup "%s".
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver on which the problem is occurring. <b>netgroup</b> (STRING): Name of the netgroup for the lookup request.

<b>EMS Identifier</b>	netgroup.nis.config
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a netgroup lookup request finds that Network Information Service (NIS) is specified as a ns-switch source, but NIS is not configured for the Vserver. Netgroup lookups using NIS will not function.
<b>Corrective Action</b>	Check the ns-switch sources configured for the netgroup database using "vserver services name-service ns-switch show" and the NIS configuration for the Vserver using "nis-domain show". Either remove NIS as a ns-switch source, or configure NIS.
<b>Syslog Message</b>	NIS configuration issues found for Vserver "%s" during lookup for netgroup "%s".
<b>Parameters</b>	<b>vserver</b> (STRING): Name of the Vserver on which the problem is occurring. <b>netgroup</b> (STRING): Name of the netgroup for the lookup request.

## "netif" Event Group

<b>EMS Identifier</b>	netif.autoNegFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when autonegotiation fails and the interface is operating at half-duplex, which might not be the desired mode.
<b>Corrective Action</b>	Verify that autonegotiation is enabled on the switch or device to which the interface is connected. Or, if the desired speed is 10 or 100 Mbps, disable autonegotiation on the interface by setting the mediatype.
<b>Syslog Message</b>	Autonegotiation failed, interface %s operating at %d Mbps half-duplex.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a". <b>speed</b> (INT): Speed used by the interface.

<b>EMS Identifier</b>	netif.badEeprom
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the network interface has an electronically erasable programmable read-only memory (EEPROM) with a bad cyclic redundancy check (CRC) or media access control (MAC) address.
<b>Corrective Action</b>	Replace the component associated with the network interface (PCIe card or controller motherboard).
<b>Syslog Message</b>	Network interface %s has an EEPROM with a bad CRC or MAC address.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a".

<b>EMS Identifier</b>	netif.badOversizePacket
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the network interface card (NIC) receives a bad oversize packet.
<b>Corrective Action</b>	Try a different switch port.
<b>Syslog Message</b>	Bad oversize packet received on network interface %s. Check for NIC receive errors (CRC, runs, fragments). Might indicate a bad switch port.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a".

<b>EMS Identifier</b>	netif.eepromReadFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure in reading the electronically erasable programmable read-only memory (EEPROM) for a network interface. The interface is not initialized.
<b>Corrective Action</b>	Rebooting the system might clear the problem. The problem might be caused by a software bug and should be reported to NetApp technical support.
<b>Syslog Message</b>	Failure in reading EEPROM for network interface %s.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a".

<b>EMS Identifier</b>	netif.excessLinkInterrupts
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when excessive link status change interrupts occur on the network interface. One or two events might indicate a momentary glitch on the link, but many events might indicate a bad switch port, cable, or network interface card (NIC).
<b>Corrective Action</b>	Try using a different switch port and cable. If the problem persists, replace the NIC.
<b>Syslog Message</b>	Excessive link status change interrupts occurred on network interface %s.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a".

<b>EMS Identifier</b>	netif.fatal.err
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the network device's driver encounters an error from which it cannot recover.
<b>Corrective Action</b>	Replace the network interface card.
<b>Syslog Message</b>	The network device in slot %d encountered fatal error %s.
<b>Parameters</b>	<b>slot</b> (INT): Slot number. <b>info</b> (STRING): Device specific information

<b>EMS Identifier</b>	netif.fwUpdateFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is an error during a network interface firmware update.
<b>Corrective Action</b>	In very rare cases, a firmware update failure might leave the interface inoperable. If the driver initialization routine subsequently fails and logs a message, the motherboard or card might need to be replaced. For more information or assistance, contact NetApp technical support.
<b>Syslog Message</b>	Firmware update of network interface %s to version %s failed :%s.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface. <b>version</b> (STRING): Version of the firmware update. <b>reason</b> (STRING): Reason for the firmware update failure.

<b>EMS Identifier</b>	netif.fwUpdateStatus
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs to indicate the status of a network interface firmware update.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Firmware update of network interface %s to version %s %s.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface. <b>version</b> (STRING): Version of firmware update. <b>status</b> (STRING): Status of firmware update process (started or completed)

<b>EMS Identifier</b>	netif.hangDetected
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a network interface driver detects that an interface is hung.
<b>Corrective Action</b>	If hardware is reset and there are no further hangs, no corrective action is required. Otherwise, if the system reports frequent hangs, a core dump is forced, or no action is taken by the driver, contact NetApp technical support.
<b>Syslog Message</b>	Network interface %s hung (%s). %s. Driver: %s.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface: for example, "e4a". <b>hangType</b> (STRING): Type of hang. For example, "transmit", "PCle RcvMstAbt". <b>recoveryAction</b> (STRING): Action, if any, that will be taken by the driver to recover. For example, "Resetting to recover" or "Forcing panic for core dump" (for root cause analysis). <b>driver</b> (STRING): Driver name.

<b>EMS Identifier</b>	netif.init.failed
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when initialization of a network interface failed due to an unexpected software error.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Initialization of network interface %s failed due to unexpected software error %s:%d.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a". <b>module</b> (STRING): Name of the software module or driver. <b>error</b> (INT): Module-specific error code.

<b>EMS Identifier</b>	netif.linkDown
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a network link goes down or the interface is not operational when first configured up.
<b>Corrective Action</b>	If the message describes the link as "down," check the cabling and switch port configuration. If the message states "controller initialization failure", report this to NetApp technical support.
<b>Syslog Message</b>	%s %s: Link %s.
<b>Parameters</b>	<b>lanType</b> (STRING): Local area network (LAN) type. <b>ifName</b> (STRING): Name of the network interface. <b>status</b> (STRING): Brief information about the problem.

<b>EMS Identifier</b>	netif.linkErrors
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the driver detects an excessive link error rate. Link errors are cyclic redundancy checks (CRC), runt frames, fragment, jabber, and alignment errors. Use the 'ifstat' command to display counts.
<b>Corrective Action</b>	Verify that the cable is securely connected at both ends. Verify that both devices are configured the same with respect to autonegotiation, speed, and duplex. If the problem persists, there might be bad hardware at one end, or a bad cable or connector.
<b>Syslog Message</b>	Excessive link errors on network interface %s. Might indicate a bad cable, switch port, or NIC, or that a cable connector is not fully inserted in a socket. On a 10/100 port, might indicate a duplex mismatch.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a".

<b>EMS Identifier</b>	netif.linkInfo
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a network interface is reset by the software or is configured down by the administrator.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s: Link %s.
<b>Parameters</b>	<b>lanType</b> (STRING): Local area network (LAN) type. <b>ifName</b> (STRING): Name of the network interface. <b>info</b> (STRING): Brief description of the event.

<b>EMS Identifier</b>	netif.linkUp
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the state of a network link changes to "up".
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s: Link %s.
<b>Parameters</b>	<b>lanType</b> (STRING): Local area network (LAN) type. <b>ifName</b> (STRING): Name of the network interface. <b>status</b> (STRING): Status of the link, "up".

<b>EMS Identifier</b>	netif.nicNotSupported
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the installed network interface card (NIC) version is not supported.
<b>Corrective Action</b>	Replace the NIC with one purchased from NetApp.
<b>Syslog Message</b>	The NIC in slot %d is not supported. The %s is not supported.
<b>Parameters</b>	<b>slot</b> (INT): Slot number of the NIC. <b>reason</b> (STRING): Specific reason the NIC is not supported.

<b>EMS Identifier</b>	netif.overTempError
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a network port is too hot or a sensor has malfunctioned. Depending on how the port is deployed, the failure may disrupt user data access, node access or cluster communication.
<b>Corrective Action</b>	Ensure adequate cooling and ventilation is available. If that does not resolve the issue, replace the failed card.
<b>Syslog Message</b>	Network port %s is over temperature.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network port: for example, "e4a".

<b>EMS Identifier</b>	netif.phyNotRead
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot read identification information from the physical layer (PHY) of a network interface. This might be caused by a software bug or hung hardware, and the link might not come up.
<b>Corrective Action</b>	If the link does not come up, power-cycle (not just reboot) the system. If the link still does not come up, replace the motherboard or network interface card, depending on the location of the interface.
<b>Syslog Message</b>	Cannot read PHY for network interface %s, status mask=0x%llx.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface, for example, "e8a". <b>statusMask</b> (LONGINTEX): Technical information about the event for Data ONTAP(R) developers.

<b>EMS Identifier</b>	netif.phyOperationFailed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure in reading or writing the physical layer (PHY) of a network interface.
<b>Corrective Action</b>	This might be caused by a software bug. If there are problems with the interface after seeing this message, replace the component associated with the network interface (PCIe card or controller motherboard). If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Failure in reading or writing PHY for network interface %s. Driver=%s, error=%d, regaddr=0x%x, command=0x%x, status=0x%x.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e2a". <b>driver</b> (STRING): Driver name. <b>error</b> (INT): Error code. <b>regaddr</b> (INTEX): PHY register address. <b>command</b> (INTEX): PHY command. <b>status</b> (INTEX): PHY status.

<b>EMS Identifier</b>	netif.phyRead
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure in reading the physical layer (PHY) of a network interface.
<b>Corrective Action</b>	This might be caused by a software bug. If there are problems with the interface after seeing this message, contact NetApp technical support.
<b>Syslog Message</b>	Failure in reading PHY for network interface %s.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a".

<b>EMS Identifier</b>	netif.rateLimitThreshold
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the protocol rate threshold is reached on a network interface.
<b>Corrective Action</b>	Fix the faulty network configuration or incorrect setup that enables a sudden spike in broadcast packets to bring down the node. If you still want a high ARP rate threshold, use the "bootarg.arp.ratelimit.threshold" boot argument to set that threshold.
<b>Syslog Message</b>	High rate limit on network interface %s for broadcast protocol %s being detected: %d pkts/sec.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface that reached the protocol rate threshold. <b>protocol</b> (STRING): Name of the broadcast protocol that overloaded the network. <b>packetRate</b> (INT): Observed incoming packet rate per second on the interface.

<b>EMS Identifier</b>	netif.sfpNotSupported
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the installed Small Form-factor Pluggable (SFP+ or QSFP+) module is not supported.
<b>Corrective Action</b>	Replace the SFP+ or QSFP+ module with one purchased from NetApp for this interface.
<b>Syslog Message</b>	The SFP+ or QSFP+ module (%s %s) installed in %s is not supported with this network interface.
<b>Parameters</b>	<b>sfpVendor</b> (STRING): SFP+ or QSFP+ vendor name. <b>sfpPn</b> (STRING): SFP+ or QSFP+ part number. <b>ifName</b> (STRING): Name of the network interface; for example, "e2a".

<b>EMS Identifier</b>	netif.speedDowngraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the interface is operating at a lower speed than expected.
<b>Corrective Action</b>	The physical connection may be faulty. Replace the cable and check the switch port configuration for errors.
<b>Syslog Message</b>	Interface %s operating at %d Mbps. This might occur due to faulty cable, faulty switch hardware, or faulty switch software.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface. <b>speed</b> (INT): Speed used by the interface.

<b>EMS Identifier</b>	netif.speedNotSupported
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a network interface autonegotiates to an unsupported speed.
<b>Corrective Action</b>	Connect to 1 or 10 gigabits per second (Gbps) switch port.
<b>Syslog Message</b>	Autonegotiation on network interface %s resolved to speed %d. This speed is not supported.
<b>Parameters</b>	<b>ifname</b> (STRING): Name of network interface. <b>speed</b> (INT): Speed in megabits per second (Mbps).

<b>EMS Identifier</b>	netif.tooManyNics
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a network interface was not initialized because the number of interfaces of this type exceeds the maximum supported.
<b>Corrective Action</b>	Remove a network interface card (NIC).
<b>Syslog Message</b>	Network interface %s was not initialized because the number of interfaces of this type exceeds the maximum (%d) supported.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e8a". <b>maxIf</b> (INT): Maximum number of interfaces of this type that is supported.

<b>EMS Identifier</b>	netif.uncorEccError
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the network interface controller reports an unrecoverable ECC error.
<b>Corrective Action</b>	Replace the component associated with the network interface (PCIe card or controller motherboard). If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Unrecoverable ECC error on network interface %s.
<b>Parameters</b>	<b>ifName</b> (STRING): Name of the network interface; for example, "e4a".

<b>EMS Identifier</b>	netif.unknownSwRequest
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a network driver does not recognize a request from another software module, possibly because the request is invalid.
<b>Corrective Action</b>	Power-cycle the controller; a reboot is not sufficient. If the problem persists, contact NetApp technical support.
<b>Syslog Message</b>	Software module %s was passed unknown %s %d for %s.
<b>Parameters</b>	<b>driver</b> (STRING): Driver module reporting the error. <b>object</b> (STRING): Name of the requested object. <b>value</b> (INT): Value that is not recognized. <b>ifName</b> (STRING): Name of the network interface.

## "netinet" Event Group

<b>EMS Identifier</b>	netinet.ethr.broadcstAddr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system finds that the Ethernet address for the IP address is found to be a broadcast address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ARP: Ethernet address is a broadcast address for IP address %s!
<b>Parameters</b>	<b>ipAddress</b> (STRING): IP address in Standard Internet dotted notation.

<b>EMS Identifier</b>	netinet.ethr.dup.clustIP
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when a new node that is trying to join the cluster is using the same IP address that is configured on this node's cluster interface. This can prevent data from being served to clients and potentially bring down the entire cluster.
<b>Corrective Action</b>	Use the Ethernet (MAC) address with the "network port show -mac " command to find the network port. Use the "network interface show -curr-port " command to identify the cluster interface that is configured with the duplicate IP address. Remove the LIF on the cluster interface of the new node in the cluster network by using the "net int delete -vserver -lif " command. After removing the LIF, assign a new, unique IP address to the cluster interface.
<b>Syslog Message</b>	Duplicate IP address %s (Ethernet MAC: %s) configured on the cluster network.
<b>Parameters</b>	<b>ipaddr</b> (STRING): Duplicate IP address that was detected on the cluster network. <b>ethaddr</b> (STRING): Ethernet (MAC) address that uniquely identifies the node configured with the duplicate IP address.

<b>EMS Identifier</b>	netinet.ethr.duplct.ipAdrr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when another system is detected using an IP address configured on this system.
<b>Corrective Action</b>	The Ethernet address uniquely identifies the other system that is using the IP address. If you are using static IP addresses, change the IP address configured on one of the systems. If DHCP is in use on the network, ensure that the static IP address is not in the range being used by the DHCP server.
<b>Syslog Message</b>	Duplicate IP address %s!! sent from Ethernet address: %s.
<b>Parameters</b>	<b>ipaddr</b> (STRING): IP address. <b>ethaddr</b> (STRING): Ethernet address.

<b>EMS Identifier</b>	netinet.ethr.noarp.flagSet <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Address Resolution Protocol (ARP) input is received, but because the no ARP flag is set the ARP input is discarded.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Discarding ARP input as %s has no ARP flag set.
<b>Parameters</b>	<b>ifName</b> (STRING): Full interface name.

## "netinet6" Event Group

<b>EMS Identifier</b>	netinet6.frag.bytes.overlap
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the incoming fragment overlaps some of the existing previous fragment in the reassembly queue.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%d bytes of a fragment from %s overlapped the %s fragment
<b>Parameters</b>	<b>bytes</b> (INT): Number of bytes. <b>ipAddress</b> (STRING): Printable that is loggable representation of IP address. <b>message</b> (STRING): String passed as "previous" or "succeeding".

<b>EMS Identifier</b>	netinet6.icmp.chksum
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system receives an Internet Control Message Protocol(ICMP) message, and while processing the ICMP message it finds a checksum error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ICMP6 checksum error (%d %x) %s.
<b>Parameters</b>	<b>icmpType</b> (INT): ICMP header type field. <b>checksum</b> (INTHEX): Checksum value. <b>ipAddress</b> (STRING): Printable that is a loggable representation of IP address.

<b>EMS Identifier</b>	netinet6.icmp.reject.equal
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system rejects a redirect because both router case and on-link destination case are equal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ICMP6 redirect rejected; neither router case nor onlink case: %s.
<b>Parameters</b>	<b>addressBuff</b> (STRING): Contains IP6 addresses.

<b>EMS Identifier</b>	netinet6.icmp.reject.length
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is a lladdrlen mismatch for the specified IP6 address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	icmp6_redirect_input: lladdrlen mismatch for %s (if %d, icmp6 packet %d): %s.
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of the IP address. <b>mediaAddrlen</b> (INT): Media address length. <b>lladdrlen</b> (INT): Address length. <b>addressBuff</b> (STRING): Contains IP6 addresses.

<b>EMS Identifier</b>	netinet6.icmp.reject.link
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system rejects an Internet Control Message Protocol6 (ICMP6) redirect.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ICMP6 redirect sent from %s rejected;It must be from the linklocal address.
<b>Parameters</b>	<b>ipAddress</b> (STRING): Printable that is a loggable representation of the IP address.

<b>EMS Identifier</b>	netinet6.icmp.reject.ndopt
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because of invalid neighbor discovery options.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	icmp6_redirect_input: Invalid neighbor discovery option, rejected: %s.
<b>Parameters</b>	<b>addressBuff</b> (STRING): Contains IP6 addresses.

<b>EMS Identifier</b>	netinet6.in6.invlid.prfxLen1
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs because of equal prefix length.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_are_prefix_equal: Invalid prefix length (%d).
<b>Parameters</b>	<b>prfxLen</b> (INT): Prefix length.

<b>EMS Identifier</b>	netinet6.in6.invlid.prfxLen2
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs because of invalid prefix length.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefixlen2mask: Invalid prefix length (%d).
<b>Parameters</b>	<b>prfxLen</b> (INT): Prefix length.

<b>EMS Identifier</b>	netinet6.in6.unReInstl.ifRte <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Data ONTAP(R) discovers another address with the same prefix as the purged address and there is a failure in reinstalling the corresponding interface route.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_purgeaddr: Failed to add an interface route for %s/%d on %s, errno = %d.
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of IP address. <b>prefixLen</b> (INT): Prefix length. <b>ifFullName</b> (STRING): Full new-style name for the network interface. <b>erNum</b> (INT): Error number.

<b>EMS Identifier</b>	netinet6.in6rmx.del.OldRoute
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system encounters an error in deleting old routes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_rtqkill: Error %d.
<b>Parameters</b>	<b>erNumber</b> (INT): Error number.

<b>EMS Identifier</b>	netinet6.input.addr.notReady
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the destination address is not ready, so the packet is discarded.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ip6_input: packet was sent to an unready address %s->%s.
<b>Parameters</b>	<b>srcAddr</b> (STRING): Source IP6 address. <b>dstAddr</b> (STRING): Destination IP6 address.

<b>EMS Identifier</b>	netinet6.input.opt.payload
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the length of the payload option in the header is inconsistent.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Length of jumbopayload option is inconsistent(%d).
<b>Parameters</b>	<b>option</b> (INT): Length of option.

<b>EMS Identifier</b>	netinet6.input.opt.rtrAlert
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the length of the router alert option in the header is inconsistent.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Length of router alert option is inconsistent(%d).
<b>Parameters</b>	<b>option</b> (INT): Length of option.

<b>EMS Identifier</b>	netinet6.mld6.illegal.type
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system discovers an illegal Internet Control Message Protocol (ICMP) type field in a multicast listener discovery structure.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	mld6_input: Illegal ICMP type field (%d).
<b>Parameters</b>	<b>type</b> (INT): ICMP type field.

<b>EMS Identifier</b>	netinet6.mld6.srcAdr.invlId
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs during validation of the source address, when the system finds that the source address is a non-linked local address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	mld6_input: Source address %s is not link-local.
<b>Parameters</b>	<b>srcAddr</b> (STRING): Source IP6 address.

<b>EMS Identifier</b>	netinet6.nbr.bad.addr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the source, or the destination or target address is bad.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ns_input: %s=%s.
<b>Parameters</b>	<b>addrType</b> (STRING): This is source or destination or target . <b>ipAddress</b> (STRING): Printable that is a loggable representation of source IP6 address.

<b>EMS Identifier</b>	netinet6.nbr.bad.tgtAddr
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the target address packet is found to be multicast.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ns_input: Bad NS target (multicast).
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nbr.badDstAddr.pkt1
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the destination address packet is bad due to a wrong destination IP6 address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ns_input: Bad DAD packet (wrong ip6 dst).
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nbr.badDstAddr.pkt2
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the destination address packet is bad due to link-layer address option.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ns_input: Bad DAD packet (link-layer address option).
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nbr.dad.complete
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Duplicate address Detection (DAD) for the specified interface address is completed, and duplicate address is found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: DAD complete for %s - duplicate found.
<b>Parameters</b>	<b>ifAddress</b> (STRING): Interface address. <b>ip6address</b> (STRING): Printable that is a loggable representation of the IP address.

<b>EMS Identifier</b>	netinet6.nbr.dad.dtcDupAdr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when DAD detected duplicate IPv6 address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: DAD detected duplicate IPv6 address %s: %d NS, %d NA.
<b>Parameters</b>	<b>ifAddress</b> (STRING): Interface address. <b>ip6address</b> (STRING): Printable that is a loggable representation of an IP address. <b>nsCount</b> (INT): Transmitted/Received ICMPv6 Neighbor Solicitation(NS) Count. <b>naCount</b> (INT): Transmitted/Received ICMPv6 Neighbor Advertisement(NA) Count.

<b>EMS Identifier</b>	netinet6.nbr.dad.ignrNS
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when Duplicate address Detection (DAD) ignores Neighbor Solicitation (NS) packet for the specified interface address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_dad_ns_input: Ignoring DAD NS packet for address %s(%s).
<b>Parameters</b>	<b>targetAddress</b> (STRING): Printable that is loggable representation of target IPv6 address. <b>ifAddress</b> (STRING): Interface address.

<b>EMS Identifier</b>	netinet6.nbr.dad.memAlcFail
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Duplicated Address Detection (DAD) is started and memory allocated fails for the specified interface address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_dad_start: Memory allocation failed for %s(%s).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of an IP6 address. <b>ifAddress</b> (STRING): Interface address.

<b>EMS Identifier</b>	netinet6.nbr.dad.retry
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Duplicate address Detection (DAD) for the specified interface address is completed, and duplicate address is found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: Retrying DAD for %s - duplicate found. Retry count: %d.
<b>Parameters</b>	<b>ifAddress</b> (STRING): Interface address. <b>ip6address</b> (STRING): Printable that is a loggable representation of the IP address. <b>count</b> (INT): Retry count after DAD failure.

<b>EMS Identifier</b>	netinet6.nbr.dad.timeout
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during Duplicated Address Detection (DAD), when number of tries or count to transmit DAD packet exceeds the predefined maximum number of tries.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: could not run DAD, driver or link problem?
<b>Parameters</b>	<b>ifAddress</b> (STRING): Interface address.

<b>EMS Identifier</b>	netinet6.nbr.dadStrc.notFnd1
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Duplicated Address Detection (DAD) timer is called, and DAD structure is not found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_dad_timer: DAD structure is not found.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nbr.dadStrc.notFnd2
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when nd6_dad_duplicated is called, and DAD structure is not found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_dad_duplicated: DAD structure not found.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nbr.dadtmr.duplcAdr
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Duplicated Address Detection (DAD) timer is called, and the parameter passed to it, is a duplicated interface address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_dad_timer: Called with duplicated address %s(%s).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of an IP6 address. <b>ifAddress</b> (STRING): Interface address.

<b>EMS Identifier</b>	netinet6.nbr.dadTmr.nTntvAdr
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Duplicated Address Detection (DAD) Timer is called with non tentative interface address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_dad_timer: Called with non-tentative address %s(%s).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of an IP6 address. <b>ifAddress</b> (STRING): Interface address.

<b>EMS Identifier</b>	netinet6.nbr.dadtmr.nullPrm
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Duplicated Address Detection (DAD) timer is called and the interface address passed to it is NULL.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_dad_timer: Called with null parameter.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nbr.duplcte.taddr
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when there is a duplicate target IP6 address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_na_input: Duplicate IP6 address %s.
<b>Parameters</b>	<b>targetAddress</b> (STRING): Printable that is a loggable representation of target IP6 address.

<b>EMS Identifier</b>	netinet6.nbr.duplcteSrc.addr
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is duplicate source IP6 address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ns_input: Duplicate IP6 address %s.
<b>Parameters</b>	<b>srcAddress</b> (STRING): Printable that is a loggable representation of source IP6 address.

<b>EMS Identifier</b>	netinet6.nbr.invlD.ndOpt1
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because of invalid Neighbor Discovery (ND)option.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ns_input: Invalid ND option; ignored.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nbr.invlD.ndOpt2
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because of an invalid Neighbour Discovery (ND) option during neighbor advertising input handling.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_na_input: Invalid ND option; ignored.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nbr.invlD.tgtAddr
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during Neighbor Advertising (NA) input handling, because of invalid target address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_na_input: Invalid target address %s.
<b>Parameters</b>	<b>targetAddress</b> (STRING): Target IP6 address.

<b>EMS Identifier</b>	netinet6.nbr.manl.intvtnReq
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when 'dad_duplicated' is called and manual intervention is required.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: Manual intervention required.
<b>Parameters</b>	<b>ifAddress</b> (STRING): Interface address.

<b>EMS Identifier</b>	netinet6.nbr.misMth.lladrln1
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is a lladrln mismatch for the specified IP6 address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ns_input: lladrln mismatch for %s (if %d, NS packet %d).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of an IP address. <b>ifAddrln</b> (INT): Interface address length. <b>lladrln</b> (INT): Address length.

<b>EMS Identifier</b>	netinet6.nbr.misMth.lladrln2
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs during Neighbor Advertising (NA) input handling, when there is a lladrln mismatch for the specified IP6 address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_na_input: lladrln mismatch for %s (if %d, NA packet %d).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of target IP address. <b>ifAddrln</b> (INT): Interface address length. <b>lladrln</b> (INT): Address length.

<b>EMS Identifier</b>	netinet6.nbr.solAdv.mlticstd
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during Neighbor Advertising(NA) input handling, as solicited advertising is multicast.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_na_input: A solicited advertising is multicast.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nd6.init
<b>Severity</b>	NOTICE
<b>Description</b>	This event occurs while attempting to initialize nd6 when it is already initialized.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_init called more than once(ignored)
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.nd6.route.add <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is replaced by a SKT_TRACE.
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when newly created route cannot be added to neighbour cache entry.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_lookup: failed to add route for a neighbor(%s), errno=%d
<b>Parameters</b>	<b>ipAddress</b> (STRING): Printable that is loggable representation of IP address of neighbour. <b>erNumber</b> (INT): Error number.

<b>EMS Identifier</b>	netinet6.nd6.router.addrLocal <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when a non-link local address is found in default router address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	default router list contains a non-linklocal address(%s)
<b>Parameters</b>	<b>dfRtrAddr</b> (STRING): Printable that is loggable representation of IP address.

<b>EMS Identifier</b>	netinet6.nd6.router.prefixLocal <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is replaced by a SKT_TRACE.
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when router advertises prefix with non-link local address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	a router(%s) advertises a prefix with non-link local address
<b>Parameters</b>	<b>rtrAddr</b> (STRING): Printable that is loggable representation of router IP address.

<b>EMS Identifier</b>	netinet6.nd6.setmtu.small
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the port MTU (Maximum Transmission Unit) is set to a smaller value than the IPv6 minimum MTU of 1280. If you set the port MTU value to less than 1280, which is not recommended, IPv6 packets larger than the set value cannot be sent from or received by the controller.
<b>Corrective Action</b>	Use the 'broadcast-domain modify' command with the '-mtu' option to increase MTU of all ports in the domain to at least the IPv6 minimum MTU of 1280.
<b>Syslog Message</b>	nd6_setmtu: new port MTU '%lu' on the port '%s' is too small for IPv6.
<b>Parameters</b>	<b>linkmtu</b> (LONGINT): Configured MTU value for the port. <b>ifName</b> (STRING): Name of the port on which the MTU is being set.

<b>EMS Identifier</b>	netinet6.prefix.addr.add <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs while adding an address because in6_control failed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefix.c:add_each_addr: Addition of addr %s/%d failed because in6_control failed for error %d.
<b>Parameters</b>	<b>ip6Address</b> (STRING): Printable that is a loggable representation of IP6 address. <b>prfxLen</b> (INT): Prefix length in bits. <b>erNumber</b> (INT): Error number.

<b>EMS Identifier</b>	netinet6.prefix.addr.inuse <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs while adding an address because "addr" is already assigned to another prefix. There might be some inconsistencies between prefixes.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefix.c:add_each_addr: Addition of addr %s/%d failed because there is already another addr %s/%d.
<b>Parameters</b>	<b>ip6Address</b> (STRING): Printable that is a loggable representation of the IP6 address. <b>prfxLen</b> (INT): Prefix length, in bits. <b>ifAddress</b> (STRING): Interface address. <b>mask</b> (INT): Mask value.

<b>EMS Identifier</b>	netinet6.prefix.addr.link <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when attempting to link an address to a prefix when the address is already linked.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefix.c: link_stray_ia6s: addr %s/%d already linked to a prefix, and it also matches %s/%d.
<b>Parameters</b>	<b>ip6Address1</b> (STRING): Printable that is a loggable representation of IP6 address for interface address. <b>prfxLen</b> (INT): Prefix length in bits. <b>ip6Address2</b> (STRING): Printable that is loggable representation of the IP6 address. <b>prfxLen2</b> (INT): Prefix length in bits.

<b>EMS Identifier</b>	netinet6.prefix.bitcopy.args <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs while copying bits from the source to the target, and an error occurs because of invalid arguments.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefix.c: bit_copy: Invalid args: srcsize %d, tgtsize %d, off %d, len %d.
<b>Parameters</b>	<b>srcsize</b> (INT): Source bits size. <b>tgtsize</b> (INT): Target bits size. <b>off</b> (INT): Off bits. <b>len</b> (INT): len bits.

<b>EMS Identifier</b>	netinet6.prefix.create <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when memory allocation fails while creating a new prefix.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefix.c: rrpr_update: %d: ENOBUFS for rr_prefix.
<b>Parameters</b>	<b>line</b> (INT): Line number of the call.

<b>EMS Identifier</b>	netinet6.prefix.ifld.len <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the interface ID length is not between 1 and 124.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	rr_are_ifid_equal: Invalid interface ID length (%d).
<b>Parameters</b>	<b>prfxLen</b> (INT): Prefix length, in bits.

<b>EMS Identifier</b>	netinet6.prefix.init.new <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs because there is a memory allocation failure in initializing the IPv6 router renumbering prefix.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefix.c: init_newprefix:%d: ENOBUFS for rp_addr.
<b>Parameters</b>	<b>line</b> (INT): Line number of the call.

<b>EMS Identifier</b>	netinet6.prefix.search <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs while searching for a matched address, and then searching for the prefix that matches the address, and address fails to point to prefix.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefix.c: Search_matched_prefix: Addr %s has no pointer to prefix %s.
<b>Parameters</b>	<b>ifaddress</b> (STRING): Interface address. <b>ifPrefix</b> (STRING): Interface prefix.

<b>EMS Identifier</b>	netinet6.prefix.search.mark <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the searched prefix matching the searched address cannot be found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	in6_prefix.c:mark_matched_prefixes: No back pointer to ifprefix for %. ND autoconfigured addr?
<b>Parameters</b>	<b>ifaddress</b> (STRING): Interface address.

<b>EMS Identifier</b>	netinet6.rtr.addRoute.pfxFail <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is replaced by a SKT_TRACE.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure to add interface route to prefix.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_attach_prefix: Failed to add a route for a prefix(%s/%d), errno = %d.
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of IPv6 prefix address. <b>addrlen</b> (INT): Prefix address length. <b>erNumber</b> (INT): Error number.

<b>EMS Identifier</b>	netinet6.rtr.delRoute.fail <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is replaced by a SKT_TRACE.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure to delete the interface route associated with the prefix.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_detach_prefix: Failed to delete route: %s/%d (errno = %d).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of IPv6 address. <b>addrlen</b> (INT): Address length. <b>erNumber</b> (INT): Error number.

<b>EMS Identifier</b>	netinet6.rtr.dflnfc.absnt <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the default route and the corresponding default interface to which, the route is to be installed, both cannot be found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	defrouter_select: There's no default router and no default interface.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.rtr.high.mtu
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Maximum Transmission Unit (MTU) size of the Router Advertisement (RA) message, sent from the specified source IPv6 address, is higher than the upper bound of the Link MTU.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ra_input: MTU option mtu=%d sent from %s; exceeds the maxmtu %d on '%s'; ignoring.
<b>Parameters</b>	<b>mtu</b> (INT): MTU size. <b>ip6Address</b> (STRING): Printable that is a loggable representation of the source IPv6 address. <b>maxmtu</b> (INT): Upper bound of the Link MTU. <b>ifName</b> (STRING): Interface name.

<b>EMS Identifier</b>	netinet6.rtr.ifaddr.findFail <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is replaced by a SKT_TRACE.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure to find an interface address belonging to a specified interface, so as to add a route to the specified interface.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	defrouter_addifreq: Failed to find an ifaddr to install a route to interface %s.
<b>Parameters</b>	<b>ifAddress</b> (STRING): Interface address.

<b>EMS Identifier</b>	netinet6.rtr.ifAddr.notFound <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs while adding interface route associated with a prefix fails, because interface address is not found.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_attach_prefix: Failed to find any ifaddr to add route for a prefix(%s/%d).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of IPv6 prefix address. <b>addrlen</b> (INT): Prefix address length.

<b>EMS Identifier</b>	netinet6.rtr.instlRoute.Fail <b>Deprecated:</b> Deprecated as of version 9.3 since this EMS is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there is a failure to install a route to the specified interface.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	defrouter_addifreq: Failed to install a route to interface %s (errno = %d).
<b>Parameters</b>	<b>ifAddress</b> (STRING): Interface address. <b>erNumber</b> (INT): Error number.

<b>EMS Identifier</b>	netinet6.rtr.invlD.ndOpt1
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because of an invalid Neighbor Discovery(ND) option.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_rs_input: Invalid ND option; ignored.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.rtr.invlD.ndOpt2
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because of an invalid Neighbor Discovery(ND) option in the receiving Router Advertising (RA)message.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ra_input: Invalid ND option; ignored.
<b>Parameters</b>	

<b>EMS Identifier</b>	netinet6.rtr.invlD.optLength
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because of an invalid option length for a prefix information option, when receiving a Router Advertising (RA)message. The option length must be equal to 4. This invalid option length is ignored.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ra_input: Invalid option length %d for prefix information option; ignored.
<b>Parameters</b>	<b>optLength</b> (INT): Option length.

<b>EMS Identifier</b>	netinet6.rtr.invlD.prefix
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because of an invalid prefix in the prefix information structure, when receiving Router Advertising(RA) message.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ra_input: Invalid prefix %s; ignored.
<b>Parameters</b>	<b>prefix</b> (STRING): Prefix.

<b>EMS Identifier</b>	netinet6.rtr.invlD.prfxLen1
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs because of an invalid prefix length for prefix information option, when receiving Router Advertising(RA) message. The prefix length must be less than 128.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ra_input: Invalid prefix length %d for prefix information option; ignored.
<b>Parameters</b>	<b>prfxLength</b> (INT): Prefix length.

<b>EMS Identifier</b>	netinet6.rtr.low.mtu
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Maximum Transmission Unit (MTU) size is lower than 1,280, which is the minimal MTU and reassembly size.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ra_input: MTU option mtu=%d sent from %s is less than the minimum Link MTU on '%s'; ignoring.
<b>Parameters</b>	<b>mtu</b> (INT): MTU size. <b>ip6Address</b> (STRING): Printable that is a loggable representation of the source IPv6 address. <b>ifName</b> (STRING): Interface name.

<b>EMS Identifier</b>	netinet6.rtr.misMth.lladrIn1
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is a lladdrlen mismatch for the specified IP6 address of the Router Solicitation (RS) packet.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_rs_input: lladdrlen mismatch for %s (if %d, RS packet %d).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of source IPv6 address. <b>ifAddrlen</b> (INT): Interface address length. <b>lladdrlen</b> (INT): Address length.

<b>EMS Identifier</b>	netinet6.rtr.misMth.lladrIn2
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is a lladdrlen mismatch for the specified IPv6 address of the Router Advertising (RA) packet.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ra_input: lladdrlen mismatch for %s (if %d, RA packet %d).
<b>Parameters</b>	<b>ip6address</b> (STRING): Printable that is a loggable representation of source IPv6 address. <b>ifAddrlen</b> (INT): Interface address length. <b>lladdrlen</b> (INT): Address length

<b>EMS Identifier</b>	netinet6.rtr.srcAdr.invl
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs during the validation of source address in the received Router Solicitation (RS) message, when it is found that the source address is a non-link local address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nd6_ra_input: Source %s is not a link-local address.
<b>Parameters</b>	<b>srcAddr</b> (STRING): Source IPv6 address.

## "nfs" Event Group

<b>EMS Identifier</b>	nfs.krb.lif.disabled
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a Kerberos-enabled LIF in a Vserver shares NFS Kerberos credentials with a LIF in another Vserver. NFS Kerberos is automatically disabled by Data ONTAP(R) on LIFs that share Kerberos credentials across Vservers, because of the security violation this causes. Disabling Kerberos on a LIF can cause service disruption to NFS clients that use these LIFs, mounted using the '-sec=krb5' option.
<b>Corrective Action</b>	NFS Kerberos has been automatically disabled by Data ONTAP on the LIF because it shared Kerberos credentials with another Vserver, causing a security violation. NFS Kerberos can be reenabled using the command: "vserver nfs kerberos interface enable". During the reenable process, Kerberos credential sharing across Vservers is disallowed.
<b>Syslog Message</b>	NFS Kerberos disabled on LIF "%s" with SPN "%s" for Vserver "%s" due to a security conflict with another Vserver. NFS Kerberos can be reenabled using the command: "vserver nfs kerberos interface enable".
<b>Parameters</b>	<b>lif</b> (STRING): Name of the LIF on which NFS Kerberos is disabled. <b>spn</b> (STRING): The service principal name associated with the LIF. <b>vserver</b> (STRING): Name of the Vserver that owns the LIF.

## "nis" Event Group

<b>EMS Identifier</b>	nis.active.false.removed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the last system to be upgraded in a cluster removes NIS configurations that were marked as inactive.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	All NIS configurations with the "-active" parameter set to "false" were removed.
<b>Parameters</b>	

<b>EMS Identifier</b>	nis.db.job.queue.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NIS group database job queue fails.
<b>Corrective Action</b>	Use the "vserver services name-service nis-domain group-database build" command to queue the NIS database job.
<b>Syslog Message</b>	NIS group database job queue failed for Vserver %s.
<b>Parameters</b>	<b>vserver_name</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	nis.group.db.build.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NIS group database build fails.
<b>Corrective Action</b>	Ensure that the configured NIS domain is reachable and bound. Ensure that the number of characters per record in the NIS server for group database does not exceed 1,024. Run the "vserver services name-service nis-domain group-database build" command to build the NIS group database again.
<b>Syslog Message</b>	Failed to build the NIS group database for Vserver %s. Error: %s.
<b>Parameters</b>	<b>vserver_name</b> (STRING): Name of the Vserver. <b>error_string</b> (STRING): Error encountered while building the NIS group database.

<b>EMS Identifier</b>	nis.group.db.build.success
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NIS group database build is successful.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NIS group database is successfully built for Vserver %s.
<b>Parameters</b>	<b>vserver_name</b> (STRING): Name of the Vserver.

<b>EMS Identifier</b>	nis.server.active
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Storage Virtual Machine (SVM, formerly Vserver) binds to any of the configured NIS servers.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	SVM '%s' has successfully bound to the %s NIS server.
<b>Parameters</b>	<b>vserver_name</b> (STRING): Name of the SVM. <b>nis_server</b> (STRING): Configured NIS server.

<b>EMS Identifier</b>	nis.server.inactive
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when one of the NIS servers configured for a Storage Virtual Machine (SVM, formerly Vserver) cannot be contacted.
<b>Corrective Action</b>	From a UNIX (R) workstation, make sure that the NIS server is responding to requests. Also make sure that the portmapper on the NIS server is responding to requests. Make sure that there are no networking issues stopping the cluster from communicating with this NIS server.
<b>Syslog Message</b>	%s NIS server configured for SVM '%s' cannot be contacted.
<b>Parameters</b>	<b>nis_server</b> (STRING): Configured NIS server. <b>vserver_name</b> (STRING): Name of the SVM.

<b>EMS Identifier</b>	nis.server.not.available
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when none of the NIS servers configured for a Storage Virtual Machine (SVM, formerly Vserver) can be contacted.
<b>Corrective Action</b>	From a UNIX (R) workstation, make sure that the NIS server is responding to requests. Also make sure that the portmapper on the NIS server is responding to requests. Make sure that there are no networking issues stopping the cluster from communicating with this NIS server.
<b>Syslog Message</b>	None of the NIS servers configured for SVM '%s' can be contacted.
<b>Parameters</b>	<b>vserver_name</b> (STRING): Name of the SVM.

## "no" Event Group

<b>EMS Identifier</b>	no.halt.brokenDisk
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the option raid.timeout is set to 0, disabling automatic shutdown on a disk failure.
<b>Corrective Action</b>	Add an appropriate spare disk.
<b>Syslog Message</b>	%s in RAID group "%s" %s broken. Automatic system shutdown has been disabled.
<b>Parameters</b>	<b>type</b> (STRING): Type of disk. <b>rgname</b> (STRING): RAID group name. <b>verb</b> (STRING): Failed disk verb.

<b>EMS Identifier</b>	no.halt.brokenDisk.notice
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a node is in a degraded state because of a broken disk, but the option raid.timeout is set to 0, disabling automatic shutdown on a disk failure. Shutdown is to encourage you to replace broken disks.
<b>Corrective Action</b>	Consult other logged messages or use the "storage disk show -broken" command to determine the identity of broken disks. Remove any broken disks. Automatic system shutdown can be enabled by altering the "raid.timeout" value using the "storage raid-options modify" command.
<b>Syslog Message</b>	%s. automatic system shutdown is disabled. Replace the disk immediately.
<b>Parameters</b>	<b>type</b> (STRING): Type of degradation.

<b>EMS Identifier</b>	no.halt.nvramLowBatt.info
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the option raid.timeout has been set to 0, disabling automatic shutdown on a low NVRAM Battery condition.
<b>Corrective Action</b>	Replace the NVRAM battery. Automatic system shutdown can be enabled by altering the "raid.timeout" value using the "storage raid-options modify" command.
<b>Syslog Message</b>	Automatic system shutdown is disabled. If the NVRAM battery is dangerously low, replace it immediately.
<b>Parameters</b>	

<b>EMS Identifier</b>	no.halt.nvramLowBatteries
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the option raid.timeout is set to 0, disabling automatic shutdown on a low NVRAM Batteries condition.
<b>Corrective Action</b>	Replace the NVRAM batteries.
<b>Syslog Message</b>	NVRAM batteries are dangerously low. Automatic system shutdown is disabled. Replace the batteries immediately!
<b>Parameters</b>	

<b>EMS Identifier</b>	no.halt.nvramLowBattery
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the option raid.timeout is set to 0, disabling automatic shutdown on a low NVRAM Battery condition.
<b>Corrective Action</b>	Replace the NVRAM battery.
<b>Syslog Message</b>	NVRAM battery is dangerously low. Automatic system shutdown is disabled. Replace the battery immediately!
<b>Parameters</b>	

<b>EMS Identifier</b>	no.halt.nvramLowBatts.info
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the option raid.timeout has been set to 0, disabling automatic shutdown on a low NVRAM Batteries condition.
<b>Corrective Action</b>	Replace the NVRAM batteries. Automatic system shutdown can be enabled by altering the "raid.timeout" value using the "storage raid-options modify" command.
<b>Syslog Message</b>	Automatic system shutdown is disabled. If the NVRAM batteries are dangerously low, we encourage you to replace it immediately.
<b>Parameters</b>	

## "noderun" Event Group

<b>EMS Identifier</b>	noderun.login.success
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a cluster user successfully logs in to the node using the 'run' command.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	'%s' logged in from cluster: '%s'.
<b>Parameters</b>	<b>user</b> (STRING): Name of the user who logged in to the node. <b>cluster</b> (STRING): Cluster name from where the user logged in to the node.

## "nodewatchdog" Event Group

<b>EMS Identifier</b>	nodewatchdog.config.invalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when bootarg.nodewatchdog.level is set to an invalid value. This can only be done manually. When an invalid value is set, Node Watchdog reverts to the default behavior.
<b>Corrective Action</b>	Set bootarg.nodewatchdog.level to a valid value at the LOADER> prompt, or modify the value by using the "system node watchdog modify" command.
<b>Syslog Message</b>	The value of bootarg.nodewatchdog.level is set to an invalid value, "%s." Node Watchdog reverted to the default behavior (%s).
<b>Parameters</b>	<b>bootarg</b> (STRING): Value of bootarg.nodewatchdog.level. <b>defaultVal</b> (STRING): Default value of bootarg.nodewatchdog.level.

<b>EMS Identifier</b>	nodewatchdog.gfc.too.long
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the storage system is low in networking buffers (mbuf) for longer than the duration threshold, which indicates abnormal circumstances. When this happens, CLI commands might hang, and clients could experience timeouts.
<b>Corrective Action</b>	If CLI commands are responding slowly or clients are timing out, reboot the node using the "reboot -node [node] -dump true" option. Also call the support team to investigate further, because this is an abnormal circumstance that might recur if not addressed. Contact NetApp technical support.
<b>Syslog Message</b>	Networking buffer depletion detected. Consumption exceeded %d%% in use and did not recede to %d%% for %d seconds.
<b>Parameters</b>	<b>enter_percentage</b> (INT): Percentage of in-use mbufs necessary to enter the flow control state. <b>exit_percentage</b> (INT): Percentage of in-use mbufs necessary to exit the flow control state. <b>duration</b> (INT): Duration for which there is a scarcity of available mbufs.

<b>EMS Identifier</b>	nodewatchdog.node.failure
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when Data ONTAP(R) experiences a prolonged outage of internal services critical to continued data service. The node experiencing this failure might operate in a degraded mode until the condition is addressed. Data ONTAP will attempt to recover by restarting the affected process.
<b>Corrective Action</b>	The affected process may produce a core file which can be analyzed. Contact NetApp technical support if the condition persists and possible analysis of the core file.
<b>Syslog Message</b>	Data ONTAP has experienced a serious internal error: %s. This might cause the node experiencing the problem to become unresponsive to data access.
<b>Parameters</b>	<b>condition</b> (STRING): Condition that caused the failure. <b>diagnosis</b> (STRING): List of system diagnoses that could cause node watchdog issues.

<b>EMS Identifier</b>	nodewatchdog.node.longreboot
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node fails to reboot within the configured time allowed for rebooting.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Data ONTAP has experienced a serious internal error. The node experiencing this problem is unable to reboot within it's allotted time of %d seconds causing it to be unavailable. The node has been panicked to enable it to recover.
<b>Parameters</b>	<b>timeout</b> (INT): The time in seconds within which reboot did not complete.

<b>EMS Identifier</b>	nodewatchdog.node.panic
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when Data ONTAP(R) experiences a prolonged outage of internal services critical to continued data service. The node has been restarted to recover from the condition.
<b>Corrective Action</b>	Contact NetApp technical support for additional assistance.
<b>Syslog Message</b>	Data ONTAP has experienced a serious internal error: %s. This might cause the node experiencing the problem to become unresponsive to data access. %s
<b>Parameters</b>	<b>condition</b> (STRING): Condition that caused the failure. <b>action</b> (STRING): Automatic corrective action taken (or why avoided) as a result of detecting this condition. <b>diagnosis</b> (STRING): List of system diagnoses that could cause node watchdog issues.

<b>EMS Identifier</b>	nodewatchdog.node.ucore.hung
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a node fails to generate an application core within the time allotted for application coredump due to a serious internal error. The node is panicked to recover from the internal error.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Unable to generate an application core for %s (pid %d) within the allotted time of %d seconds causing the application to become unavailable. The node has been panicked to recover.
<b>Parameters</b>	<b>process_name</b> (STRING): Name of the application that failed to generate core. <b>process_id</b> (INT): PID of the application that failed to generate core. <b>timeout</b> (INT): Time in seconds within which the application coredump did not complete.

<b>EMS Identifier</b>	nodewatchdog.resrc.alloc.failure
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a critical system resource required for Data ONTAP(R) to continue serving data cannot be allocated for an extended period of time. Data ONTAP might operate in a degraded mode.
<b>Corrective Action</b>	If Data ONTAP operates in a degraded mode, reboot the node using the "-dump true" option. Contact NetApp technical support. When Node Watchdog is configured to "node_restart", Data ONTAP will detect and recover from this condition automatically.
<b>Syslog Message</b>	Resource allocation failures detected for %s. The percentage of %d allocation failure attempts were met or exceeded for %d seconds.
<b>Parameters</b>	<b>resource</b> (STRING): Type of resource that cannot be allocated. <b>percentage</b> (INT): Failure percentage threshold. <b>duration</b> (INT): Duration of the resource allocation failure. <b>diagnosis</b> (STRING): List of system diagnoses that could cause node watchdog issues.

<b>EMS Identifier</b>	nodewatchdog.resrc.lng.running.crit
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the count of certain critical resources internal to Data ONTAP(R) are consumed with long running operations. When this happens, Data ONTAP might operate in a degraded mode.
<b>Corrective Action</b>	If Data ONTAP operates in a degraded mode, reboot the node using the "-dump true" option. Contact NetApp technical support. When Node Watchdog is configured to "node_restart", Data ONTAP will detect and recover from this condition automatically.
<b>Syslog Message</b>	Long running %s detected. Exceeded threshold of %d%% for %d seconds.
<b>Parameters</b>	<b>resource</b> (STRING): Resource that is consumed with long running operations. <b>percentage</b> (INT): Percentage of the long running resource. <b>duration</b> (INT): Duration for which the resources were long running.

<b>EMS Identifier</b>	nodewatchdog.svc.rpc.noresp
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a service critical to data access fails to respond to service monitoring and is restarted. Data ONTAP(R) might have experienced a serious error and might operate in a degraded mode.
<b>Corrective Action</b>	If the message reports that the service has "restarted" then no action is required. If the status is "not restarted" or "unsuccessfully restarted," then reboot the node using the "system node reboot" command with the "-dump true" option, and then contact NetApp technical support.
<b>Syslog Message</b>	The %s service internal to Data ONTAP that is required for continuing data service was unavailable. The service failed, but was %s.
<b>Parameters</b>	<b>service</b> (STRING): Service that failed. <b>restarted</b> (STRING): Whether the service was restarted. Possible values are "restarted," "not restarted," and "unsuccessfully restarted." <b>diagnosis</b> (STRING): List of system diagnoses that could cause node watchdog issues.

## "nonha" Event Group

<b>EMS Identifier</b>	nonha.resvConflictHalt
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the controller halts itself after it finds disk with reservation conflicts.
<b>Corrective Action</b>	Contact NetApp technical support for recovery assistance.
<b>Syslog Message</b>	A disk reservation conflict was detected on disk %s at %-20s.
<b>Parameters</b>	<b>disk_name</b> (STRING): Name of the disk. <b>time</b> (STRING): Time when the disk reservation conflict was detected. <b>last_update</b> (INT): Time passed since last rescan, in milliseconds.

## "nv" Event Group

<b>EMS Identifier</b>	nv.extension.disabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when NVRAM segments of a nvlog client are disabled in a NVRAM section.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s segments have been disabled in %s NVRAM section.
<b>Parameters</b>	<b>cid</b> (STRING): Nvlog client ID. <b>nv_section</b> (STRING): The NVRAM section in which the nvlog client segments are disabled.

<b>EMS Identifier</b>	nv.extension.enabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when NVRAM segments of a nvlog client are enabled in a NVRAM section.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s segments have been enabled in %s NVRAM section.
<b>Parameters</b>	<b>cid</b> (STRING): Nvlog client ID. <b>nv_section</b> (STRING): The NVRAM section in which nvlog client segments are enabled.

<b>EMS Identifier</b>	nv.extension.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when nvlog client segments cannot be enabled in a partner NVRAM section following a controller failover. When this event occurs, the system continues to operate, but with diminished performance due to the increased failover load coupled with decreased NVRAM capacity for logging.
<b>Corrective Action</b>	For a System ID-related failure message, verify that each member node in this configuration is assigned a valid and unique system ID by using the "system show -fields systemid" command. Do not physically move a controller or NVRAM card in an HA or MetroCluster(tm) configuration. A failure message of "Configuration Recovery Needed" means that a reboot is needed to recover persistent MetroCluster configuration at a switchover site.
<b>Syslog Message</b>	Client segments cannot be enabled in the %s NVRAM section, because of %s.
<b>Parameters</b>	<b>nv_section</b> (STRING): NVRAM section in which nvlog client segments cannot be enabled. <b>failure_reason</b> (STRING): Reason client segments cannot be enabled in this partner NVRAM section.

<b>EMS Identifier</b>	nv.fake
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the nonvolatile (NV) driver detects that system memory is being used to simulate NVRAM.
<b>Corrective Action</b>	Reset the 'fake-nvram?' boot environment variable from the boot loader: 'unsetenv fake-nvram?'.
<b>Syslog Message</b>	%u MB system memory being used to simulate NVRAM.
<b>Parameters</b>	<b>memory_size</b> (INT): Memory size (in MB) being used to simulate NVRAM.

<b>EMS Identifier</b>	nv.fio.write.err
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the write to VNVRAM fails and the retry count has been exhausted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The write to VNVRAM failed with error %u; retry limit exhausted.
<b>Parameters</b>	<b>error</b> (INT): Error returned by the last write.

<b>EMS Identifier</b>	nv.fio.write.retry
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the write to VNVRAM fails. The write will be retried.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The write to VNVRAM failed with error %u; will retry.
<b>Parameters</b>	<b>error</b> (INT): Error returned by the write.

<b>EMS Identifier</b>	nv.none
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the system cannot detect a nonvolatile (NV) device.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	No NV device has been detected.
<b>Parameters</b>	

<b>EMS Identifier</b>	nv.partner.disabled
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when checking the partner nonvolatile RAM (NVRAM) and the partner NVRAM is disabled. This event most commonly occurs during the takeover or switchover process after the partner has gone down.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVRAM validate: %s NVRAM was disabled.
<b>Parameters</b>	<b>host</b> (STRING): Name of the partner host.

<b>EMS Identifier</b>	nv.partner.nvcheck.failure
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when nonvolatile RAM (NVRAM) inconsistencies are detected during takeover. Takeover is continued only if the option for consistent NVRAM mirroring is disabled or if the takeover is forced.
<b>Corrective Action</b>	When the partner node recovers, NVRAM will be reinitialized to a consistent state. The error string provides additional information to assist NetApp technical support in identifying the inconsistency and subsystem that caused the failure.
<b>Syslog Message</b>	NVRAM validate: %s
<b>Parameters</b>	<b>error</b> (STRING): Error string describing which subsystem caused the failure and what the mismatching values are.

<b>EMS Identifier</b>	nv.partner.size.mismatch
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the HA pair nonvolatile RAM (NVRAM) sizes do not match. In this case, an HA pair cannot be formed.
<b>Corrective Action</b>	Check to make sure that the local NVRAM hardware size matches the partner NVRAM hardware size. Verify that the same bootargs are in use on both nodes. One or both nodes might need to be rebooted. Contact NetApp technical support if the problem persists.
<b>Syslog Message</b>	CF monitor: NVRAM size mismatch between nodes detected; node requires %llu bytes, partner exported %llu bytes.
<b>Parameters</b>	<b>localNVSize</b> (LONGINT): Size of the local NVRAM. <b>partnerNVSize</b> (LONGINT): Size of the partner NVRAM.

<b>EMS Identifier</b>	nv.partner.takeover.continued
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when takeover proceeds even when nonvolatile RAM (NVRAM) inconsistencies are detected in the HA pair. This most commonly occurs when the NVRAM mirror consistency has been disabled or if the takeover is forced.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVRAM validate: Error encountered (%s), but continuing takeover; some data might be lost.
<b>Parameters</b>	<b>error</b> (STRING): Error string.

<b>EMS Identifier</b>	nv.rename.err
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when there is an error while renaming the files specified in /etc/nvfail_rename.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nvfail_rename: %s: %s.
<b>Parameters</b>	<b>fileName</b> (STRING): File name. <b>error</b> (STRING): Error string.

<b>EMS Identifier</b>	nv.rename.files
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs while renaming the files specified in /etc/nvfail_rename.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Renaming files specified in /etc/nvfail_rename.
<b>Parameters</b>	

<b>EMS Identifier</b>	nv.rename.longName
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs while renaming the files specified in /etc/nvfail_rename, when the file name is too long.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	nvfail_rename: %s: File name too long.
<b>Parameters</b>	<b>fileName</b> (STRING): File name.

<b>EMS Identifier</b>	nv.switchover.continued
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when switchover proceeds even when nonvolatile RAM (NVRAM) inconsistencies are detected in the DR partner sections.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVRAM validate: Error encountered (%s), but continuing switchover; some data might be lost.
<b>Parameters</b>	<b>error</b> (STRING): Error string.

## "nvdimmm" Event Group

<b>EMS Identifier</b>	nvdimmm.fw.upgrade.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when NVDIMM controller firmware failed to upgrade.
<b>Corrective Action</b>	Power-cycle the controller and reboot ONTAP to attempt the firmware update again. If the error persists, contact NetApp technical support for assistance.
<b>Syslog Message</b>	NVDIMM controller in slot-%d failed to upgrade firmware because of %s.
<b>Parameters</b>	<b>slot</b> (INT): NVDIMM slot location. <b>error</b> (STRING): Reason for upgrade failure, which could be: 1. the image file does not exist or is corrupted 2. it is unable to enter update mode 3. it is unable to clear update mode 3. the firmware image transfer failed 4. of a CRC mismatch with the transferred image 5. it failed to validate or commit the image 6. it failed to restart after the image upgrade

<b>EMS Identifier</b>	nvdimmm.fw.upgrade.succeed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVDIMM controller successfully upgrades its own firmware image..
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVDIMM controller firmware in slot-%d was upgraded to %s.
<b>Parameters</b>	<b>slot</b> (INT): NVDIMM slot location. <b>version</b> (STRING): New firmware version.

<b>EMS Identifier</b>	nvdimmm.nvemmm.destage.succeed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when all NVDIMM devices have copied nonvolatile data to flash memory.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVMM subsystem successfully copied nonvolatile data to flash memory on NVDIMM device in %ld seconds.
<b>Parameters</b>	<b>seconds</b> (INT): Time taken by the destage operation.

<b>EMS Identifier</b>	nvdimmm.nvemmm.restage.succeed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when all NVDIMM devices have restored nonvolatile data from flash memory.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVMM subsystem successfully restored nonvolatile data from flash memory on NVDIMM device in %ld seconds.
<b>Parameters</b>	<b>seconds</b> (INT): Time taken by the restage operation.

<b>EMS Identifier</b>	nvdimm.nvmem.checkfail
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when NVDIMM-based NVMEM checks fail.
<b>Corrective Action</b>	For all errors, check that the right type of NVDIMM is properly installed at the designated DIMM slot.
<b>Syslog Message</b>	NVMEM subsystem configuration check failed because %s. To prevent NVMEM data loss, halt the system.
<b>Parameters</b>	<b>error</b> (STRING): Description of the error, which could be: 1 device in slot-N is not accessbile. 2. device in slot-N is missing. 3. device in slot-N is not NVDIMM. 4. device in slot-N is the wrong size (N); expected size (N)

<b>EMS Identifier</b>	nvdimm.nvmem.destage.failure
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when NVDIMM fails to copy nonvolatile data to the flash on the NVDIMM-device.
<b>Corrective Action</b>	This type of error indicates that the volatile data on the local NVMEM has been lost. A storage system in an HA configuration might recover the NVMEM content from its partner. To prevent future possible data loss, take the appropriate actions based on the error: 1. If the failure is caused by a malfunctioning battery, contact NetApp technical support for assistance with battery replacement. 2. If the failure is caused by an NVDIMM intermittent hardware failure, contact NetApp technical support for assistance.
<b>Syslog Message</b>	NVMEM subsystem failed to copy nonvolatile data to flash memory on NVIDMM device because %s.
<b>Parameters</b>	<b>error</b> (STRING): Reason for destage failure could be: (1) SDRAM is not in self-refresh mode (2) energy source (battery) is not functioning properly (3) of insufficient battery (4) destage process timeout (5) an intermitten hardware error results partial data saved (6) of a hardware error (7) of a firmware error (8) of a flash error

<b>EMS Identifier</b>	nvdimm.nvmem.initfail
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the nvdimm-based NVMEM subsystem is not initialized successfully.
<b>Corrective Action</b>	For all errors, check if the error is persistent or intermittent by power cycling the controller and rebooting ONTAP. Note: If the last reboot is a dirty shutdown, set the bootarg.init.battery_override to force system to replay the NVLOG first when booting. Then, gracefully shut down and power cycle the controller.. If the failure is persistent: (a) For error (1) (2) (3) (5) (6) (7) (8), contact NetApp technical support for assistance with replacement of NVDIMM or upgrade NVDIMM firmware. (b) For error (4), b.1 If failure cause is battery, contact NetApp technical support for assistance with replacement of the battery. b.2 For other failures, contact NetApp technical support for assistance with replacement of NVDIMM. (c) For error (9), contact NetApp technical support for assistance with replacement of the controller. (d) For error (10), verify the NVDIMM is installed properly and check if the correct BIOS is installed.
<b>Syslog Message</b>	NVMEM subsystem initialization failed because %s. To prevent NVMEM data loss, halt the system.
<b>Parameters</b>	<b>error</b> (STRING): Description of the error, which could be: 1.NVDIMM device in slot-N not accessible. 2.NVDIMM device in slot-N not ready. 3.NVDIMM device in slot-N is busy. 4.NVDIMM device in slot-N lost persistence due to [reason] 5.NVDIMM device in slot-N has worn-out flash (N percent remaining) 6.NVDIMM device in slot-N failed to configure energy source 7.NVDIMM device in slot-N failed to configure saveNPin. 8.NVDIMM device in slot-N failed to enable data preservation. 9.failed to enable battery. 10.NVDIMM memory address not mapped contiguously.

<b>EMS Identifier</b>	nvdimm.nvmem.restage.failure
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when nonvolatile data on the NVDIMM is either corrupt or not accessible. Because these errors cannot be corrected, nonvolatile data in flash memory is lost.
<b>Corrective Action</b>	Frequent occurrence of these errors indicates that the NVDIMM is experiencing persistent intermittent hardware failure. Contact NetApp technical support for assistance with replacement.
<b>Syslog Message</b>	NVMEM subsystem failed to restore nonvolatile data from flash memory on the NVIDMM module because of %s.
<b>Parameters</b>	<b>error</b> (STRING): Reason for restage failure could be: (1) SDRAM is not in self-refresh mode (2) of SDRAM uncorrectable error (3) restage process timeout (4) of a hardware error

## "nvme" Event Group

<b>EMS Identifier</b>	nvme.card.degraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVMe caching module has gone into a degraded state due to a warning reported by the drive. Performance, integrity, or reliability may be compromised.
<b>Corrective Action</b>	Replace the NVMe caching module.
<b>Syslog Message</b>	NVMe caching module in slot %s with serial number %s, and model number %s is degraded with status 0x%llx.
<b>Parameters</b>	<b>slot_subslot</b> (STRING): PCI slot of the NVMe device. <b>serial</b> (STRING): Serial number of the controller. <b>model</b> (STRING): Model number of the controller. <b>reason</b> (LONGINTEX): Internal reason why the card is degraded.

<b>EMS Identifier</b>	nvme.card.removed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an NVMe drive has been "hot-removed" from the system (while the system was powered on). The caching module is unavailable and system performance will be degraded.
<b>Corrective Action</b>	Insert an NVMe caching module into the system.
<b>Syslog Message</b>	NVMe caching module in slot %s with serial number %s, and model number %s was removed from the system.
<b>Parameters</b>	<b>slot_subslot</b> (STRING): PCI slot of the NVMe device. <b>serial</b> (STRING): Serial number of the controller. <b>model</b> (STRING): Model number of the controller.

<b>EMS Identifier</b>	nvme.fw.activate.complete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when new firmware has been successfully activated on the drive and running normally.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVMe caching module in physical slot %s with serial number %s, and model number %s successfully replaced firmware version %s with %s in firmware slot %u.
<b>Parameters</b>	<b>slot_subslot</b> (STRING): PCI slot of the NVMe device. <b>serial</b> (STRING): Serial number of the controller. <b>model</b> (STRING): Model number of the controller. <b>old</b> (STRING): Version of firmware that has been replaced. <b>new</b> (STRING): Version of firmware that was activated. <b>fw_slot</b> (INT): Firmware slot that the new version was programmed to. <b>reset</b> (INT): An indication on whether the device had to be reset or not in order to activate the firmware.

<b>EMS Identifier</b>	nvme.fw.activate.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there was an issue while activating the new firmware on the the NVMe drive. The caching module will continue normal operation with obsolete firmware.
<b>Corrective Action</b>	The caching module is still completely functional however it is running with obsolete firmware. Contact NetApp technical support for alternative solutions.
<b>Syslog Message</b>	NVMe caching module in slot %s with serial number %s, and model number %s failed to activate firmware version %s on the drive with error code 0x%llx.
<b>Parameters</b>	<b>slot_subslot</b> (STRING): PCI slot of the NVMe device. <b>serial</b> (STRING): Serial number of the controller. <b>model</b> (STRING): Model number of the controller. <b>version</b> (STRING): Version of firmware attempted to download. <b>code</b> (LONGINTEX): Internal error code.

<b>EMS Identifier</b>	nvme.fw.program.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when there was an issue while downloading new firmware to the NVMe drive. The caching module will continue normal operation with obsolete firmware.
<b>Corrective Action</b>	The caching module is still completely functional however it is running with obsolete firmware. Contact NetApp technical support for alternative solutions.
<b>Syslog Message</b>	NVMe caching module in slot %s with serial number %s, and model number %s failed to download firmware version %s to the drive with error code 0x%llx.
<b>Parameters</b>	<b>slot_subslot</b> (STRING): PCI slot of the NVMe device. <b>serial</b> (STRING): Serial number of the controller. <b>model</b> (STRING): Model number of the controller. <b>version</b> (STRING): Version of firmware attempted to download. <b>code</b> (LONGINTEX): Internal error code.

<b>EMS Identifier</b>	nvme.ssd.attach.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVMe drive encounters an error before the drive is reported to upper layers. The drive will not be discovered, and show up in sysconfig o/p.
<b>Corrective Action</b>	The drive could not be attached. Remove or replace the drive.
<b>Syslog Message</b>	NVMe SSD encountered error: "%s" on slot %d. Could not attach drive.
<b>Parameters</b>	<b>error</b> (STRING): Type of error that occurred. <b>slot</b> (INT): Slot number of associated NVMe SSD.

## "nvmem" Event Group

<b>EMS Identifier</b>	nvmem.battery.capacity.low
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery lacks the capacity to preserve the NVMEM contents for the required minimum of 72 hours. The system is at the risk of data loss if the power fails. This message repeats every hour while the problem continues and the system shuts down in 24 hours if automatic recharging of the battery does not restore its charge.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over- temperature. The battery charges automatically. If the capacity is not restored in several hours, replace the battery pack. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery lacks the capacity to preserve the NVMEM contents.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.capacity.low.warn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery capacity is below normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery capacity is below normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.capacity.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery capacity is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery capacity is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.capLow
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery capacity is low. To prevent data loss, the system schedules a clean shutdown if the problem is not corrected.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis overheating. The battery charges automatically. If the capacity is not restored automatically within 30 minutes after the system is powered on, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery capacity is low (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvmem.battery.capLowCrit
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery capacity is critically low. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Correct any environmental problems, such as overheating. The battery charges automatically. If the capacity is not restored automatically within 30 minutes after the system is powered on, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery capacity is critically low (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.capLowWarn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVMEM battery capacity is below normal.
<b>Corrective Action</b>	Correct any environmental problems, such as overheating. The battery charges automatically. If the capacity is not restored automatically within 30 minutes after the system is powered on, replace the NVMEM battery within three months. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery capacity is below normal (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvmem.battery.capNormal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVMEM battery capacity is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery capacity is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.current.high
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery current is excessively high and the system will shut down.
<b>Corrective Action</b>	First, correct any environmental problems, such as chassis over- temperature. If the NVMEM battery current is still too high, replace the battery pack. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery current is excessively high and the system will shut down.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.current.high.warn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery current is above normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery current is above normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.current.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery current is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery current is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.currentHigh
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery charging current is critically high. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery current is critically high (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.currentHiWarn
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery charging current is above normal. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery current is above normal (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvmem.battery.currentLow
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery detects a short circuit. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Replace the controller module.
<b>Syslog Message</b>	The NVMEM battery has a short circuit (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.currentLowWarn
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery is discharging when it should not. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery current is below normal (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvmem.battery.discFET.normal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVMEM battery discharge field-effect transistor (FET) is on.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery discharge FET is on.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.discFET.off
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery discharge field-effect transistor (FET) is off. To prevent data loss, the system shuts down.
<b>Corrective Action</b>	Shut down the system and power-cycle the controller. If the discharge FET remains off, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery discharge FET is off. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.end_of_life.high
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery-cycle count indicates that the battery has reached its anticipated life expectancy.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery has reached its anticipated life expectancy.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.end_of_life.high.warn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery-cycle count indicates that the battery is nearing its anticipated life expectancy.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery is nearing its anticipated life expectancy.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.end_of_life.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery-cycle count indicates that the battery is well below its anticipated life expectancy.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery is well below its anticipated life expectancy.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.fccLow
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery full-charge capacity is low. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Use the "system battery show" SP CLI command to get the battery manufactured date. If the battery is newer than three years old, correct any chronic environmental problems, such as overheating. If the full-charge capacity is still below normal, contact technical support for assistance with replacement of the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery full-charge capacity is low (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvmem.battery.fccLowCrit
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery full-charge capacity is critically low. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Use the "system battery show" SP CLI command to get the battery manufactured date. If the battery is newer than three years old, correct any chronic environmental problems, such as overheating. If the full-charge capacity is still below normal, contact technical support for assistance with replacement of the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery full-charge capacity is critically low (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.fccLowWarn
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery full-charge capacity is below normal.
<b>Corrective Action</b>	Use the "system battery show" SP CLI command to get the battery manufactured date. If the battery is newer than three years old, correct any chronic environmental problems, such as overheating. If the full-charge capacity is still below normal, contact technical support for assistance with replacement of the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery full-charge capacity is below normal (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvmem.battery.fccNormal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVMEM battery full-charge capacity is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery full-charge capacity is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.FET.normal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVMEM battery charge field-effect transistor (FET) is on.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery charge FET is on.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.FET.off
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery charge field-effect transistor (FET) is off. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Shut down the system and power-cycle the controller. If the charge FET remains off, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery charge FET is off. To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvmem.battery.noCharge
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery requests a charge but does not receive it. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Pull the controller from the slot and ensure that the NVMEM battery connector is seated properly. If the problem occurs again, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery is requesting to be charged but the charger is not charging the battery. To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvmem.battery.normalCharge
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVMEM battery charging status is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery charging status is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.notPresent
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery is not present. To prevent data loss, the system shuts down.
<b>Corrective Action</b>	While the system is shut down, pull the controller from the slot and ensure that the NVMEM battery is present. If the NVMEM battery is already present, ensure that the connector is seated properly. Push the controller back in and power on the system. If this does not correct the problem, replace the NVMEM battery. If the system still does not detect the battery, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery is not present. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.packInvalid
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an unsupported NVMEM battery pack is installed in the system. To prevent data loss, the system initiates a clean shutdown if the problem is not corrected.
<b>Corrective Action</b>	Shut down the system and replace the NVMEM battery with a correct battery pack.
<b>Syslog Message</b>	The incorrect NVMEM battery is installed. Expected part number is %s. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>partnum</b> (STRING): Valid battery part number. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.packValid
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a valid NVMEM battery pack is present and readable.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A valid NVMEM battery pack is present.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.powerFault
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery is not receiving power. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Pull the controller from the slot and ensure that the NVMEM battery connector is seated properly. Push the controller back in and boot the system. If the NVMEM battery is still not receiving power, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery is not receiving power. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.powerNormal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVMEM battery power is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery power is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.sensor.unread
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the battery state of the battery-backed memory (NVMEM) is unknown. One of the battery sensors is not readable.
<b>Corrective Action</b>	Shut down the system and power-cycle the controller module. If the problem is not corrected, replace the battery. If the sensor is still not readable, replace the controller module.
<b>Syslog Message</b>	The battery state of the battery-backed memory (NVMEM) %s is not readable.
<b>Parameters</b>	<b>sensor_name</b> (STRING): Sensor name.

<b>EMS Identifier</b>	nvmem.battery.temp.high
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery is too hot and the system is at a high risk of data loss if power fails. The system will shut down.
<b>Corrective Action</b>	If the system is excessively warm, allow it to cool gradually. If the NVMEM battery temperature reading is still too high, replace the battery pack. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery is too hot and the system is at a high risk of data loss if power fails. The system will shut down to prevent data loss.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.temp.high.warn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery temperature high.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery temperature is high.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.temp.low
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery is too cold and the system is at a high risk of data loss if power fails.
<b>Corrective Action</b>	If the system is excessively cold, allow it to warm gradually. If the NVMEM battery temperature reading is still too low, replace the battery pack. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery is too cold and the system is at a high risk of data loss if power fails.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.temp.low.warn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery temperature is low.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery temperature is low.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.temp.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery temperature is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery temperature is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.tempHigh
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery temperature is critically high. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Correct any environmental problems, such as a overheating. If the NVMEM battery temperature is still above normal, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery temperature is critically high (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.tempLow
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery is too cold. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	If the system is excessively cold, allow it to warm gradually. If the NVMEM battery temperature is still too low, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery is too cold (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvmem.battery.unread
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery state cannot be determined because the sensor is unreadable. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Pull the controller from the slot and ensure that the NVMEM battery connector is seated properly. If the problem is not corrected, replace the NVMEM battery. If the sensor is still not readable, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery state cannot be determined because the '%s' sensor is unreadable. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>sensor_name</b> (STRING): Sensor name. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.voltage.high
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery voltage is excessively high and the system will shut down.
<b>Corrective Action</b>	First, correct any environmental problems, such as chassis over- temperature. If the NVMEM battery voltage is still too high, replace the battery pack. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery voltage is excessively high and the system will shut down.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.voltage.high.warn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery voltage is above normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery voltage is above normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.voltage.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM battery voltage is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM battery voltage is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.battery.voltageHigh
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery voltage is critically high. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery voltage is critically high (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.voltageHiWarn
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery voltage is above normal. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Correct any environmental problems, such as overheating. If the NVMEM battery voltage is still above normal, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery voltage is above normal (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvmem.battery.voltageLow
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM battery voltage is critically low. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Correct any environmental problems, such as overheating. If the NVMEM battery voltage is still critically low, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery voltage is critically low (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvmem.battery.voltageLowWarn
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery voltage is below normal. To prevent data loss, the system schedules a clean shutdown if the problem is not corrected.
<b>Corrective Action</b>	Correct any environmental problems, such as overheating. If the NVMEM battery voltage is still below normal 30 minutes after environmental problems have been corrected, replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery voltage is below normal (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvmem.battery.wrongCharge
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM battery charger charges the battery without a request to do so. If this issue is not resolved within the specified time, the system shuts down to prevent data loss.
<b>Corrective Action</b>	Replace the NVMEM battery. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM battery charger is charging the battery even though the battery is not requesting to be charged. To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvmem.voltage.high
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVMEM supply voltage is high and the system is at a high risk of data loss if power fails. The system will shut down.
<b>Corrective Action</b>	Correct any environmental or battery problems. If the problem persists, replace the controller module.
<b>Syslog Message</b>	The NVMEM supply voltage is high and the system is at a high risk of data loss if power fails. The system will shut down to prevent data loss.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.voltage.high.warn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM supply voltage is above normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM supply voltage is above normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.voltage.low
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the NVMEM supply voltage is low and the system is at a high risk of data loss if power fails.
<b>Corrective Action</b>	First, correct any environmental or battery problems. If the problem continues, replace the controller module.
<b>Syslog Message</b>	The NVMEM supply voltage is low and the system is at a high risk of data loss if power fails.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.voltage.low.warn
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM supply voltage is below normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM supply voltage is below normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvmem.voltage.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVMEM supply voltage is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVMEM supply voltage is normal.
<b>Parameters</b>	

## "nvpm" Event Group

<b>EMS Identifier</b>	nvpm.extend.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when nvlog client segments cannot be enabled in a partner NVRAM section following a controller failover or MetroCluster(R) switchover. When this event occurs, the system continues to operate, but with diminished performance due to the increased failover load coupled with decreased NVRAM capacity for logging.
<b>Corrective Action</b>	Perform a storage system giveback operation or a metrocluster switchback operation to restore operating performance.
<b>Syslog Message</b>	Client segments cannot be enabled due to a %s.
<b>Parameters</b>	<b>event</b> (STRING): Event that triggered the extension. <b>current_state</b> (INT): (debug only) Current Non-volatile RAM Partition Manager (NVPM) state. <b>expected_state</b> (INT): (debug only) Expected NVPM state. <b>reason</b> (INT): (debug only) Reason for the extension failure.

## "nvram" Event Group

<b>EMS Identifier</b>	nvram.battery.capacity.low.critical
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery capacity is critically low. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over- temperature. The battery charges automatically. If the capacity is not restored automatically within 30 minutes after system power is on, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery capacity is critically low (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvram.battery.capacity.low.warn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVRAM battery capacity is below normal.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over- temperature. The battery charges automatically. If the capacity is not restored automatically within 30 minutes after system power is on, replace the NVRAM battery within three months. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery capacity is below normal (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvram.battery.capacity.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery capacity is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery capacity is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvr.am.battery.capacityLow
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery capacity is low. To prevent data loss, the system will schedule a clean chassis shutdown if the problem is not corrected.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over-temperature. The battery charges automatically. If the capacity is not restored automatically within 30 minutes after system power is on, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery capacity is low (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvr.am.battery.chargeFET.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery charge FET is on.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery charge FET is on.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvr.am.battery.chargeFET.off
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery charge FET is off. To prevent data loss, the system will initiate a clean chassis shutdown if the problem is not corrected within 24 hours of first detection.
<b>Corrective Action</b>	Shut down the system and power-cycle the controller. If the charge FET remains off, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery charge FET is off. To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvr.am.battery.charging.nocharge
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery is requesting to be charged but the charger is not charging the battery. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Reseat the NVRAM battery connector. If the problem occurs again, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery is requesting to be charged but the charger is not charging the battery. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvr.am.battery.charging.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery charging status is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery charging status is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvr.am.battery.charging.wrongcharge
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery charger is charging the battery even though the battery is not requesting to be charged. To prevent data loss, the system will initiate a clean chassis shutdown if the problem is not corrected within 24 hours of first detection.
<b>Corrective Action</b>	Replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery charger is charging the battery even though the battery is not requesting to be charged. To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvr.am.battery.current.high
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery charging current is critically high. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery current is critically high (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvr.am.battery.current.high.warn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery charging current is above normal. To prevent data loss, the system will initiate a clean chassis shutdown if the problem is not corrected within 24 hours of first detection.
<b>Corrective Action</b>	Replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery current is above normal (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvr.am.battery.current.low
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery detects a short circuit. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Contact NetApp technical support for assistance with identification and replacement of the appropriate component.
<b>Syslog Message</b>	The NVRAM battery has a short circuit (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvr.am.battery.current.low.warn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery is discharging when it should not. To prevent data loss, the system will initiate a clean chassis shutdown if the problem is not corrected within 24 hours of first detection.
<b>Corrective Action</b>	Replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery current is below normal (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvr.am.battery.current.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery current is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery current is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvr.am.battery.dischargeFET.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery discharge FET is on.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery discharge FET is on.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.dischargeFET.off
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery discharge FET is off. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Shut down the system and power-cycle the controller. If the discharge FET remains off, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery discharge FET is off. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.endOfLife.high
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery-cycle count indicates that the battery has reached its anticipated life expectancy.
<b>Corrective Action</b>	Replace the NVRAM battery in the next three months.
<b>Syslog Message</b>	The NVRAM battery has reached its anticipated life expectancy.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.endOfLife.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery-cycle count indicates that the battery is well below its anticipated life expectancy.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery is well below its anticipated life expectancy.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.fault
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery is reporting a fatal fault condition. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over-temperature. If the battery still reports a fatal fault, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery is reporting a fatal fault condition. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.fault.cleared
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery internal fault condition has been cleared.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery internal fault condition has been cleared.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.fault.warn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVRAM battery is reporting a non-fatal fault condition.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over- temperature. If the condition persists, replace the NVRAM battery in the next three months.
<b>Syslog Message</b>	The NVRAM battery is reporting a non-fatal fault condition.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.fcc.low
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery full-charge capacity is low. To prevent data loss, the system will initiate a clean chassis shutdown if the problem is not corrected within 24 hours of first detection.
<b>Corrective Action</b>	Use the "sysconfig -M" command in 7-Mode or the "run local sysconfig -M" command in clustered Data ONTAP(R) to get the battery manufacturer date. If the battery is newer than three years old, correct any chronic environmental problems, such as chassis over-temperature. Replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery full-charge capacity is low (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvrām.battery.fcc.low.critical <b>Deprecated:</b> Deprecated as of version 9.2.0 to address the EMS ID length violation.
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery full-charge capacity is critically low. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Use the "sysconfig -M" command in 7-Mode or the "run local sysconfig -M" command in clustered Data ONTAP(R) to get the battery manufacturer date. If the battery is newer than three years old, correct any chronic environmental problems, such as chassis over-temperature. Replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery full-charge capacity is critically low (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.fcc.low.warn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVRAM battery full-charge capacity is below normal.
<b>Corrective Action</b>	Replace the NVRAM battery in the next three months. Use the "sysconfig -M" command in 7-Mode or the "run local sysconfig -M" command in clustered Data ONTAP(R) to get the battery manufacturer date. If the battery is newer than three years old, correct any chronic environmental problems, such as chassis over-temperature.
<b>Syslog Message</b>	The NVRAM battery full-charge capacity is below normal (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvrām.battery.fcc.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery full-charge capacity is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery full-charge capacity is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.fccLowCrit
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery full-charge capacity is critically low. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Use the "system node run -node local sysconfig -M" command to obtain the battery manufacturing date. If the battery is over three years old, replacement might be necessary. Contact NetApp technical support for troubleshooting assistance.
<b>Syslog Message</b>	The NVRAM battery full-charge capacity is critically low (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.fcmtō.warn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVRAM battery fast-charge timeout expires. The battery will not be charged until this condition is corrected.
<b>Corrective Action</b>	Shut down the controller and power cycle it from the Service Processor (SP) command line interface (CLI) with the "system power cycle" command. The fast-charge timeout will be reset after the power cycle.
<b>Syslog Message</b>	The NVRAM battery has reached a charging timeout fault. The battery charger will not turn on again until the controller has been power cycled. Low capacity warning messages begin in %s weeks.
<b>Parameters</b>	<b>num_weeks</b> (STRING): Number of weeks before low capacity warning messages begin.

<b>EMS Identifier</b>	nvrām.battery.not.present
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery is not present. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	While the system is shut down, pull the controller from the slot and ensure that the NVRAM battery is present. If the NVRAM battery is already present, ensure that the connector is seated properly. Push the controller back in and power on the system. If this does not correct the problem, replace the NVRAM battery. If the system still does not detect the battery, replace either the field-replaceable unit (FRU) NVRAM card or the Plus-CPU Module (PCM), where the battery is located.
<b>Syslog Message</b>	The NVRAM battery is not present. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.pack.invalid
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unsupported NVRAM battery pack is installed in the system. To prevent data loss, the system initiates a clean chassis shutdown if the problem is not corrected within 24 hours of first detection.
<b>Corrective Action</b>	Shut down the system and replace the NVRAM battery with a correct battery pack.
<b>Syslog Message</b>	The incorrect NVRAM battery is installed. Expected part number is %s. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>partnum</b> (STRING): Valid battery part number. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.pack.valid
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a valid NVRAM battery pack is now present and readable.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	A valid NVRAM battery pack is present.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.power.fault
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery is not receiving power. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Pull the controller from the slot and ensure that the NVRAM battery connector is seated properly. Push the controller back in and boot up the system. If the NVRAM battery is still not receiving power, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery is not receiving power. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.power.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery power is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery power is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.sensor.unreadable
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery state cannot be determined because the sensor is unreadable. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Pull the controller from the slot and ensure that the NVRAM battery connector is seated properly. Push the controller back in and power on the system. If the problem is not corrected, replace the NVRAM battery. If the sensor is still not readable, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery state cannot be determined because the '%s' sensor is unreadable. To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>sensor_name</b> (STRING): Sensor name. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.temp.high
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery temperature is critically high. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Correct any environmental issues, such as a high ambient temperature. If the NVRAM battery temperature is still above normal, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery temperature is critically high (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.temp.high.warn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVRAM battery temperature is above normal. Battery life will be severely compromised.
<b>Corrective Action</b>	Correct any environmental issues, such as a high ambient temperature. If the NVRAM battery temperature is still above normal, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery temperature is above normal (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvrām.battery.temp.low
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery is too cold. To prevent data loss, the system will initiate a clean chassis shutdown if the problem is not corrected within 24 hours of first detection.
<b>Corrective Action</b>	If the system is excessively cold, allow it to warm gradually. If the NVRAM battery temperature is still too low, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery is too cold (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvrām.battery.temp.low.warn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVRAM battery temperature is below normal.
<b>Corrective Action</b>	Allow the system to warm gradually. If the NVRAM battery temperature is still low, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery temperature is below normal (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvrām.battery.temp.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery temperature is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery temperature is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvrām.battery.voltage.high
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery voltage is critically high. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery voltage is critically high (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.voltage.high.warn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery voltage is above normal. To prevent data loss, the system will initiate a clean chassis shutdown if the problem is not corrected within 24 hours of first detection.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over- temperature. If the NVRAM battery voltage is still above normal, replace the NVRAM battery. If the problem returns or persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery voltage is above normal (%s). To prevent data loss, the system will shut down %s.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>countdown</b> (STRING): Remaining time before chassis shutdown.

<b>EMS Identifier</b>	nvrām.battery.voltage.low
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the NVRAM battery voltage is critically low. To prevent data loss, the system will shut down.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over- temperature. If the NVRAM battery voltage is still critically low, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery voltage is critically low (%s). To prevent data loss, the system will shut down in %d minutes.
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message. <b>num_minutes</b> (INT): Number of minutes until the system shuts down.

<b>EMS Identifier</b>	nvrām.battery.voltage.normal
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the NVRAM battery voltage is normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The NVRAM battery voltage is normal.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvr.am.battery.voltageLowWarn
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM battery voltage is below normal. To prevent data loss, the system will schedule a clean chassis shutdown if the problem is not corrected.
<b>Corrective Action</b>	Correct any environmental problems, such as chassis over-temperature. If the NVRAM battery voltage is still below normal 30 minutes after environmental problems have been corrected, replace the NVRAM battery. If the problem persists, replace the FRU (field-replaceable unit) NVRAM card or PCM, where the battery is located.
<b>Syslog Message</b>	The NVRAM battery voltage is below normal (%s).
<b>Parameters</b>	<b>reading</b> (STRING): Reading that triggered this message.

<b>EMS Identifier</b>	nvr.am.excessive.cecc.errs
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when excessive correctable error-correcting code (ECC) memory errors are reported by the NVRAM complex.
<b>Corrective Action</b>	Use the "system environment sensors show -hidden true" cluster shell command to view the current "NV Correctable ECC count" and "NV Correctable ECC rate" values. Contact NetApp technical support for further assistance.
<b>Syslog Message</b>	Excessive correctable ECC errors in the NVRAM card.
<b>Parameters</b>	

<b>EMS Identifier</b>	nvr.am.excessive.sbit.ecc.errs <b>Deprecated:</b> Deprecated as of version 9.2.0 to address the EMS ID length violation.
<b>Severity</b>	ALERT
<b>Description</b>	This event is issued to report excessive singlebit ECC errors.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Excessive singlebit ECC errors in the NVRAM card
<b>Parameters</b>	

<b>EMS Identifier</b>	nvr.am.flash.spare.low
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs periodically when the capacity of the NVRAM flash memory spare blocks is low, before it becomes critically low. This issue typically indicates that the NVRAM hardware is approaching the end of its service life and should be replaced soon.
<b>Corrective Action</b>	Contact NetApp technical support for replacement assistance.
<b>Syslog Message</b>	NVRAM flash memory spare capacity is low: %s.
<b>Parameters</b>	<b>problem</b> (STRING): Information about the NVRAM flash memory spare blocks whose capacity is low and about its condition.

<b>EMS Identifier</b>	nvr.am.hw.degraded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the NVRAM hardware is degraded.
<b>Corrective Action</b>	Contact NetApp technical support for replacement assistance.
<b>Syslog Message</b>	NVRAM hardware is degraded: %s.
<b>Parameters</b>	<b>reasonText</b> (STRING): Reason the NVRAM hardware is degraded.

<b>EMS Identifier</b>	nvr.am.hw.initFail
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the Data ONTAP(R) NVRAM hardware fails to initialize.
<b>Corrective Action</b>	Typically, this type of error is unexpected and indicates that the NVRAM hardware is failing and should be replaced. Contact NetApp technical support for assistance with the replacement.
<b>Syslog Message</b>	NVRAM hardware initialization failed: %s.
<b>Parameters</b>	<b>error</b> (STRING): Description of the error.

<b>EMS Identifier</b>	nvr.am.hw.normal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the NVRAM hardware is operating normally.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	NVRAM hardware is operating normally.
<b>Parameters</b>	

## "object" Event Group

<b>EMS Identifier</b>	object.store.available
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the node can connect to the object store again after an "object.store.unavailable" error.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Able to connect to the object store "%s".
<b>Parameters</b>	<b>configname</b> (STRING): Object store configuration name.

<b>EMS Identifier</b>	object.store.full
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the node failed to write data to the specified object store because it is out of space. You may see other EMS notifications from dependent subsystems.
<b>Corrective Action</b>	Examine the object store, check the space settings, and if necessary, create space by adding capacity to the object store.
<b>Syslog Message</b>	Failed to write to object store %s because it is out of space.
<b>Parameters</b>	<b>config_name</b> (STRING): Object store configuration name.

<b>EMS Identifier</b>	object.store.unavailable
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when the node is unable to connect to the object store.
<b>Corrective Action</b>	Verify that your intercluster LIF is online and functional using the network interface show command. Also, check network connectivity to the object store server by using the 'ping' command over the destination node intercluster LIF. Additionally, ensure that the configuration of your object store has not changed and login and connectivity information is still accurate. If the condition persists, contact NetApp technical support.
<b>Syslog Message</b>	Unable to connect to the object store "%s".
<b>Parameters</b>	<b>configname</b> (STRING): Object store configuration name.

## "objectattach" Event Group

<b>EMS Identifier</b>	objectAttach.hw.unsupported
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an object store attach failed due to an unsupported hardware configuration.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Object store attach failed because node %s with model %s is not supported by FabricPools.
<b>Parameters</b>	<b>node</b> (STRING): Node that has the unsupported hardware version. <b>model</b> (STRING): Model information.

## "objstore" Event Group

<b>EMS Identifier</b>	objstore.host.unresolvable
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the object store server host name cannot be resolved to an IP address. The object store client will not be able to communicate with the object store server without resolving to an IP address.
<b>Corrective Action</b>	Check the DNS configuration to verify that the host name is configured correctly with an IP address.
<b>Syslog Message</b>	Object store server host name "%s" cannot be resolved to an IP address.
<b>Parameters</b>	<b>hostname</b> (STRING): Host name of the object store server.

<b>EMS Identifier</b>	objstore.interclusterlifDown
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the object store client cannot find an operational LIF to communicate with the object store server. This node will not allow object store client traffic until the intercluster LIF is operational.
<b>Corrective Action</b>	Use the "network interface show -role intercluster" command to check intercluster LIF status. Verify that the intercluster LIF is configured correctly and is operational. If an intercluster LIF is not configured, use the "network interface create -role intercluster" command to create it.
<b>Syslog Message</b>	Object store client could not find an operational intercluster LIF (IPspace ID: %d).
<b>Parameters</b>	<b>ipspaceID</b> (INT): IPspace ID of the intercluster LIF.

## "old" Event Group

<b>EMS Identifier</b>	old.replica.volume
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a wafliron operation determines that a volume served as a SnapMirror(R) destination for a previous release of Data ONTAP(R).
<b>Corrective Action</b>	Retry the wafliron operation after the SnapMirror relationship is updated for this volume.
<b>Syslog Message</b>	Wafiron cannot start on aggregate %s because aggregate contains a volume %s which served as a snapmirror destination for a previous release of ONTAP.
<b>Parameters</b>	<b>aggrname</b> (STRING): Name of the aggregate. <b>volname</b> (STRING): Name of the volume.

## "openssh" Event Group

<b>EMS Identifier</b>	openssh.unsupported.cipher
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unsupported cipher is used while attempting an SSH connection.
<b>Corrective Action</b>	Attempt to connect with SSH by using a supported cipher.
<b>Syslog Message</b>	Attempted an SSH connection using unsupported cipher %s.
<b>Parameters</b>	<b>ciphername</b> (STRING): Cipher used for the SSH connection.

<b>EMS Identifier</b>	openssh.unsupported.hostalgo
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unsupported host key algorithm is used while attempting an SSH connection.
<b>Corrective Action</b>	Attempt to connect with SSH by using a supported host key algorithm.
<b>Syslog Message</b>	SSH connection from %s was attempted using an unsupported host key algorithm %s.
<b>Parameters</b>	<b>ipaddress</b> (STRING): IP address of the remote host that was trying to establish an SSH connection. <b>hostkeyalgorithm</b> (STRING): Host key algorithm used for the SSH connection attempt.

<b>EMS Identifier</b>	openssh.unsupported.kexalgo
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unsupported key exchange algorithm is used while attempting an SSH connection.
<b>Corrective Action</b>	Attempt to connect with SSH by using a supported key exchange algorithm.
<b>Syslog Message</b>	Attempted an SSH connection using unsupported key exchange algorithm %s.
<b>Parameters</b>	<b>kexalgorithm</b> (STRING): Key exchange algorithm used for the SSH connection.

<b>EMS Identifier</b>	openssh.unsupported.MAC
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unsupported Message Authentication Code (MAC) is used while attempting an SSH connection.
<b>Corrective Action</b>	Attempt to connect with SSH by using a supported MAC.
<b>Syslog Message</b>	Attempted an SSH connection using unsupported MAC %s.
<b>Parameters</b>	<b>macname</b> (STRING): MAC used for the SSH connection.

## "oss" Event Group

<b>EMS Identifier</b>	oss.config.file.modified
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a configuration file for the the ONTAP(R) Status Service (OSS) server is modified from its original released version.
<b>Corrective Action</b>	If the modification was intentional, you can ignore this message. If the modification was not intentional, confirm that write access controls to the node's root volume are configured correctly.
<b>Syslog Message</b>	OSS has detected a modified configuration file. Process: %s, file: %s.
<b>Parameters</b>	<b>process</b> (STRING): Name of the process that loaded the modified file. <b>filepath</b> (STRING): The full file path for the modified file.

<b>EMS Identifier</b>	oss.eventept.conn.lost
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the connection between the "event endpoint" and the ONTAP(R) Status Service (OSS) server is lost. OSS is responsible for collecting system status information, in the form of events, from various internal and external components of the node. Components report events by submitting them to an "event endpoint" which then relays the information to the central OSS server. When the connection between the endpoint and the server is broken, events submitted will be queued until the connection can be restored. If the link is not repaired in a timely manner, some events may be discarded.
<b>Corrective Action</b>	A broken connection is usually a temporary condition. The link will automatically be repaired once inter-process communication is re-established. The service can be tested with the command 'system status show -name "System up time"'. If the up time increments with repeated calls, the connection has been restored. If the connection is not restored in ~10 minutes, contact NetApp technical support.
<b>Syslog Message</b>	OSS Event Endpoint lost connection. Process: %s, Reason: %s.
<b>Parameters</b>	<b>process</b> (STRING): Name of the process that owns the event endpoint <b>reason</b> (STRING): String containing additional information or reasons for the connection loss

<b>EMS Identifier</b>	oss.eventept.conn.restored
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the connection between the "event endpoint" and the ONTAP Status Service (OSS) server is restored. This notice will only occur when the same endpoint has previously experienced a loss or disconnect.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	OSS Event Endpoint connection restored. Process: %s.
<b>Parameters</b>	<b>process</b> (STRING): Name of the process that owns the event endpoint

<b>EMS Identifier</b>	oss.monitor.noplugins.loaded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the ONTAP(R) Status Service (OSS) monitor can not load any configured plug-ins. Not having any loaded plug-ins means that OSS monitor is not functional and needs to be fixed.
<b>Corrective Action</b>	Check the configuration under system status in diagnostic mode to make sure that the OSS monitor is configured correctly for the device being monitored. For example, to check that the hypervisor settings are correct for the monitoring of the SDOT hypervisor, show the configuration like this: set -privilege diagnostic; system status hypervisor show Adjust any settings, and then restart the monitor to see whether the plug-in load correctly: set -privilege diagnostic; system status restart -service mond For assistance contact NetApp technical support.
<b>Syslog Message</b>	OSS Monitor has not loaded any plug-ins. Reason: %s.
<b>Parameters</b>	<b>reason</b> (STRING): String containing additional information or reasons for the plug-in load failure.

<b>EMS Identifier</b>	oss.monitor.snmp.cleared
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a previous ONTAP(R) Status Service (OSS) monitor had an SNMP error that is now cleared.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	OSS Monitor SNMP error has been cleared.
<b>Parameters</b>	

<b>EMS Identifier</b>	oss.monitor.snmp.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the ONTAP(R) Status Service (OSS) monitor using SNMP has experienced an error or outage with the device being monitored.
<b>Corrective Action</b>	Check to see that the device has the SNMP agent configured correctly to allow the OSS monitor to function. Consult the device vendor's documentation for setting up the SNMP configuration. For assistance contact NetApp technical support.
<b>Syslog Message</b>	OSS Monitor has SNMP error. Reason: %s.
<b>Parameters</b>	<b>reason</b> (STRING): String containing additional information or reasons for the SNMP outage.

<b>EMS Identifier</b>	oss.monitor.v2c.unsupported
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the ONTAP(R) Status Service (OSS) monitor using SNMP has not been configured to use SNMP v3 and has defaulted to trying to use SNMP v2. This is insecure and not supported.
<b>Corrective Action</b>	Configure SNMP v3 monitoring. Each device has a specific configuration needed for SNMP v3. For example, the monitoring of the SDOT hypervisor requires the following command to be completed for configuring SNMP v3: set -privilege diagnostic; system hypervisor snmpv3-config create modify ... For assistance contact NetApp technical support.
<b>Syslog Message</b>	OSS Monitor has SNMP v2 configured, which is not supported.
<b>Parameters</b>	

<b>EMS Identifier</b>	oss.trap
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the ONTAP(R) Status Service gets an SNMP trap from a monitored device.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Trap %s : %s
<b>Parameters</b>	<b>trapname</b> (STRING): Trap SNMP OID or SNMP MIB symbolic name. <b>trapbody</b> (STRING): Trap body with SNMP OID bindings.

## "pac" Event Group

<b>EMS Identifier</b>	pac.access
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the access is denied or unsuccessful for the specified source host, destination host, and network interface combination.
<b>Corrective Action</b>	If you want to provide access, then modify 'options.(protocol).access' to allow access.
<b>Syslog Message</b>	%s: %s from if = %s, source IP = %s, destination IP = %s. Check options %s.access, if desired.
<b>Parameters</b>	<b>protocol1</b> (STRING): Protocol. <b>status</b> (STRING): Access status. <b>ifIpAddr</b> (STRING): Interface address. <b>srcIpAddr</b> (STRING): Source IP address. <b>dstIpAddr</b> (STRING): Destination IP address. <b>protocol2</b> (STRING): Protocol.

<b>EMS Identifier</b>	pac.if.getName
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the protocol access control fails to get the interface name with the address.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: getifnamewithaddr() failed with address %s in protocol access control.
<b>Parameters</b>	<b>protocol</b> (STRING): Protocol. <b>ifAddr</b> (STRING): Interface IP address in internet standard dotted notation.

<b>EMS Identifier</b>	pac.peer.getName
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the protocol access control fails to get the peer name.
<b>Corrective Action</b>	Check Domain Name System (DNS) for possible errors.
<b>Syslog Message</b>	%s: getpeername() failed in protocol access control with %s.
<b>Parameters</b>	<b>protocol</b> (STRING): Protocol. <b>errorMessage</b> (STRING): Internal error message indicating why the peer name could not be obtained.

<b>EMS Identifier</b>	pac.sock.getName
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the protocol access control fails to get the socket name.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s: getsockname() failed in protocol access control with %s.
<b>Parameters</b>	<b>protocol</b> (STRING): Protocol. <b>errMessage</b> (STRING): Internal error message indicating why the socket name could not be obtained.

## "passwd" Event Group

<b>EMS Identifier</b>	passwd.changed
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	The password for a user has been changed.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	passwd for user '%s' changed.
<b>Parameters</b>	<b>username</b> (STRING): The name of the user whose password has just been changed.

## "pci" Event Group

<b>EMS Identifier</b>	PCI.init.process.timeWarn
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs to warn about the time taken by PCI initialization when PCI configuration is waiting for outstanding background threads that might still be running.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	The PCI initialization process has taken %d seconds.
<b>Parameters</b>	<b>processTime</b> (INT): Time taken by PCI initialization process.

## "pcie" Event Group

<b>EMS Identifier</b>	pcie.errors
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when correctable PCI Express errors are detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	PCI Express correctable error - %s
<b>Parameters</b>	<b>pcie_errors</b> (STRING): String contains details about the PCI Express correctable error(s) and which device(s) was/were the source of error(s).

<b>EMS Identifier</b>	pcie.link.errors
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when PCI Express link errors are detected.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	PCI Express link error - %s
<b>Parameters</b>	<b>pcie_link_errors</b> (STRING): String contains details about the PCI Express link error(s) and which device(s) was/were the source of error(s).

## "pcnfsd" Event Group

<b>EMS Identifier</b>	pcnfsd.auth.failure
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the authorization for a user fails due to a corrupted password entry in /etc/passwd.
<b>Corrective Action</b>	Restore the password entry for the user.
<b>Syslog Message</b>	Corrupted password in /etc/passwd file.
<b>Parameters</b>	

## "pcp" Event Group

<b>EMS Identifier</b>	pcp.linkStateChangeSucceed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a change of network port state can now be confirmed after the initial attempt failed due to some race condition. The affected port is now operational.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Link state change for port %s can now be confirmed after the change %u seconds ago.
<b>Parameters</b>	<b>portname</b> (STRING): Port name. <b>retrySeconds</b> (INT): Number of seconds that the port state change could not be confirmed.

<b>EMS Identifier</b>	pcp.linkStateInProgress
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a change of network port state cannot be confirmed because another configuration task is in progress. The change of the network port state happens when the node is booting up or the administrator changes the network port state manually, via the "network port modify -up-admin [true false]" command. The affected port might still be operating in the state before the attempted change. While this condition exists, any further configuration or status operations will not be possible.
<b>Corrective Action</b>	The link state change request will be retried in the next 5 minutes. If it succeeds, a linkStateChangeSucceed event will be generated. If the issue persists for more than 5 minutes, and the linkStateChangeSucceed event is not generated, there is a configuration task that has not proceeded correctly. The system state will be automatically collected and an AutoSupport(R) callhome event will be generated. The node from which this event was triggered needs to be rebooted to clear the issue.
<b>Syslog Message</b>	Link state change cannot be confirmed on port %s.
<b>Parameters</b>	<b>portname</b> (STRING): Port name.

## "perf" Event Group

<b>EMS Identifier</b>	perf.ccma.off
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the performance archiver is not enabled.
<b>Corrective Action</b>	Enable the performance archiver to track system activity and allow technical support to troubleshoot performance problems. To re-enable, run the 'archive config modify -is-enabled true' command.
<b>Syslog Message</b>	Performance archiver is not enabled for datastore '%s'.
<b>Parameters</b>	<b>datastore</b> (STRING): Datastore name.

## "perfstatd" Event Group

<b>EMS Identifier</b>	perfstatd.dir.permission
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the perfstat daemon (perfstatd) startup fails due to improper permissions for the '/mroot/etc/log' directory. This failure impacts the continuous archiving of performance data that technical support uses to troubleshoot performance issues.
<b>Corrective Action</b>	Verify that the permissions of the '/mroot/etc/log' directory are 'rwxr-xr-x' by executing the 'fsecurity show /vol/vol0/etc/log' command from the nodeshell. After correcting the permissions for this directory, restart perfstatd by executing the 'spmctl -e -h perfstatd' command from the freebsd shell.
<b>Syslog Message</b>	The perfstat daemon startup failed due to improper directory permissions.
<b>Parameters</b>	

<b>EMS Identifier</b>	perfstatd.disk.full
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the perfstat daemon (perfstatd) startup fails due to a full disk. This failure impacts the continuous archiving of performance data that technical support uses to troubleshoot performance issues.
<b>Corrective Action</b>	Verify that the '/mroot' file system is full by executing the 'df /mroot' command from the freebsd shell. After clearing some space, restart perfstatd by executing the 'spmctl -e -h perfstatd' command from the freebsd shell.
<b>Syslog Message</b>	The perfstat daemon startup failed due to a full disk.
<b>Parameters</b>	

<b>EMS Identifier</b>	perfstatd.start.unsuccessful
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the perfstat daemon (perfstatd) startup fails. This failure impacts the continuous archiving of performance data that technical support uses to troubleshoot performance issues.
<b>Corrective Action</b>	The startup failure might be due to improper permissions for the '/mroot/etc/log' directory or a full disk. Verify that the permissions of the '/mroot/etc/log' directory are 'rwxr-xr-x' by executing the 'fsecurity show /vol/vol0/etc/log' command from the nodeshell. Verify that the '/mroot' file system is not full. After fixing the cause of the failure, restart perfstatd by executing the 'spmctl -e -h perfstatd' command from the freebsd shell.
<b>Syslog Message</b>	The perfstat daemon startup failed.
<b>Parameters</b>	

## "pha" Event Group

<b>EMS Identifier</b>	pha.add.dev.limitExceeded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an attempt to add a passthrough host adapter (PHA) disk to a virtual disk adapter fails because the supplied disk number exceeds the maximum supported disk ID.
<b>Corrective Action</b>	Reduce the number of devices connected to Data ONTAP(R) and retry this operation.
<b>Syslog Message</b>	Failed to add a device with unit number %d to virtual disk adapter. Reason: Supplied disk number exceeds the max number of supported disks.
<b>Parameters</b>	<b>disk_num</b> (INT): Unit number for the rejected disk.

<b>EMS Identifier</b>	pha.dev.get.uuid.bioReadErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when block read operation for the passthrough host adapter (PHA) disk header returns an error. As a result, Data ONTAP(R) is unable to add or manage this device.
<b>Corrective Action</b>	Ensure that the device is still connected to and accessible by Data ONTAP(R) and retry the operation.
<b>Syslog Message</b>	Failed to get UUID for device %s%d. Reason: Block read operation returned an error: 0x%x.
<b>Parameters</b>	<b>devname</b> (STRING): Name of the device. <b>unit</b> (INT): Unit number of the device. <b>bio_error</b> (INTHEX): Error code returned by block read operation.

<b>EMS Identifier</b>	pha.dev.get.uuid.devNotAdded
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) fails to get disk header after multiple retries and finally give up. As a result, Data ONTAP(R) is unable to add the disk.
<b>Corrective Action</b>	Ensure that the device is still connected to and accessible by Data ONTAP(R) and retry the operation.
<b>Syslog Message</b>	Failed to get disk header for device %s%d. Number of bioerr %d Retries %d.
<b>Parameters</b>	<b>devname</b> (STRING): Name of the device. <b>unit</b> (INT): Unit number of the device. <b>bioerr_cnt</b> (INT): Number of BIO errors. <b>retry_cnt</b> (INT): Number of retries.

<b>EMS Identifier</b>	pha.dev.get.uuid.devNotExist
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) fails to retrieve the the descriptor for the passthrough host adapter (PHA) device. As a result, Data ONTAP(R) fails to read the header on this device and is unable to add or manage it.
<b>Corrective Action</b>	Ensure that the device is still connected to and accessible by Data ONTAP(R) and retry the operation.
<b>Syslog Message</b>	Failed to retrieve the descriptor for device %s%d. Reason: %s.
<b>Parameters</b>	<b>devname</b> (STRING): Name of the device. <b>unit</b> (INT): Unit number of the device. <b>error</b> (STRING): Error message.

<b>EMS Identifier</b>	pha.dev.uuidWriteHeaderErr
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when Data ONTAP(R) fails to write the header to the passthrough host adapter (PHA) device. As a result, Data ONTAP(R) is unable to add or manage this device.
<b>Corrective Action</b>	Ensure that the device is still connected to and accessible by Data ONTAP(R) and retry the operation.
<b>Syslog Message</b>	Failed to write header to the device %s%d.
<b>Parameters</b>	<b>devname</b> (STRING): Name of the device. <b>unit</b> (INT): Unit number of the device.

## "platform" Event Group

<b>EMS Identifier</b>	platform.ChsisMoboNameDiff
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the product name on the chassis is different from the one on the controller.
<b>Corrective Action</b>	Place the controller in a compatible chassis.
<b>Syslog Message</b>	The product names on the chassis (%s) and the controller (%s) are different. Contact NetApp technical support to resolve this.
<b>Parameters</b>	<b>prodNameChsis</b> (STRING): Product name on the chassis. <b>prodNameCtrlr</b> (STRING): Product name on the controller.

<b>EMS Identifier</b>	platform.dimmConfigError
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the DIMM configuration of the controller is different from the configuration supported by this model. This often occurs when an incorrect DIMM memory size is used in a DIMM slot.
<b>Corrective Action</b>	Place correctly sized and supported DIMMs in the designated slots. For replacement instructions, search the NetApp technical support web site using the keywords "replacing", "DIMM", and "system".
<b>Syslog Message</b>	Memory DIMM configuration mismatch in slots %s.
<b>Parameters</b>	<b>slots</b> (STRING): List of slots with the incorrect DIMM.

<b>EMS Identifier</b>	platform.insufficientMemory
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when there is not enough system memory for the system to function, likely due to slots that contain incorrect, failed, or missing DIMMs.
<b>Corrective Action</b>	Replace the incorrect, failed, or missing DIMMs.
<b>Syslog Message</b>	Not enough system memory for the system to function. Detected %d GB, expected %d GB. Check DIMMs slots %s.
<b>Parameters</b>	<b>mem_detected</b> (INT): Amount of system memory that was detected. <b>mem_expected</b> (INT): Amount of system memory that this model supports. <b>slots</b> (STRING): List of slots with incorrect, failed, or missing DIMMs.

<b>EMS Identifier</b>	platform.reducedMemory
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when system memory is less than expected for this model, likely due to slots that contain incorrect, failed, or missing DIMMs.
<b>Corrective Action</b>	Replace the incorrect, failed, or missing DIMMs.
<b>Syslog Message</b>	System memory (%d GB) is less than expected (%d GB). Check DIMMs slots %s.
<b>Parameters</b>	<b>mem_detected</b> (INT): Amount of system memory that was detected. <b>mem_expected</b> (INT): Amount of system memory that this model supports. <b>slots</b> (STRING): List of slots with incorrect, failed, or missing DIMMs.

## "pn" Event Group

<b>EMS Identifier</b>	pn.mvia.freeq.empty
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the pass-through network layer depletes its supply of buffers for sending traffic, which could cause an Interconnect timeout.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Pass-through network layer free queue empty for %d msecs, which might cause Interconnect timeout.
<b>Parameters</b>	<b>time</b> (INT): Duration of depletion in msecs.

<b>EMS Identifier</b>	pn.mvia.send.starvation
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the pass-through network layer takes too long to execute the logic for sending traffic, which could cause an Interconnect timeout.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Pass-through network layer "send" thread not run for %d msecs, which might cause Interconnect timeout.
<b>Parameters</b>	<b>time</b> (INT): How long the pass-through network layer has not executed the logic for sending traffic.

## "pvif" Event Group

<b>EMS Identifier</b>	pvif.allLinksDown <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when all of the links for a specified interface group have failed.
<b>Corrective Action</b>	Examine all links of the specified interface group by using the "network port show" command. Also ensure that they are properly connected.
<b>Syslog Message</b>	ifgrp %s: All links are down
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group.

<b>EMS Identifier</b>	pvif.alllinksdowntrap <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when all of the links in an interface group are down.
<b>Corrective Action</b>	Check all the links of the interface group.
<b>Syslog Message</b>	ifgrp %s: All links are down.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group.

<b>EMS Identifier</b>	pvif.badMtu
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the interface group (ifgrp) driver fails to update the MTU size on a member port because it does not support the requested configuration.
<b>Corrective Action</b>	Use the "ifgrp remove-port" command to remove the member port that does not support the requested MTU size, or use the "broadcast-domain remove-ports" and "broadcast-domain add-ports" commands to assign the ifgrp to a broadcast domain whose MTU are supported on all member ports.
<b>Syslog Message</b>	ifgrp %s: unable to update MTU size to %d on %s.
<b>Parameters</b>	<b>ifgrpName</b> (STRING): Name of the ifgrp. <b>mtuSize</b> (INT): Requested MTU size. <b>portName</b> (STRING): Name of the member port.

<b>EMS Identifier</b>	pvif.downLink <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects that a link has gone down.
<b>Corrective Action</b>	Check the link that went down.
<b>Syslog Message</b>	ifgrp %s: Link %s status is down
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group. <b>linkName</b> (STRING): Name of the link.

<b>EMS Identifier</b>	pvif.downLinkTimer <b>Deprecated:</b> Deprecated as of version 9.2 since this EMS is no longer suitable for the new state machine.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a link fails to go down within a certain time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ifgrp: %s: Link timed out on going down
<b>Parameters</b>	<b>Name</b> (STRING): Name of the interface.

<b>EMS Identifier</b>	pvif.failedLinkMonitoring <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a link goes down for the specified single-mode ifgrp.
<b>Corrective Action</b>	The underlying links of a single-mode interface group should be in one broadcast domain.
<b>Syslog Message</b>	Member link of ifgrp %s is being marked down due to link monitoring failure.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group.

<b>EMS Identifier</b>	pvif.failovertrap <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects a link down condition for a single mode interface group and we failover to the backup interface.
<b>Corrective Action</b>	Check the link that went down.
<b>Syslog Message</b>	ifgrp %s failed over to the backup link %s.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group. <b>linkName</b> (STRING): Name of the link.

<b>EMS Identifier</b>	pvif.getMACFail <b>Deprecated:</b> Deprecated as of version 9.2 because this EMS was never got a chance to be called. It is replaced by net.ifgrp.addLimitExceeded.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system cannot obtain a MAC address from the address pool.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ifgrp: %s: failed to obtain a MAC address from the address pool
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group.

<b>EMS Identifier</b>	pvif.initMemFail <b>Deprecated:</b> Deprecated as of version 9.2 since this EMS is no longer needed.
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an attempt to obtain memory to create the MAC address database fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ifgrp: Unable to allocate memory for MAC table
<b>Parameters</b>	

<b>EMS Identifier</b>	pvif.initMesgFail <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is no longer supported.
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an attempt to obtain memory to create messages during pvif initialization fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ifgrp: Unable to allocate memory for messages
<b>Parameters</b>	

<b>EMS Identifier</b>	pvif.lacp.outofsync
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when a link is operationally up and cannot be aggregated into its configured ifgrp within the time limit. This might occur due to misconfiguration, physical link error, or implementation limits on the number of links allowed.
<b>Corrective Action</b>	Verify that the switch configuration is correct, and that the physical links are operating without error.
<b>Syslog Message</b>	ifgrp %s, port %s cannot synchronize with the LACP aggregate.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the ifgrp. <b>linkName</b> (STRING): Name of the link.

<b>EMS Identifier</b>	pvif.mediaDuplexMismatch <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system tries to bring up a link in an interface group, and the interface for the link is half duplex.
<b>Corrective Action</b>	Consider modifying the duplex attribute of the new interface to full duplex to increase bandwidth utilization.
<b>Syslog Message</b>	ifgrp %s: Link %s is in half-duplex mode. This mode can affect network performance.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group. <b>linkName</b> (STRING): Name of the link.

<b>EMS Identifier</b>	pvif.mediaMismatch <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system tries to bring up a link on an Ethernet interface in a multi-interface group, and there are other Ethernet interfaces within the group that differ either in terms of speed or duplex setting.
<b>Corrective Action</b>	Ensure that the reported link's speed and duplex is the same as that of the other member links. In the case of a mismatch, the interface group is still operational, but there might be a performance degradation.
<b>Syslog Message</b>	Inconsistent media type observed while adding link %s under ifgrp %s, which is configured as a multi-level ifgrp hierarchy. This mismatch can lead to performance degradation.
<b>Parameters</b>	<b>linkName</b> (STRING): Name of the link. <b>vifName</b> (STRING): Name of the interface group.

<b>EMS Identifier</b>	pvif.memAllocFail <b>Deprecated:</b> Deprecated as of version 9.2 since this EMS is no longer needed.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an attempt to obtain memory fails.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ifgrp: unable to allocate memory for %s
<b>Parameters</b>	<b>Name</b> (STRING): Name of the object or event for which memory allocation fails.

<b>EMS Identifier</b>	pvif.setMediaFail <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the interface group driver is unable to set the media type on a specified link. The error code indicates the reason for failure.
<b>Corrective Action</b>	Ensure that the reported link supports the media type being set.
<b>Syslog Message</b>	ifgrp %s: Unable to set media type on link %s. Error: %d.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group. <b>linkName</b> (STRING): Name of the link. <b>errorCode</b> (INT): Error code for the failure.

<b>EMS Identifier</b>	pvif.setMtuFail <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the interface group driver is unable to set the MTU size on a specified link due to an unexpected problem. The error code indicates the reason for the failure.
<b>Corrective Action</b>	Contact NetApp technical support for assistance.
<b>Syslog Message</b>	ifgrp %s: Unable to set MTU size on link %s. Error: %s.
<b>Parameters</b>	<b>interfaceName</b> (STRING): Name of the interface group. <b>linkName</b> (STRING): Link that failed. <b>errorString</b> (STRING): Error code for the failure.

<b>EMS Identifier</b>	pvif.speedDuplexErr <b>Deprecated:</b> Deprecated as of version 9.2 since this detection is no longer needed.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a link has a speed and duplex mismatch.
<b>Corrective Action</b>	Ensure that all the member links have the same speed and duplex by modifying the corresponding attributes in the port. In the case of mismatch, the interface group is still operational, but the load might not be balanced.
<b>Syslog Message</b>	ifgrp: %s: Link %s detected speed or duplex mismatch with ifgrp - link (speed: %d, duplex: %d), ifgrp (speed: %d, duplex: %d)
<b>Parameters</b>	<b>vifname</b> (STRING): Interface group name. <b>intfname</b> (STRING): Interface name. <b>link_speed</b> (INT): Speed of the interface, in Mbps. <b>link_duplex</b> (INT): Duplex of the interface: 0 -> Half Duplex 1 -> Full Duplex <b>ifgrp_speed</b> (INT): Speed of the interface group, in Mbps. <b>ifgrp_duplex</b> (INT): Duplex of the interface group: 0 -> Half Duplex 1 -> Full Duplex

<b>EMS Identifier</b>	pvif.switchLink <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system is switching links due to a link failure.
<b>Corrective Action</b>	Check the link that failed.
<b>Syslog Message</b>	%s: switching to %s
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group. <b>linkName</b> (STRING): Name of the link.

<b>EMS Identifier</b>	pvif.upLinkTimer <b>Deprecated:</b> Deprecated as of version 9.2 since this EMS is no longer suitable for the new state machine.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a link fails to come up in time.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ifgrp: %s: Link timed out on coming up
<b>Parameters</b>	<b>Name</b> (STRING): Name of the interface.

<b>EMS Identifier</b>	pvif.vifConfigDown <b>Deprecated:</b> Deprecated as of version 9.2 since this feature is not supported anymore.
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the interface group has been administratively disabled.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	ifgrp %s administratively disabled.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group.

<b>EMS Identifier</b>	pvif.vlanCreateFail <b>Deprecated:</b> Deprecated as of version 9.2 since this EMS is no longer suitable in the new implementation.
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when the system cannot create VLANs over the interface groups.
<b>Corrective Action</b>	Contact technical support for assistance.
<b>Syslog Message</b>	ifgrp %s: Unable to create link %s. Error: %s not configured to support VLANs.
<b>Parameters</b>	<b>vifName</b> (STRING): Name of the interface group. <b>intfname</b> (STRING): Name of the interface. <b>name</b> (STRING): Name of the interface.

## "qos" Event Group

<b>EMS Identifier</b>	qos.mgmt.operation.failed
<b>Severity</b>	ERROR
<b>Description</b>	This message indicates that cluster quality of service (QoS) cannot propagate settings to the classification and control components on the specified node. This might be a transient condition, or it might indicate insufficient resources to complete the operation. QoS workload classification and control might behave incorrectly on this node.
<b>Corrective Action</b>	Inspect the management gateway process log for errors indicating why the command failed. If this behavior persists, contact NetApp technical support.
<b>Syslog Message</b>	QoS configuration update failed on node %s: %s
<b>Parameters</b>	<b>node</b> (STRING): Node on which operation failed. <b>error</b> (STRING): Error description.

<b>EMS Identifier</b>	qos.monitor.memory.abated
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the Quality of Service (QoS) subsystem's dynamic memory is no longer at its limit for the current platform hardware. All QoS features will operate as normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	QoS dynamic memory is no longer at its limit. All QoS features will operate as normal.
<b>Parameters</b>	<b>subject</b> (STRING): QoS Memory message title. <b>count</b> (INT): Number of times this has happened.

<b>EMS Identifier</b>	qos.monitor.memory.maxed
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the Quality of Service (QoS) subsystem's dynamic memory hits its limit for the current platform hardware. As a result, some QoS features might operate in a limited capacity.
<b>Corrective Action</b>	Some active workloads or streams should be deleted to free up memory. Use the 'statistics show -object workload -counter ops' command to determine which workloads are active. Active workloads will show non-zero ops. Then use the 'workload delete [workload name]' command multiple times to remove particular workloads. Alternatively, use the 'stream delete -workload [workload name] *' command to delete the associated streams from the active workload.
<b>Syslog Message</b>	QoS dynamic memory has reached its limit. Some QoS features might operate in a limited capacity.
<b>Parameters</b>	<b>subject</b> (STRING): QoS Monitor message title. <b>count</b> (INT): Number of times this has happened.

<b>EMS Identifier</b>	qos.violation.report
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs every hour to provide a snapshot of violation detection status for the Quality of Service (QoS) policy groups. The snapshot shows the states of those policy groups that either cannot meet their service-level objectives (SLOs), or are impacted by (deactivation) actions taken by QoS to remedy the situations. Possible violation states include LOW_OFFERED, which means the offered load for a policy group is too low, or INSUFFICIENT_RESOURCES, which means the system can not support the specified targets in the SLO. The deactivation states include ACTIVATED, which means this policy group is not impacted by deactivation, or DEACTIVATED, which means this policy group is deactivated to support other violated policy group.
<b>Corrective Action</b>	After observing a violation, one should collect ONTAP statistics counters and use 'qos statistics' CLI command to monitor the violated policy group. Increase the client load if a low offered violation is present and the policy group client does not generate sufficient load. For other violations, identify the critical resources (cpu, memory, network, disk, etc.) that could lead to the violation, or identify the hot spot in a clustered system. The solution to the former is to add more resources; while the latter is to move workloads around to avoid the hot spot.
<b>Syslog Message</b>	QoS violation state for policy group %s is (pgid= %u violation= %s deactivation= %s).
<b>Parameters</b>	<b>name</b> (STRING): The QoS policy group name. <b>id</b> (INT): The QoS policy group identifier. <b>vdstate</b> (STRING): The violation state for a QoS policy group. <b>dastate</b> (STRING): The deactivation state for a QoS policy group.

## "query" Event Group

<b>EMS Identifier</b>	query.execution.console
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the dotsql command-line program processes an SQL query.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>query</b> (STRING): Query that was executed.

<b>EMS Identifier</b>	query.execution.failed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a SQL query of the system fails for any reason.
<b>Corrective Action</b>	This type of failure can occur legitimately during the course of normal system operation. In cases of unexpected failure, the requestor provides diagnostic advice.
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<b>query</b> (STRING): Query that was executed. <b>error</b> (STRING): Error message that occurred.

## "quota" Event Group

<b>EMS Identifier</b>	quota.inconsistent
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the quota database is corrupted.
<b>Corrective Action</b>	Use the 'quota off' command followed by the 'quota on' command to clear the corruption and reenable quotas on the volume.
<b>Syslog Message</b>	Quota database on %s%s%s is corrupted. Disabling quotas until the corruption is fixed.
<b>Parameters</b>	<b>vol_name</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier for the volume in cases in which the volume name alone is insufficient.

<b>EMS Identifier</b>	quota.intr.boot.fschk
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when previous quota initialization was interrupted due to a system reboot or file system consistency checking.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	WAFL: Reboot or file system consistency checking interrupted quota initialization on %s %s%s%s%s.
<b>Parameters</b>	<b>type</b> (STRING): Type of object (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>name</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier for the volume in cases in which the volume name alone is insufficient.

<b>EMS Identifier</b>	quota.parse.error
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the system detects an error while scanning the quota rules. The parser would be skipping this quota definition.
<b>Corrective Action</b>	Fix the error in quota rules definition using the CLI commands "quota policy rule modify" or "quota policy rule delete".
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>errmsg</b> (STRING): Message describing the error in detail.

<b>EMS Identifier</b>	quota.push.rules.complete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system has completed pushing rules into the quota database.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Quota rules push completed on %s %s%s%s%s.
<b>Parameters</b>	<b>type</b> (STRING): Type of object (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Additional volume identifier, used to uniquely identify the volume if the volume name alone cannot.

<b>EMS Identifier</b>	quota.push.rules.start
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system starts pushing rules into the quota database.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Quota rules push started on %s %s%s%s%s.
<b>Parameters</b>	<b>type</b> (STRING): Type of object (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Additional volume identifier, used to uniquely identify the volume if the volume name alone cannot.

<b>EMS Identifier</b>	quota.reinit.required
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when an unplanned MetroCluster(tm) switchover happens. If a quota operation was running on a volume located on a disaster site during the unplanned switchover, the quota database could be in an incomplete state and quotas need to be reinitialized on that volume.
<b>Corrective Action</b>	After the unplanned switchover is complete, use the "quota off" CLI command followed by the "quota on" CLI command to reinitialize quotas for the indicated volume.
<b>Syslog Message</b>	Quota reinitialization is required on %s%s%s due to an unplanned switchover.
<b>Parameters</b>	<b>volname</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier for the volume in cases in which the volume name alone is insufficient.

<b>EMS Identifier</b>	quota.resize.start
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when quota resize starts.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>noticestring</b> (STRING): Quota resize started.

<b>EMS Identifier</b>	quota.resize.stop
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when quota resize stops or finishes.
<b>Corrective Action</b>	None.
<b>Syslog Message</b>	%s
<b>Parameters</b>	<b>noticestring</b> (STRING): Quota resize stopped or completed. It also reports the duration for the quota resize.

<b>EMS Identifier</b>	quota.scan.complete
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the administrator uses the "volume quota on" command and the quota scanner has completed scanning.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Quota scan completed on %s %s%s%s%s.
<b>Parameters</b>	<b>type</b> (STRING): Type of object (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Additional volume identifier, used to uniquely identify the volume if the volume name alone cannot.

<b>EMS Identifier</b>	quota.scan.start
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the administrator uses the "volume quota on" command and starts the quota scanner.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Quota scan started on %s %s%s%s%s.
<b>Parameters</b>	<b>type</b> (STRING): Type of object (volume or aggregate). <b>owner</b> (STRING): Volume owner. <b>vol</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Additional volume identifier, used to uniquely identify the volume if the volume name alone cannot.

<b>EMS Identifier</b>	quota.softlimit.exceeded
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a user exceeds the soft quota limit (file and/or block limit).
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s for %s on volume %s%s%s%s
<b>Parameters</b>	<b>ltype</b> (STRING): Type of soft limit (file or block). <b>verb</b> (STRING): Error condition (exceeded). <b>whom</b> (STRING): Entity for whom this event is generated. <b>volname</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier for the volume in cases in which the volume name alone is insufficient. <b>vfname</b> (STRING): vFiler(tm) name.

<b>EMS Identifier</b>	quota.softlimit.normal
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when a user's soft quota limit (file and/or block limit) returns to normal.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s for %s on volume %s%s%s%s
<b>Parameters</b>	<b>ltype</b> (STRING): Type of soft limit (file or block). <b>verb</b> (STRING): Status "normal" to indicate that the previously violated condition is now fixed. <b>whom</b> (STRING): Entity for whom this event is generated. <b>volname</b> (STRING): Volume name. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier for the volume in cases in which the volume name alone is insufficient. <b>vfname</b> (STRING): vFiler(tm) name.

<b>EMS Identifier</b>	quota.upgrade
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a quota upgrade on the volume is started, ended or aborted.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Quota upgrade %s for volume %s%s%s.
<b>Parameters</b>	<b>status</b> (STRING): Indicates that the upgrade has started or is over for this vFiler. <b>volname</b> (STRING): Name of the volume. <b>app</b> (STRING): Application UUID. <b>volident</b> (STRING): Unique identifier for the volume in cases in which volume name alone is insufficient.

## "raid" Event Group

<b>EMS Identifier</b>	raid.aggr.lock.conflict
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when a configuration operation on an aggregate (for example, adding disks, relocating aggregate disks, etc.), fails to get exclusive lock access because of a conflict with an existing configuration operation that is already holding the exclusive lock on the aggregate.
<b>Corrective Action</b>	Retry the failed operation after the current operation is complete.
<b>Syslog Message</b>	Exclusive access on the aggregate %s by operation %s failed because of a conflict with current operation %s. Retry after a few minutes.
<b>Parameters</b>	<b>aggregate</b> (STRING): Name of the aggregate. <b>attempted_op_name</b> (STRING): Name of the operation that tried to get exclusive access. <b>current_op_name</b> (STRING): Name of the operation that is currently holding the exclusive access.

<b>EMS Identifier</b>	raid.aggregate.relocate
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the source node prepares an aggregate for relocation to the specified destination node.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Aggregate %s%s: Prepared for 'relocation' operation.
<b>Parameters</b>	<b>owner</b> (STRING): String indicating the owner of the affected aggregate. <b>vol</b> (STRING): Name of the aggregate.

<b>EMS Identifier</b>	raid.aggrvote.pullNotOk
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when the mirror vote pull from the replicated database (RDB) to the mailbox fails. SyncMirror(R) aggregates with only one plex will be kept offline. The mirror vote pull is retried automatically.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	RAID: mirror vote pull from the RDB failed. SyncMirror aggregates with only one plex will be kept offline.
<b>Parameters</b>	

<b>EMS Identifier</b>	raid.aggrvote.updateNotOk
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when the mirror vote update to a replicated database (RDB) fails.
<b>Corrective Action</b>	The update is retried automatically. If the condition persists, contact NetApp technical support.
<b>Syslog Message</b>	RAID: mirror vote update to the RDB failed with error %s for aggregate UUID %s (num of plexes %d; ids: %d, %d).
<b>Parameters</b>	<b>reason</b> (STRING): Reason for the failure. <b>aggregate_uuid</b> (STRING): Universal Unique Identifier (UUID) of the aggregate. <b>num_plexes</b> (INT): Number of plexes recorded in the mirror vote. <b>plex0_id</b> (INT): ID of plex 0 in the mirror vote. <b>plex1_id</b> (INT): ID of plex 1 in the mirror vote.

<b>EMS Identifier</b>	raid.aggrvote.updateOk
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the mirror vote update to a replicated database (RDB) succeeds.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	RAID: mirror vote update to the RDB succeeded for aggregate UUID %s (num of plexes %d; ids: %d, %d), action %s.
<b>Parameters</b>	<b>aggregate_uuid</b> (STRING): Universal Unique Identifier (UUID) of the aggregate. <b>num_plexes</b> (INT): Number of plexes recorded in the mirror vote. <b>plex0_id</b> (INT): ID of plex 0 in the mirror vote. <b>plex1_id</b> (INT): ID of plex 1 in the mirror vote. <b>action_type</b> (STRING): Action performed on the RDB table entry. "CREATE" or "MODIFY".

<b>EMS Identifier</b>	raid.assim.add.offline.disk
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when adding an offline disk into a raidtree.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Adding offline %s to plex_id:%d
<b>Parameters</b>	<b>disk_info</b> (STRING): Formatted information of the offline disk. <b>plexId</b> (INT): The identifier for the plex. <b>shelf</b> (STRING): Shelf identifier where the disk is located <b>bay</b> (STRING): Disk bay within the shelf where disk is located <b>vendor</b> (STRING): Name of the vendor of the disk <b>model</b> (STRING): Model string of the disk drive <b>firmware_revision</b> (STRING): Firmware revision number of the disk <b>serialno</b> (STRING): Serial number of the disk <b>disk_type</b> (INT): Type of disk drive <b>disk_rpm</b> (STRING): Rotational speed of disk in RPM <b>carrier</b> (STRING): Unique ID of the carrier in which the disk is installed. <b>site</b> (STRING): For a MetroCluster(tm) configuration, indicates the site {Local Remote} where the disk is located. For non-MetroCluster configurations, site is 'Local'.

<b>EMS Identifier</b>	raid.assim.build.errorDisk
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when RAID cannot build a RAID tree for a specific plex from a specific disk. Data ONTAP(R) takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Error building RAID tree %s, plex %d, from disk %s.
<b>Parameters</b>	<b>tree</b> (STRING): Volume type. <b>plexId</b> (INT): Identifier for the plex. <b>disk</b> (STRING): Name of the disk.

<b>EMS Identifier</b>	raid.assim.cfo.aggr.offline
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event occurs when a CFO aggregate which is originally homed to the disaster recovery (DR) partner or DR auxiliary partner is taken offline during assimilation after switchover in a MetroCluster(tm) configuration. Switched over CFO aggregates are kept offline.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Aggregate %s%s originally homed to %u is taken offline. Reason: %s.
<b>Parameters</b>	<b>owner</b> (STRING): Owner of affected aggregate. <b>aggregate</b> (STRING): The name of the aggregate. <b>dr_home_owner_id</b> (INT): NVRAM system ID of the aggregate's disaster recovery (DR) home owner. <b>reason</b> (STRING): The reason for taking the aggregate offline.

<b>EMS Identifier</b>	raid.assim.cls.mismatchGens
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Data ONTAP(R) excludes a disk from assimilation into this RAID tree because of a configuration error detected by the consistent label set (CLS) algorithm: the disk transaction generation contains an internal inconsistency. Data ONTAP takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	Data ONTAP takes appropriate recovery actions but if the aggregate is still shown as 'failed' when the command 'sysconfig -r' or 'aggr status -r' is run, then contact NetApp technical support for information about how to resolve the issue.
<b>Syslog Message</b>	Orphaning disk %s, because of generation count mismatch (%d/%d).
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>l1gen</b> (INT): Generation count of the disk's L1 transaction. <b>l2gen</b> (INT): Generation count of the disk's L2 transaction.

<b>EMS Identifier</b>	raid.assim.cls.noStableCls
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the consistent label set (CLS) algorithm is restarted because Data ONTAP(R) could not determine a consistent CLS for all of the RAID aggregates. Data ONTAP takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Unable to find a stable CLS for all RAID trees. Resorting disks.
<b>Parameters</b>	

<b>EMS Identifier</b>	raid.assim.cls.noStableCls2
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the consistent label set (CLS) algorithm is restarted because Data ONTAP(R) could not determine a consistent CLS for all of the RAID aggregates with Label 2. Data ONTAP takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Unable to find a stable CLS for all RAID trees with Label 2. Resorting disks.
<b>Parameters</b>	

<b>EMS Identifier</b>	raid.assim.cls.retryCls
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the consistent label set (CLS) algorithm is restarted due to a disk that appears with an unreasonable timestamp (appears to be a future time). Data ONTAP(R) takes appropriate recovery actions, as described in additional logged events
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Suspect unreasonable timestamp in future for disk in plex %s/%d. Restarting CLS algorithm.
<b>Parameters</b>	<b>plex</b> (STRING): Plex name. <b>pid</b> (INT): Plex ID.

<b>EMS Identifier</b>	raid.assim.cls.tooManyPlexes
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the number of plexes detected exceeds the maximum limit allowed, during consistent label set (CLS) computation. Data ONTAP(R) takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Raidtree %s has more than %d plexes (plex IDs %d, %d, %d)
<b>Parameters</b>	<b>vol</b> (STRING): Name of the aggregate. <b>maxPlexes</b> (INT): Maximum number of plexes allowed per tree. <b>plex1</b> (INT): Plex #1. <b>plex2</b> (INT): Plex #2. <b>plex3</b> (INT): Plex #3.

<b>EMS Identifier</b>	raid.assim.cls.tooRecent
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when Data ONTAP(R) excludes a disk from assimilation into this RAID tree because of a configuration error detected by the consistent label set (CLS) algorithm: the disk transaction identifier indicates that it is more recent than the base transaction ID of the CLS. Data ONTAP takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	Data ONTAP takes appropriate recovery actions but if the aggregate is still shown as 'failed' when the command 'sysconfig -r' or 'aggr status -r' is run, then contact NetApp technical support for information about how to resolve the issue.
<b>Syslog Message</b>	Orphaning disk %s, because its generation (%d/%d) is more recent than %d/%d.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>t1gen</b> (INT): Generation count of the disk's transaction. <b>t1time</b> (INT): Timestamp of the disk's transaction. <b>vgen</b> (INT): Generation count of the aggregate. <b>vtime</b> (INT): Timestamp of the aggregate transaction.

<b>EMS Identifier</b>	raid.assim.cxt.degradedDirty
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This message occurs when RAID detects that a context parity protected aggregate contains a degraded RAID group and has dirty parity.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s "%s%s" is degraded and has dirty parity.
<b>Parameters</b>	<b>vol_type</b> (STRING): Volume type. <b>host</b> (STRING): 'Local' or 'Partner' where the aggregate is located. <b>vol</b> (STRING): Name of the aggregate.

<b>EMS Identifier</b>	raid.assim.disk.badlabelversion
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when RAID assimilation discovers that a disk has an invalid raid label version. Data ONTAP(R) marks the disk as broken.
<b>Corrective Action</b>	Contact NetApp technical support. For information about correcting the problem, search for the "raid.assim.disk.badlabelversion" keyword on the Knowledgebase of the NetApp Support Site.
<b>Syslog Message</b>	%s has %s RAID label with version (%d), which is not within the currently supported range (%d - %d).
<b>Parameters</b>	<p><b>disk_info</b> (STRING): Information about the disk object, including disk name, path, shelf, bay, serial number, vendor, model, RPM and carrier serial number.</p> <p><b>gen</b> (STRING): Non-empty string for the old format label.</p> <p><b>version</b> (INT): Label version number.</p> <p><b>versionLow</b> (INT): Lower range of the valid label version.</p> <p><b>versionHigh</b> (INT): Upper range of the valid label version.</p> <p><b>shelf</b> (STRING): Identifier of the shelf where the disk is located.</p> <p><b>bay</b> (STRING): Disk bay within the shelf where the disk is located.</p> <p><b>vendor</b> (STRING): Name of the vendor of the disk.</p> <p><b>model</b> (STRING): Model string of the disk.</p> <p><b>firmware_revision</b> (STRING): Firmware revision number of the disk.</p> <p><b>serialno</b> (STRING): Serial number of the disk.</p> <p><b>disk_type</b> (INT): Type of disk.</p> <p><b>disk_rpm</b> (STRING): Rotational speed of the disk, in RPM.</p> <p><b>carrier</b> (STRING): Unique ID of the carrier in which the disk is installed.</p> <p><b>site</b> (STRING): For a MetroCluster(tm) configuration, indicates the site {Local Remote} where the disk is located. For non-MetroCluster configurations, site is 'Local'.</p>

<b>EMS Identifier</b>	raid.assim.disk.broken
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when we discover that a broken disk has been discovered during assimilation.
<b>Corrective Action</b>	Wait for the event message raid.disk.unload.done or raid.carrier.remove to be issued and then replace the carrier containing the failed disk. If the disk is contained in a single-disk carrier, raid.disk.unload.done will be issued immediately. Otherwise, wait for raid.carrier.remove which indicates the carrier has been fully prepared for removal.
<b>Syslog Message</b>	Broken %s detected during assimilation.
<b>Parameters</b>	<b>disk_info</b> (STRING): Formatted information of the disk <b>shelf</b> (STRING): Shelf identifier where the disk is located <b>bay</b> (STRING): Disk bay within the shelf where disk is located <b>vendor</b> (STRING): Name of the vendor of the disk <b>model</b> (STRING): Model string of the disk drive <b>firmware_revision</b> (STRING): Firmware revision number of the disk <b>serialno</b> (STRING): Serial number of the disk <b>disk_type</b> (INT): Type of disk drive <b>disk_rpm</b> (STRING): Rotational speed of disk in RPM <b>carrier</b> (STRING): Unique ID of the carrier in which the disk is installed. <b>site</b> (STRING): For a MetroCluster(tm) configuration, indicates the site {Local Remote} where the disk is located. For non-MetroCluster configurations, site is 'Local'.

<b>EMS Identifier</b>	raid.assim.disk.brokenPreAssim
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when we discover that a broken disk has been discovered prior to assimilation.
<b>Corrective Action</b>	Wait for the event message raid.disk.unload.done or raid.carrier.remove to be issued and then replace the carrier containing the failed disk. If the disk is contained in a single-disk carrier, raid.disk.unload.done will be issued immediately. Otherwise, wait for raid.carrier.remove which indicates the carrier has been fully prepared for removal.
<b>Syslog Message</b>	Broken %s detected prior to assimilation.
<b>Parameters</b>	<b>disk_info</b> (STRING): Formatted information of the disk <b>shelf</b> (STRING): Shelf identifier where the disk is located <b>bay</b> (STRING): Disk bay within the shelf where disk is located <b>vendor</b> (STRING): Name of the vendor of the disk <b>model</b> (STRING): Model string of the disk drive <b>firmware_revision</b> (STRING): Firmware revision number of the disk <b>serialno</b> (STRING): Serial number of the disk <b>disk_type</b> (INT): Type of disk drive <b>disk_rpm</b> (STRING): Rotational speed of disk in RPM <b>carrier</b> (STRING): Unique ID of the carrier in which the disk is installed. <b>site</b> (STRING): For a MetroCluster(tm) configuration, indicates the site {Local Remote} where the disk is located. For non-MetroCluster configurations, site is 'Local'.

<b>EMS Identifier</b>	raid.assim.disk.md5error
<b>Severity</b>	NOTICE
<b>Description</b>	This event occurs when we detect that a disk label has an MD5 signature that is different from the MD5 signature of the disk that it's on. Usually this is due to a disk serial number change.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s%s%s, diskobj_verify: MD5 signature of disk %s (S/N %s) does not match with its label signature. This has been corrected.
<b>Parameters</b>	<b>container</b> (STRING): The type of container (aggregate, disk pool). <b>owner</b> (STRING): Owner of the aggregate. <b>vol</b> (STRING): Name of the aggregate. <b>disk</b> (STRING): The name of the disk <b>serial</b> (STRING): The serial number of the disk <b>oldmd5</b> (STRING): The old MD5 checksum of the disk <b>newmd5</b> (STRING): The new MD5 checksum of the disk

<b>EMS Identifier</b>	raid.assim.disk.nolabels
<b>Severity</b>	EMERGENCY
<b>Description</b>	This event occurs when we detect that a disk has no valid labels. Disks in NetApp systems should always have valid labels; therefore, a disk without labels implies that there is corruption somewhere in the data path to the disk. (This is the most common cause, often because of loose cables or a newly added shelf.) It is possible, although much less likely, that the disk itself is experiencing silent data corruption. The affected disk is taken out of service for the reason "bad label."
<b>Corrective Action</b>	If the disk was newly added and really should be treated as a spare, the "disk unfail" command will mark the disk as a spare. Otherwise, if the disk was previously working normally, check the connectivity to the disk. Are all the cables secured? Sometimes newly added shelves or loose cables can cause electrical noise on the bus that corrupts data transmission. If the connectivity to the disk is good and there is filesystem data on the disk, contact NetApp technical support for help.
<b>Syslog Message</b>	%s has no valid labels. It will be taken out of service to prevent possible data loss.
<b>Parameters</b>	<b>disk_info</b> (STRING): Formatted information of the disk <b>shelf</b> (STRING): Shelf identifier where the disk is located <b>bay</b> (STRING): Disk bay within the shelf where disk is located <b>vendor</b> (STRING): Name of the vendor of the disk <b>model</b> (STRING): Model string of the disk drive <b>firmware_revision</b> (STRING): Firmware revision number of the disk <b>serialno</b> (STRING): Serial number of the disk <b>disk_type</b> (INT): Type of disk drive <b>disk_rpm</b> (STRING): Rotational speed of disk in RPM <b>carrier</b> (STRING): Unique ID of the carrier in which the disk is installed. <b>site</b> (STRING): For a MetroCluster(tm) configuration, indicates the site {Local Remote} where the disk is located. For non-MetroCluster configurations, site is 'Local'.

<b>EMS Identifier</b>	raid.assim.disk.region.hole
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when RAID assimilation detects that a disk has a hole between the two disk regions. Data ONTAP(R) takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	Contact NetApp technical support. For information about correcting the problem, search for the "raid.assim.disk.region.hole" keyword on the Knowledgebase of the NetApp Support Site.
<b>Syslog Message</b>	Disk %s (S/N %s) has a hole in its allocated space between region %d (type %s, start %llu, size %llu) and region %d (type %s, start %llu, size %llu).
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>diskSerialno</b> (STRING): Serial number of the disk. <b>regionId1</b> (INT): First disk region identifier. <b>region1</b> (STRING): First disk region name. <b>start1</b> (LONGINT): Start of the first disk region. <b>size1</b> (LONGINT): Size of the first disk region. <b>regionId2</b> (INT): Second disk region identifier. <b>region2</b> (STRING): Second disk region name. <b>start2</b> (LONGINT): Start of the second disk region. <b>size2</b> (LONGINT): Size of the second disk region.

<b>EMS Identifier</b>	raid.assim.disk.region.overlap
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when RAID assimilation detects that a disk has two regions overlapping. Data ONTAP(R) takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	Contact NetApp technical support. For information about correcting the problem, search for the "raid.assim.disk.region.overlap" keyword on the Knowledgebase of the NetApp Support Site.
<b>Syslog Message</b>	On disk %s (S/N %s), region %d (type %s, start %llu, size %llu) overlaps with region %d (type %s, start %llu, size %llu).
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>diskSerialno</b> (STRING): Serial number of the disk. <b>regionId1</b> (INT): First disk region identifier. <b>region1</b> (STRING): First disk region name. <b>start1</b> (LONGINT): Start of the first disk region. <b>size1</b> (LONGINT): Size of the first disk region. <b>regionId2</b> (INT): Second disk region identifier. <b>region2</b> (STRING): Second disk region name. <b>start2</b> (LONGINT): Start of the second disk region. <b>size2</b> (LONGINT): Size of the second disk region.

<b>EMS Identifier</b>	raid.assim.disk.rightsizeChange
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event indicates that the rightsize stored in this disk's Table Of Contents(TOC) is different from the rightsize currently being reported by the disk.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	(None).
<b>Parameters</b>	<p><b>diskType</b> (STRING): Indicates if this a spare or filesystem disk.</p> <p><b>disk_info</b> (STRING): Formatted information of the disk</p> <p><b>toc_rightsize</b> (LONGINT): The disk rightsize according to the disk TOC.</p> <p><b>changeType</b> (STRING): Type of change: growth or shrinkage.</p> <p><b>storage_rightsize</b> (LONGINT): The disk rightsize according to the storage layer.</p> <p><b>systemAction</b> (STRING): The action being taken by the system to deal with this event.</p> <p><b>shelf</b> (STRING): Shelf identifier where the disk is located</p> <p><b>bay</b> (STRING): Disk bay within the shelf where disk is located</p> <p><b>vendor</b> (STRING): Name of the vendor of the disk</p> <p><b>model</b> (STRING): Model string of the disk drive</p> <p><b>firmware_revision</b> (STRING): Firmware revision number of the disk</p> <p><b>serialno</b> (STRING): Serial number of the disk</p> <p><b>disk_type</b> (INT): Type of disk drive</p> <p><b>disk_rpm</b> (STRING): Rotational speed of disk in RPM</p> <p><b>carrier</b> (STRING): Unique ID of the carrier in which the disk is installed.</p> <p><b>site</b> (STRING): For a MetroCluster(tm)(tm) configuration, indicates the site {Local Remote} where the disk is located. For non-MetroCluster configurations, site is 'Local'.</p>

<b>EMS Identifier</b>	raid.assim.disk.spare
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when we spare an error disk.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Sparing %s, because %s
<b>Parameters</b>	<p><b>disk_info</b> (STRING): Formatted information of the disk</p> <p><b>reason</b> (STRING): (None).</p> <p><b>shelf</b> (STRING): Shelf identifier where the disk is located</p> <p><b>bay</b> (STRING): Disk bay within the shelf where disk is located</p> <p><b>vendor</b> (STRING): Name of the vendor of the disk</p> <p><b>model</b> (STRING): Model string of the disk drive</p> <p><b>firmware_revision</b> (STRING): Firmware revision number of the disk</p> <p><b>serialno</b> (STRING): Serial number of the disk</p> <p><b>disk_type</b> (INT): Type of disk drive</p> <p><b>disk_rpm</b> (STRING): Rotational speed of disk in RPM</p> <p><b>carrier</b> (STRING): Unique ID of the carrier in which the disk is installed.</p> <p><b>site</b> (STRING): For a MetroCluster(tm) configuration, indicates the site {Local Remote} where the disk is located. For non-MetroCluster configurations, site is 'Local'.</p>

<b>EMS Identifier</b>	raid.assim.fatal
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when assimilation encounters a fatal error, such as running out of memory.
<b>Corrective Action</b>	Contact NetApp technical support.
<b>Syslog Message</b>	Assimilation failed: %s
<b>Parameters</b>	<b>reason</b> (STRING): Reason assimilation failed.

<b>EMS Identifier</b>	raid.assim.fatal.upgrade
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when RAID assimilation encounters a fatal error during an unsuccessful upgrade to a newer version of Data ONTAP(R).
<b>Corrective Action</b>	Contact NetApp technical support. For information about correcting the problem, search for the "raid.assim.fatal" keyword on the Knowledgebase of the NetApp Support Site. You can also boot with the previous version of Data ONTAP.
<b>Syslog Message</b>	Assimilation failed: This system appears to be upgrading from a previous version of Data ONTAP. Errors were found while upgrading the aggregates. The upgrade will abort now.
<b>Parameters</b>	

<b>EMS Identifier</b>	raid.assim.label.makeForeignVol
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when ownership cannot be claimed over a previously non-native aggregate.
<b>Corrective Action</b>	Use the 'storage aggregate online' command to bring the aggregate online.
<b>Syslog Message</b>	%s %s could not be turned into a %snative aggregate; it will appear to be foreign.
<b>Parameters</b>	<b>vol_type</b> (STRING): Volume type. Always aggregate. <b>vol</b> (STRING): Name of the aggregate. <b>host</b> (STRING): Empty string for local aggregates, or "partner" for partner aggregates. <b>vol_type2</b> (STRING): No longer used.

<b>EMS Identifier</b>	raid.assim.label.makeNativeVol
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when we claim ownership over a previously non-native aggregate.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s %s turned into a %snative %s.
<b>Parameters</b>	<b>vol_type</b> (STRING): Volume type. <b>vol</b> (STRING): Name of the aggregate. <b>host</b> (STRING): Empty string for local aggregates, or "partner " for partner aggregates. <b>vol_type2</b> (STRING): Volume type.

<b>EMS Identifier</b>	raid.assim.label.noNativeVols
<b>Severity</b>	NOTICE
<b>Description</b>	This event is generated when we complete assimilation and discover that none of the volumes or aggregates match the local system id. This can occur if the NVRAM card has been swapped. The system will attempt to select a set of volumes and aggregates to make native.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	No native volumes or aggregates detected, assuming NVRAM card swap. %d NVRAM system id(s) (%u, %u, %u...) found among all volumes. NVRAM system id %u selected. NVRAM card swap detected by %s.
<b>Parameters</b>	<b>nsets</b> (INT): Number of different serial numbers found in non-native volumes. <b>nvrasm_sysid1</b> (INT): First NVRAM system id to select from. <b>nvrasm_sysid2</b> (INT): Second NVRAM system id to select from. <b>nvrasm_sysid3</b> (INT): Third NVRAM system id to select from. <b>selected_nvrasm_sysid</b> (INT): Selected NVRAM system id of volumes before swap. <b>who</b> (STRING): Module detected NVRAM card swap.

<b>EMS Identifier</b>	raid.assim.label.upgrade
<b>Severity</b>	INFORMATIONAL
<b>Description</b>	This event is generated when we upgrade RAID labels to the new 6.2-and-later format.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	Upgrading RAID labels.
<b>Parameters</b>	

<b>EMS Identifier</b>	raid.assim.label.upgrade.corruptSize
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an old RAID label is being upgraded and the label appears to be corrupted due to the parity type and the sizes[0] entry (describing the size of the parity disk) conflicting. This deals with burt 79966.
<b>Corrective Action</b>	Wait for the event message raid.disk.unload.done or raid.carrier.remove to be issued and then replace the carrier containing the failed disk. If the disk is contained in a single-disk carrier, raid.disk.unload.done will be issued immediately. Otherwise, wait for raid.carrier.remove which indicates the carrier has been fully prepared for removal. Contact NetApp technical support.
<b>Syslog Message</b>	Disk %s has a corrupt old label: sizes[%d] is %u.
<b>Parameters</b>	<b>disk</b> (STRING): Disk with the corrupted label. <b>rgdn</b> (INT): Disk number given by the RAID Group. <b>size</b> (INT): Size of the disk.

<b>EMS Identifier</b>	raid.assim.label.upgrade.parityMismatch
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when an old RAID label is being upgraded and the label appears to be corrupted due to the parity type and the sizes[0] entry (describing the size of the parity disk) conflicting. This deals with burt 79966.
<b>Corrective Action</b>	Wait for the event message raid.disk.unload.done or raid.carrier.remove to be issued and then replace the carrier containing the failed disk. If the disk is contained in a single-disk carrier, raid.disk.unload.done will be issued immediately. Otherwise, wait for raid.carrier.remove which indicates the carrier has been fully prepared for removal. Contact NetApp technical support.
<b>Syslog Message</b>	Disk %s has a corrupt old label: parity type mismatch.
<b>Parameters</b>	<b>disk</b> (STRING): Disk with the corrupted label.

<b>EMS Identifier</b>	raid.assim.mark.error.disk.broken
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when RAID moves an invalid disk into a broken disk pool. Invalid disks can be ones with bad labels or with an unsupported label version.
<b>Corrective Action</b>	Wait for the event message raid.disk.unload.done or raid.carrier.remove to be issued and then replace the carrier containing the failed disk. If the disk is contained in a single-disk carrier, raid.disk.unload.done will be issued immediately. Otherwise, wait for raid.carrier.remove which indicates the carrier has been fully prepared for removal.
<b>Syslog Message</b>	Marking disk %s, which failed assimilation in %s %s, as broken, because %s.
<b>Parameters</b>	<b>disk</b> (STRING): Name of the disk. <b>vol_type</b> (STRING): Volume type. <b>tree</b> (STRING): Name of the aggregate. <b>reason</b> (STRING): Reason for marking the disk broken.

<b>EMS Identifier</b>	raid.assim.rg.dupChildId
<b>Severity</b>	ALERT
<b>Description</b>	This event occurs when we detect that a RAID group object has an inconsistent list of disk objects in its label configuration record.
<b>Corrective Action</b>	(Call support).
<b>Syslog Message</b>	%s %s%s, rgobj_verify: RAID object %d has duplicate child objects (%s and %s) with ID %d.
<b>Parameters</b>	<b>vol_type</b> (STRING): Volume type. <b>owner</b> (STRING): Owner of the aggregate. <b>vol</b> (STRING): Name of the aggregate. <b>rgId</b> (INT): The RAID group identifier <b>diskName1</b> (STRING): One disk with this identifier <b>diskName2</b> (STRING): Another disk with this identifier <b>childId</b> (INT): The child identifier

<b>EMS Identifier</b>	raid.assim.rg.offlineVerifyFailed
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when an offline disk within a RAID group fails verification checks. For example, ownership information differs with the parent aggregate, or the parent tree map specifies this disk is unmapped. Data ONTAP(R) takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	(None).
<b>Syslog Message</b>	%s "%s%s", Offline child object (ID=%d) in RAID object %d failed verification
<b>Parameters</b>	<b>vol_type</b> (STRING): Volume type. <b>owner</b> (STRING): Owner of the affected aggregate. <b>vol</b> (STRING): Name of the aggregate. <b>rgld</b> (INT): RAID group identifier. <b>childld</b> (INT): Child identifier.

<b>EMS Identifier</b>	raid.assim.tree.degradedDirty
<b>Severity</b>	EMERGENCY
<b>Description</b>	This message occurs when an aggregate contains a degraded RAID group and has dirty parity. Wafiron must be run before the aggregate can be brought online.
<b>Corrective Action</b>	Run wafiron for the aggregate by using the command 'aggr wafiron start'.
<b>Syslog Message</b>	%s "%s%s" is degraded and has dirty parity. You must run wafiron on this aggregate before it can be brought online.
<b>Parameters</b>	<b>vol_type</b> (STRING): Volume type. <b>host</b> (STRING): 'Local' or 'Partner' where the aggregate is located. <b>vol</b> (STRING): Name of the aggregate. <b>vol_type2</b> (STRING): Volume type.

<b>EMS Identifier</b>	raid.assim.tree.dupld
<b>Severity</b>	ALERT
<b>Description</b>	This message occurs when RAID assimilation detects that a duplicate volume identifier exists. Data ONTAP(R) takes appropriate recovery actions, as described in additional logged events.
<b>Corrective Action</b>	Contact NetApp technical support. For information about correcting the problem, search for the "raid.assim.tree.dupld" keyword on the Knowledgebase of the NetApp Support Site.
<b>Syslog Message</b>	%s %s%s and %s %s%s have the same RAID tree ID. RAID assimilation will be aborted.
<b>Parameters</b>	<b>vol_type1</b> (STRING): Volume type. <b>owner1</b> (STRING): Owner of the first aggregate. <b>vol1</b> (STRING): Name of the first aggregate. <b>vol_type2</b> (STRING): Volume type. <b>owner2</b> (STRING): Owner of the second aggregate. <b>vol2</b> (STRING): Name of the second aggregate.

<b>EMS Identifier</b>	raid.assim.tree.dupName
<b>Severity</b>	NOTICE
<b>Description</b>	This message occurs when the system detects a duplicate name for a volume or an aggregate. In this case, the second volume or aggregate with that name is renamed.
<b>Corrective Action</b>	Use the 'vol rename' command or 'aggr rename' command to resolve the conflict permanently.
<b>Syslog Message</b>	Duplicate %s names found, an instance of %s%s is being renamed to %s%s.
<b>Parameters</b>	<b>vol_type</b> (STRING): Whether the duplicate name is for a volume or an aggregate. <b>owner1</b> (STRING): String indicating the owner of the volume or aggregate. <b>vol</b> (STRING): Original name of the volume or aggregate. <b>owner2</b> (STRING): String indicating the owner of the volume or aggregate. <b>newName</b> (STRING): New name of the volume or aggregate.

<b>EMS Identifier</b>	raid.assim.tree.foreign
<b>Severity</b>	ERROR
<b>Description</b>	This message occurs when a RAID tree object contains an ownership identifier that is different from the local system. In this case, the aggregate is declared "foreign" and is marked offline.
<b>Corrective Action</b>	Use the 'storage aggregate online' command to bring the aggregate online.
